The soil and water resource of the Jaffna Peninsula are both related to the lime stone geology of the land. The soils are formed on the marine deposits and sediments under the influence of sea waves and winds on lime stones. Tile lime stone being a porous rock is the source of groundwater for the Peninsula. Well drained and high productive calcic Red Yellow latasol and Red Yellow latasol soil types are found in central areas (60,000Ha). Alkalin saline soil and Regasol are found in coastal areas (26000Ha) and Alluvial soil is in ValukaiAru area (10000Ha). In certain areas coral lime stone is available. This different soil types offer scope for cultivation of exotic as well as local crops. Tile depth of soil varies from 90cm-150cm.

WATER

Jaffna peninsula has a source of Ground Water store in the Sub terrain layer of limestone. The limestone is the main aquifer. This a aquifer has several isolated caves and caverns capable of storing ground water without evaporation losses. It is a excellent aquifer. The entire g round water is generated from percolated rainfall and it forms a freshwater lens beneath the peninsula. It is found that the fresh water lens do not extend below the base of the lime stone. The fresh water lens is sustained by the buoyancy of fresh water in relation to sea water. Difference in density, (1.0,1.025) giving a ratio of 40:1. That is every meter of fresh water above the sea level requires a depth of fresh water lens of 40m when no mixing between fresh and seawater takes place. There is no sharp interface between fresh and seawater.

TREE PLANTING

Small scale coconut plantations, indigenous trees and fruit trees have been grown in homesteads, private lands, and common places. These tree plants components have played an important role in providing a source of income to the substantial number of families, nutritive food and protect the environment. Agro forestry is not an actual forest; it is a phenomenon influencing substantial effects on climate and environment which is favoring for agriculture and human living. Trees are providing many benefits to the communities. They provide food; medicine, shade, green manure, timber and fire wood and also function as natural cooler in different climate.

During the conflict period, palmyrah, coconut and many trees in homesteads, public places such as schools, temples, road sides, cemeteries etc, and coastal regions were either cut or damaged. Further general population started cutting trees for firewood purposes. In 2004, Tsunami tidal wave and in the fourth week of November 2008 the torrential storm followed by flood caused severe damage to perennial tees. Large number of perennial trees were either completely or partly damaged or lost its potential vigor.

In the roads of the Jaffna district, there is no tree cover which is very common in other parts of the country and world. At the same time there is no wind belt along the coastal line. As a result the drift of sea water and air towards land is a common
