## GAYATHRI PEETAM

A yogi was living in Madras for a long time. Most of the residents knew him as an ordinary man and pundit. Only a few knew him secretly about his yogic attainments and were learning yoga from him and were benefitted. One day some people who had known him to be an ordinary man saw few sadhus sitting round him and discussing something and were seen paying their respects to him. When such sadhus were asked in secrecy they revealed the greatness of the yogi. Out of compulsion he agreed to our request to start a spiritual Sabha at Madras.

The secrets of various religious tenets were made known to them. The knowledgeable people understood the "Tatvas" of sastras supported by scientific explanations. The secrets of yoga was made known to such yoga students. Many were involved in actual experiences and were trained in Divine curing, yoga curing and mental curing and a lot of people were cured of their longstanding ailments.

Thus quite a number of people from all over India were benefitted. People from abroad also came to know of him and desired that they should also be trained in yoga and allied science. They were trained by sending lessons in English. Some who wanted their doubts to be cleared came from abroad and had their doubts cleared. Out of reverence for Swamiji they have also earmarked some properties for him abroad.

Even today work started by him is being carried through his disciples. In Sri Lanka a branch has been started and his divine service is being carried on by his grace.

## INTRODUCTION

All devotees who follow the path of God according to their own faith, appear to find fault with faith than their own. They keep saying that if one were to follow their faith only one will be able to attain salvation. What others are following appears to be not the correct one. The faith adhered to by them is the best and the God he is following is the most powerful one. Thus they keep finding fault with other faiths. Looking at such kind of attitude adopted by the followers of each faith raises a doubt in our minds. But for a man who knows that there must be strong faith in God and keeps meditating on him need not bother about what others say. Why should he be bothered?

Many have mocked at the various deities kept at various Hindu temples whether the idols are made of stone, mud or metal. Their main aim is to find fault and indulge in unwanted mockery about the various Gods in Hindu temples. Before finding fault and indulging in mockery of idols kept in Hindu temples it is very doubtful whether they have analysed the various aspects of the philosophy of Hindus that lie behind the installation of the deities and their meaning of various rituals behind this deity worship? One of the main reason behind this state of affairs is the fact that Hindus who perform deity worship do not know fully about the philosophy of deity worship. Therefore, they are unable to give a fitting reply to those who mock at their deities. Those who have been immensely benefitted by the deity worship have to pass on their experience to others. They will not only get convinced but also convince others by giving a fitting reply. They will only hold the view that this kind of deity worshippers are trying to justify their views and hence they will consider their following as untrue.

This publication is brought with the sole aim of making the people to understand idol worship by explaining the deep meaning behind it to enable them to understand the philosophy behind idol

worship of Hindus which is being followed from time immemorial. This will enable to give a fitting reply to people who mock at this kind of worship. Once they know the truth they will realise the truth and derive immense benefit by following idol worship.

For a modern man the ancient philosophical works do not give the required mental satisfaction without knowing the scientific truths by delving deep into it. They wish to know the spiritual explanations in a scientific way. Looking at various spiritual sayings superficially they rush to the conclusion that spiritual sayings are false because they do not conform to the scientific explanations. They further opine that all spiritual sayings are based on foolish faiths. To those who still strongly believe that the modern scientific explanations alone are the truth behind spirituality this book is written to explain that whatever is contained in spirituality are truth and nothing but truth. We do not want to claim the veracity of the above statement but let the staunch devotees of idol worship determine the veracity of the above assertions of ours by following the path of idol worship.

It is the desire of the learned people all over the world that they should live like brothers shedding all their differences and hatred towards one another. But the pity is that people do have differences and hatred towards others in the name of religion. If all were to understand that there is only one caste and one God there will be no room for their differences that exists now. We hope that this work will be useful by ironing out the differences.

If the Hindus can know that what they are following as laid down by their preceptors they will be benefitted by idol worship and they will not be finding fault in idol worship. We would be serving the great cause if we can make these kinds of disbelievers of idol worship to believe that there is truth in idol worship and that it will confer enormous benefits to them.

**Let God's Grace Be Showered On These People**

**Kanniah Yogi**

# IDOL WORSHIP

## I. INTRODUCTION

We give the explanation for the practice of worshipping idols made out of clay, stone, or combination of metals. People have been saying that our preceptors have been foolish to believe that the various forms of idols made out of various materials as God. To dispel the wrong impression of such people who have been mocking at idol worshippers we offer a scientific explanation. Those who proclaim as scientists do not understand the scientific truths of the philosophy of spiritual meanings. It is a matter to be pitied.

From the time of ancient people idol worship has been in vogue in all religions in some form or the other. Those who have been finding fault and making fun of idol worship have been following idol worship without the knowledge of idol worship. Among the Christians, catholic sect openly follow the worship of idols. The Protestants who say that there is no form are following worship of form in observing their faith. The Mohamedans who make fun of idol worship do pay their respects to "Khabha". Why? Buddhists and Jains worship the idols of Buddha and Theerthasasthars respectively. Parsis worship fire. Are these not worship of form in one way or the other?

We wish to impress on those who make fun of idol worship. No one can perform God's worship without form in the beginning. It is through the worship of the form or idol the worship of God is commenced at the outset. Those who read this may at the first instance think differently about this aspect expressed by us; but we again affirm this is the truth pure and simple.

Those who perform idol worship say that God is formless; but it is through idol worship one can attain the formless Supreme Being.

There are innumerable places of God built in the entire world by various religious followers. To worship formless God why so many

mosques and churches? We can worship at any place at any time the formless being. The Hindu temples which are standing monuments of sculptures and happen to be one of the awe inspiring constructions of the world should have been built by people who do not know anything? The builders of the temples were realised souls and who knew all about God. Further, these great souls have been born in Hindu religion and their numbers are countless. Nowhere do we find a parallel to this fact has been accepted by people of all sects all over the world. In which religion yogis were born? Siddhars and Munis were born in which religion? The first book in the social order of mankind i.e., Rig vedas was first unraveled by whom? Who found yoga, manthra, yantra japa and hundreds of yoga systems? Who was responsible for bringing out upanishads which has been acclaimed as Bramha Vidya by Germans as the highest of Tatva? It is not to be found originally anywhere in the world except in India. Such a great tradition of spirituality was given to the world by Hindus and it is these people who gave to the world the practice of such idol worship, for the good of the people living in the world. Instead of knowing the deep philosophy and meaning behind such idol worship, people make fun of it. What can we say about such ignorant people?

