

SUPPLEMENT

TO

The Ceylon Government Gazette.

PART I.

No. 5,320—FRIDAY, NOVEMBER 16, 1894.

VITAL STATISTICS OF CEYLON.

REPORT OF THE REGISTRAR-GENERAL FOR THE SECOND QUARTER OF 1894.

I.—Population.

THE estimated population of the Island on the last day of the quarter was 3,152,017, an increase of nearly 12,000 on the previous quarter.

Table I. in the appendix gives the area and estimated population of each Province and District of the Island in the quarter.

Arrivals and Departures of Indian Coolies.—The total number of Indian coolies who arrived in the Island this quarter (25,792) was 10,558 fewer than the average number for the second quarter of the last three years (36,350) while the departures (17,195) were less by only 1,526.

II.—Marriages.

Marriages.—The number of general marriages—i.e., marriages other than Kandyan or Mohammedan—registered in this quarter was 2,613, and of Kandyan marriages 967.

Table VII. in the appendix shows the marriages solemnized among the general community in every Province and district of the Island, the civil condition, nationality, the highest, lowest, and mean ages of the parties, the mode of solemnization, the number of bridegrooms and brides who were unable to sign their names in the register, &c.

Table VIII. gives similar information in respect of Kandyans.

First Marriages; Re-marriages.—Of the 2,613 general marriages, 2,274 (equal to 87 per cent.) were between bachelors and spinsters, 53 between bachelors and widows, 260 between widowers and spinsters, 24 between widowers and widows, 1 between a divorced man and spinster, and 1 between a divorced woman and bachelor. Of the 967 Kandyan marriages, 771 (equal to 80 per cent.) were between bachelors and spinsters, 38 between bachelors and widows, 90 between widowers and spinsters, 32 between widowers and widows, 15 between divorced men and spinsters, 3 between divorced men and widows, 11 between divorced women and bachelors, 7 between divorced women and widows.

Age at Marriage.—The mean age at marriage for the general community was 27·8 for males and 18·9 for females; and for Kandyans 27 for males and 21 for females.

Minors.—In the general community 7 per cent. of the bridegrooms and 75 per cent. of the brides were under 21, and amongst the Kandyans 13 per cent. of the bridegrooms and 66 per cent. of the brides were under 21.

Mixed Marriages.—There were 23 mixed marriages in the quarter: 4 between Europeans and Burghers, 1 between a European and a Sinhalese, 10 between Burghers and Sinhalese, 1 between a Burgher and a Tamil, 6 between Sinhalese and Tamils, 1 other mixed marriage.

Signature in Marriage Register.—Of the 5,226 persons married among the general community this quarter, 587 men and 1,921 women signed the register with marks; that is to say, 78 per cent. of the men and 26 per cent. of the women were able to write their names. Of the 1,934 persons married among the Kandyans, 332 men and 929 women signed the register with marks, i.e., 65 per cent. of the men and 4 per cent. of the women were able to write their names.

III.—Births and Deaths.

Births.—The births registered in the quarter numbered 25,864, and were in the proportion of 34·2 to 1,000 persons living, as against 30·1 the average of the corresponding period for the ten years 1884–93.

Deaths.—The deaths registered in the quarter amounted to 22,502, including 26 Europeans, 107 Burghers, 15,305 Sinhalese, 5,380 Tamils, 1,588 Moors, 57 Malays, and 39 others, and corresponded to an annual rate of 29·8 per 1,000.

The Births and Deaths and their Rates in this quarter are compared in the following statement with the results obtained in the previous quarter, the second quarter of the past year, and the average of the corresponding quarter in the ten years 1884–93:—

TABLE A.

	Births.	Deaths.	Per Mille per Annum.	
			Birth-rate.	Death-rate.
Average of ten previous second quarters in 1884-93	22,043	19,173	30·1	26·1
Second quarter of 1893	24,680	25,388	32·7	33·7
First quarter of 1894	23,567	21,373	31·5	28·6
Second quarter of 1894	25,864	22,502	34·2	29·8

It will thus be seen that the birth and the death-rates recorded this quarter were higher than the average and than the rates in the immediately preceding quarter.

