## PREFACE.

The Máldive Islayds have been a Dependency of the British Government in Ceylon since 1796, continuing to pay Annual Tribute. But comparatively little is known, even at this day, about the Group, and still less regarding the Language, which is peculiar to it.
The recognized authorities on the Máldivian Language, up to the close of last century, have been few indeed-François Pyrard (1615), Willmott Christopher (1841), and Albert Gray (1878).

But between 1900 and 1902 were printed, in the Sitzungsberichte der Kgl. Bayer, Akademie der Wissenschaften, of Munich, three learned Papers by Professor Wilhelm Geiger, entitled Máldivische Studien, I. (pp. 641-684, with one Plate, headed Máldivische Alphabete), II. (pp. 371-387), III. (pp. 107-132), which have very materially advanced our knowledge of the Structure of the Language.

The importance of these unique "Linguistic Studies" induced the Council of the Asiatic Society of Ceylon to apply to Professor Geiger and the Deutsche Morgenlandische Gesellschaft, at Halle, for permission to publish an English Translation in its Journal. This permission was courteously granted; and in 1913 a Translation of the three Parts of Máldivische Studien was completed for the Society by Mrs. J. C. Willis.

The marked and consistent ability displayed throughout by Mrs. Willis, in her translation of highly technical matter, can only be properly realized by those in a position to compare the German Text with its excellent English version.*

[^0]The difficult nature of the letterpress, its occasional turgidity (necessitating exceptional pains in translating. to reproduce the writer's full meaning), added to puzzling abbreviations, have not deterred Mrs. Willis from preparing for the Society, with infinite patience and meticulous care, an eminently satisfactory rendering, which reproduces the more or less specialized phraseology of the German original with admirable fidelity and success.

Mrs. Willis's good wine needed little or no bush. Nathless, to ensure as accurate a presentation as possible of certain passages in the German, perchance open to possible doubt, the entire manuscript was carefully revised by Mr. John Harward. M.A.. President of the Society, who managed to snatch time, amid his arduous official duties as Director of Education, to compare the English Translation closely with the German Text, and insert in places valuable emendations making for additional clearness.

Mr. Harward found himself unable to see the Translation through the press before learing Ceylon in 1916, to seek needed and well-deserced rest, on retirement from the Government Service. after a lengthened period of strenuous and invaluable work.

His mantle, as Editor, has ultimately fallen on an exHonorary Secretary of the Society, to whom the Fates in 1879 granted a short risit to the Máldives. and the opportunity subsequently of making a partial study-uncompleted, owing to his transference to the charge of the Archæological Surreyof the Islands, their History, Customs, Trade. and Language.*

Despite admitted limitations for the adequate fulfilment of such a task, he has ventured, faut de mieux, with some diffidence, to essay, on behalf of the Council, $\dagger$ the somewhat invidious task of editing the Translation of the "Studies" for publication in the Society's Journal.

[^1]The " editorial functions" in the issue of this English version of Professor Geiger's work have, on the whole, been comparatively light, and to a great degree confined to formal details : to wit, the splitting up of some of the long wearisome paragraphs of the original text; the occasional insertion of desirable words within brackets to help the sense ; adding sub-heads to ensure enhanced clarity and convenience ; and transposing to more suitable positions Notes which in the German (i.e., Section I.) are lumped together at the end.

Every endeavour has been made to retain, as far as practicable, the Professor's own spelling of Máldivian, Sinhalese, and other Oriental words: whilst making it consistent with the System of Transliteration adopted by the Ceylon Government and the forms of diacritical type available in the founts of the Ceylon Government Printing Office. Fortunately few changes proved to be needed ; and those almost entirely for the better.*

To Mr. C. H. Collins, B.A., C.C.S., Honorary Secretary of the Society, to Mr. H. C. Cottle. the Government Printer, and to I. Abdul Hamid Dídí Effendi, Máldivian Government Representative in Ceylon, the Editor owes a special meed of thanks.