We wish to pose a question to the devotees of idol worship who have great and staunch faith in God, What is meant by God? Whom do you worship? Why? To obtain what benefits are you adopting idol worship? We are going to say whatever reply you intend to give is wrong and it cannot be acceptable to the minds of researchers. If one were to answer that God is that or the other we are going to say that whatever reply you intend to give is wrong and it cannot be acceptable to the minds of researchers. If one were to answer that God is that or the other we are going to ask you as to how you know it? Have you seen Him? If one were to say that he has seen answer that God he has to accept idol worship, because whatever one sees through the eye has a form. One cannot see the formless thing and the theory that God is without form will not hold water. If one were to say that he has not seen God but from what has been stated in our religious scriptures we believe that such a God exists. This saying will only lead on to the conclusion

that it is a blind foolish faith and it will not be acceptable to adopting ways and means of idol worship. Why then the Hindus adopt idol worship when they affirm without doubt that God is formless? We will, therefore, try to explain how they see the formless God through God in idol form. Dear people of the world, follow the path of true knowledge and uplift yourselves in the spiritual realm.

The entire world is subjected to creation, sustenance and destruction at the same time. This is continuous on going process of evolution which the philosophers say that it is the play of God. "Janmathyasya Yatha - from whom the entire universe is created and gets indrawn in Him ultimately is Bramham. Just as all letters commence with the word "AH" the entire universe springs from the fountainhead of God. He is called "Adhi Bhaghavan". The answer of Hindu religion to the question who is God? The answer lies in the fact that who is source for all actions like oil in a till seed. He is pervasive everywhere. He can be found in a twig and a pillar. Isavasya Upanishad says "Isa Vasyamidam Sarvam Yath Kincha Jagathjam Jagath". Even in the smallest atom He pervades. Therefore, Hindu philosophical works say that He is formless, He is Power and He is everything in both animate and inanimate things.

## 2. EVOLUTION

First of all let us analyse scientifically whether the views held by the Hindus are true. The things seen through telescope, microscope and through the naked eye are physical matter. There are things existing in solid, liquid and gaseous, atomic and electronic state. To begin with let us know the facts about solids. Sun, Moon Mountain, Stone, Sand and other matter and metals are not permanent things as seen by the eye. They keep on changing. All objects are in fact Radio Active substances that keep on changing and radiating. The fact has been established scientifically also. Some radiate at a slow rate and get destroyed after a longtime. Some radiate at a rapid rate and spend themselves out at a very short time. Uranium, radium etc., radiate at a very rapid rate and spend themselves quickly. Diamond and metals are those that radiate at

a very slow rate and lasts for a long time. At one end we find things radiating at different rate and getting destroyed and at the same time we find new things being formed by cohesion of atoms. In the universe the creative and destructive things keep happening continuously. The interregnum between creation and destruction is the static nature of things as we see. What has been said of solids are equally applicable to other states of matter like liquid, gaseous, atomic and electronic things. At one end old set of things keep perishing or disintegrating and at another end new set of things keep creating and come into existence. Human eye can see only solid and liquid things. With scientific instruments one may be able to see gaseous things, atomic and electronic things. By the cohesion of unseen atoms only solids, liquids and other things which can be seen by the human eye, are made.

We saw that there are various stages of matter. We should not rush to the conclusion that these individual matter formed out of cohesion come into being and get destroyed. A thing can change its state Viz., water becoming ice or when heated it will become steam. Steam can further disintegrate into atoms and may become atoms with life - force in it. Likewise when a solid matter is formed the reverse process takes place. Hindus of ancient times knew this fact long ago and they called it as "Theory Of Evolution". The fact that is unravelled here is that what we see physically finds its origin in things that are unseen by the naked eye.

The physical things we see find their root of origin from power as per the findings of modern science. The basis of this universe is not electronic energy. They also disintegrate and become energy. The conclusion is by hardening of atoms, matter is created and by disintegrating of atoms power is released. Sometimes when atoms harden also energy is created. The real truth is ENERGY. The world we see is an illusion. If a matter radiates at speed greater than that of speed of light the matter will cease to exist but only energy will be present. When the speed of energy radiation becomes lesser and lesser we see so many stages of matter. Hindus who knew the Supreme Being in the form of "Parasakthi" i.e., great energy should have known all these facts. The Sakthi cult's philosophy is contained in energy and its explicit functions.

Now let us know another great truth. Man cannot see with physical eyes the subtler objects. Similarly the mind cannot think of subtler objects. What the man thinks about are those that he has experienced through the five senses viz., sound, touch, vision taste, and smell. Whatever man makes as new are not really new but a mixture of things already known to him and it is presented in a transformed state. Whatever the man dreams are those that he has experienced during his waking state. However, in the dream state he sees them in a disjointed or incogent way. Whatever man has not experienced through his senses he cannot dream. Man would have seen a bird flying and a tiger walking. In the dream state he cannot see them if he had not seen them in the waking state. Man's inventive power knowledge, gathering in a society are all what he has already seen. He merely adds them together or discards some of them. Man can see physical matter, hear sound and can come to know many physical aspects through his five senses. There are many sounds in space called 'The Music of The Spheres'. These sound waves do strike him but he cannot receive them. Similarly in respect of other senses like touch, taste, smell, heat and cold that cannot be perceived by man do exist in space. His perception is limited to a particular vibration of physical things only.

For the functioning of man's mind thought waves are mainly responsible. These thought waves are capable of making a man understand only in a limited spheres. Now we can say with firm conviction that man's mind can think of physical aspect only.

Oh! Man! Are you going to think of God who is a subtler being? My Dear Man it cannot happen! Since the mind can only think of physical thing. It cannot think of subtler energy which is God.

### 3. ENERGIES

In the universe there are two kinds of energies viz, (a) Mechanical (b) Conscious. Although the mechanical energies can perform great voluminous and very hard jobs there is no consciousness in them. On the other hand conscious energies have knowledge. Any kind of huge mechanical energies can be controlled by conscious energies.

Train, motor vehicles and other electrical appliances are actuated by mechanical energies. Once they are activated they blindly function till the energies last. If it were to encounter any obstacle in its functioning it will break down or meet with an accident and disintegrate.

A motor car proceeding on the road if it were to come across a big stone it will dash against it and will stop or capsize unless it is guided by a conscious being. All mechanical things function without consciousness.

If an ant proceeding straight meets with an obstacle it will try to go left or right or surmount it or change its path. This is consciousness. The energy that enables the ant to surmount or bypass its obstacle is called conscious force or soul force. All living things happen to be conscious force.

In the last chapter we saw that all things in the universe are product of energies hardening. We also saw energy is evolving in any state of matter at all times. Now we should know whether to form matter originally and to disintegrate it finally, it is mechanical or conscious energy? Einstein who found the theory of relativity has come to the conclusion at the end of his research that all energies functioning at the root is through the conscious energy in man or mental energy. Just like a man preparing edibles for his taste when he wants to have it, the entire matter of the universe is created and destroyed without setting a time frame for their origin and disintegration. When we see the disintegration of uranium we cannot with certainty say that this kind of atom will disintegrate in a particular manner. It disintegrates in a topsyturvy manner. As long as man activates his wish in a certain way we are at a loss to know what he will do next. Similarly the electronic atoms gathering and forming what kind of matter cannot be determined by us. Therefore, the root energy's ways of functioning can only be what the religious leaders call as God and we have to believe it.

