

SUPPLEMENT

TO

The Ceylon Government Gazette.

PART I.

No. 5,363—FRIDAY, JULY 26, 1895.

VITAL STATISTICS OF CEYLON.

REPORT OF THE REGISTRAR-GENERAL FOR THE FIRST QUARTER OF 1895.

I.—Population.

THE estimated population of the Island on the last day of the quarter was 3,185,275, an increase of 6,050 on the previous quarter, due to an excess of 3,633 births over deaths, and of 2,417 arrivals over departures of Indian coolies.

Table I. in the appendix gives the area and estimated population of each Province and district of the Island in the quarter.

*Arrivals and Departures of Indian Coolies.*—The total number of Indian coolies who arrived in the Island this quarter (23,160) was more than twice as large as the number in the corresponding quarter of last year (10,550), while the departures (20,743) show an excess of only 4,205 over the number in the corresponding quarter of last year (16,538).

II.—Marriages.

*Marriages.*—The number of general marriages—*i.e.*, marriages other than Kandyan or Muhammadan—registered in this quarter was 3,741, and of Kandyan marriages 7,723. The number of Kandyan marriages this quarter, as in the previous one, was exceptionally high, about seven or eight times the usual number, the increase being due to the pressure brought to bear on the people by the Government Agents under instructions from Government to register marriages.

Table VII. in the appendix shows the marriages solemnized among the general community in every Province and district of the Island, the civil condition, nationality, the highest, lowest, and mean ages of the parties, the mode of solemnization, the number of bridegrooms and brides who were unable to sign their names in the register, &c.

Table VIII. gives similar information in respect of Kandyans.

*First Marriages; Re-marriages.*—Of the 3,741 general marriages, 3,292 (equal to 88 per cent.) were between bachelors and spinsters, 92 between bachelors and widows, 292 between widowers and spinsters, 52 between widowers and widows, 5 between divorced men and spinsters, 5 between divorced women and bachelors, 1 between a divorced man and a widow, and 2 between divorced women and widowers. Of the 7,723 Kandyan marriages, 6,276 (equal to 81 per cent.) were between bachelors and spinsters, 375 between bachelors and widows, 613 between widowers and spinsters, 234 between widowers and widows, 73 between divorced men and spinsters, 42 between divorced men and widows, 69 between divorced women and bachelors, 17 between divorced women and widowers, and 24 between divorced men and divorced women.

*Age at Marriage.*—The mean age at marriage for the general community was 29.4 for males and 21.8 for females; and for Kandyans 28 for males and 21 for females.

*Minors.*—In the general community 4 per cent. of the bridegrooms and 62 per cent. of the brides were under 21, and amongst the Kandyans 7 per cent. of the bridegrooms and 43 per cent. of the brides were under 21.

*Mixed Marriages.*—There were 26 mixed marriages in the quarter: 4 between Europeans and Burghers, 3 between Burghers and Sinhalese, 1 between a Burgher and a Tamil, 17 between Sinhalese and Tamils, and 1 between a Parsee and a Burgher.

*Signature in Marriage Register.*—Of the 7,462 persons married among the general community this quarter, 1,010 men and 2,964 women signed the register with marks; that is to say, 73 per cent. of the men and 21 per cent. of the women were able to write their names. Of the 15,446 persons married among the Kandyans, 3,313 men and 7,387 women signed the register with marks, *i.e.*, 57 per cent. of the men and 4 per cent. of the women were able to write their names.

III.—Births and Deaths.

*Births.*—The births registered in the quarter numbered 25,227, and were in the proportion of 33.6 to 1,000 persons living, as against 30.4, the average of the corresponding period for the ten years 1885-94 and 31.5 the rate in the first quarter of last year.

*Deaths.*—The deaths registered in the quarter amounted to 21,594, including 33 Europeans, 96 Burghers, 14,723 Sinhalese, 5,008 Tamils, 1,607 Moors, 89 Malays, and 39 others, and corresponded to an annual rate of 28.7 per 1,000.

The Births and Deaths and their Rates in this quarter are compared in the following statement with the results obtained in the previous quarter, the first quarter of the past year, and the average of the corresponding quarter in the ten years 1885-94:—

Average of ten previous first quarters in	Births.	Deaths.	Per Mille per Annum.	
			Birth-rate.	Death-rate.
1885-94	22,200	21,944	30.4	30.0
First quarter of 1894	23,567	21,373	31.5	28.6
Fourth quarter of 1894	29,436	21,685	38.4	28.3
First quarter of 1895	25,227	21,594	33.6	28.7

It will thus appear that while the birth-rate of the Island in the present quarter rose above the average of the corresponding quarters of 1885-94, the death-rate fell below the average.