Mr. Collins fell in most cordially with the Editor's proposal to issue the "Studies" as an "Extra Number" $\dagger$ of the Society's Journal, and in the form in which it is now presented : further, he generously denied no expense for the preparation of the several Plates necessary to a proper understanding of the printed matter. In addition. Mr. Collins’s

[^2]knowledge of German has been more than once very readily lent to the better solving of a knotty passage.

To Mr. Cottle it is entirely due that the "Studies" make their appearance in that unrivalled excellence of type and general finish which distinguish publications emanating from the Ceylon Government Press.

Without his ungrudging advice, and personal aid, this " Extra Number" could not possibly have been issued in its present neat dress and completeness.

Finally, from Abdul Hamid Dídí Effendi the Editor has received most generous, self-denying, and invaluable help in elucidating obscurities in Máldivian texts, sentences, \&c., and in throwing a flood of brilliant light on the modern Máldive Alphabet.

Of the Author's own masterly achievement of a hard task, his "Studies" assuredly " give ample room and verge" for unstinted praise.

If. perchance. there asserts itself unmistakably " the Teutonic literary temperament," so-called, for setting store disproportionately large by the meritorious lexicographic work due to a special protégé, Hasan-bin Adam, at the cost of belittling, or wholly ignoring. the efforts of other no less worthy labourers in the field-efforts, in the case of the stand-out " pioneers," Pyrard, Christopher, and Gray, which, without doubt, cannot but have greatly simplified the Professor's researches-if at times an undue tendency to " magnify the ego,"

I am Sir Oracle, And when I ope my lips let no dog bark,
is amusingly pronounced-let not, on that account. full justice be denied to the real " merits" of a great scholar, even though one may be not altogether " careless his faults to scan."

Any learned sa vant, be he of whatever race, who, like Professor Geiger, actuated by worthy motive and despite very considerable drawbacks, has toiled to give a clear lead to students in the study of a tongue still almost unknown, can claim the right, in all fairness, to generous acknowledgment for sterling work.

Having, like Dr. Samuel Johnson, "set limits to" his "work," which was "ended though not completed," the Professor offers a just plea for considerate treatment at the hands of critics:-

The principal object of my "Máldivian Studies" must be to put in motion an energetic beginning to Scientific Investigation of the Máldivian Language on the very spot; where alone it can really be carried out with satisfactory results.

The foregoing Notes on Máldivian Grammar give us, of course, only a general and incomplete picture of the Structure of the Language. They are a first attempt, and should be judged as such.

He who knows the many purely external difficulties and obstacles with which one meets in the East in researches which lie at the foundation of work such as mine; he who has experienced how the best intentions and the most enthusiastic zeal are constantly checked and crippled by a thousand petty trifles, will judge the deficiencies of my work kindly.

Knowledge must be indulgent. It may be an easy thing to point out and criticise this or that defect ; but of greater worth than criticism is energetic co-operation.

A final word touching the four Appendices, and Plates II. to IX.

For thus supplementing Professor Geiger's Text. and Plate I. issued with it, the Editor, whilst accepting full responsibility, does not feel that any apology is due, in view of the special reason justifying its compilation stated in the preamble of each Appendix.

It is hoped that these Addenda. which render the "Studies" more comprehensive, may help further to facilitate prosecution of research by those interested in the semi-unknown Máldivian Language.
H. C. P. BELL.

New Year's Day, 1919.

# MÁLDIVIAN <br> <br> LINGUISTIC sTUDIEs. 

 <br> <br> LINGUISTIC sTUDIEs.}

By Professor Wilhelm Geiger.

## SECTION I.*

## INTRODUCTION.

The Máldives $\dagger$ are a large group of many islands which extend in the Indian Ocean from $7^{\circ}\left(0^{\prime}\right.$ North latitude to $0^{\circ} 42^{\prime}$ South latitude, and from $72^{\circ} 333^{\prime}$ to $73^{\circ} 44^{\prime}$ East longitudr. Together with the Lakbadives and the Citagos Islands they belong to a submarine mountain chain. on the summits of which the coral polyps have built their reefs.