What the scientists have said now has been said by our preceptors thousands of years ago. They have said that God is the sole cause of the

universe. His transformations are the Lila Vibhuthies of this universe's matter. The Sakya philosophy which says that the root of the entire universe is the primordial matter and vishitathwaitha and other religions do not dispute the fact that the primordial energy is that of God. Can we now come to the conclusion that formless god's energies are forms and they are created by God's power.

The power that activates the mechanical gadget must be present in it. Like the electrical energy in electrical engines or diesel in diesel engines, the power that drives a motor car must be in the motor spirit. The mechanical contrivance and the energy that activates it, cannot be in separate places. Radar and wireless sets have contacts through wireless magnetic waves that are broadcast in the atmosphere at a particular frequency and the same is received in an instrument that can receive these frequencies. Although God is transformed in various energies and forms it is He who creates the primordial matter and destroys them. One has to accept the all pervasive nature of God. There is power in an atom so there must be atomic energy in all things that are made up of atoms. But this energy may be potent. Today man is able to split atoms and produce energy. If that be the case the energy must be in the atoms. We, therefore, are led to the conclusion that in all things God's energy exists but in a latent state. If we have an instrument to bring out the latent power of God we can bring it out.

We ask those people who make fun of idol worship to note how far the science affirms the worship of the form i.e., idol. Just like there are means to bring out the power in atoms there are means to bring out the latent God's power in stone, sand and other inanimate matters. Now do you understand that idol worship is nothing but the worship of God? Let us proceed further.

#### 4. EVOLUTION OF ENERGY

We will now analyse the fact that how the mechanical energy can change into conscious energy and vice versa. How mechanical energies can change from one state to another? All of us know that electrical energy is there. But has any one seen it? Do not be taken aback. Although

there is electricity in the house we do not see it in its original form. We feel it when it makes an electric bulb glow or heats up an electric stove or through the electric fan when it rotates. Thus we come to know of the existence of electrical energy when it gives light through an electric bulb and feel the heat in the electric stove etc.

Electrical energy gets transformed as light, heat and mechanical energy. When rotating an electric fan electrical energy is transformed as a mechanical energy. In the radio station the sound waves are super imposed by electro-magnetic waves. We receive such waves in our radio and television sets which converts these electro-magnetic waves as video and audio impulses and we hear them as sound and see pictures in our radio and television sets. From this we understand that one energy can be made to function as another energy.

The various matters change into various energies. For example various oils burn to give light. Motor spirit changes as power to drive a motor car. Prism converges the rays of sun and produces fire. Likewise we can quote any number of instances.

In man's body the Pranic force is acting according to its desire. Heart, lungs, blood circulation and secretion in the liver keep happening involuntarily. Sometimes man's emotion produce changes in the functioning of organs in the body of man. A man gripped by anger is subjected to increased blood flow and heart beat etc. Similarly when a man is worried or over anxious, changes in his system takes place. Many fail to take note of these changes.

A man with good health, appetite and digestive power suddenly loses his health when he is confronted with worries. Day by day there is a decline in his health although he takes his normal diet. On the contrary a man who does not have enough food to eat is quiet healthy. The reason is that he is always cheerful and as a result the mind's happy state keeps his body healthy.

By eating good food alone all the seven elements required for the body does not accrue. The mind also plays an important part in it. This has been the view of the spirituals. Therefore they classified food as Rajasic and Tamasic. The one who takes satvic food creates good thoughts in him. One who partakes Rajasic food thinks bad things only. One who eats Tamasic food is incapable of thinking rightly. Fruits milk, ghee and curd are classified as Satvic food and if such a man attempts to compose a poem he will succeed easily. One eats non-vegetarian food attempts to compose poems he will not easily succeed. The reason behind this is that the food one eats affects his mind directly. The food that we take in changes into subtler aspect as "Rajas" and the end result is that it affects the nature of mind's functioning. Now we know that physical matter i.e., food changes into conscious energy.

Dear Man! Can you now infer that God's power can be created in stone, sand and metals? They become the store house of God's power. Let us proceed further.

### 5. SUBTLER ASPECT IN MATTER.

Physical matter can change into subtler matter and vice versa. This fact we saw in the last chapter. Now let us see how through the physical matter, the subtler energies express themselves. Sometimes the physical things appear as though no changes of subtler nature has taken place and yet in physical things subtler energies can express themselves. In big cities drinking water is supplied through iron pipes. Through copper or aluminium wire electricity is carried. The electricity which reaches the electric bulb heats up the tungsten wire and it is changed into light. In chemical laboratories the gaseous matter is filled in glass tubes and experiments are carried out. In aerate water companies carbon dioxide is filled in iron cylinders. Thus according to the material filled in or conveyed there is subtle change in the containers.

Through space radio waves are broadcast throughout the space of the world. The Pranic force which is soul force passes through the physical nerves of beings throughout the body. In mesmerism, hypnotism the subtler human magnetism is passed through the nerves to the other

person's body. Those who are well versed in manthras are able to change the sick magnetism of a sick person by passing curative magnetism in lemon, vibhuthi, and kumkumam and are able to cure the ailing persons by giving those lemons, vibhuthi etc. There are students in Madras and in our Peetam in Sri Lanka who have cured many sick persons of their family and friends. In Gold, silver and copper plates yantras are written and divine force is induced in them to cure various ailments. This is also the experience of our Gayathri Peetam.

Telepathy, thought reading and other subtler energies function have been accepted by today's scientists after conducting necessary experiments by them. The subtler mind force are pervasive throughout the space. In exercises like "Navasyam", "Janavasyam", "Rajavasyam" etc., a man's mental power is made to pervade in space and made to enter the minds of several people's mind which are receptive to receive them. This exercise is adopted in foreign countries by many people under the name "Thought Influence".

There is no physical matter in the universe which has not been pervaded by subtler forces. In stone, sand and metals the subtler force is fully pervaded. Like magnetism existing in iron some form of magnetic force is present in all things. The strength of magnetic force varies according to the strength of magnetic field. Consequently it attracts or repulses things that come within the magnetic field of each object. The magnetism around a human being is called human magnetism.

It is through this magnetic field, subtler energies enter inside the objects or go out of the objects. We can change the quality of this magnetic field by chemical means or other means. By passing human magnetism we can change the magnetism present in divine prasadam.

Hindus had known this fact some thousands of years ago. By this they made the divine force to get charged in stone, sand and metals and made them to express the divine force for the benefit of the people who followed the idol worship. Therefore, stone, sand and metals which are physical things absorbed the divine force and through human magnetism they entered the humans and conferred all good benefits. This fact can be now accepted by any reasonable man.