Table II. in the appendix gives similar information to Table A in respect of each Province and district in the Island. Table I. gives the births and deaths according to sex, and births according to legitimacy; Table IX. the births according to nationality and sex; Table X. illegitimate births according to nationality and sex; Table XI. the deaths for each month of the quarter according to nationality for every Province and district. The causes of

death for every Province and district are shown in Table XII.; and for the estates in the Central, Uva, Sabaragamuwa, and the Kalutara District of the Western Province in Table XIII.; and for the town of Colombo (according to wards) in Table XIV. Table XV. shows the period of life at which the deaths of the various races occurred in every district.

*Age at Death.*—The deaths of infants under one year of age numbered 4,555, and were in the proportion of 180 deaths to 1,000 births. The rate of infant mortality varied in different districts, 428 (for all races) in Puttalam, 332 (for Sihalése) in Kurunégala, 262 (for Sihalése) in Ratnapura, 251 (for Sihalése) in Hambantota, 226 (for Tamils) in Trincomalee, 215 (for Sihalése) in Mátalé, 205 (for Sihalése) in Nuwara Eliya, 196 (for Sihalése) in Chilaw, 174 (for Sihalése) in Kandy, 111 (for Sihalése) in Galle, 109 (for Sihalése) in Negombo, 102 (for Sihalése) in Mátara, 92 (for Sihalése) in Colombo, and 65 (for Sihalése) in Kalutara.

*Sex.*—Of the total number of births (25,227), 13,025 were males and 12,202 were females, i.e., 107 males to 100 females; of the total number of deaths (21,594), 11,040 were males and 10,504 were females. Out of equal numbers living of each sex there died 928 males to 1,000 females.

#### IV.—State of Public Health.

The general health of the population of the Island this quarter (the registered mortality being 28·7) was better than the average first quarter of the last ten years 1885–94 (30·0).

Tables III., IV., V., and VI. in the appendix show the births and deaths, the birth-rates and the death-rates for all ages and for infants in the several districts of the Island, and in the subdivisions of those districts for this quarter, for the immediately preceding quarter, for the first quarter of last year, and the average for the corresponding period of the last four years 1891–94. The rates shown are for the Sihalése only in the Sihalése districts, and for the Tamils only in the Tamil districts. These separate rates furnish more trustworthy data for comparing the relative sanitary condition of those districts and divisions of the Island than if the rates included other nationalities temporarily resident in them. In the Puttalam District, where the Sihalése and Muhammadans are found in almost equal numbers, and in the Batticaloa District, where the Tamils and Muhammadans are almost in equal numbers, the rates of the different sections of the population as well as of all races are given.

*Western Province.*—As usual the Western Province maintains the first place as the healthiest Province of the Island with a death-rate of 20 per thousand, which, though higher than in the corresponding quarter of last year (19·1) was lower than the average for the corresponding quarter in 1891–94 (20·6).

The death-rate of Colombo District, exclusive of the Municipality, declined from a mean annual rate in the corresponding quarter of the last four years 1891–94 of 18·2 to 16·7 this quarter, the decline being 1·2 in Alutkuru koralé South (from 15·3 in the first quarter of 1891–94 to 14·1 this quarter), 1·6 in Salpiti koralé (from 17·8 in the first quarter of 1891–94 to 16·2 this quarter), and 4·9 in Hévagam koralé (from 24·5 in the first quarter of 1891–94 to 19·6 this quarter), while in the Siyané koralé the rate recorded equalled the average for the period.

In the Negombo District the death-rate fell from 24·3 (the average rate for the first quarter in 1891–94) to 23·7 in the first quarter of 1895, with a reduction of 6 to every 1,000 of the population. The reduction was chiefly in Hápitiagam koralé, where the death-rate in the quarter was 6 per 1,000 lower than the average, and equal to that in Alutkuru koralé North (the healthiest division of the district), which has a rate of 19·4, or 2 per 1,000 lower than in the corresponding period of 1891–94 (21·4).

