

SUPPLEMENT

TO

The Ceylon Government Gazette.

PART I.

No. 5,310—FRIDAY, SEPTEMBER 14, 1894.

VITAL STATISTICS OF CEYLON.

REPORT OF THE REGISTRAR-GENERAL FOR THE FIRST QUARTER OF 1894.

I.—Population.

THE estimated population of the Island on the last day of the quarter was 3,140,058, as against 3,143,852 on December 31 last, a decrease of over 3,000 on the population of last quarter—a decrease usual in the first quarter owing to the excess of departures over arrivals of immigrant Indian coolies.

Table I. in the appendix gives the area and estimated population of each Province and District of the Island in the quarter.

Arrivals and Departures of Indian Coolies.—The total number of Indian coolies who arrived in the Island this quarter (10,550) was less than half the number of the corresponding quarter of last year (21,479), while the number of departing coolies (16,538) was about 4,300 fewer than in the corresponding quarter of last year (20,829), and exceeded the arrivals by about 6,000, causing a decrease in the immigrant population, which was not compensated by the excess in the quarter of 2,194 registered births over deaths.

II.—Marriages.

Marriages.—The number of general marriages—i.e., marriages other than Kandyan or Mohammedan—registered in this quarter was 2,707, and of Kandyan marriages 1,192.

Table VII. in the appendix shows the marriages solemnized among the general community in every Province and district of the Island, the civil condition, nationality, the highest, lowest, and mean ages of the parties, the mode of solemnization, the number of bridegrooms and brides who were unable to sign their names in the register, &c.

Table VIII. gives similar information in respect of Kandyans.

First Marriages; Re-marriages.—Of the 2,707 general marriages, 2,385 (equal to 88 per cent.) were between bachelors and spinsters, 51 between bachelors and widows, 236 between widowers and spinsters, 32 between widowers and widows, 1 between a divorced man and spinster, and 2 between divorced women and bachelors. Of the 1,192 Kandyan marriages, 1,001 (equal to 80 per cent.) were between bachelors and spinsters, 38 between bachelors and widows, 98 between widowers and spinsters, 29 between widowers and widows, 8 between divorced men and spinsters, 4 between divorced men and widows, 11 between divorced women and bachelors, 3 between divorced women and widowers.

Age at Marriage.—The mean age at marriage for the general community was 26·9 for males and 19·6 for females; and for Kandyans 28 for males and 20 for females.

Minors.—In the general community 7 per cent. of the bridegrooms and 74 per cent. of the brides were under 21, and amongst the Kandyans 14 per cent. of the bridegrooms and 65 per cent. of the brides were under 21.

Mixed Marriages.—There were 18 mixed marriages in the quarter: 4 between Europeans and Burghers, 7 between Burghers and Singhalese, 1 between a Burgher and a Tamil, and 6 between Singhalese and Tamils.

Signature in Marriage Register.—Of the 5,414 persons married among the general community this quarter, 614 men and 2,087 women signed the register with marks; that is to say, 77 per cent. of the men and 23 per cent. of the women were able to write their names. Of the 2,384 persons married among the Kandyans, 467 men and 1,141 women signed the register with marks, i.e., 60 per cent. of the men and only 4 per cent. of the women were able to write their names.

III.—Births and Deaths.

Births.—The births registered in the quarter numbered 23,567, and were in the proportion of 31·5 to 1,000 persons living, as against 30·3, the average of the corresponding period for the ten years 1884–93.

Deaths.—The deaths registered in the quarter amounted to 21,373, including 20 Europeans, 102 Burghers, 14,398 Singhalese, 5,228 Tamils, 1,517 Moors, 72 Malays, and 36 others, and corresponded to an annual rate of 28·6 per 1,000.

The Births and Deaths and their Rates in this quarter are compared in the following statement with the results obtained in the previous quarter, the first quarter of the past year, and the average of the corresponding quarter in the ten years 1884–93:—

TABLE A.

	Births.	Deaths.	Per Mille per Annum.	
			Birth-rate.	Death-rate.
Average of ten previous first quarters in 1884–93	21,979	21,275	30·3	29·3
First quarter of 1893	24,345	25,737	32·6	34·5
Fourth quarter of 1893	25,625	18,854	33·6	24·7
First quarter of 1894	23,567	21,373	31·5	28·6

It will thus appear that while the birth-rate of the Island in the present quarter rose above the average of the corresponding quarters of 1884–93 the death-rate fell below the average.