[^3]The islands are grouped into "Atolls"-the Máldivian word. as is well known, has passed as a termination into geographical science - and these Atolls, as a rule, are surrounded by a barrier reef, which protects them from storms and waves. In the Northern Atolls, however, the reefs are washed away.

The form of the indiridual islands is circular or oval. They are only of very small extent, the length and breadth seldom exceeding an English mile. The soil of the islands consists of sand; and in most islands there is thick jungle, from which the crowns of the coconut palms lift their heads proudly in all directions.

The principal Island is called málé. It belongs to (a double) Atoll (North and South) of the same name, and from it the whole Archipelago has probably received its appellation. On Málé is the residence of the Sultán. The number of its inhabitants is from 2,000 to 3,000 .*

The climate of the Máldives does not seem unpleasant, for the excessive heat is tempered by sea breezes; but it is extremely unhealthy. Foreigners are usually attacked, within a short time, by severe abdominal disorders, which, if the indiridual does not at once leare the Islands, seem in most cases to run a swift and fatal course.

As regards the inhabitants of the Máldives, it is impossible to determine their total number. Bell (in 1883) estimated them to be at least 30,000 : in former times there were doubtless many more. The gradual decline in the number of the population seems, howerer, to have recently come to a standstill, or eren to have been succeeded by an increase. $\dagger$

* Bell, loc. cit., 1883, p. 53. The C'ensus of 1911 (p. 500) gives the total as 5,236 inhabitants.-B., Ed.
$\dagger$ Mr. Gray (Journal, R.A.S., 1878, new series, X., p. 197) puts the population of the group at 20,000. Mr. Bell (The Mildive Islands, 1883, p. 53) considered this "perhaps too low an estimate, and a total of at least 30,000 may, with more probability, be asstumed." Mr. Bell adds, " that the population was in former days larger is admitted by the Islanders themselves, who point with melancholy significance to islands in nearly every Atoll now lying waste, where homesteads stood of old. It is, however, satisfactory to find good grounds fur the belief

The fact can scarcely be disputed, that, at a period of time still unknown to us, the Máldives were colonized from Ceylon, or, as also may be possible, were colonized at the same time as Ceylon, by Áryan immigrants who came over from the Continent of India.

The first view seems the more probable to me, owing to reasons which appear on a study of the character of the Máldivian language. This, in fact, shows a number of features which are characteristic of the Sinhalese language, and which have not arisen in the Prákrit foundation of Sinhalese, but seem to have originated on Ceylon soil itself. In course of time the Áryan stock of the Máldivian population would be much mixed with Dráriḍian and Arab blood: so that the physical type of the Máldivians can no longer be considered a unit.

The fact that there is no trace of Buddhism on the Islands* must not surprise us too much : Islám has totally ousted this religion.
that the gradual depopulation-mainly attributable to the proverbially unhealthy climate-has not merely been arrested, but that, from the closer connection now yearly being established with the outside world, and the increased facilities for ubtaining yearly necessaries of life, a steady re-action is setting in." (Census R+port. $1911, \mathrm{p} .499$.)

This Census made the total population of the Máldive Islands to be '‘ 72,237 (males, 39,244 ; females, 32,993 )," pointing to 50,000 rather than 30,000 as nearer the mark in the Eighties.-B., Ed.

* See Bell, loc. cit., p. 74, Buddhism on the Mildives.

Mr. J. Stanley Gardiner (Thr Natures of the Máldives. Proceedings, Cambridge Philos. Society, XI., Part I.. 1900) unconsciously plays the role of "Balaam" in an endeavour to condemn the theory of Buddhism formerly existing on the Máldives:-
"Mounds in Landu and Miladu of Miladummadulu Atoll, as also in Haddumati, Suvadiva. and Addu Atolls, and Fua Mulaku Island, suggest by their form a con-parison with the dágahas of Anuradhapura.
"Gang, in Haddumati Atcll, was evidently a great religous centre, having ruins of fourteen of these, some with smooth sides of squared stone.
" One, in Landu, appears to have had a kind of pit or well in the centre, formed by squared blocks of Porites, and covered by two large flat masses. Within this, in 1848, were found a number of gold or brass ornamental discs.