## 6. WHY FORM?

For worship of god why do we have idols? The fact is that man's mind cannot think anything which has no form. Man will not develop affinity towards anything which he does not see. When one cannot firmly think or visualise any object he cannot also derive any benefit from it. All subtler energies enter through the mind of man and begins to act. All karmas, effects of planets act through the mind whether it confers good or bad effects. Let us assume that one has to get involved in an accident. How does it make a man to get involved in an accident? At a particular time in that man's mind a thought will arise that he should go in a particular road. He thinks that it is his thought and begins to act. At the same time thought arises in the mind of a vehicle driver that he should drive down the same road. The two meet and the accident takes place. If a man has to get rich according to his karma, thought flashes in his mind to act in a particular way and he acts accordingly and gets the unexpected wealth.

One comes to know his existence in the body through his mind only (COGITO ERGO SUM). The word man was derived from the word mind. The words "MAN" "MONAD" "MANES" all connote man which contains in itself mind of man. There is no man without mind. Dreaded diseases arise from the mind and enters into the body of man according to the opinion of Dr. Samuel Haniman.

If subtler energies have to enter in a man his mind should first get in touch with them. But mind cannot think of subtler energies. That being the case how these subtler energies can enter in the mind of man? It is here lies the secret of connection between the physical and subtler things.

Each quality and energy exist to function in the physical and subtler matter. There is no energy in the universe which exists without functioning in the matter whether it is physical or subtler. Qualities are also like that. Good quality is one aspect. This aspect does not exist all by itself. It co - exists in a man or animal or anything. Electrical energy is in space or in electrical appliances or electric bulb. Electricity does

not exist separately. Similarly God's power exists in this universe in the root cause of the matter or its transformations like Chetana, Achetana, Moving and Static things. This is described as Sri Narayana reclining on his snake bed in the milky ocean in the scriptures, Bramha in Lotus, Siva in Kailasa and Supreme Being in "Paramapada" or the seventh strata of space. All the above objects mentioned are physical things in which subtler force remains pervaded. When we use the word physical we mean the objects we see as well as those in a state of atom, electronic and space which are suitable to the subtler things.

What do we mean when we say that a man thinks about electricity? Does he really think about electricity? It is not possible. He can only think of an object that is activated by electricity. When a person thinks about beautiful things he thinks about beauty. When one thinks about peace, he thinks about an object which is peaceful like a calm cow.

One who thinks about electricity knows the full aspects of electricity. When a man thinks about beauty he knows all the aspects of beauty and its uses. When one thinks about the pervasive Godly power in an object he knows about God's aspects. Man who has analysed atomic energy, electrical energy and magnetic energy and has invented new things have known the physical aspect of the functioning of these energies and have invented new things.

If a man were to say that he does not think of God with form, he cannot think of God at all. Those who do not follow idol worship or God in a form do not follow God at all. If one were to accept God as anything in form he has to do it only through form.

## 7. GRACE AND FORM.

In the previous chapter we saw that if we think how the energy functions through the objects and the secrets of philosophy behind its functioning is known. We will proceed further and come to know of a greater and more valuable truth in this chapter. If one wants to develop an aspect in him or if one desires to make a particular energy act on him,

if he were to clearly and staunchly concentrate on the object in his mind he will know the latent energy in that object and its qualities. This fact has been known to our yogis of ancient times which is now confirmed by modern Mental Sciences.

If one wants to be happy always he has to concentrate on happiness. But he cannot think of happiness aloof from other things. Therefore, those who wish to live happily should through a form alone can concentrate on happiness and without doubt his life will be happy. Similarly if a man were to concentrate with firm faith on a thing he will be able to feel power in that object. If a man concentrates on an elephant he will become strong like an elephant. By concentrating on a poisonous snake one will generate poison in him. By meditating on valour of a lion he will acquire the valour of a lion. By meditating on peaceful aspects one will get peace. Gita says "Yath Bhavam Tat Bhavathi". You will become as you feel about a thing. The tamil proverb "Manam Pol Mangalyam" drives home this aspect only.

If a man steps on a rope and thinks that he has stepped on a poisonous snake and that it had bitten him he will develop all symptoms of poison in his body as though a snake has bit him. A man who believes that he has consumed poison will start developing all kinds of symptoms of poison in his body as though he has consumed poison. A man suffering from a very chronic ailment is made to think by some means that his ailment has been cured he will really get cured. This has been proved by modern psychologists after extensive research by them.

One who can successfully drive away all his difficulties can enjoy happiness. He can dispel his ignorance and become enlightened. If a man believes firmly that he can cross the ocean of "Samsara" with God's Grace he will cross it without doubt. He will surmount all obstacles in "Samsara" and will enjoy bliss. How is he able to accomplish this? How can he think of God without any form? He firmly believes that God will shower His Grace in this particular form only and he begins to feel Him and concentrate on Him in that form. According to what we have already explained above the state of feeling enables him to achieve his objective. God's power is all pervasive which enters through his mind and fulfils

his desires. What is in this which is not acceptable to reason? "Yo Yatha Mam Prpathyanthe Than Thathaiva Bajamyaham" - "Whosoever follows me in whichever form I am bestowing my Grace through that form," says Gita.

One who desires to obtain the Grace of God cannot think of subtler God. Without thinking about Him one cannot get His Grace. Since God is everywhere in every thing one has to think of some form of God and firmly believe that He will bestow His Grace and keep on concentrating in this manner single - pointedly the God in that form who will bestow His Grace. This is the greatest secret about idol worship.

### **8. THE TRADITION OF MANY FORMS OF IDOL.**

God is one and to follow Him is it not enough if we have one form? Why so many forms with organs and without organs? We give the answers to these questions below:

Water has no taste and is in a chill state. But we drink it in many forms to quench our thirst i.e., ice water and other cold forms. The same water is used to drive a steam engine by converting into steam. Thus it is changed into various states and put to various uses.

Similarly electricity is one but when utilising it we make various electrical appliances work to suit our needs Viz., fan, motor, stove, grinding machine and iron. Is it befitting for a reasonable man to ask electricity is one and, therefore, is not enough that we have only one appliance to make use of it?

God is one, God's power is one and from Him who has no Gunas so many varieties of things are found in this universe with various qualities. We get from carbon atoms various things like graphite, coal, charcoal and other carbon items. Similarly God's power manifested itself as various innumerable energies in the universe.

Although the matter is the same, energy is one we utilise it according to its qualities. We cannot get the full use of a thing in an

untransformed state like the use of it we get from the transformed state of the same object. We cannot get chillness of water in its ordinary state. We have to make it undergo a change by chilling it. We change the electrical energy by feeding into an electric bulb and get light. Thus we have to change the original state of a thing sometimes to get the desired effect.

God is the resting place for all auspicious qualities (the kalyana gunas) and according to each one's way of thinking the form most appealing to him is selected and God's energy is expressed outwardly and confers all beneficial effects. If one wants to get rid of his sorrows he should know by following which form he should make the God's energy express and try to adopt that method. Like passing electricity through wires and making a fan work.

In the universe each object is capable of expressing more of God's energy. Mountains express the high state of God's energy. Sun expresses the heat energy of God. Moon expresses the cool aspect of God's energy. In the wind its force and in knowledgeable people in the form of knowledge. In one full chapter of Gita God's aspect or vibhuthies are fully explained.