Table II. in the appendix gives similar information to Table A in respect of each Province and district in the Island. Table I. gives the births and deaths according to sex, and births according to legitimacy. Table IX. the births according to nationality and sex. Table X. illegitimate births according to nationality and sex. Table XI. the deaths for each month of the quarter according to nationality for every Province and district. The causes of death for every Province and district are shown in Table XII., for the estates in the Central, Uva, Sabaragamuwa, and the Kalutara District of the Western Province in Table XIII., and for the town of Colombo (according to wards) in Table XIV. Table XV. shows the period of life at which the deaths of the various races occurred in every district.

Age at Death.—The deaths of infants under one year of age numbered 4,035, and were in the proportion of 144 deaths to 1,000 births. The rate of infant mortality varied in different districts from 343 (for Tamils) in Trincomalee, 319 (for Sinhalese) in Puttalam, 247 (for Sinhalese) in Kurunégala, 202 (for Tamils) in Mannár, to 92 in Mátara, 100 in Kalutara, 110 in Colombo, and 119 in Negombo. 34 deaths were reported to be of centenarians (19 males and 15 females).

Sex.—Of the total number of births (25,864) 13,540 were males and 12,324 were females, *i.e.*, 110 males to 100 females; of the total number of deaths (22,502), 11,487 were males and 11,015 were females. Out of an equal number living of each sex there died 921 males to 1,000 females.

IV.—State of Public Health.

The general health of the population this quarter (29·8) though better than in the corresponding quarter of last year (33·7), was worse than the average second quarter of the last ten years (26·1).

Tables III., IV., V., and VI. in the appendix show the births and deaths and the death-rates for all ages and for infants in the several districts of the Island, and in the subdivisions of those districts for this quarter, for the immediately preceding quarter, for the second quarter of last year, and the average for the corresponding period of the last three years 1891-93. The rates shown are for the Sinhalese only in the Sinhalese districts, and for the Tamils only in the Tamil districts. These separate rates furnish more trustworthy data for comparing the relative sanitary condition of those districts and divisions of the Island than if the rates included other nationalities temporarily resident in them. In the Puttalam District, where the Sinhalese and Mohammedans are found in almost equal numbers, and in the Batticaloa District, where the Tamils and Mohammedans are almost in equal numbers, the rates of the different sections of the population as well as of all races are given.

Western Province.—The Western Province, which usually maintains the first place as the healthiest Province of the Island, yields the place this quarter (22·1) to the Northern. The death-rate of the Sinhalese (who form the bulk of the population, and whose rate is a better standard than the rate for all races of the health of the Province) rose in the quarter to 22·1, an increase of 3 per 1,000 on the rate for last quarter (19·1), and 1·4 on the rate for the second quarter of 1891-93 (20·7).

The death-rate of the Colombo District, exclusive of the Municipality, increased from 18·1 (the average rate for the second quarter in 1891-93) to 20·8, the increase being confined to the divisions of Alutkuru kóralé south and Héwágam kóralé. In both these divisions the mortality was 5 per 1,000 in excess, the death-rate increasing in Alutkuru kóralé south from 13·1 to 18·4 and in Héwágam kóralé from 23·1 to 28·1, while in the other two divisions of the district, Siyané kóralé and Salpiti kóralé, the death-rates recorded were the average.

The Kalutara District was healthier this quarter (16·4) than in the last (19·3) and than in the corresponding quarter of 1891 (18·5), 1892 (17·6), and 1893 (19·8), the lowest death-rate being in the division of Pasdun kóralé, which shows a rate of 13·8 as against 20·1, the average for the corresponding quarter in 1891-93.

In the Negombo District the death-rate was, as usual in the second quarter of the year, very high (29·1), and equalled the average for the corresponding quarter of 1891-93.