Table II. in the appendix gives similar information to Table A. in respect of each Province and district in the Island. Table I. gives the births and deaths according to sex, and births according to legitimacy. Table IX. the births according to nationality and sex. Table X. illegitimate births according to nationality and sex. Table XI. the deaths for each month of the quarter according to nationality for every Province and district. The causes of death for every Province and district are shown in Table XII., for the estates in the Central and Uva Provinces in Table XIII., and for the town of Colombo (according to wards) in Table XIV. Table XV. shows the period of life at which the deaths of the various races occurred in every district.

Age at Death.—The deaths of infants under one year of age numbered 4,522, and were in the proportion of 192 deaths to 1,000 births. The rate of infant mortality varied greatly in different districts from 621 (for Sinhalese) in Puttalam, 467 (for Tamils) in Vavuniya, 337 (for Sinhalese) in Kurunégala, 336 (for Tamils) in Mannár, 335 (for Sinhalese) in Máatalé, 318 (for Sinhalese) in Hambantota to 62 in Kalutara, 87 in Negombo, 98 in Málara, and 105 in Colombo. 44 deaths were reported to be of centenarians (17 males and 27 females).

Sex.—Of the total number of births (23,567) 12,173 were males and 11,394 were females, i.e., 107 males to 100 females; of the total number of deaths (21,373), 10,905 were males and 10,468 were females. Out of an equal number living of each sex there died 919 males to 1,000 females.

IV.—State of Public Health.

The general health of the population of the Island this quarter (28·6), though worse than in the past quarter (24·7), was better than the average first quarter of the last ten years.

Tables III., IV., V., and VI. in the appendix show the births and deaths and the death-rates for all ages and for infants in the several districts of the Island, and in the subdivisions of those districts for this quarter, for the immediately preceding quarter, for the first quarter of last year, and the average for the corresponding period of the last three years 1891-93. The rates shown are for the Sinhalese only in the Sinhalese districts, and for the Tamils only in the Tamil districts. These separate rates furnish more trustworthy data for comparing the relative sanitary condition of those districts and divisions of the Island than if the rates included other nationalities temporarily resident in them. In the Puttalam District, where the Sinhalese and Mohammedans are found in almost equal numbers, and in the Batticaloa District, where Tamils and Mohammedans are almost in equal numbers, the rates of the different sections of the population as well as of all races are given.

Western Province.—As usual the Western Province maintains the first place as the healthiest Province of the Island. The death-rate of the Sinhalese (who form the bulk of the population, and whose rate is the best standard of the healthiness of the Province) was this quarter below 20 per 1,000, and was lower than the average rate for the corresponding period in 1891-93 (21·1). It was, however, about 4 per 1,000 in excess of the rate for last quarter (15·5), which was a period of low mortality. The first quarter of 1893 was unhealthy, fever and diarrhoea prevailed in some parts of the Province, and the deaths recorded exceeded the average. In the second quarter the death-rate reached its climax rising to 26·8, and declined in the third quarter to 20·0. In the next quarter the rate (15·5) went down below the normal point (17·0), rising to 20 in this quarter.

The death-rate of the Colombo District, exclusive of the Municipality, declined from an average for the first quarter in 1891-93 of 18·7 to 16·1, and varied from 13·6 in Alutkuru koralé south (the lowest rate in the Province), 14·6 in Salpiti koralé, and 16·6 in Siyané koralé, to 20·9 in Hápítigam koralé (the highest rate in the Province).

The Negombo District shows a still larger decline, falling from an average of 25·6 to 20·5, the decline being greatest in the Hápítigam koralé division of the district, where the rate, (18·9) was lower than in the corresponding period of any of the previous three years.

The District of Kalutara also shared a reduced mortality this quarter, the death-rate recorded being 19·3 as against 22·0, the average rate for the period in 1891-93. The mortality was specially low in the Pasdun koralé division, which, though usually the unhealthiest division in the district, is the healthiest this quarter, and shows a death-rate lower than in any previous quarter since 1891.