The colour of the skin of the males is usually a dark copper ; some of the women are decidedly pretty.

As regards the character of the Máldivians, I give some statements from the Report of the two Englishmen, Lieutenants Young and Christopher, of the Indian Nary, who, in the course of a Survey of the Máldirian Archipelago in the years 1834-1836, spent several months at Málé:-
"They are a quiet, peaceable race, hospitable and kind to strangers, though suspicious and distrustful of them. Unacquainted, indeed, with the practice of the higher virtues, but equally unfamiliar with vice in its darker forms, with desires and wants circumscribed and limited, and the means of satisfying them attainable without much liwbour, they have little incitement to increased exertion for the puipose of augmenting their productions; and hence, in all probability, the little attention paid to the improvement of their resources, and the absence of all care regarding the amelioration of their condition. The apathy and indifference evinced by them on these subjects seem, however, to result in a great measure from feelings of contentment, though of as spurious kind." *

The religion of the Máldirians is Muhammadan. According to Gray they embraced this religion about the year 1200. Native tradition indicates Yúsuf Shams-ud-dín, from Tabríz. in Persia, as the apostle of Islám in the Máldives. He died in Málé, and his grave there is held in great honour.

- At Fua Mulaku a fen oval six-sided beads, either of an extremely hard clouded glas- or of crystal, were found.
"The presence of an immense Bó tree (M. boi gas) at Málé, and another in Fua Mulaku, is of no importance: no traditions cling to them. The tank resmble those of Anuradhapura, but there is no particular Buthhi-t type
"Indication of Buddhism might. indeed, be gleaned from the above, but I found no wt.se evidence inity support."
"Mound:." with pusible a lic chambers (" pit" or "well"), which " suggent" the "dágabas of Anurádhapura"; "tanks" which resemble the pokn"n of that wh Sinh ahe Capital: lurited metal, "ornamental disc-" and " "ral bedds, glas or crystal-to say nothing of the unexplained presence of two $B 6$ trees (one at Málé, the chief Island itself)-are about as promising " mdication of Buddhism," judged by Ceylon archæology, a- one can well hope to find where Muhammadanism (withitsiconoclastic zeal) has existed for some elcrht centuries.-B., Ed.
* Transactions of the Geographical Society, Bombay. I., p. 66.

But although Islám is the official religion. the old animistic nature-worship, the belief in demons and spirits, in exorcism and magic, plays the most important part * in the life of the people.
" The belief in the existence of spirits and supernatural beings, who interfere, sometimes visibly. in limman affairs for purposes of evil, as also in extraordinary phenomena supposed to afford intimation of pending calamity, is universal among the Islanders. . . . . They believe also in the auspiciousness, or otherwise, of certain days for particular transactions, no undertakings of any importance to individuals, or to the public, being entered mon without the priest being consulted to determine that point. During recitations in Arabic of passages from the Korann. which is a common practice, incense is kept burning, and when this takes place on board a boat, the crew are always careful to fumigate the rudder-head and tiller before the fire is extinguished..... Many individuals on the islands gain their livelihood by writing charms, which are supposed to possess much virtue, not only as io preventive against, but also a cure in most diseases. In order to produce a curative effect the ink of a freshly-written charm is washed off in water and drunk as a medicine." $\dagger$

So far as is known to me, the ancient historical writings of the Sinhalese give no information about a colonization of the Máldives by that people: neither do they mention any sovereignty which they at times exercised over the Islands.

The first allusion to the Máldives is found in Ptolemy (the Second Century A.D.), who places a group of 1,378 little

[^4]islands to the west of Taprobané (Ceylon).* There can scarcely be a doubt that by these the Lakkadives and Máldives are meant. After Ptolemy, and with reference to him, Pappus of Alexandria speaks of 1,370 small islands which are near Taprobané. and dependent on it.