Southern Province.—The Southern Province follows the Western in point of health, and shows for the Sinhalese a death-rate of 23·5, a reduction of 3 per 1,000 on the mean rate of the corresponding quarter of the last three years (26·4). The death-rate (23·8) was somewhat excessive in the Galle District, being 1·1 higher than the average (22·7), while in the other two districts the rates recorded were 5 per 1,000 below the average. Thus in Mátara District the death-rate declined from 26·7 to 20·1, the decline being greatest in Gangaboda pattuwa, which has a rate of 16·9 this quarter as against 30·3, the rate for the corresponding period in the preceding three years. In Hambantota the death-rate declined from 35·1 to 30·1, the Giruwa pattu east division showing a decline from 33·7 to 27·6, and Giruwa pattu west a decline from 34·4 to 29·1, while the rates in the other divisions of this district equalled the average.

North-Western Province.—The mortality in the Kurunégala District corresponded this quarter to an annual rate of 45·7 per 1,000, almost the same rate as the average for the corresponding period of 1891-93 (45·9). In Wanní, Hiriyala, and in We-udawili hatpattu, the death-rates recorded were higher than in the second quarter of 1891-93, while the other divisions show this quarter a comparatively low mortality.

The Chilaw District is more than twice as healthy this quarter than Kurunégala (45·7), and has a death-rate of 17·9, a great reduction on the rate of the corresponding quarter of the last three years (25·3). The southern kóralé of this district (Pitigal kóralé south), which is a most prosperous division of the Island, has this quarter a death-rate of 16·1, being about twice as healthy as Pitigal kóralé north (31·0), the other division of the district.

Central Province.—The deaths among the Sinhalese living in the Central Province were in the quarter at the annual rate of 35·1, an increase of 1·6 on the mean rate of the corresponding quarter of the last three years (33·5). In the Kandy District the Sinhalese death-rate increased to 33·9 from 31·6 (the average for the second quarter of 1891-93), the increase being most marked in Uda Dumbara, where the rate almost doubled, increasing from 25·1 to 50·4. In Yatinuwara the rate increased from 36·1 to 47·9 (the average for the second quarter in 1891-93), and in Tumpane from 45·8 to 47·2, while in the other divisions of the district the rates recorded were below the average. The lowest death-rate was in Uda Bulatgama division, which shows this quarter (18·7) even a better rate than in the corresponding quarter of 1891 (28·2), 1892 (20·3), or 1893 (22·9). The reduced mortality of this division is attributed to the prosperity introduced into it by the opening of new tea estates.

The Nuwara Eliya District also shows a higher death-rate (28·8) than usual (27·7), the increase being due to the unhealthiness of the Kotmale division of the district, where the death-rate recorded this quarter (34·6) has considerably exceeded the average (25·5), while the death-rates of the other divisions were below the average.

The death-rate of Mátalé District (43·3) equalled this quarter the average of the corresponding period of the last three years. The death-rate recorded in Mátalé north division this quarter, though an improvement (50·1) on the last (71·6), is still above the mean rate of the second quarter of 1891-93 (46·2).

Province of Sabaragamuwa.—The Province of Sabaragamuwa shows a great increase in the mortality, the deaths recorded corresponding in the quarter to an annual rate of 44·2 per 1,000, or one-third higher than the mean rate for the second quarter in 1891-93 (34·6).

The death-rate of Ratnapura District during this period was better than usual, and declined from 34·6 (the average rate for the second quarter in 1891-93) to 32·8 this quarter. The increase in the provincial mortality was due, therefore, to the unhealthiness of Kéggalla District, which had an unprecedentedly high death-rate (53·5), higher even than the rates of mortality recorded in the corresponding quarter of last year (48·0), and its immediately preceding quarter (39·0), which were regarded as exceptional rates for the district.

The Kégalla death-rate for this quarter is in fact the highest furnished by any district in the Island in the quarter. More than one-third of the total deaths resulted from fever. The Dehigampal koralé division has the highest death-rate in the district (72·3), and is followed by Kinigoda koralé, which occupies this quarter (62·3), exactly the same position as it did in the corresponding quarter of last year (63·5). Next come the Paranakuru (56·7) and the Beligal koralés (50·1), both with rates higher than in the corresponding quarter of last year (50·0 and 46·2 respectively), and then the Galboda koralé with a rate of 48·8. The lowest death-rate in the district is 38·4 in Panawal koralé, which had in the last quarter a rate of 20·0 per 1,000.