We already explained that God is the root origin of energy in the universe. His transformation in various ways we call them as devas, devies etc. Devas are those who express more of one aspect of God. Each devata is capable of accomplishing different jobs. If we understand the different transformation of energy of God we will know the secret about God. One who desires wealth should follow the devata known as "Thirumagal", because she is the transformation of God's wealth. One should pray to "Kalaimagal" to acquire knowledge. One who wishes to conquer death should pray to "Mruthyunja". One who desires to be cured of his ailments should pray to "Roganasini". Those who wish to get married should pray to "SwayamVarakala Devi". Thus the following of various devas and devies are related to knowledge about their way of functioning and expressing God's energies.

Now you would have understood that by following different form of idol worship we invoke the power of the Supreme Being in its various aspects and get the Grace conferred through the channel of various devas.

### **9. TRUTH ABOUT FORM.**

To those who question why some deities have two hands, some deities four hands, for some several hands etc., Likewise for some deities only one face, for some three faces, for some six faces, different deities have different ornaments and different weapons in their hands. For Linga there appears to be no shape at all. Do you not think that following such deities is blind, foolish faith? We give below the answers to these questions:

The various forms of deities have been called out according to the manner in which God's subtler energy acts on the physical matter. The particular shape, particular organs, particular weapons, particular ornaments for each and every deity expresses the way the subtler forces act on the physical things. These details have been kept as closely guarded secrets by our yogis from time immemorial. The reason for this is that the present day man cannot understand these secrets according to his reasoning. In case they try to understand instead of treading the path of God realisation they may use it for getting worldly things or misuse them. We will illustrate by a few instances that there is truth in those divine idol forms.

In man's body a pair of hands and legs, two eyes, one heart and two lungs are there. Why? For birds only two legs are there. Why? For some animals a tail is there. Why? Has any one thought about this? Why the shape of hands and legs should be as they appear to us? Why the heart is in that shape not round? How does the heart function? What does the pair of hands and legs do? For performing a particular job particular shape should only exist and the reason behind it is known to spiritualists only.

An electric fan revolves due to electricity. If that be the case electricity could be straight away fed to the fan without inducing the coil

to create a magnetic field and make the fan to rotate. Likewise the wireless waves can be sent into the atmosphere and there will be no need to have transistors, diodes etc., to make the radio function. The subtler force to act through the physical matter, certain arrangements should be there in it to receive the subtler energies and convert them into mechanical, kinetic or electrical or atomic energy. There must be also devices to segregate the subtler energy and receive only the required subtler energy in physical form.

All things evolving in the universe make use of subtler energy only. The bodily organs like eyes, ears, mind etc., absorb the subtler energies and are able to perceive through eyes, ears, nose tongue and skin etc., The Pranic energy is taken in by the lungs. They then distribute it to the entire body. The legs absorb the energy and they are able to walk. The stomach is formed in such a way that it is able to effect digestion of food by mixing it with the digestive juices by regular contraction and expansion of the stomach.

The divine power to enable one to move about are absorbed by the respective organs viz., legs, hands, eyes, and ears. They also express through the various organs. Based on this the functioning of the Supreme Being in the physical form the shape of the hands, legs, eyes, and other organs have been shaped. Since all physical organs created in man are to absorb and express divine energies, they are given shape accordingly.

In divine form the hands absorb energies and extend Grace. Divine form in various heads express different spheres of knowledge. The three heads indicate the power of God to create, sustain and destroy and express knowledge outwardly. Five heads indicate apart from the three acts mentioned above the power to shower Grace and protect a man. The philosophic knowledge is expressed through the five heads six heads again express philosophic knowledge and twelve hands express twelve kinds of absorbing God's energies.

The drum in the hands of Shiva indicates the splitting of atoms from its cohesive state and conveys the power of destruction. The conch in the hands of Sri Narayana indicates the power of cohesion of atoms. The spear in the hands of Sri Muruga indicates the power of splitting things and releasing energies from them. Indra's Vajrayudha indicates disintegration of energies.

The ornaments worn by the deities express the joy of all the living beings derive in this physical world. Sri Narayana's Kausthubhamani indicates all Bhogas (enjoyments) and wealth attained by human through the divine power acting on physical matter. Lakshmi's pearl garland indicates the rare wealth that is accrued to the human. Saraswathi's Veena symbolises the various arts in the physical world.

The vehicles of divine beings express the particular way the divine force has to be channelised physically and the practice that are to be adopted for expressing it. Narayana's vehicle 'Garuda' symbolises how the fleeting mind has to be controlled. The bandicoot which is Ganesa's vehicle symbolically represents how to control the mind straying in bad ways. Bramha's Hamsa symbolically shows how to discriminate between the good and bad through common sense. It creates a sense of detachment towards wordly things in a being.

God's power is innumerable. One has to live happily by enjoying the world and higher planes. One has to get freed from ignorance and get pure knowledge. In order to explicitly make the divine energy function, man has to arrange for physical form of God and through it the divine energy has to be expressed and made to be beneficial to him praying for divine Grace.

## 10. FORMLESS IN FORM

How can we believe that out of idols made of stone, sand and metals, divine energy expresses itself? That too in this materialistic world. How can we believe that through the organs of the idols the energy expresses itself? We give below the answers to these questions.

Those who say out of sheer vexation that they are not able to see God are saying that they are unable to see Him through the naked eye. Can we see electricity through naked eyes? Has anybody seen mind in ones body? (We do not mean brain) Has anyone seen knowledge? The eye is incapable of seeing subtler things and hence cannot see power which is subtler energy. Having accepted God as power it is foolish to say that one is unable to see Him. We know electrical energy is there by seeing the electrical appliances working. We know that magnetic energy is present when we see the iron particles being attracted by it. We know that wireless waves are present when we switch on the radio. Thus we feel the existence of energy from the functioning of the implements driven by them. We cannot see them through our eyes and attempting to see them is nothing but a sort of a foolish attempt.

The divine energy expressing through stone, sand, and metals can be known only from those who have been benefitted by it. If a man suffering from incurable disease were to place a fruit in front of an idol and pray and get cured after eating it, we know that God's energy has entered through the fruit and has cured him. If a man suffering multi various difficulties were to stand before the idol and pray and accept the prasad and after some time if all his troubles were to disappear like dew before sunlight, can we not conclude it is through the prasad taken by him God's energy has entered and dispelled all troubles experienced by him?

In India there are innumerable temples and idols made out of stone sand and metals are installed there. Innumerable people also visit these temples and make their contribution to the temple. Does it mean that these people are visiting these temples and making their contribution to the temple, without getting any benefits? If we were to enquire from the visiting devotees many would say that they have been benefitted by their visits to these shrines. An untruth can only last for a time and not for all times to come. It is truth only that remains without a change for any length of time. Therefore, from what have seen above we can affirm that through the idols of any kind divine Grace expresses itself. God confers His benefits on a few only. Why does He not confer on others? The answer to those who say that they have not been benefitted by Him

is given ! Those who take tonic to strengthen their body do not get strength uniformly. In some cases they lose even whatever strength they have. When an epidemic spreads it does not affect all. It kills many, weakens a few and spares a few. The medicine consumed by a few will act on them according to their constitution.