In the Sixth Century, Cosmas Indicopleustes, who got his information from Sopater, mentions a large number of islets in the neighbourhood of Ceylon where fresh water and coconuts are to be found throughout. $\dagger$ His statement is indeed striking; for on almost all the islands known at the present time there is fresh water. and the richness of the Máldives in coconut palms is a well-known fact.

The first visitor to the Máldive Islands to whom we are indebted for a more accurate description is the famous Arabian traveller of the Fourteenth.Century, Ibn Batuta. $\ddagger \mathrm{He}$ remained eighteen months on Málé, and gives us a tolerably detailed account of the condition of the Islands, of their conversion to Islám, of their government, and of their trade with India, China, and Yemen. §

In the Sixteenth Century the Portuquese made many attempts to bring the Máldives under their dominion. Finally, their independence was acknowledged in a Treaty ; in which, howerer, the Portuguese reserved to themselves the exclusive right of trade with them. ||

Almost thirty-five years later, on July 2, 1602, a French ship, with a band of adrenturers on board. was driven ashore among the Atolls. The crew were taken prisoners : some died in consequence. others succeeded in escaping; only four remained, among them François Pyrard de Laval.

[^5]Pyrard stayed five years in the Máldices. By his wise and tactful conduct he gained the farour of the Sultán, so that he had a tolerable amount of liberty, and could carry on trade. Finally, when the Maldivian kingdom was plunged into the confusion of war, he regained his freedom.

In 1607 the "King of Bengal" undertook an expedition to the Máldives. His fleet attacked Málé suddenly, without encountering serious resistance, and returned with rich booty. On the Bengal ships Prrard and his three companions left the Máldives.

Four years later, after many other adventures. Prrard once more safely trod the soil of his native land.

Pyrard’s work, Voyage aux Indes Oricntales. which is very scarce, appeared for the first time in the rear 1611. the second edition in 1615-1616, the third in 1619.* It contains the most complete description of the Máldive Islands which has hitherto appeared, and still serres as a raluable source of information.

The Dutch followed the Portuguese in the Government of the East Indian world; and were followed by the English at the close of the Eighteenth Century. After the latter took possession of Ceylon, the sorereignty which the Dutch had wielded over the Máldives passed automatically to their successors. $\dagger$

[^6]In the years 1834-1836 a Survey of the Máldive Archipelago was undertaken by Captain Moresbry, at the instance of the Bombay Gorernment, since such a Survey was urgently necessary in the interests of Marine Commerce.

On this occasion Lieutenants Young and Christopher spent at the Máldives, and almost exclusively on Málé island. two to three months-from June 4 until August 17 and September 9,1834 , respectively. They suffered severely from fever, but were able during their stay to make a scries of important observations on the country and people, government and commerce, manners, customs, and language, which they subsequently collected into a IIemoir.*

This is full, and (until 1883 was) the most recent knowledge of the Máldive Islands a railable. It must be considered. so far as it goes, credible and reliable, but is, at the present time, scarcely up to date. $\dagger$

* Memoir on the Inhabitants of the Maldiva Islands, by Lieutenants J. A. Young and W. Christopher, of the Indian Navy ; Transactions of the Geographical Society, Bombay, I., pp. 53-86. Cf. Captain Moresby's Report on the Maldivas; loc. cit., pp. 102-108.

Among other notices of the Maldives and their inhabitants are M. Haberlandt, Die Kultur der Eingeborenen der Malediven, Mittheilungen der Anthropologie; Gesellschaft in Wien, 1888, XVIII., p. 29 seq.; Rossct, Minikoi und seine Bewolntr, Ausland, 1891, LXIV., pp. 16, 35, 67. ('f. Dit Maldiven, Ausland, 1887. LX.. pp. 761-76t.
$\dagger$ Bell, The Míldive Istands, p. ii.