Province of Uva.—The Province of Uva, which is identical with the Badulla District, has a death-rate of 34·1, a lower rate than in the preceding quarter (36·6) and than in the corresponding quarter of 1891 (37·8), 1892 (37·3), and 1893 (36·5). This improvement is attributed to a healthy season and to an abundant food supply.

North-Central Province.—This Province (32·4), like Uva, has been healthier than in the preceding quarter (48·7) and than in the corresponding period of the past three years (47·9). In Hurulupaláta, which is the healthiest division of the district this quarter, the death-rate declined from 48·7 (the mean rate for second quarter in 1891–93) to 26·0; in Kalagam paláta from 53·3 to 36·8, in Nuwaragam paláta from 45·7 to 34·9, and in Tamankaduwa from 32·0 to 24·4.

Northern Province.—The death-rate among the Tamils in the Jaffna District this quarter (20·7), though a great improvement on the last quarter (24·4), was 2·2 higher than the mean-rate for the corresponding quarter of the last three years (18·5). This increase is due to a heavy mortality in Valikamam north, which, though usually the healthiest division of the district, fell this quarter below Valikamam east (10·1), Valikamam west (15·4), Vadamaradchi west (18·9), Jaffna (17·6), and the Islands division (20·8) in health, and shows a death-rate (21·0) about twice as high as the average for the period (11·2), due mainly to an epidemic of fever and dysentery especially among children. In the other districts of this Province the death-rates recorded were much lower than the average.

In Mannár the death-rate declined from 58·7 (the mean-rate for the second quarter in 1891–93) to 30·9 this quarter, in Mullaittivu from 48·3 to 34·4, and in Vavuniya from 41·9 to 23·1, an exceptionally low death-rate for the district.

Eastern Province.—The health of the population in the Eastern Province has been, as in the Southern, Uva, and the North-Central Provinces, better than usual, the death-rate recorded (32·9) having been 2·3 lower than the mean-rate for the second quarter of the past three years (35·2).

The Batticaloa District shows for the Tamils a death-rate (28·7) about 5 per 1,000 lower than the average (34·3), and for the Mohammedans a death-rate (25·5) 15 per 1,000 lower.

The Trincomalee District has been unhealthy during this quarter, and its death-rate increased from 39·3 to 51·2, the increase being confined to the town division, the death-rate of which rose to 72·7, a rate which is as high as in Dehigampal koralé, the unhealthiest division of the Kégalla district in this quarter.

V.—Causes of Death.

The causes of death registered in the Island during the quarter are given in detail in Table XII. in the appendix. They may be summarized as follows :—

TABLE B.

District.	Cholera.	Small-pox.	Fevers.	Dysentery and Diarrhœa.	Violence.				All other Causes.	Total.
					Accidents.	Homicide.	Suicide.	Execution.

Kégalla ...	27	—	758	375	19	1	—	—	847	2,027

Fever and Diarrhœal Diseases.—Of the 22,502 deaths registered in the quarter, 7,125 were reported as due to various forms of fever and 5,282 to diarrhœal diseases, *i.e.*, fever contributed 32 per cent. and diarrhœal diseases 23 per cent. of the total deaths from all causes. Under the head "Diarrhœal Diseases" is included cholera, which accounted for 122 deaths, and to which cause probably many deaths really due to acute diarrhœa have been attributed.

There were no deaths registered this quarter from smallpox. Measles accounted for 34 deaths, of which 8 were in Mátara, 6 in Jaffna, 4 in Kandy, and 4 in Badulla.