Southern Province.—The Southern Province follows the Western as the next healthiest Sinhalese Province of the Island. The death-rate recorded among the 469,004 Sinhalese estimated to be living in the Province corresponded to an annual rate of 27·2 per 1,000, which, though an increase of 8·1 over the rate for the quarter in the Western Province (19·1), was considerably below the average of the corresponding period in 1891-93 (36·2). But it must be remembered that the Province was very unhealthy during this period in the last three years. The death-rate this quarter therefore compares favourably with the average, but is higher than for last quarter, which here, as in the Western Province, was a period of low mortality.

In the Galle District the death-rate this quarter (26·0) was slightly worse than in the first quarter of 1891 (23·5) or 1893 (25·7), but shows great improvement on the rate of the first quarter of 1892 (32·7), which was an unhealthy period in the district. Omitting the latter period and confining the comparison to the first quarter of 1891 and 1893, it will be noticed that the death-rate this quarter was excessive in almost all the divisions of the district, Wellaboda pattuwa showing an excess of 6, Hinidum pattuwa 5, Gangaboda pattuwa 3, and Walallawiti koralé 2 per thousand over the average rate of the first quarter of the two years 1891 and 1893. The Talpe pattuwa, which is the unhealthiest division of the district this quarter, shows a death-rate higher than for the first quarter of 1891 (26·1), but a lower rate than for the first quarter of last year, when the mortality rose to 35·5 owing to an epidemic of dysentery and diarrhoea, which in the division caused as many as 189 deaths out of a total of 402 from all causes.

The Málara District shows a very satisfactory improvement in health. The death-rate, which fell here in the last quarter from 30·2 (the death-rate of third quarter 1893) to 24·8, fell again to 22·3 this quarter, which, with the exception of the rates for the second and third quarters of 1892 (17·4 and 20·5 respectively), were the lowest recorded in the district for any previous quarter since 1891. This decline is noticeable in all the divisions composing the district, the lowest being in Weligam koralé (18·6) and the highest in Morawak koralé (36·4).

The rate of mortality in the Hambantota District (40·2) has been in the quarter nearly double that for the last (23·9), and varied from 34·7 in Giruwa pattuwa west (the lowest) to 76·8 in Mágam pattuwa (the highest).

North-Western Province.—The mortality in the North-Western Province, which is estimated to consist of 270,723 Sinhalese, was in the quarter at the annual rate of 40·2 per 1,000, almost the same proportion as in the corresponding period of 1892 (40·0), which was the healthiest first quarter of the past three years. The rate is, however, considerably higher than for last quarter, which in this Province, as in those already noticed, was a period of low mortality, the death-rate falling to its lowest point (27·5) gradually from the extraordinary rate of 70·8 in the first quarter of last year, 48·8 in the second, and 39·6 in the third quarter.

The Kurunégala District shows a death-rate of 43·9, which closely corresponds with the average rate of the first quarter of 1891-92 (44·3). The first quarter of 1893 was a period of exceptional unhealthiness, and the death-rate for that period should therefore be excluded from comparison. The lowest death-rates in the district were in Katugampola hatpattu (25·9) and in Dambedeni hatpattu (32·3), both of which show better rates than for the first quarter of 1891 (Katugampola hatpattu 26·7, Dambedeni hatpattu 42·1) and 1892 (Katugampola hatpattu 32·0, Dambedeni hatpattu 43·4), and the highest rates were in the Wanni and Hiriyala hatpattu divisions. The death-rates of the last two divisions were worse than in the first quarter of 1891 and 1892, and were about twice as high as for last quarter.

The Chilaw District was in the quarter twice as healthy as the Kurunégala District. The deaths recorded corresponded to a rate of 21·2, as against 43·9 for Kurunégala District, and varied from 17·1 in Pitigal koralé south to 46·1 in Pitigal koralé north, the other division of the district.

Central Province.—The deaths among the 250,128 Sinhalese estimated to be living in the Central Province were in the quarter at the annual rate of 32·6, which is a decline of 3·8 on the mean rate of the corresponding period of the last three years (36·4). In the Kandy District the death-rate declined from 32·7 (the average for the first quarter of 1891-93) to 27·5, the decline being most marked in the divisions of Tumpene, Harispattu, Uda Bulatgama, and Udapaláta. Fever was less fatal during the quarter than usual both in Tumpene and Harispattu, while the

reduction in the rate of Uda Bulatgama and Udalalāta is attributed to the prosperity introduced into those divisions by the opening of new tea estates.