## I.-THE MALDIVIAN LANGUAGE.

After these general preliminary remarks, I now come to the Máldivian Language itself.

Our knowledge of this is very scanty, and almost entirely confined to the rocabulary.

## Vocabularies.

We possess two Vocabularies,* which, howerer, can lay no claim to completeness.

The first originated with Pyrard, 1602-1607, and appeared in the Second and Third Editions of his Voyage aux Indes Orientales. $\dagger$

The second Vocabulary was compiled by Christopher during his stay in Málé in the year 1834. and in 1841 was printed in the Journal of the Royal Asiatic Society. $\ddagger$

Pyrard's Vocabulary was subsequently published again by Gray, and compared with that of Christopher. §

Gray's Paper is the first attempt to discorer the connection between the Máldirian and Siņhalese languacres.

A number of Máldivian words are found in Bell's book, \|l already mentioned: a few. too. which show the identity of

[^7]the language which is spoken on Minikoi with that of the Máldivian Islands, occur in the communication of Rosset previously mentioned.

## Texts.

As regards the text of the Máldivian Language, we possess (in print), up to the present time, only three Letters: one was lithographed in facsimile and translated by Christopher;* another by Bell ; $\dagger$ a third is given in Bennett's Ceylon and its Capabilities, London, 1843, along with an official translation. $\ddagger$ The last-mentioned Letter, howerer, is unknown to me. §

I myself began my Máldive collection (of words, phrases, \&c.) in the winter of $\mathbf{1 8 9 5}-\mathbf{1 8 9 6}$, during my stay in Ceylon.

As related in the Account of my Journey, I had the opportunity of meeting a Máldirian of high rank, Ibráhim Dídí,\| in Colombo, and, from his information, putting together a vocabulary, as well as a number of Máldivian paradigms and sentences.

My material has convinced me that only by a collection of new texts can we expect to further our Máldive linguistic studies.

Since my return (to Germany) I have kept up an unbroken correspondence with my excellent Sinhalese friend, A. Mendis Gunasékara. Mudaliyár; and it is to him especially that I owe the fact that I am now in a position to publish some contributions to the investigation of the Máldivian Language which I hope are not without value.

I sent sentences to Mudaliýár Gunasékara which I wished to have translated. He succeeded in discovering an Indian

[^8]merchant, named Sheik Ali, at the time residing in Colombo, but who had lived for many years in the Máldives, and spoke the language as his mother tongue.

Communicating with Sheik Ali (who neither wrote nor spoke English) through the medium of Sinhalese and Tamil, the Mudaliyár delivered the sentences written down by him to me for further elaboration.*

## Vocabularies in Europe.

In conclusion, I have to mention the Náldivian materials which are found in European Libraries. They are certainly not very plentiful ; and, as far as I know, have not hitherto been adequately valued by any inquirer. $\dagger$

## "Copenhagen Vocabulary."

First, a short manuscript Vocabulary of the Máldivian Language is found in the Library of Copenhagen. $\ddagger$ By the kind mediation of Professor Fausböll, I received the manuscript at Erlangen, and was able to enter its contents into my list of Máldive words.

The Máldivian Writing § employed in this Vocabulary has a quite unique style, differing considerably from the Writing which I learnt, and which is used in the (tro) Letters quoted below.

In the little manuscript I also discovered the original of a Máldivian missive which Sultán Muhammád Muîn-ud-dín

[^9]Iskandar sent to the English Governor in Colombo (kolembe rasgefánc).* This is doubtless the Sultán of that name who in 1799 succeeded to the throne of his father, Hasan Núr-ud-dín.

## "London Vocabulary."

Secondly, in the Library of the London India Office is $A$ Vocabulary, Persian and Hindústáni, $\dagger$ printed in Calcutta, 1808, and formerly belonging to the Bibliotheca Leydeniana.

In this book the Máldivian translation of every word is entered, with a few exceptions, by a native of Himití (in Nilandú Atoll), named Hasan-bin-Adam.

