"Save the Jaffna Medical Faculty"

A Medical Students Plea,
University of Jaffna
This brochure has been made possible by the kind sponsorship of

MANOHARAN & VETTIVEL,
ENGINEERS — CONTRACTORS,
49, AMBALAVANAR ROAD,
JAFFNA.

The Contractor of the Faculty of Medicine building.
Dr. Sameul Green, the first gentleman to teach Western Medicine in Jaffna and who produced one of the first batch of Medical Students in the whole of Asia, on arriving in Jaffna from Boston, U.S.A., surveyed the whole health field and he decided that for his work to be of any lasting benefit to the people, he said in his own words;

"Stud the Province with Well Educated Physicians"

1988

We, the students, of Jaffna Medical Faculty, will take these immortal words into our hearts and serve here where the need is most necessary. We pledge our unfailing and continuous support to the growth of the Faculty and to help achieve this Institute’s vast potentials.

It is from the bottom of our hearts that we make a plea to each one of you to help solve the present crisis and get the Faculty going and growing again, by helping to fill in the most pressing vacancies. Please help us to:

"Save the Jaffna Medical Faculty"

Medical Students,
Faculty of Medicine,
University of Jaffna.
THE PLEA

We, the students, Faculty of Medicine University of Jaffna would like to bring to your kind notice that the Jaffna Medical Faculty is facing its worst crisis i.e. possible closure of the Jaffna Medical Faculty. The primary and most pressing problem is a lack of staff in all the disciplines and especially in certain clinical and para-clinical departments. The details of the immediate necessary vacancies have been given in this brochure.

We, as students realising the seriousness and urgency of the problem have decided to work on all options that are available to us. We have launched a campaign;

"Save the Jaffna Medical Faculty"

It is our fervent hope that the very much needed doctors will come and fill up the vacancies that are most pressing. Gradually we hope that as a Teaching Hospital is built and a Cancer Unit is built the necessary staff vacancies will be filled. The potential of the Jaffna Medical Faculty is vast. The Jaffna Medical Faculty, has the capacity to provide 150 seats per year for an undergraduate course in Medicine and Surgery. The Faculty chooses its students from all over Sri Lanka especially the North-East-Central regions of the country. These are the regions where there is a shortage of doctors, to serve the millions of people residing here. The Faculty in addition has the facilities for postgraduate studies and meaningful research related to this region.
In addition many related courses in the health sciences are being conducted. We hope that the campaign will help keep the Faculty running and growing, through which the many disciplines of the health sciences can reach out and touch the people and to lift the health standard of the community now and on the long run. We hope that the Jaffna Medical Faculty will become a super power in the health world as regards to service to the health needs of humanity. We as students realise our obligations and responsibility towards the Jaffna Medical Faculty. Our pledge is found in this brochure.

We, the students, of the Jaffna Medical Faculty would like to send this plea to you to help save the Jaffna Medical Faculty. Please help us to solve the present staff crisis to keep the Faculty continuing and to latter achieve all of its potential on the long run.

We have included a working paper on how we hope to solve this problem. Once again we would be most grateful if you could kindly help us in anyway to fill these most pressing vacancies.

We would like to thank you for the concern you have shown and the support extended towards this campaign, and look forward to working with you to make this campaign a success.

Medical Students,
Faculty of Medicine
University of Jaffna.

Positions on contract also invited.
THE JAFFNA MEDICAL FACULTY'S
STUDENTS PLEDGE

We, the students, Faculty of Medicine, University of Jaffna, are most grateful and are obliged to the Jaffna Medical Faculty for giving us this golden opportunity to read in Medicine and eventually to enter the noble profession, to serve humanity in regard to health. We all too well realise the severe competition in entering into this field. We will do our best to do justice to this honour.