The death-rate of Nuwara Eliya District this quarter was equal to 24.1, which is about the normal rate for the district.

In the Mátalé District the deaths recorded increased from a rate of 51.3, the average for the period in 1891-93 to 54.3 this quarter, the increase being chiefly in Mátalé north division, which shows a rate (71.6) about 14 per 1,000 higher than the average (57.8), and this increase is attributed by the Assistant Provincial Registrar to the want of wholesome food among the people.

Province of Sabaragamuwa.—This quarter (28.2) shows great improvement on the corresponding period of 1891 (33.7), 1892 (37.8), and 1893 (38.6) in the health of the Sinhalese population of the Province.

The rate of mortality in the Ratnapura District (37.1) was below the average of the corresponding period of the last three years (46.1), but was about twice as high as in the Kégalla District (20.8). The death-rate of Kégalla District rose in the first quarter of 1893 to 39.0, from which it mounted to 48.0 in the second quarter, and by gradual fall declined to 34.9 in the third quarter, 22.7 in the fourth quarter, and then to 20.8 this quarter, which is the lowest point to which the rate has fallen since 1891.

Province of Uva.—The health of the population in the Province of Uva has been during the quarter very satisfactory, the death-rate recorded having been 36.6 as against 46.4, the average for the corresponding period of the last three years. This reduction in the mortality is attributed by the Provincial Registrar (1) to favourable climatic conditions (2) to abundance of food and (3) to general improvement in the condition of the people brought about by a large expenditure on public works and by the abolition of the paddy tax. In Bintenna the death-rate declined from 51.5 to 40.1; in Buttala from 62.8 to 42.2; in Udukinda from 33.9 to 24.8; and in Wellassa from 53.6 to 31.7. The Wellawaya division shows a higher death-rate (70.2) than for the last quarter (65.2) and the corresponding period of 1893 (57.6). This increase is attributed to scarcity of food and to an exceptionally prolonged drought which has materially reduced the water supply for domestic purposes. "This division is practically," says the Provincial Registrar, "a dense forest with only a few openings.....The gradual depopulation of the division has been proceeding for years, and nothing but the encouragement of paddy cultivation and the opening of the district by cart roads can improve the condition of the people."

North-Central Province.—The mortality in the North-Central Province was in the quarter below the average, the deaths recorded corresponding to an annual rate of 48.7 as against 58.9, the mean-rate for the period in 1891-93. The decline is seen in all the divisions of the district except in Nuwaragam kóralé, which shows an increase.

Northern Province.—The health of the Tamil population in the Jaffna District has been worse during this quarter (24.4) than in the first quarter of 1891 (19.9) and 1893 (21.4), but not so bad as in the first quarter of 1892, when the death-rate of the district was as high as 30 per 1,000.

Similarly the death-rates of the Mannár and Vavuniya-Vilankulam districts (46.3 and 48.5 per 1,000 respectively) were this quarter higher than in the first quarter of 1891 and 1893, but lower than in the first quarter of 1892.

The death-rate of Mullaittivu District this quarter (53.8) was equal to the average of the first quarter of the last two years.

Eastern Province.—The Batticaloa District has been healthy during the quarter, the deaths recorded being among the Tamils at the annual rate of 24.6, as against 35.1, 61.9, and 32.4 respectively in the first quarter of 1891, 1892, and 1893, and among the Mohammedans (who are usually healthier than the Tamils in this district) at the rate of 20.2, as against 25.5, 31.6, and 23.5 respectively in the first quarter of 1891, 1892, and 1893.

The Trincomalee District shows a similar improvement in the health of its population, the deaths recorded corresponding in the quarter to a rate of 32.2, which is a decline on the rates of the first quarter of 1891 (34.1), 1892 (54.5, the increase being due to the epidemic of cholera), and 1893 (39.2).

V.—Causes of Death.

The causes of death registered in the Island during the quarter are given in detail in Table XII. in the appendix. They may be summarized as follows:—

TABLE B.