The Kalutara District shows even a greater improvement than either Colombo or Negombo, the death-rate (18·6) being 2·7 lower than in the corresponding period of 1891–94 (21·3). The division of Rayigam koralé has as usual the lowest rate in the district (16·6 this quarter, as against 20·4 in the first quarter of 1891–94), followed by Kalutara Totamuna with 18·7 (as against 20·2 in the first quarter of 1891–94), Pasdun koralé with 20·3 (as against 22·9 in the first quarter of 1891–94), and the Local Board of Kalutara with 23·9 (as against 28·8 in the first quarter of 1891–94).

*Southern Province.*—The health of the Sihalése living in the Southern Province was worse this quarter (29·3) than in the corresponding period of the last two years 1893–94 (28·7). In the corresponding quarter of 1891–92 the Province was very unhealthy during this quarter, and had a mean death-rate of 39 per 1,000, the result of the epidemic of fever which prevailed in the Mátara and Hambantota Districts. If the abnormal death-rates of the two districts for the first quarter of 1891 and 1892 be excluded from comparison, the death-rate in the Mátara District (24 per 1,000) equalled the average of the first quarter in 1893–94, and the death-rate of the Hambantota District (39·5) was 6 per 1,000 lower than the average (45·4). Unlike Mátara and Hambantota the Galle District was unhealthy during the quarter, and had a death-rate (29·6) 4 per 1,000 above the mean rate of the first quarter in 1891–94 (25·8). The increase occurred mainly in the Wellaboda pattuwa, which, though generally a healthy division of the district, was the unhealthiest division this quarter, and had a death-rate (37·7) 50 per cent. higher than the average. In Hinidum pattu, which followed Wellaboda as the second unhealthiest division of the district in the quarter, the death-rate increased from 29·9 (the mean rate for first quarter in 1891–94) to 35·3 this quarter, in Ganga-boda it increased from 24·0 (the mean rate for first quarter in 1891–94) to 29·1 this quarter, and in the town division of Galle from 24·7 (the mean rate for first quarter in 1891–94) to 31·7 this quarter.

*North-Western Province.*—The mortality among the Sihalése living in the North-Western Province was during the quarter in the proportion of 40·5 per 1,000, a reduction of 8·6 on the mean rate of the last four years for the same period (49·1). This reduction was mainly in the Kurunégala District (which contains more than three-fourths of the Sihalése resident in the Province), and more particularly in the Hiriyala, Dambadeniya, and Wéudawili hatpattu divisions of that district. In Hiriyala the death-rate was 15 per 1,000 lower (being 45·0 this quarter, as against 60·4 in the corresponding quarter of 1891–94), in Dambadeniya it was 20 per 1,000 lower (being 34·5 this quarter, as against 54·4 in the corresponding quarter of 1891–94), and in Wéudawili hatpattu it was 14 per 1,000 lower (being 39·8 this quarter, as against 53·5 in the corresponding quarter of last year). The other divisions also show a reduced mortality, but the reduction in them is inconsiderable.

The death-rate of Chilaw District was equal to 28·0 per 1,000, and exceeded the average for the corresponding period of the last four years 1891–94 (26·5). The southern koralé of this district (Pitigal koralé South) has a death-rate of 22·9 (as against 23·3 the average rate for the period in 1891–94); and is three times as healthy as the northern koralé (Pitigal koralé North), the death-rate of which in the quarter (66·2) was 19 per 1,000 in excess of its average (47·1).

The Puttalam District shows but little improvement on the average, the death-rate for all races having been 57·1 in the quarter, against an average of 55·2. The death-rate for the Sihalése in the quarter was 68·8, as against 44·7 for the Muhammadans.

*Central Province.*—The Central Province was healthy during the quarter, and showed a death-rate of 30 per 1,000, being 5·5 per 1,000 lower than in the corresponding quarter of the last four years 1891–94 (35·5). This improvement is noticeable throughout the Province, but more markedly in the Kandy and the Mátalé Districts. In Kandy the death-rate fell from a mean annual rate in the first quarter of 1891–94 of 35 to 28 per 1,000, with a decline in Tumpane of 12 per 1,000 (from 44·4 in the first quarter of 1891–94 to 32·3 in the present quarter), in Uda Dumbara of 10 per 1,000 (from 41·2 in the first quarter of 1891–94 to 31·2 in the present quarter), in Pata Hévaheta of 9 per 1,000 (from 29·1 in the first quarter of 1891–94 to 20·4 in the present quarter), and in Hariapattu of 8 per 1,000 (from 38·4 in the first quarter of 1891–94 to 29·9 in the present quarter). In Udapaláta and in Uda Bulatgama the death-rates equalled the average for the corresponding period in 1891–94, while in Pata Dumbara, Uduuwara, and Yatinuwara the rates exceeded the average. It was 29·0 this quarter in Pata Dumbara, as against 26·4 in the first quarter

of 1891-94; 32.4 this quarter in Udunuwara, as against 28.9 in the first quarter of 1891-94; and 33.5 this quarter in Yatinuwara, as against 31.5 in the first quarter of 1891-94.