Mr. Tawney was so kind as to send the book to me, and with it a bundle of letters; from which it appears that some years ago, according to Mr. Bell's wish, it had been sent to Colombo. He showed it to some native Máldivians, who were to examine the Vocabulary; but they came to the conclusion that it was full of mistakes and errors, and of little or no value. $\ddagger$

This correspondence was indeed discouraging to me; but l did not allow myself to be deterred from putting the Vocabulary to a test on my own account, and preparing a copy for myself.

The result at which I arrived is happily much more fa vourable. I regret to be obliged to say that the Máldivians whose aid Mr. Bell sought, clearly did not take much pains in the matter: perhaps they did not possess the necessary knowledge of Persian and Hindástání.

At any rate they were in error in calling in question Hasan-bin-Adam's knowledge of their mother tongue. $\ddagger$

[^10]Extra No.-1919.] máldivian linguistic studies.
The "London Vocabulary" (which I have now to deal with on the basis of my own observations) is, indeed, not free from errors, and a considerable number of words contained in it can be rejected at once as worthless. But the mistakes can be partly explained on the general ground that the Máldivian language does not possesis an absolutely fixed orthography.

The words which I characterize as worthless are not to be set down to the ignorance of the translator, but are explained by the praiseworthy, though naturally impracticable, endeavour to give, wherever possible, a translation for every Persian and Hindústání word.

Thus, there are in this Vocabulary numerous words (e.g., technical terms, \&c.) for which there neither are, nor can be found, equivalents in Máldivian.

In such cases, Hasan-bin-Adam got over the difficulty in two ways: either he gave instead of the translation an explanatory paraphrase, or he transliterated the Persian (or perhaps Arabic) or Hindústání word into the Máldivian alphabet.

Of the " paraphrases "-using this expression on account of its shortness-many are quite intelligible, and at least show us that the translator understood his task.*

Thus, for example, the grammatical terms " singular" and "plural" (p.133) are written by him as eb-bas, " one word," and GINA-baS, " many mords." Instead of " barren" (of a woman), he says ( $p$. 176) dari mai suvé," she does not become mother of a child." The Persian buz-ikiuhi, "mild goats," he translates (p. 39) closely by farcbada matí bakari. "goats on the hills."

Many of the paraphrases may indeed be real terms; for the paraphrasing expressions do not seem at all strained to the Máldivians, and are also found in Christopher's Vocabulary. Thus, for instance, FINI-FEŃ-MaCr, i.e., " dew-flower:" for "rose," the same expression being found in L.V., p. 67.

[^11]The verb hunu-kerán, " make hot $"="$ cook $"$; Us-kurán, " make high," "raise "; ladu gannan, " be ashamed," and others which occur in L.V., do not differ, as regards their method of formation, from verbs like hes-kuran', "empty"; dú-kURaí, "lower"; bírex́ gannax́, "be afraid," in Christopher.

The expression mínun mará mínu, " the man who kills people" (p. 104), for "executioner," we shall meet below, in the story of "The Wise Judge." Consequently, others, such as DADU KORÁ mínu, "the man who tills the fields" $=$ " countryman"; or ropi VIKhá míno, " the man who sells bread " = " baker," may really be Máldivian and constantly used. We find also in Christopher expressions like dagado talí Míhu'́n, for "smith."

A really pretty and well-considered paraphrase is, for example, MAU-KORI, "flower enclosure," for "garden." The word, which might perhaps have been apt, Gótí, is well known to our author: it occurs in several places; but here he evidently a voids it designedly, because it has the more general significance of "yard," corresponding to the Anglo-Indian "compound." *

Further, as regards the Arabic, Persian, and Hindústání words which occur in Máldivian guise in L.V., these are not very numerous.

As examples, I mention (a) the names of the Signs of the Zodiac (p. 4), like Hamale, "Aries" = Ar. hamal; asadu, "Leo" = Ar. asad; (b) expressions from the Islámic faith, like nabí, " prophet"; valí,"saint"; imáme, "religious leader" (p.116) ; as wellas (c) words like irádá, " will," "resolution"; kabćle, "agreement"; Masalato, " goods" (p. 94) ; faidá kuráv, "explain" (p. 196 ; Persian paidá) ; fikurd kurán, "consider" (p. 98) ; and many others.