The recent situation has given us more awareness of the importance and absolute need of this profession. Normally the health needs of this part of the world is vast and there is so much to be done. The need for well educated physicians is here now, even as it was in 1847, when Dr. Samuel Green said that for his work to be worthwhile it is essential to "STUD THE PROVINCE WITH WELL EDUCATED PHYSICIANS". We as students will take this into our hearts and serve where the need is. We know that Modern Medical help has not reached to barely all the areas. We have a long way to go. We realise we are needed most here.

We are ever indebted to our most respected teachers who have set an example and shown us the way by their dedication and untiring hard work. Under many trying conditions they have taken great pain to teach and train us all. They are very much like our mothers and fathers, and we are deeply grateful. We realise that our University is quite different from other universities. The most valuable factor being that
the University is like a large family where the staff knows every student and personally take great care about his progress and welfare. We can approach any of the staff at any time and get a sympathetic ear which is most valuable for us students. We do not feel lost and we feel useful. There is so many other good factors, too numerous to write. A student entering the University of Jaffna and in our regard the Faculty of Medicine is most fortunate.

We, the students realise that the least obligation is to serve in this community where we are needed most. To alleviate pain and suffering of the people, to console and comfort in times of sorrow. To help always in the promotion of health in our community. We pledge continueing support and will take active part to see that our beloved Jaffna Medical Faculty continues to grow and continues to provide the priviledges we have had, to all the future generations of students that will be entering through the portals of this most esteemed institution.

The Students of the Jaffna Medical Faculty
THE RICH HISTORY OF MEDICINE IN JAFFNA

The influence of Western Medicine had its impact in Jaffna in the early part of the Nineteenth Century when 5 members of the American Mission Society arrived here in September 1816.

Dr. John Scudder on June 18, established his dispensary at Pandatherippu. He worked long hours attending on patients with diverse diseases and taught medicine to a hand full of local men. He performed many heroic and successful operations eg. successful plastic reconstruction of multilated ears, amputation above the knee, excision of large tumors, eyes cataract operations. These are stupendous feats in those days when there were no facilities for anaesthesia, blood transfusion and sterility as obtains today. He and his wife had many trials, losing 3 children in 18 months. Neither work nor calamity overwhelmed them. In 1832 he created a dispensary building that still stands. Dr. Scudder left Jaffna for Madras and later shifted to Vellore. Many of the Scudder Family lived and died in India. Dr. Ida Scudder, founder and principal Emeritus of the Vellore Christian Medical College was a grand daughter of Dr. John Scudder.

Dr. Samuel Green sailed from Boston in 1847 to Jaffna via Madras and crossed the Palk Strait and arrived here on October 6th. Dr. Green surveyed the field and found that ignorance and superstition was rife. Common diseases prevailed in Jaffna according to his readings - frequent episodes of cholera and smallpox, fever & lung infection, scabies, fever & ague with enlarged spleen - now known as malaria, cancer of the mouth
the healthy died of diabetes, the effect of vegetarianism and indolence combined. He decided that for his work to be of any lasting benefit to the people, he should in his own words:

"Stud the province with well educated physicians"

In February 1848 he set up a dispensary at Manipay and organised the Mission Medical school with 7 students selected from Batticotta Seminary now known as Jaffna College giving instruction in Western Medical Science in English. The Medical curriculum being based on the lines followed by the Medical Faculties of the American Universities. The students attended the Mission dispensary regularly and twice weekly clinic at the Friend-in-Need Society Hospital at Jaffna established by Mr. Auckland Byte the Government Agent N. P. with the assistance of Mr. Green and in collaboration with the Friend in need society of Jaffna. The hospital has grown into what it is now the GENERALHOSPITAL, JAFFNA. The first batch graduated in 1850 with a competent ability. They were one of the first medical Graduates in the whole of Asia.

To make Medical Education available to a wider group, Dr. Green initiated medical teaching in the vernacular which was a revolutionary idea - at least 100 years ahead of his time. He translated the standard texts and journals into Tamil.