In Mátalé the improvement was considerable, the death-rate falling in the quarter to 36.2 from 52.2 in the first quarter of 1891-94, with a decline of 16 per 1,000. The decline is due partly to the exceptional unhealthiness of the district in the last four years.

The Nuwara Eliya District maintained this quarter its normal health.

*Province of Sabaragamuwa.*—The health of the Province of Sabaragamuwa during the quarter has been satisfactory, and the mortality was below the average for the period, having been only 30 per 1,000. The Kégalla District, in which the death-rate was as high as 53.5 in the second quarter of last year, fell in the third quarter of that year to 47.4 and in the fourth to 29.3, from which it fell again this quarter to 24.5, which is the normal rate for this period.

The Ratnapura District has a death-rate in the quarter of 37.2, which, though higher than the rate in the Kégalla District (24.5), is lower than its own rate for the first quarter of the preceding four years 1891-94 (43.8).

*Province of Uva,* which is identical with the Badulla District, had, like the other Provinces of the Island, a lower rate (35.8) than in the first quarter of the last four years (43.9). In Wellawaya, which is the unhealthiest division of the district, the death-rate (49.4) was 29 per 1,000 lower than in the corresponding quarter of 1891-94 (78.0); in Bintenna it was 14 per 1,000 lower (34.1 this quarter, as against 48.6 in the first quarter of 1891-94); in Yatikinda it was 10 per 1,000 lower (27.2 this quarter, as against 37.6 in the first quarter of 1891-94); and in Buttala it was 15 per 1,000 lower (42.3 this quarter, as against 57.6 in the first quarter of 1891-94). In other divisions there was a comparatively small decline in the mortality.

*North-Central Province.*—The Anurádhapura District shows, like Badulla, an improvement in health, the death-rate falling in the quarter to 45.3 from 56.3 in the first quarter of 1891-94. This improvement was shared by every division included in the district, except by the town division of Anurádhapura, the death-rate of which, however, is liable to serious fluctuation, and should be left out of consideration.

*Northern Province.*—The mortality in the Jaffna District during this quarter (23.0) was nearly in the same proportion as the average for the corresponding period in 1891-94 (23.8). The division of Valikámam North retains in the quarter its usual place as the healthiest division (16.0) of the district, while Valikámam East and West divisions, next to Valikámam North, the healthiest in the district, yield their usual place to Vadamaradchi West and to the Jaffna division of the district, and show a decline on their average health for the period. In Valikámam East the death-rate rose from 18.3 in the first quarter of 1891-94 to 24.6 this quarter, and in Valikámam West it rose from 22.2 in the first quarter of 1891-94 to 25.4 this quarter, while in the Vadamaradchi West division it declined from 22.3 in the first quarter of 1891-94 to 18.4 this quarter, and in the Jaffna division from 24.9 in the first quarter of 1891-94 to 19.4 this quarter. The death-rate of The Islands division in this quarter was about the average. In Ténmaradchi it was somewhat lower, being 32.0 as against 35.7 in the corresponding quarter of 1891-94. The rates of the other divisions of the district are untrustworthy for comparison, as the populations contained in them are too small for rate calculation.

The Mannár District was in the quarter (28.6) nearly twice as healthy as in the first quarter of 1891-94 (50.2), the Mannár island division showing in particular an exceptionally low rate (19.4 as against 56.8 in the first quarter of 1891-94).

The Mullaittivu District also shows an improvement in its health, the death-rate recorded having declined in the quarter to 46.2 from 58.6 in the corresponding quarter of 1891-94.

Only in the Vavuniya District was the mortality higher than the average.

*Eastern Province.*—This quarter the mortality in the Batticaloa District was, both among the Tamils and among Muhammadans, in the same ratio as in the corresponding period of the preceding four years 1891-94.

The Trincomalee District shows a very marked improvement in health (27.9), the death-rate being 10 per 1,000 lower than in the first quarter of 1891-94 (37.4).

**V.—Causes of Death.**

The causes of death registered in the Island during the quarter are given in Table XII. in the appendix. They may be summarized as follows:—

TABLE B.