District.	Cholera.	Small-pox.	Fevers.	Dysentery and Diarrhoea	Violence.				All other Causes.	Total.
					Accidents	Homicide	Suicide.	Execution.		
CEYLON ...	150	3	6,250	5,076	376	21	18	5	9,474	21,373

Badulla ...	5	—	292	532	19	—	1	1	540	1,390
Ratnapura ...	—	—	190	310	30	—	2	—	449	981
Kégalla ...	9	—	186	204	27	2	3	—	417	848

Fever and Diarrhoeal Diseases.—Of the 21,373 deaths registered in the quarter, 6,250 were reported as due to various forms of fever and 5,226 to diarrhoeal diseases, *i.e.*, fever contributed 29·2 per cent. and diarrhoeal diseases 24·4 per cent. of the total deaths from all causes. Under the head “Diarrhoeal Diseases” is included cholera, which accounted for 150 deaths, and to which cause probably many deaths, really due to acute diarrhoea, have been attributed.

Smallpox accounts for 3 deaths this quarter (1 in Colombo and 2 in Jaffna), and measles 26 (Jaffna 7, Kurunégala 6, Puttalam 4).

The other chief natural causes of death were infantile convulsions 1,563, general dropsy 569, anæmia 472, debility 607, phthisis 594, pneumonia 275, bronchitis 97, worms 698, thrush 146, doehmius duodenalis 101 (of which 27 in Kandy, 19 in Badulla, 20 in Kégalla, 16 in Kalutara, 7 in Mátalé, 6 in Colombo), puerperal convulsions 358, child-birth 134, old age 326, premature birth 119 (of which 66 in Badulla), parangi 64 (of which 38 in Kurunégala), scrofula 124 (of which 62 in Kurunégala), want of breast milk 76 (of which 24 in Kandy, 19 in Badulla, 11 in Mátalé, 9 in Nuwara Eliya), malarial cachexia 73, hydrophobia 13 (Galle 6, Colombo 2, Kurunégala 2, Negombo, Kalutara, and Anurádhapura 1 in each).

Deaths by Violence.—Of the 420 deaths attributed to these causes, 103 are attributed to fall from trees, 54 to drowning, 46 to snake-bite, 31 to burns and scalds, 26 to injury at birth, 20 to poison, 18 to gunshot wounds, 12 to fall of heavy substances, 8 to being run over by carts, 3 to being run over by trains, 3 to wasp stings, 2 to crocodile, 1 to elephant, 4 to buffaloes, 1 to cheetah, 2 to sunstroke, 1 to lightning.

Eighteen deaths were attributed to suicide, of which 9 were by hanging and 5 by drowning, and 4 otherwise. Twenty-one deaths are attributed to murder and other forms of homicide (Colombo 6, Negombo 4, Kalutara 2, and Kégalla 2, Jaffna, Kandy, Galle, Mátara, Hambantota, Kurunégala, Chilaw 1 in each).

Five men were judicially executed this quarter, 3 in Colombo, 1 in Kandy, 1 in Badulla.

VI.—Health of the Estate Population.

The total number of births reported for registration this quarter from the estates in the Central, Uva and in the Kégalla District of the Province of Sabaragamuwa was 1,333 (of which 2 Burghers, 13 Singhalese, 1,316 Tamils and 2 Moors), and the total number of deaths was 1,453 (of which 2 Burghers, 13 Singhalese, 1,434 Tamils, and 4 Moors), corresponding respectively to an annual rate of 24·9 and 27·1 per 1,000. The causes of deaths are given in detail in Table XIII., and may be summarized as follows:—

Fever	...	93	Anchyllostomiasis	...	49
Diarrhoea	...	261	Bronchitis	...	24
Dysentery	...	259	Pneumonia	...	99
Want of Breast Milk	...	28	Diseases of Parturition	...	40
Old Age	...	28	Debility	...	190
Infantile Convulsion	...	52	Other Causes	...	330

TABLE C.