From 1850—1907, the Medical staff of the friend-in-need society hospital was drawn almost totally from the graduates of Dr. Green's Medical School. Few of his outstanding students were Gould, Town, Evarts,
Danforth, Mills and Paul. They eventually manned and powered the Government Medical Services of the country. However the establishment of the Colombo Medical School in 1870 resulted in the closure of Dr. Green's Medical School in 1875. Dr. Samuel Green was a surgical giant of his days and was the first visiting surgeon of the Friend-in-need Society Hospital. He saw about 2500+ cases in 13 months, many of them surgical. Since Dr. Green practised abdominal surgery it is likely that he brought with him the news about anaesthesia first demonstrated at Massachusetts General hospital on October 16th, 1846 by Morton.

Scott and Nursing Education

Dr. & Mrs. Scott arrived at Manipay in 1893. Dr. Scott had qualification in Arts, Theology & Medicine. His wife was his biggest asset. The first lady doctor to serve in Jaffna. Mrs. Scott started a nursing school another pioneering effort at Manipay. The present school of Nursing in Jaffna was established only in 1960 almost 70 years later.

Around 1931, the Jaffna Civil Hospital had a bed staff of 200. 3 qualified surgeons and 4 doctors in the Medical staff worked here. The surgeons did casualty operations even at night under petromax and torch light.

Dr. W Jameson during the 1930's dominated the medical scene from Manipay. He was builder of the Modern Manipay Green Memorial Hospital. He was an able surgeon - he performed over 500 operations annually, efficient administrator & fluent in Tamil.
He raised the professional standard of his assistants by sending the doctors for postgraduate training to such centres as London, Edinburgh, Berlin and Vienna. He equipped the hospital with X ray plants, ECG recorder and BMR apparatus and Choul apparatus for the treatment of cancer. He attended patients not only from Jaffna but also from all over Ceylon.

**Jaffna Medicine 1950 — 1978**

With the addition of specialists the Civil Hospital, Jaffna became a General Hospital. In the 1960's Jaffna General Hospital was a recognised centre for postgraduate training of doctors for the final examination of the Royal Colleges of England. Many surgeons and physicians followed in the trail of Dr. Samuel Green with the gradual development of Surgery & Gynaecology in the province.

Psychiatry was given a boost by the pioneer psychiatrist the late Dr. T. Arulampalam who worked to popularise psychiatry & dispel false beliefs and misconceptions. In his first year he treated 9000 patients. He gave several talks to the public. About 40 talks in 4½ years. He established a society called "Friends of the Psychiatric Unit" KKS to encourage the welfare of the mentally ill patients. Dr. N. T. Sampanthan FRCS gave a boost to cooperative hospitals in Jaffna.

**Jaffna General Hospital today**

The increased health needs and demands brought about in the Jaffna General Hospital extensions and constructions of new buildings.
It has now become a common occurrence for many to be told that treatment cannot be given or operations carried out due to shortages of various sorts. To make matters worse there has been a scale of migration of doctors to other countries, from 1968 and more recently of nurses and para medicals leaving grave deficiencies. It would be correct to say that Despite vast advances in medicine in the past 20 years, it would be correct to say that quality of patient care has not improved appreciably.

Medical school Jaffna University 1978

With the intention of increasing the output of doctors to meet the needs and demands of the country the Jaffna Medical Faculty was constructed in Jaffna. Jaffna has thus once again become a centre for Medical Education. As a consequence of the establishment of the Jaffna Medical School, Jaffna Hospital became elevated to status of a Teaching hospital.

Ref. from J.M.A. Presidential address 1980/81-C.Wijayaratne MBBS (Cey), DPM (Liverpool) MFCM.
A PLEA TO THE COMMUNITY

We as possible potential doctors will not and cannot become politically involved, as one of the basic tenets of medical practice is the alleviation of pain and suffering in our fellow humans regardless of caste, creed or religion.

We feel that during any political situation or change, optimally all innocent Civilians should be protected but especially a few sectors of the society should be given maximum protection by all concerned bodies.