District.	Cholera.	Small-pox.	Fevers.	Dysentery and Diarrhoea	Violence.*				All other Causes.	Total.
					Accidents	Homicide	Suicide.	Execu-tion.		
CEYLON ...	118	2	6,403	5,015	370	29	21	12	9,624	21,594
Colombo ...	10	1	552	475	42	7	3	3	1,417	2,510

Chilaw ...	5	—	202	75	4	2	—	—	214	502
Annrádhapura ...	2	—	344	148	6	1	—	—	301	802
Badulla ...	8	—	282	472	17	—	2	—	536	1,317
Ratnapura ...	—	—	217	275	32	—	—	—	451	975
Kégalla ...	15	1	223	207	25	1	3	—	500	975

*Fever and Diarrhoeal Diseases.*—Of the 21,594 deaths registered in the quarter, 6,408 were reported as due to various forms of fever and 5,153 to diarrhoeal diseases, i.e., fever contributed 30 per cent. and diarrhoeal diseases 24 per cent. of the total deaths from all causes. Under the head "Diarrhoeal Diseases" is included cholera, which accounted for 118 deaths, and to which cause probably many deaths really due to acute diarrhoea have been attributed.

Smallpox accounts for 2 deaths this quarter (1 in Colombo and 1 in Kégalla), measles to 69 (of which 17 were in Colombo and 17 in Galle), chickenpox to 11 (of which 6 in Nuwara Eliya), whooping cough to 22, and 3 to mumps.

The other chief natural causes of deaths were infantile convulsions 1,502, general dropsy 546, anæmia 498, debility 722, phthisis 618, pneumonia 289, bronchitis 149, asthma 74, pleurisy 52, worms 551, thrush 148, doehmius duodenalis 83 (38 in Kégalla, 25 in Kandy, 6 in Kalutara, 5 in Badulla, and 4 in Colombo), puerperal convulsions 343, childbirth 121, old age 383, premature birth 125 (of which 69 in Badulla), parangi 48 (of which 22 in Kurunégala), scrofula 110 (of which 41 in Kurunégala), want of breast milk 69 (of which 33 in Badulla, 18 in Kandy, and 6 in Mátalé), malarial cachexia 107, hydrophobia 13 (Galle 3, Colombo and Negombo 2 in each, Mátalé, Mátara, Puttalam, Chilaw, Anurádhapura, and Badulla, 1 in each).

*Deaths by Violence.*—Of the 432 deaths attributed to these causes, 114 are attributed to fall from trees, 61 to drowning, 29 to snake-bites, 33 to burns and scalds, 17 to gunshot wounds, 18 to injury at birth, 8 to fall from height other than from trees, 5 to lightning, 3 to wasp stings, 3 to crocodile, 2 to sunstroke.

Twenty-one deaths were attributed to suicide, of which the majority (14) were by hanging, 1 by gunshot, 1 by cut or stab wound, and 5 otherwise.

Twenty-nine deaths were attributed to murder and other forms of homicide (25 Sinhalese and 4 Tamils).

As many as twelve men were judicially executed this quarter, 7 in Kandy, 3 in Colombo, 1 in Negombo, and 1 in Hambantota.

## VI.—Health of the Estate Population.

The total number of births reported for registration from the estates in the Central, Uva, and the Sabaragamuwa Provinces, and in the Kalutara District of the Western Province, was 1,434 (of which 3 were Europeans, 28 Sinhalese, 1,400 Tamils, and 7 Moors), and the total number of deaths was 1,472 (1 European, 21 Sinhalese, 1,446 Tamils, and 4 Moors), corresponding respectively to an annual rate of 24.8 and 25.6 per 1,000. The causes of death are given in detail in Table XIII., and may be summarized as follows:—

Fever	...	84	Anchylostomiasis	...	48
Diarrhoea	...	228	Bronchitis	...	50
Dysentery	...	217	Pneumonia	...	129
Want of Breast Milk	...	21	Diseases of Parturition	...	42
Old Age	...	48	Debility	...	257
Infantile Convulsions	...	63	Other Causes	...	340

TABLE C.