Take the example of students studying in a school in a particular class. Some students understand the lessons well and some understand a little and some do not understand at all. The reason behind this aspect is the difference in student's desire to understand naturally the lessons taught. Is it not?

Similarly those who benefit by the prasad given stone or any other idol is their belief in that idol. It differs from person to person. To enable the God's power to act on a person he must have the right type of receptive mind to yield more light we have to use a powerful lamp. Electrical bulb's brightness depends on its voltage. More the voltage more the brightness. To the extent faith in God is in one's self God's power can express itself to the person concerned to that extent only. A man who has opposite ideas cannot be hypnotised by anyone. One can be hypnotised only when he is amenable to receive the thought force of the hypnotiser. Similarly to absorb God's energy one should have the right mental make up. The mental make up is staunch devotion towards God.

Without studying spiritual science by merely reading science one cannot understand Athma Jana. Therefore, one cannot say that it is false and in such a man's modern mind spritual knowledge and God's energy cannot enter. By merely saying one cannot get God's Grace is a wasteful exercise. One has to get God's energy through the medium of his mind.

Those who practice idol worship with deep devotion and deep interest do get benefits. But those who outwardly make a show without getting it from the bottom of their heart will not get any benefits. God's energy can be got by deep devotion only towards God and carry out all functions with sustained and staunch interest. One should hear suitable discourses, one should further get upadesa and make his mind fit enough

to receive God's energies. This work is being done by Gayathri Peetam. Those who have contact with us treat idol as God with life and have derived immense benefits.

## 11. GOD IN STONE

Stone, sand and in metals how God's energy in subtler form is absorbed in them? How do we know that God's energy or power has come to that idol? We give the answer to these questions below:

We have already seen that in all the objects in the world there is magnetism and, therefore, a magnetic field. Generally speaking the magnetic field exists as per its shape i.e., round in round shape, square in square things, oval in oval shaped things. Likewise in the hands of a man on his two sides it will be long in the shape of the hand. Around a stone idol magnetic field will exist in the same shape of an idol. (Let us assume this way as though it is not very much correct but to understand the truth let us assume that the magnetic field exists in that manner.)

When two objects are close by to each other their magnetic fields inter mingle and form a fresh magnetic field and their nature changes. Let us not try to know what changes take place now. Similarly if two persons stand close by the magnetic fields of these people and mingle fresh magnetic field is created. This fresh magnetic field keeps on accruing. There will be difference in the magnetic field of a healthy man and a sick man.

Further, there will be difference in the radiation when one thinks good thoughts and bad thoughts. The former will be beneficial and the other will be harmful. By observing one's magnetic field we can know whether his state of health is good or bad. In spiritual gatherings combined with scientific research one can know other's state of health, mind etc., This method is extensively used in healing ailments. This science of knowing the diagnosis of diseases is called the Aura Diagnosis.

Man can see the magnetic field around animate and inanimate objects. But to accomplish it he needs training. (We explained in detail

in our lessons Human Magnetism with scientific proofs and experiments). To see the magnetic field through the eyes now a days some instruments have been invented and those instruments are now available in our Peetam.

A strong magnet of an object can be charged to a weak magnet of an object. Similarly a strong willed man can change a bad man. A bad man with a strong magnetism can change a good man with weak magnetism into a bad man by the influence of his bad magnetism. Many instances in a man's life and the evolution of animals are contained in this principle and philosophy. A man with strong magnetism can charge an object with it and make it radiate for a long period. A good natured man can charge his good magnetism in the walls and doors of the house he lives and enable it to keep radiating the good effects. Anyone with weak magnetism who happen to live in that house will be influenced by the good magnetic vibrations and attain many beneficial effects. A bad man likewise may leave bad magnetism behind and any one living in that house will encounter bad effects. Temples, holy places, yoga ashrams etc., have all been raised based on this fact. Those who have constructed temples on hills knew this fact very well.

Those who adopt manthric method, sadhus etc., who chant manthras and give water, fruits etc., to ailing persons and consequently they get cured and also accrue many benefits. This is based on this magnetism being passed on to them. The pity is that it has led to many fake cases and there are only a handful of true cases. Our Peetam has been following this method and sending prasadam with good magnetism charged into it and by using them many have been benefitted.

If we can see the magnetic field we see one magnetic field intermingling with the other magnetic field. If we know the natural magnetism of an object we can by observing its magnetic field know what other magnetism is combined with it. The magnetism in the fruit changes when a yogi passes his magnetism in it. By seeing a fruit we can say that it is an ordinary fruit or the one charged with magnetism of a yogi. There are several people in the world who by merely handling a fruit can say about its qualities and what it is made up of. This art is called Pychometry.

Ordinary sculpture stone differs from the one in which God's force is charged. The stone charged with magnetism will be more bright in power and will radiate at a fast rate where as an ordinary stone will not. One can say from the properties explained above whether a stone has been charged with magnetism or not and whether idol has power or not. Our Peetam's students have visited many temples and have found out that the idols in very old temples have power and have seen God in that shape. Our students by merely looking at the idol will be able to say whether it has power or not; because they do not merely see the stone idol but also its radiation. The radiation from the stone idol is the God's power and that is why we say that they see God in stone.

Generally in the stone and metal idols God's power is made to be absorbed and radiate the magnetism charged. We do not want you to believe blindly this fact. Please contact those who have the power to see magnetic field and they will be able to distinguish and tell between an ordinary idol sanctified by manthras and yagnas. If both the idols are kept side by side they can see God's power entering in the sanctified idols with great speed. It will touch the magnetic field of humans giving them joy. This can be practically seen in the yagna performed in our Peetam and many who have participated in it have practically experienced divine grace entering the yanthras and idols and they have shed tears of joy with joined palms.

God's power is all pervasive and it is like a perennial river. To quote Ishavasya Upanishad: "Poornamatha Poornamitam, Poornath, Poorna Mucheyethe Poornasya Poornamadhaya Poornameva Shishyathe". This (other world) is full (with veda) This (world) is full (with the veda). That which fills is more celebrated than the world that is filled with drawing the agent of filling from the world (that is pervaded) there remains the Omkaramaka Vastu that is full.

If we understand the tatvas said about God earlier we can know the meaning of this mantra easily. In this universe in some place or at one time in thousands of idols if we charge God's power like letting out water through taps the God's power will keep on flowing continuously for many, many years. The source of God's energy never dries up.