The first group is children. It must be made very clear that adults can go through any political change and be minimally affected later. But children can be scarred both physically and psychologically. The children are the real innocents, and the future of any society. Adverse effect on them adversely affects any political change or situation on the long run. Why we are writing this is because we have seen children suffering. Even the most experienced and most hardened doctor cannot stand any sight, but it is most difficult and it breaks all our hearts to see a child in pain and suffering. Children are the delight of all society and children are our hopes, let us all be only too aware of this and we plea, we fall to our knees and beg all members of society to give full protection. Schools, the most vital part of children must also be untouched. The schools are the children’s most vital aid. We beg you, let the children live and let the children save this community. A hope worth living for.
We would also like to make a very strong plea that the sick, all the disciplines of health workers and health institutions be given maximum protection during any political change by all members of society. Caring for the weak, alleviation of pain and suffering in our fellow human beings is one of the basic of all society. It is the duty of each member of society to protect these people and the health personnel who help these poor people. We wish to work through the mass media and public contacts that all sick people health personnel and medical institutions not to be affected by any political situation. We would be most grateful if all and other social bodies take up this very important issue and make everyone aware of the importance and long term benefits of maintaining this.

We would like to make it very clear that we are not opposed to any political change. As possible potential doctors we feel we have a very important duty apart from promotion of health ie. protection of vital sectors of our community. National and international medical associations must act together to put governments on notice that the international medical community takes its ethical obligations to those entrusted to its care seriously and that it expects governments to do so as well. *

We would like to conclude this community plea by giving below the solemn pledge taken at the time of being admitted as a member of the medical profession;
DECLARATION OF GENEVA

Adopted by the general assembly, of the world medical association at Geneva, Switzerland, Sept., 1948.

I Solemnly Pledge myself to consecrate my life to the service of humanity;

I WILL GIVE to my teachers the respect and the gratitude which is there due;

I WILL PRACTICE MY PROFESSION with conscience and dignity;

THE HEALTH OF MY PATIENT will be my first consideration

I WILL RESPECT the secrets which are confided in me;

I WILL MAINTAIN by all the means in my power, the honour and the noble traditions of the medical profession.

MY COLLEAGUES will be my brothers (& sisters)*

I WILL NOT PERMIT consideration of religion, Nationality, race, party politics or social standing to intervene between my duty and my patient;

I WILL MAINTAIN the utmost respect for human life from the time of conception; even under threat.

I WILL NOT USE my medical knowledge contrary to the laws of humanity.

I MAKE THESE PROMISES solemnly, freely and upon my honour.

Thank you

We would like to thank you for your kind concern and look very much forward to receiving your much needed help. If you do accept to fill a vacancy you will be assured that you will be most welcome and we will do every thing in our power to make your assimilation into the University and Community as comfortable as possible. We look forward to having you at our Faculty and please let us know of anything we could do for you here. Please also kindly be a working member of this campaign by contacting doctors you may know personally and tell them the need.

Thank you once again for your kind concern and we all look forward to hearing from you soon.

Medical students
Faculty of medicine
University of Jaffna.
We would like to extend our deepest gratitude to all the people; our Dean, Student Counsellor, Doctors, Senior lecturers, lecturers, all other personnel working at the Jaffna medical Faculty, University, Jaffna Teaching Hospital, editors & reporters of the various newspapers, principals of schools, students of schools prominent citizens of our community, all individuals, all University students and the students of the Jaffna Medical Faculty for your encouragement, enthusiasm, unitiring work and patience. Most of all we would like to show our deepest gratitude to the patients of the Jaffna (Teaching) Tellipalai, all other hospitals, and the families in the community project areas for your kind tolerance and patirce and helping the students to gain knowledge and valuable experience. We all will always be grateful and obliged. Without most valuable encouragement and advice this campaign would not have lifted off. It is our fervent hope that this campaign will be successful and will leave its results for generations of medical students to come and for the good of the general community. A hope worth striving and living for. We thank each one of you for helping to “SAVE THE JAFFNA MEDICAL FACULTY”.