Districts.	Estimated Population in 1895.	Birth-rate.				Death-rate.			
		Average of Four First Quarters, 1891-94.	First Quarter of 1894.	Fourth Quarter of 1894.	First Quarter of 1895.	Average of Four First Quarters, 1891-94.	First Quarter of 1894.	Fourth Quarter of 1894.	First Quarter of 1895.
Kandy ...	88,223	25.2	23.0	24.3	27.0	27.9	25.4	26.6	24.4
Mátalé ...	13,115	22.8	31.1	25.4	25.0	31.2	45.5	19.4	21.0

Kégalla ...	21,234	14.3	15.5	14.3	17.0	32.7	33.9	35.1	35.7
Kalutara ...	4,922	—	—	10.1	8.2	—	—	44.1	28.8

*Kandy District.*—The total number of births reported for registration from the estates in the Kandy District was 600, of which 587 were Tamils, 6 Sinhalese, and 7 Moors; and the deaths numbered 536, of which 530 were Tamils, 5 Sinhalese, and 1 a European. The Tamil birth-rate in the quarter was equal to 27.0, as against a mean-rate of 25.2 in the corresponding period of 1891-94; and the Tamil death-rate was equal to 24.4, as against a mean-rate of 27.9 in the first quarter of 1891-94. As usual the most fatal cause was diarrhoeal diseases, which caused 178 deaths (90 from diarrhoea and 88 from dysentery), or nearly 33 per cent. of the total number of deaths (536). The other chief causes of death were debility 63 (including mostly deaths of infants from inability to suck milk), pneumonia 36, infantile convulsion 21, general dropsy 20, anchylostomiasis 14, starvation and want of breastmilk 17, childbirth 9, old age 20, fever 32, bronchitis 6, malarial cachexia 10, anæmia 6, and phthisis 15.

*Mátalé District.*—The total number of births reported for registration from the estates in the Mátalé District was 81 (all Tamils), and the deaths numbered 68 (all Tamils) and corresponded to an annual birth-rate of 25.0 (against a mean-rate of 22.8 for the corresponding period of 1891-94), and a death-rate 31.2 (against a mean-rate of 31.2 in the first quarter of 1891-94) respectively. Dysentery and diarrhoea caused 23 deaths, i.e., 34 per cent. of the total number of deaths (68), debility caused 7, pneumonia 3, fever 8, general dropsy 2, childbirth 3, old age 3.

*Nuwara Eliya District.*—The total number of births reported for registration from the estates in the Nuwara Eliya District was 383 (2 Europeans, 1 Sinhalese, and 380 Tamils), and the deaths numbered 407 (404 Tamils, 2 Sinhalese, and 1 Moor), and corresponded to an annual birth-rate of 24.9 (against a mean rate of 22.0 in the first

quarter of 1891-94), and a death-rate of 26.4 (against a mean death-rate of 17.4 in the first quarter of 1891-94) respectively. Dysentery and diarrhoea were fatal in 112 cases, or nearly 28 per cent. of the total deaths (407). 97 deaths are attributed to debility (mostly of infants from inability to suck), 18 to fever, 28 to pneumonia, 25 to general dropsy, 11 to old age, 19 to infantile convulsion, 3 to premature birth, 3 to phthisis, and 9 to bronchitis.

*Badulla District.*—The total number of births reported for registration from the estates in the Badulla District was 204 (1 European and 203 Tamils), and the deaths numbered 183 (181 Tamils, 1 Sihaliese, and 1 Moor), and corresponded to an annual birth-rate of 42.1 (against a mean rate of 25.3 in the corresponding period of 1891-94), and a death-rate of 37.5 (against a mean rate of 28.6 in the first quarter of 1891-94) respectively. Dysentery and diarrhoea were fatal in 53 cases, or nearly 30 per cent. of the total deaths (183), debility in 30 (mostly of infants from inability to suck), fever in 10, infantile convulsions in 9, pneumonia in 24, anchylostomiasis in 3, starvation and want of breastmilk in 3.

*Ratnapura District.*—The total number of births reported for registration from the estates in the Ratnapura District was 52 (50 Tamils and 2 Sihaliese), and the deaths numbered 43 (41 Tamils and 2 Sihaliese), and corresponded respectively to an annual birth-rate among the Tamils of 40.4, and a death-rate of 33.1 per 1,000.

As usual, the most fatal cause was diarrhoeal diseases, which caused 15 deaths (11 from dysentery and 4 from diarrhoea), or 35 per cent. of the total number of deaths (43). The other chief causes of deaths were debility 3, starvation and want of breast milk 1, infantile convulsions 4, doehmius duodenalis 2, and pneumonia 4.