If water is to flow through the tap it must be opened always. If close the tap or if it were to be blocked due to dust or other elements the water will cease to flow. Once the tap of Physical samskaras are open God's energy will always keep flowing through. What is the reason for idols in some temples not having divine force? The reason is that it would not have been installed at the outset by charging God's energy through proper manthras, yagnas and the required rituals. Secondly lack of devotion, disbelief, desanctifying must have blunted the flow of divine energy in due course of time. The desanctified temples are those that have been brought to that state due to the bad thoughts of bad people. That is why certain rules and regulations have been laid down while going to the temples for worship. Many do not know the secret behind it and they do not observe the regulations. This is one of the reasons for the decline of sanctity in our temples. Those religious leaders if they understand and reform the temples, they will be centres of benefits for people.

## 12. GOD'S VISION IN PHYSICAL FORM.

From what has been said so far it is clear that through stone, metals and other kinds of idols the unseen power of God can be made to manifest and people can be benefitted by it. But there are some who claim to have seen God with their physical eyes in physical form. How can we believe this? We give the answer to this doubt below:

There is a tamil proverb which says that for a startled man's eye whatever is dark appears to be a ghost ( Mirandavan Kannukku irundathellam Pai) What is the truth behind this? In fact there is no ghost a startled person appears to see the ghost. Take two persons, one who is not afraid of ghost and the other who is afraid of it. If both of them were to go to a secluded place in pitch darkness, the former person feels that he has seen a ghost whereas the latter person does not see anything. A thing which is not seen by one and seen by the other appears to be true for each of them, what they say is true. A thing not

seen by many appears to some. This is called hallucination. If ten startled persons get out all of them will see the ghost perhaps. If there were to be one who is not startled he will not see the ghost. Such a person will be a liar in the company of startled people even though he may be correct.

A very deeply loved son is sent to a far off place owing to the fact that he secured a good job. The anxious father will be full of anxiety and worry if he does not get letters regularly from him. At that time if he gets a letter from his son announcing the arrival of him at a particular time and date; while anxiously waiting for his arrival he suddenly appears to see that his son has come but in fact he has not come. This is hallucination. Sometimes he may hear as though his son has beckoned him.

We often see in pictures the separated lovers thinking about each other and they appear to see one another suddenly. This is also a state of hallucination. Similarly many incidents might have happened in every one's life but they would not have analysed them. One who is anxiously expecting some one may feel as though he had come or a lost thing may appear as though it is near him etc., We know that these are all not true.

The hallucination reveals a great secret to us. If one were to continuously think about a thing deeply the thing in his mind appears to be there. There are many hidden secrets in how these things happen. Every thought has a form. If a man were to continuously and deeply think about a thing and that is meditated upon deeply in a concentrated manner that shape gets formed in the mental space thereafter, in his mental plane, and around the magnetic field of that person. One sees only this form outside if he has power to see the magnetic field. (We have explained this practice in another book called Human Magnetism). The mental atoms are made to gather together due to deep meditation and when these atoms become dense it is visible to the naked eye.

Yoga students to test their meditational power used to carry out these kinds of exercises. Some would strongly meditate as though a rupee coin is lying in a busy street. Every one passing through the street may see as though a rupee coin is lying there but when they try to pick it up

it will not be there. In foreign countries to test the meditational power the people meditating used to sit in a hall and meditate as though there is a rose flower in the hall. After deep meditation everyone present in the hall will see as though a rose is there. There are many students in our Peetam who are carrying out this kind of exercises.

In case regarding ordinary people doing this exercises in a very ordinary way and deriving immense benefit, What to say in respect of staunch devotees who always think about God deeply and meditate on him with full concentration? Will they not see their desired deity? Can there be any doubt about this?

In accordance with the strength of meditational power the magnetic atoms can be made to join and according to one's intensity of meditation these mental creations will be visible. We also saw earlier that mental waves can be directed to travel long distances and reach the desired person to achieve a desired effect. They can also be made to pervade a wide area and long distances. By this method many people suffering from ailments at a far off place can be cured. It is called Absent Healing. Many yogis have created a wide and a long magnetic field and have enabled people living thousands of kilometers away to have a vision of them. Yogis have immense magnetic power and they can replenish their spent magnetism immediately. That is why they are able to project their magnetic field to the different parts of the world and give their vision to their devotees in the various parts of the world at the same time.

To test the devotion of Sahahdeva Lord assumed thousands of illusionary forms. The principle behind this is what we have explained above. Those who are steeped in devotion see their family or Ishta Deiva in this manner. Those who see their God's vision through devotion may not be able to explain scientifically. We cannot on that score say that their vision is false. It is acceptable to research the fact that devotees see their Ishta Deiva in all the places. The entire thing is based on the above principle explained.

### 13. GOD IN MAN

It is said that God has assumed physical form like man and lived as one among them and performed many miracles etc., How can we believe this? Sometimes it is said that the God emerged from the idol and partook the offering with the devotees and having played with them and merged with the idol. Should we believe this? We would like to explain this to people who get confused on hearing all these happenings.

The scientific explanation in respect of this aspect is there and if we begin to explain it a separate book has to be written on this subject. However we would like to briefly explain this aspect.

We saw earlier that all things seen are the transformation of unseen things only. Let us call this root subtler being as "Prakruthi". In the same clay different deities are made. Likewise different objects found in the world are made out of the single matter "Prakruthi". The ability to make the desired shape out of clay or Gold we call it as power of God. The power of God is present even in objects made and evolution takes place because of this. Latent power of God expresses in a small way in inanimate objects and in greater degree in animate objects according to their degree of evolution and its development.

(Like worm, insects, animals and man) In human beings the power varies according to the extent it can express itself in it. It is present in Devas at a higher level than human. Man's awareness and Athma is a part of that God's power. Man is a demi-God. The Supreme Being manifests in a big way and the man does it in small way only. From the things created by the Supreme Being man manufactures what he needs. God destroys in a big way and the humans use the same destructive power in the world in a limited way.

God desires and does everything "Soaichith". The Upanishad Says that He desired and creation was set in motion. Christians say that the Lord wanted to create the world and He did it. (As per the Bi' similarly

man also does a thing when he wishes and with full desire to do a thing. Generally the common people desire to experience the worldly pleasures and they do not desire to bring out the divine power which lies in them in a latent form. Therefore, not all people in the world do new things.

It is not enough if a man wants to do a thing. He must have the knowledge to do it. The all knowledgeable Supreme Being created the universe. There are only a handful of people who are in a position to bring out the latent power of God and they are called yogis, Munis and Siddhars.

The atoms that go to make up the matter is pervasive throughout the universe. The power of knowledge is likewise pervasive throughout the universe. A man who knows how to gather the atoms in the space and create a thing and induce the Supreme knowledge in it, it will act as living being with feeling. A person who does this creates with his mental power and it is called mental creation. We are prohibited from explaining this aspect. However, we will briefly explain how it functions.