The other chief natural causes of death were infantile convulsions 1,616, general dropsy 553, anæmia 411, debility 562, phthisis 620, pneumonia 200, bronchitis 85, pleurisy 159, worms 783, thrush 206, doehmius duodenalis 84, of which 19 in Kandy, 32 in Kégalla, 6 in Badulla, 7 in Colombo, 10 in Kalutara, 4 in Mátalé, and 4 in Nuwara Eliya),

puerperal convulsions 384, child-birth 151, old age 272, premature birth 107 (of which 60 in Badulla), parangi 49 (of which 28 in Kurunégala), scrofula 137 (of which 58 in Kurunégala), want of breast milk 74 (of which 26 in Kandy, 19 in Badulla, 6 in Nuwara Eliya, and 5 in Mátalé), malarial cachexia 87, hydrophobia 15 (Colombo and Kurunégala 4 in each, Negombo, Kalutara, Mátalé, Nuwara Eliya, Jaffna, Mátara, and Anurádhapura 1 in each).

Deaths by Violence.—Of the 465 attributed to these causes, 109 are attributed to fall from trees, 74 to drowning, 37 to snake-bites, 29 to injury at birth, 25 to burns and scalds, 9 to gunshot wounds, 10 to fall of heavy substances, 8 to crocodiles, 7 to fall from height other than from trees, 4 to being run over by train, 3 to being run over by carts, 3 to lightning, 1 to sunstroke.

Thirty-one deaths were attributed to suicide, of which the majority (21) were by hanging, 3 by drowning, and 7 otherwise.

Twenty-nine deaths were attributed to murder and other forms of homicide (22 Sinhalese, 4 Tamils, and 3 Moors).

Four men were judicially executed this quarter, 2 in Colombo, 1 in Mannár, and 1 in Galle.

VI.—Health of the Estate Population.

The total number of births reported for registration this quarter from the estates in the Central, Uva, Sabaragamuwa, and in the Kalutara District of the Western Province was 1,628 (of which 5 were Europeans, 3 Burghers, 24 Sinhalese, 1,594 Tamils, and 4 Moors), and the total number of deaths was 1,977 (of which 2 were Europeans, 1 Burgher, 15 Sinhalese, 1,955 Tamils, 3 Moors, and 1 Malay), corresponding respectively to an annual rate of 28.3 and 27.1 per 1,000. The causes of deaths are given in detail in Table XIII., and may be summarized as follows:—

Fever	149	Anchylostomiasis	...	54
Diarrhoea	384	Bronchitis	...	19
Dysentery	443	Pneumonia	...	90
Want of Breast Milk	41	Diseases of Parturition	...	20
Old Age	47	Debility	...	256
Infantile Convulsion	80	Other Causes	...	394

TABLE C.

Districts.	Estimated Population in 1894.	Birth-rate during the Second Quarter of				Death-rate during the Second Quarter of			
		1891.	1892.	1893.	1894.	1891.	1892.	1893.	1894.
Kandy	91,775	26.8	28.9	25.8	26.9	25.0	36.2	39.8	30.2
Mátalé	14,342	22.9	18.2	26.0	31.3	20.1	21.6	38.0	28.0
Nuwara Eliya	61,836	24.1	22.1	26.9	31.5	17.8	29.2	35.2	39.4

Ratnapura	5,279	26.6	34.9	38.0	34.9	20.5	21.3	51.7	34.9
Kéggalla	21,261	12.4	18.5	12.8	16.0	18.7	19.5	39.2	49.2
Kalutara	4,304	1.3	—	1.3	9.3	1.3	1.3	10.2	40.1

Kandy District.—The total number of births reported for registration from the estates in the Kandy District was 632, of which 616 were Tamils, 13 Sinhalese, and 3 Moors; and the deaths numbered 700, of which 692 were Tamils, 5 Sinhalese, 2 Moors, and 1 European. The Tamil birth-rate in the quarter was equal to 26.9, as against a mean rate of 27.2 in the corresponding period of 1891-93, and the Tamil death-rate was equal to 30.2, as against a mean rate of 33.7 in the second quarter of 1891-93. As usual, the most fatal cause was diarrhoeal diseases, which caused 317 deaths (158 from diarrhoea and 159 from dysentery), or nearly 45 per cent. of the total number of deaths (700). The other chief causes of death were debility 69 (including mostly deaths of infants from inability to suck milk), pneumonia 31, infantile convulsion 27, general dropsy 14, anchylostomiasis 12, starvation and want of breast milk 22, child-birth 19, old age 16, fever 36, bronchitis 7, malarial cachexia 5, anæmia 4, and phthisis 5.