*Kégalla District.*—The total number of births reported for registration from the estates in the Kégalla District was 104 (89 Tamils and 15 Sihaliese), and the deaths numbered 198 (187 Tamils, 11 Sihaliese), and corresponded respectively to an annual birth-rate among the Tamils of 17.0, and a death-rate of 35.7 per 1,000. Kégalla thus maintains its reputation as a district containing the unhealthiest estates.

The most fatal cause was diarrhoeal diseases, which accounts for 64 deaths (44 from diarrhoea and 20 from dysentery), or 32 per cent. of the total number of deaths (198). The other causes of deaths were anchylostomiasis 34, debility 15 (mostly of infants from inability to suck milk), fever 11, general dropsy 5, malarial cachexia 6, phthisis 7, pneumonia 12, infantile convulsions 6, and old age 6.

*Kalutara District.*—The total number of births reported for registration from the estates in the Kalutara District was 10 (all Tamils), and the deaths numbered 37 (35 Tamils, 1 Sihaliese, and 1 Moor), and corresponded respectively to an annual birth-rate among the Tamils of 8.2, and a death-rate of 23.8 per 1,000.

The most fatal cause was diarrhoeal diseases, which caused 19 deaths (11 from dysentery and 8 from diarrhoea, or 50 per cent. of the total number of deaths (37). The other principal causes of deaths were doehmius duodenalis 4, debility 1, fever 5, phthisis 2, and bronchitis 1.

**VII.—Health of the Town of Colombo.**

The deaths registered in the town of Colombo during this quarter numbered 1,163, and corresponded to an annual rate of 35.0, which, though worse than in the corresponding quarter of last year (33.4), was lower than the rate in the immediately preceding quarter, when it was as high as 37.3 per 1,000.

The births registered during the quarter numbered 589, and were equal to an annual rate of 24.2 per 1,000.

The rate of infant mortality, measured by the proportion of deaths under one year to a thousand births, was equal to 462, a higher proportion than in the corresponding quarter of last year (412).

As usual, the death-rate exceeded the birth-rate, which is due mainly to the preponderance of males over females (chiefly among the Europeans, the Indian Tamils, and Mnhammadans), and to the presence of hospitals and jails which add to the normal mortality of the town. The death-rate this quarter was 45 per cent. in excess of the birth-rate.

The subjoined table gives the births and deaths, and the rates of each nationality living in the Colombo Municipality in the first quarter of this year and of 1894 for the immediately preceding quarter, and the average of the corresponding period in the eight years 1887-94 :—

TABLE D.

Others ...	2,724	7	12	7	6	14	21	33	30	11.4	17.9	10.2	8.9	22.1	31.0	48.1	44.7

The birth and the death-rates given in the above table for the Europeans, Malays, and the races classed together under the term "Others" are not accurate, and are liable to constant fluctuation, owing chiefly to their population being too small for purposes of rate calculation. Excluding the rates for these sections of the population, the lowest death-rate in the town was among the Burghers 22.4, who show an increase of nearly 4 per 1,000 on their rate for the first quarter of last year (26.2).

The next lowest death-rate in the town was among the Sihaliese (35.1 this quarter, as against 33.9 in the first quarter of last year), and next to the Sihaliese the Moors have the lowest death-rate (35.7 this quarter, as against 35.5 in the first quarter of last year), and then the Tamils, whose death-rate in the quarter (45.3) is, with the exception of that for the Malays (a rate untrustworthy for comparison), the highest in the town. The high Tamil death-rate is probably due chiefly to the deaths among the Indian coolies who flock to this port.

The number of births and deaths of the different races in the different wards in the town, their rates per 1,000, the principal zymotic causes of death, &c., are shown in the following table :—

TABLE E.

Name of Ward.	Population at Census, 1891.	Births.										Deaths.													Deaths of Children under one year.

There were 9 deaths from cholera this quarter, the first appearance of cholera in the town after a period of three years, the disease being introduced by arrivals from India. The last death from cholera was a solitary case in the fourth quarter of 1891. Smallpox accounted for 1 death, which occurred in the Fort Ward and measles to 14, a third of which were among the Burghers.

Dysentery and diarrhoea were fatal to 190 (224 in the corresponding quarter of last year), 76 to infantile convulsions (153 in the corresponding quarter of last year), 160 to fever (183 in the corresponding quarter of last year), 16 to enteric fever (10 in the corresponding quarter of last year), 59 to malarial cachexia (20 in the corresponding quarter of last year), 84 to phthisis (91 in the corresponding quarter of last year), 120 to bronchitis and pneumonia (32 in the corresponding quarter of last year), 5 to diseases of parturition (15 in the corresponding quarter of last year), 27 to premature birth (7 in the corresponding quarter of last year), 59 to old age (22 in the corresponding quarter of last year), 104 to debility (59 in the corresponding quarter of last year), and anchylostomiasis to 4 (6 in the corresponding quarter of last year).