A man performing magic is able to bring out from an empty tin many sweets in a flash. He distributes the same to his audiences and everyone tastes it. Many are able to do by tricks. There are some who can really create sweets out of nothing. Swami Vivekananda in his foreword to a book says that he was a witness to such an act. The man well versed in mantras due to his mental power gathered all atoms that go to make up the sweets and created sweets actually. This is a case of mental creation. How it is done cannot be explained here as we are prohibited to do so as already said. Many people all over the world have learnt this art and are immensely benefitted because of it. Then one may ask why not create Gold and grains and enrich the world? Is a man who knows to steal should make a living by stealing? One can steal and at the same time he can be caught and punished for stealing.

The entire universe is ordained to follow a path laid down by the Supreme Being who created it. It keeps going in the set grove as per the

laws of God. A man who knows how to use the natural forces by his mental strength cannot change its normal course of action. Therefore, he should not misuse his power. If he does the Supreme Being, will put an end to his life. No one should act against the evolutionary process of the universe. Yet some have misused the powers acquired by them and met with their fate. These people are called the black magicians. There is an order in the universe according to which each created thing will have to follow. Any one acting against the laid down rules and regulations of God finds this end. One wants to enjoy all comforts without undergoing any difficulties. Some Sadhus and yogis who use their power attract people who want to become quick rich by hook or crook. Sometimes they help them. But it is not good for both. Therefore, a man who has acquired mental power will not use it for surmounting his karmas. He will use it to the extent it is required for his daily karmas. We have known about several mantra experts die because of the misuse of the mantras. A knife can be used to cut vegetables and the same can be used to kill others or to commit suicide.

Some during their worldly life would have mastered mental creation and they appear before their relatives after their death and render help to them. We have come to know lot of such cases from abroad. As more and more learn this mental creations more instances will come to light. Jesus giving vision to many after his crucifixion is based on mental creation. Those who have power to create several idols with divine power to help their progeny after their death have been there and are still there. These idols keep yielding benefits for a long time after their death. We normally call them as their family deities.

If a man who has only a little knowledge and small physical frame is capable of creating things out of Prakruthi. Why not the Supreme Being create things as per his wish? Gita says "Prakrithi Swamavashtabhya Visrujami Puna: Puna": With Prakrithi in me I express myself explicitly when required. "Ava Janathi Mam Mooda Manusheem Thanumasritham: When I assume human body the foolish humans do not know who I am.

The creator of the entire universe i.e. Supreme Being gives His vision in the form His devotees desire and Graces them. Whenever the devotee needs help He helps him. Sometimes He remains in the physical frame and keeps company with His devotees and performs all the acts like eating, playing etc. and gives pleasure to His devotee. God is very easily accessible to His devotees.

Through the idol He creates physical forms. He comes out of the idol and after helping the devotee He merges back in the same idol. This process is called atomising and de-atomising.

We can know clearly how the atoms are held in a cohesive state and get de-atomised. By getting trained in Mental Science and creation one can understand this.

Sri Rama, Krishna and Jesus were born to their respective mothers and lived like humans. The secret of their incarnations lie in Mental Creatinons. To understand them one should read more and we will explain them in our book "Truths about Avathars".

#### 14. INVITATION

We are sure that people who are not biased, narrow minded, bounded by religious tenets, want to know the truth, will understand what we have explained in this booklet and will accept it as true. He has to raise the edifice of God realisation on the foundation of idol worship. Although God is formless He appears in whatever form His devotees desire Him to appear and bestow His Grace. It is wrong to think that after death on the judgement day one should get the benefits of worship of God. He has to experience God in this world when he is alive in the form he desires Him to give vision to him. Realise the good of this and the other plane, dispel ignorance, gain true knowledge and after expending the 'Prarabdha Karma' attain moksha.

If one wants to accomplish anything in this world he should be equipped with the requisite qualities to achieve it. What are these qualities? We have already explained these qualities. We can educate them to acquire the required qualities and give them training suitably.

Therefore, we extend an invitation to all the world beings to come to our Peetam and be benefited.

Oh! Dear People! come! while you are alive to know about the Supreme Being That creates, Destroys the entire universe and get His Grace. Do not wait till your death. Do not wait till the day of judgement. You can get the Grace of God now and spend the rest of the days in the world enjoying His BLISS. March towards God's kingdom. Take each step, each moment to reach His Kingdom. The Joy and sorrow of Samsara can be surmounted. Join with us together to attain divine BLISS.

Through the form try to reach the formless God through magnetic power or subtler power. Get trained in Gayathri Peetam and join the select band of people who have seen God in physical form. Progress every moment towards God Realisation and you will feel the change. Nobody needs to give up his religious faiths. Experience their respective Ishta Deiva through spiritual and idol worship.

"Yo Yatha Mam Prapathyanthe than thathaiva Bajamyaham." Who ever follows me in whatever gunas, for them I give my vision in that gunas and Grace them. (Gita)

To get God' Grace no body need to change his religion. No body need to give up his Ishta Deiva. Since one God is in various forms all are one. Christians call Him as Christ, Mohammedans as Allah, Saivaitas as Siva, Muruga's Chetana power. All the people have to have devotion, interest, clarity and Upasana.

Therefore, Oh! Ye! people of the world come in large numbers! See the God's auspicious form and get His Grace. Make your life a meaningful and true life. Dispel all ignorance. Get true knowledge and live a great Divine life. Come! Come ! Come!

# SRI GAYATHRI PEETAM

## TRAININGS

Only for those who have been progressing at a rapid rate in God's path to achieve their goal we impart training to them in the following methods.

### YOGA VIDHYA

The captioned training will be imparted. Those who cannot get trained strightaway in the above scheme, may choose any one of the training mentioned below and attain the capacity to learn YOGA VIDHYA.

- 1) Chitman Training
- 2) The Science of Pranayamam
- 3) The science of Concentration
- 4) The Science of Meditation
- 5) The Science of Human Magnetism
- 6) The Science of Mental Creation
- 7) The Science of Subtler Knowledge
- 8) The Science of Evolution
- 9) The Science of Man
- 10) The Powers of the Universe
- 11) The Science of Planet's Influence on Man

The details in respect of the required method of training will be mailed to those who need the particular training.

# GAYATHIRI SIDDHAR'S

## ATHMA YOGA TRAINING LESSONS

- 1) Who Am I?
- 2) The Arrangement of Man
- 3) Freedom of Athma
- 4) Subtler Body Is The Real Man
- 5) Subtler Body Or Astral Body
- 6) Initial Lessons on Subler Things
- 7) Subtler And Physical
- 8) Training For Clairvoyance
- 09) Life And Karma
- 10) How To Win Over Karma
- 11) Good knowledge and Bad Knowledge
- 12) How to Get The Aid Of Knowlege
- 13) How to Know The Past Present and Future
- 14) Knowledge About Time And Cliarvoyance
- 15) Advanced Training In Clairvoyance
- 16) The Aim Of Life
- 17) Evolution Of Animals
- 18) Life's List of Things
- 19) Bhavana Sakthi

Om

## Gayathri Siddhar'S