Districts.	Population at the Census of 1891.	Birth-rate during the First Quarter of				Death-rate during the First Quarter of			
		1891.	1892.	1893.	1894.	1891.	1892.	1893.	1894.
Kandy ...	91,775	24·0	25·7	28·2	23·0	25·5	35·1	25·8	25·4
Mátalé ...	14,342	15·8	19·3	24·9	31·1	23·2	28·3	28·0	45·5
Nuwara Eliya ...	61,836	20·9	20·8	18·4	28·1	14·0	19·3	14·5	20·3
Badulla ...	29,967	18·8	27·4	30·2	25·0	21·2	33·8	28·4	31·0
Kégalla ...	19,121	15·4	13·0	13·2	15·5	19·7	33·7	43·5	33·9

Kandy District.—The total number of births reported for registration from the estates in the Kandy District was 532, of which 521 Tamils, 9 Singhalese, and 2 Moors; and the deaths numbered 578, of which 574 were Tamils, 2 Singhalese, and 2 Moors. The Tamil birth-rate in the quarter was equal to 23·0, as against a mean rate of 26·0 in the corresponding period of 1891–93, and the Tamil death-rate was equal to 25·4, as against a mean rate of 28·8 in the first quarter of 1891–93. As usual the most fatal cause was diarrhoeal diseases, which caused 218 deaths (107 from diarrhoea and 111 from dysentery), or nearly 38 per cent. of the total number of deaths (578). The other chief causes of death were debility 73 (including mostly deaths of infants from inability to suck milk), pneumonia 34, infantile convulsion 22, general dropsy 20, anchyllostomiasis 19, starvation and want of breast milk 15, child-birth 15, old age 13, fever 33, bronchitis 9, malarial cachexia 8, anæmia 7, and phthisis 6.

Mátalé District.—The total number of births reported for registration from the estates in the Mátalé District was 110 (all Tamils), and the deaths numbered 161 (all Tamils) and corresponded to an annual birth-rate of 31·1 (against a mean rate of 20·0 in the corresponding period of 1891–93), and a death-rate of 45·5 against a mean rate of 26·5 in the first quarter of 1891–93 respectively. Dysentery and diarrhoea caused 56 deaths, *i.e.*, 35 per cent. of the total number of deaths (161), debility caused 13 (mostly of infants from inability to suck), pneumonia 12, fever 10, malarial cachexia, general dropsy, and child-birth 7 each, anæmia 5, infantile convulsion 5, anchyllostomiasis 4, old age 4, and bronchitis 3.

Nuwara Eliya District.—The total number of births reported for registration from the estates in the Nuwara Eliya District was 432 (2 Burghers, 2 Singhalese, and 428 Tamils), and the deaths numbered 311 (310 Tamils and 1 Singhalese) and corresponded to an annual birth-rate of 28·1 (against a mean rate of 20·0 in the first quarter of 1891–93), and a death-rate of 20·3 (against a mean death-rate of 15·9 in the first quarter of 1891–93), respectively. Dysentery

and diarrhoea were fatal in 101 cases, or nearly 32 per cent. of the total deaths (311). 64 deaths are attributed to debility (mostly of infants from inability to suck), 38 to pneumonia, 21 to general dropsy, 11 to fever, 10 to child-birth, 8 to bronchitis, 7 to starvation and want of breast milk, 6 to convulsion, 4 to old age, and 4 to influenza.

Badulla District.—The total number of births reported for registration from the estates in the Badulla District was 185 (1 Sinhalese and 184 Tamils), and the deaths numbered 233 (229 Tamils, 2 Sinhalese, and 2 Moor) and corresponded to an annual birth-rate of 25.0 (against a mean rate of 25.4 in the corresponding period of 1891-93), and a death-rate of 31.0 (against a mean rate of 27.8 in the first quarter of 1891-93) respectively. Dysentery and diarrhoea were fatal in 83 cases, or nearly 36 per cent. of the total deaths (233), debility in 30 (mostly of infants from inability to suck), fever in 17, infantile convulsion in 14, pneumonia in 12, anchylostomiasis in 9, old age in 6, general dropsy in 5, phthisis in 4, and bronchitis 3.

Kégalla District.—The total number of births reported for registration from the estates in the Kégalla District was 74 (73 Tamils and 1 Sinhalese), and the deaths numbered 170 (160 Tamils, 8 Sinhalese, and 2 Burghers) and corresponded respectively to an annual birth-rate among the Tamils of 15.5 and a death-rate of 33.9 per 1,000, which is an improvement on the corresponding quarter of last year, when the birth-rate was 13.2 and the death-rate 43.5.