Mátalé District.—The total number of births reported for registration from the estates in the Mátalé District was 113 (112 were Tamils and 1 a Moor), and the deaths numbered 102 (100 were Tamils and 2 Sinhalese) and corresponded to an annual birth-rate of 31.3 (against a mean rate of 22.4 in the corresponding period of 1891-93), and a death-rate of 28.0 (against a mean rate of 22.6 in the second quarter of 1891-93) respectively. Dysentery and diarrhoea caused 39 deaths, i.e., 38 per cent. of the total number of deaths (102), debility caused 2, pneumonia 10, fever 14, malarial cachexia, general dropsy, child-birth, and old age 3 each, anæmia and anchylostomiasis 2 each.

Nuwara Eliya District.—The total number of births reported for registration from the estates in the Nuwara Eliya District was 495 (3 Europeans, 1 Burgher, 5 Sinhalese, and 486 Tamils), and the deaths numbered 611 (608 Tamils, 2 Sinhalese, and 1 Moor) and corresponded to an annual birth-rate of 31.5 (against a mean rate of 24.5 in the second quarter of 1891-93), and a death-rate of 39.4 (against a mean death-rate of 27.1 in the second quarter of 1891-93), respectively. Dysentery and diarrhoea were fatal in 252 cases, or nearly 41 per cent. of the total deaths (611). 128 deaths are attributed to debility (mostly of infants from inability to suck), 26 to fever, 24 to pneumonia, 24 to general dropsy, 21 to old age, 18 to infantile convulsion, 6 to premature birth, 6 to phthisis, 6 to bronchitis, 5 to starvation and want of breast milk.

Badulla District.—The total number of births reported for registration from the estates in the Badulla District was 240 (2 Europeans, 1 Sinhalese, and 237 Tamils), and the deaths numbered 207 (205 Tamils, 1 Sinhalese, and 1 Malay) and corresponded to an annual birth-rate of 31.7 (against a mean rate of 30.9 in the corresponding period of 1891-93), and a death-rate of 27.4 (against a mean rate of 27.5 in the second quarter of 1891-93) respectively.

Dysentery and diarrhoea were fatal in 91 cases, or nearly 44 per cent. of the total deaths (207), debility in 37 (mostly of infants from inability to suck), fever in 4, infantile convulsion in 14, pneumonia in 11, anchylostomiasis in 6, starvation and want of breast milk in 5.

Ratnapura District.—The total number of births reported for registration from the estates in the Ratnapura District was 46 (all Tamils), and the deaths numbered 48 (46 Tamils, 1 Sinhalese, and 1 European), and corresponded respectively to an annual birth-rate among the Tamils of 34.9 and a death-rate of 34.9 per 1,000, which is an increase on the corresponding quarter of 1891-93, when the birth-rate was 32.9, and the death-rate was 31.1.

As usual the most fatal cause was diarrhoeal diseases, which caused 16 deaths (12 from dysentery and 4 from diarrhoea), or 33 per cent. of the total number of deaths (48). The other most fatal causes of deaths were debility 7, starvation and want of breast milk 4, fever and general dropsy 3 each.

Kégalla District.—The total number of births reported for registration from the estates in the Kégalla District was 90 (85 Tamils, 4 Sinhalese, and 1 Burgher), and the deaths numbered 266 (261 Tamils, 4 Sinhalese, and 1 Burgher), and corresponded respectively to an annual birth-rate among the Tamils of 16.0 and a death-rate of 49.2 per 1,000, which is an increase on the corresponding quarter of 1891-93, when the birth-rate was 14.6, and the death-rate was 25.8.

The most fatal cause was diarrhoeal diseases, which caused 99 deaths (60 from diarrhoea and 39 from dysentery) or 37 per cent. of the total number of deaths (266). The other most fatal causes of deaths were fever 48, anchylostomiasis 23, infantile convulsion 15, debility 13 (mostly of infants from inability to suck milk), general dropsy 12, malarial cachexia 11, pneumonia 9, anæmia 5, and old age 4.