There were 14 accidental deaths this quarter, of which 3 were attributed to fall from trees, 3 to drowning, 1 to being run over by a cart, 1 to railway accident, 1 to poison, and 5 to other causes.

Two deaths resulted from homicide.

### VIII.—Health of the Principal Towns.

The total number of births registered in the principal towns during this quarter numbered 2,308, corresponding to an annual rate of 29.4 per 1,000, a higher proportion than in the same period for 1891-94 (29.2).

The deaths numbered 2,838, and were at the annual rate of 36.3 per 1,000, an increase of 2 per 1,000 on the mean death-rate of fourth quarter of 1891-94 (34.4).

The following table shows the birth and death-rates in each of the principal towns of the Island for the first quarter of 1895, and for its corresponding period in 1891, 1892, 1893, and 1894 :—

Town.	Population at Census of 1891.	Birth-rate per Mille per Annum.					Death-rate per Mille per Annum.				
		First Quarter.					First Quarter.				
		1891.	1892.	1893.	1894.	1895.	1891.	1892.	1893.	1894.	1895.
Colombo	127,836	20.5	22.0	19.4	22.4	24.2	27.0	24.5	25.0	33.4	35.0
Negombo	18,933	65.8	62.5	75.4	81.0	90.6	39.4	48.0	48.4	50.6	66.0
Kalutara	10,864	34.0	31.4	32.5	35.8	35.1	25.4	50.0	37.0	25.4	24.6
Kandy	20,558	14.4	17.4	12.8	11.2	16.6	26.8	28.8	27.8	30.0	27.8
Mátalé	4,197	14.5	16.4	14.5	13.5	10.6	43.5	24.2	81.2	78.3	55.1
Nuwara Eliya	2,726	19.3	25.3	20.8	26.8	20.8	1.5	41.7	47.6	11.9	17.9
Jaffna	43,179	28.9	40.3	40.0	46.2	31.8	22.2	41.0	29.4	35.4	26.8
Galle	33,590	24.8	27.2	35.1	50.6	45.0	36.9	27.4	56.3	35.6	40.6
Mátara	8,602	41.0	33.5	41.0	32.5	39.6	30.6	32.5	35.4	21.2	29.7
Hambantota	2,576	14.1	20.4	39.2	29.8	34.5	25.1	42.3	39.2	42.3	59.7
Batticaloa	7,257	24.0	17.9	16.2	27.4	29.1	19.0	82.7	10.6	2.8	14.0
Trincomalee	11,948	31.9	26.8	26.1	33.6	20.4	29.9	63.5	32.2	41.4	24.8
Kurunégala	4,745	28.2	16.2	23.9	13.7	13.7	83.8	74.4	107.7	75.2	68.4
Puttalam	4,976	33.0	41.9	30.6	24.2	37.9	48.3	72.5	62.0	70.9	38.7
Chilaw	3,738	41.2	29.3	29.3	25.0	20.6	56.4	49.9	29.3	44.5	30.4
Badulla	5,023	27.5	37.9	35.5	33.9	29.1	45.2	77.5	44.4	55.7	41.2
Ratnapura	3,527	24.1	18.4	25.3	36.8	39.1	23.0	37.9	46.0	40.2	42.6

The highest death-rate (66.0) was in Negombo, which has also the highest birth-rate (90.6). Next to Negombo the highest death-rates were in Kurunégala (68.4), but the rate for Kurunégala as also the rates from Chilaw, Ratnapura, Mátalé, Nuwara Eliya, and Hambantota, are untrustworthy and liable to constant fluctuation owing to the population of these towns being too small for purposes of rate calculation. Omitting these towns, Badulla has next to Negombo the highest death-rate (41.2), and is followed by Galle (40.6), Puttalam (38.7), Colombo (35.0), Mátara (29.7), Kandy (27.8), Jaffna (26.8), and Kalutara (24.6).

Colombo, July 3, 1895.

P. ARUNACHALAM, Acting Registrar-General.

APPENDIX.

Table I.—Area, Estimated Population, Marriages, Births, and Deaths registered in the First Quarter of 1895.