As usual the most fatal cause was diarrhoeal diseases, which caused 62 deaths (53 from diarrhoea and 9 from dysentery), or 36 per cent. of the total number of deaths (170). The other most fatal causes of deaths were fever 20, anchylostomiasis 17, general dropsy 12, debility 10, infantile convulsion 8, pneumonia 4, anæmia 3, malarial cachexia 3, and child-birth 3.

VII.—Health of the Town of Colombo.

The deaths registered in the town of Colombo this quarter numbered 1,099 and corresponded to an annual rate of 34.9 per 1,000, exactly the same proportion as in the immediately preceding quarter, but considerably higher than the rate for the first quarter of last year (25.0) and than for the first quarter in the period 1887-92 (22.4). This, as explained in previous reports, is mainly the result of improved registration of deaths in the town.

The total number of births registered during the quarter was 733, representing an annual rate of 23.2 per 1,000, an increase of 20 per cent. on the mean rate of the corresponding quarter of last year (19.4).

The rate of infant mortality, measured by the proportion of deaths under one year to a thousand births, was equal to 412, and was almost the highest recorded in any division in the Island—an index not so much of the inferior healthiness of the Colombo Municipality as of greater accuracy in registration.

As usual the death-rate exceeds the birth-rate, which is due mainly to the preponderance of males over females (chiefly among the Europeans and among the Indian Tamils and Mohammedans), and to the presence of hospitals and jails which add to the normal mortality of the town. The death-rate this quarter was 50 per cent. in excess of the birth-rate.

The subjoined table gives the births and deaths and their rates of each nationality living in the Colombo Municipality for the first quarter of this year and of 1893, for the immediately preceding quarter, and the average of the corresponding period in the six years 1887-92:—

TABLE D.

Nationality.	Population at the Census of 1891.	Births.				Deaths.				Birth-rate per Mille per Annum.				Death-rate per Mille per Annum.			
		Average of the First Quarters, 1887-92.	First Quarter, 1893.	Fourth Quarter, 1893.	First Quarter, 1894.	Average of the First Quarters, 1887-92.	First Quarter, 1893.	Fourth Quarter, 1893. The town death-rate this quarter (34.9) was about 10 per 1,000 higher than in the first quarter of last year (25.0).

The mortality statistics of the town are available only from 1887, when they began to be first collected separately; and till the beginning of 1893 they were marred by imperfect registration. Even in the first quarter of 1893 the new system of registration did not come fully into operation.

The quarterly rates of mortality for the years 1887 to 1892 and for the first quarter of 1893 should therefore be excluded from comparison, except for the purpose of ascertaining the extent to which registration was neglected

The number of births and deaths of the different races in the different wards in the town, their rates per 1,000, the principal zymotic causes of death, &c., are shown in the following table :—

As usual the healthiest division of the town is the Kollupitiya Ward (22.3), and the unhealthiest is the Slave Island, which shows a death-rate of 31.9. The rates of mortality given in the table for the Fort and Galle Face Ward and for the Pettah Ward are untrustworthy for purposes of comparison, as the population in those wards is composed mainly of male adults, and less stationary than in any other ward of the town.

There were no deaths in the quarter from cholera or smallpox. Dysentery and diarrhoea were fatal to 224 (as against 134 in the first quarter of last year), infantile convulsions to 153 (as against 90 in the first quarter of last year), fever to 193 (as against 133 in the first quarter of last year), malarial cachexia to 20 (28 in the first quarter of last year), bronchitis and pneumonia to 32 (29 in the first quarter of last year), child-birth to 15 (12 in the first quarter of last year), premature birth to 7 (3 in the first quarter of last year), debility to 59 (31 in the first quarter of last year), old age to 22 (17 in the first quarter of last year), anchylostomiasis to 6 (8 in the first quarter of last year). Measles was fatal to 1, whooping cough to 2, and influenza to 2.

There were 20 accidental deaths this quarter, of which 4 were attributed to drowning, 4 to injury at birth, 2 to being run over by trains, 2 to burns and scalds, 1 to fall from tree, 5 to falls other than from trees, and 2 to other causes. Three men were judicially executed this year.

Registrar-General's Office,
Colombo, August 27, 1894.

P. ARUNACHALAM,
Acting Registrar-General.