Kalutara District.—The total number of births reported for registration from the estates in the Kalutara District was 12 (10 Tamils, 1 Sinhalese, and 1 Burgher), and the deaths numbered 43 (all Tamils), and corresponded respectively to an annual birth-rate among the Tamils of 9.3, and a death-rate of 40.1 per 1,000.

The most fatal cause was diarrhoeal diseases, which caused 13 deaths (8 from dysentery and 5 from diarrhoea), or 30 per cent. of the total number of deaths (43). The other most fatal causes of deaths were docthmus duodenalis 8, infantile convulsion, pneumonia, and fever 3 each, malarial cachexia and anæmia 2 each.

VII.—Health of the Town of Colombo.

The deaths registered in the town of Colombo this quarter numbered 1,110, and corresponded to an annual rate of 34.8 per 1,000, almost the same proportion as in the preceding two quarters (34.9), but 4 per 1,000 lower than the rate in the corresponding quarter of last year (38.9), which was an unhealthy period.

The total number of births registered during the quarter was 771, representing an annual rate of 24.2 per 1,000, an increase of 30 per cent. on the rate of the corresponding quarter of last year (18.7).

The rate of infant mortality, measured by the proportion of deaths under one year to a thousand births, was equal to 367, and was almost the highest recorded in any division in the Island—an index not so much of the inferior healthiness of the Colombo Municipality, as of greater accuracy in registration.

As usual the death-rate exceeds the birth-rate, which is due mainly to the preponderance of males over females (chiefly among the Europeans and among the Indian Tamils and Mohammedans), and to the presence of hospitals and jails which add to the normal mortality of the town. The death-rate this quarter was 44 per cent. in excess of the birth-rate.

The subjoined table gives the births and deaths and their rates of each nationality living in the Colombo Municipality for the second quarter of this year and of 1893, for the immediately preceding quarter, and the average of the corresponding period in the six years 1887-92:—

TABLE D.

Nationality.	Population at the Census of 1891.	Births.				Deaths.				Birth-rate per Mille per Annum.				Death-rate per Mille per Annum.			
		Average of the Second Quarters, 1887-92.	Second Quarter, 1893.	First Quarter, 1894.	Second Quarter, 1894.	Average of the Second Quarters, 1887-92.	Second Quarter, 1893.	First Quarter, 1894. The birth and the death rates given in the above table for the Europeans, Malays, and the classes designated "Others" are not accurate for purposes of comparison, as the populations on which rates are calculated are too small to yield trustworthy rates. Excluding the rates for these nationalities the lowest death-rate in the town this quarter was among the Burghers (27.8), next come the Sinhalese (32.2), and then the Moors (36.1) and the Tamils (43.2).

The number of births and deaths of the different races in the different wards in the town, their rates per 1,000, the principal zymotic causes of death, &c., are shown in the following table :—

TABLE E.

There were no deaths in the quarter from cholera or smallpox. Dysentery and diarrhoea were fatal to 206 (as against 267 in the second quarter of last year), infantile convulsion to 127 (as against 140 in the second quarter of last year), fever to 227 (as against 233 in the second quarter of last year), malarial cachexia to 34 (17 in the second quarter of last year), bronchitis and pneumonia to 34 (63 in the second quarter of last year), child-birth to 6 (18 in the second quarter of last year), premature birth to 3 (3 in the second quarter of last year), debility to 58 (41 in the second quarter of last year), old age to 29 (23 in the second quarter of last year), anchylostomiasis to 7 (10 in the second quarter of last year). Measles was fatal to 3, whooping cough to 2, and influenza to 1.

There were 31 accidental deaths this quarter, of which 5 were attributed to drowning, 14 to injury at birth, 1 to being run over by cart, 4 to burns and scalds, 2 to fall from tree, 1 to poison, 1 to sunstroke, and 3 to other causes. Two men were judicially executed this quarter.

Registrar-General's Office,
Colombo, October 27, 1894.

P. ARUNACHALAM,
Acting Registrar-General.