[^12]I have already said that these words can be eliminated as worthless-at least for our scientific purposes. But it must be mentioned emphatically that many of them, as a matter of fact, may belong to the Máldivian vocabulary, which has borrowed a good deal.

As regards doubt regarding the unreliability of the L.V., this is refuted by the fact that, without taking the Numerals into account, I have counted, in round numbers, five hundred Words which also occur, in like form and with the same meaning, in Christopher's list. By this its correctness is proved.

Further, it is not credible that all the remaining words which occur in the L.V., but are missing from Christopher, should be worthless.

Moreover, I am in a position to prove the correctness of a whole series of words (which have not been quoted otherwise), either by comparison with my own collection (Geiger), or by etymology.

## Some Maldivian Words in the " London Vocabulary."

I subjoin the list here, with the observation that it is by no means exhaustive. But it is natural that I (in Germany), so many thousand miles away from the land of origin, was not in a position to verify all the new words of the L.V.; and for this reason especially deplore the fact that this could not be done at the time that the L.V. was in Bell's hands. and his Máldivian helpers were there.* I do not doubt that among the words whose correctness I cannot confirm-preliminarily, at least-there are many true Máldirian words.

1. aDUn, " ointment for the eyes " (p. 34) $=$ Geiger. andur ; S. anddun ; P. añjana. Forms with, and without. the ante-consonantic nasal are very frequently found close together. I heard HaNDU, " moon"; L.V. (p. 3), HadU : Christopher has HADU, but the cerebral is certainly incorrect.
[^13]I wrote kanḍu, " ocean ": Christopher and L.V. (p. 8) have кappe. Cf. also Nos. 21, 31, 60, following. In these cases, it appears to me that there is a difference of dialect.*
2. agu, " price," "value" (p.74) = Geiger ; S. aga ; P. aggha; L.V.(p. 186), AGU-VÁN, " be worth," " to cost."
3. ARIKARI, " side " (p.19) = Geiger ; K.V., " rib."
4. asei mirds, " black pepper " (p. ธ̃5) = Geiger, asé MIRCS.
5. aIt, "sunshine" (p. 2) = Geiger ; K.V.; S. avu ; P. átapa.
6. bantída', " pious man," " believer" (p. 178) = Geiger, bantyádaś míhe', " man of good habits"; opposed to Kále míhe'.
7. bertiabif, " back " (p. 18) = Geiger; K.V.: Christopher has only buri.
8. bercgade, " wheel of a cart" (p.78) = Geiger.
9. Daḷt. "horn" (p. 4l) = Geiger ; S. dala ; P. dáṭhá, " tooth." The meaning " horn " was also confirmed by me. Christopher has only eddalte, "ivory;" e.g., "elephant's tooth.
10. Deli, " charcoal " (p.9) =S. deli; Christopher, deli, $\because$ ink ${ }^{\prime \prime}=$ L.V. (p. 127).
11. Devt. "demon " (p.2) =s. dev," good deity" ; P. deva.
12. EnNís," to come " $(\mathrm{p} .182)=$ S. enu. I have recorded anván.

[^14]13. faraín, " to begin" (p. 186) = Geiger. Cf. S. paṭan, "beginning"; paṭan gannu, "to begin"; P. paṭthána, patṭhápeti. With respect to the equivalence of Máldivian R and Sinhalese t, see Geiger, Litteratur und Sprache der Singhalesen (Ind. Grdr., 1, 10), p. 88.
14. fatas, "ditch" (p. 92) = S. patas, "deep pit," "well."
15. faturán, " spread out" $(\mathrm{p} .190)=$ Geiger ; S. paturuvanu; P. pattharati.
16. fautud, " clear," " open " (p. 158) = S. pahaḷa; P. pákata.
17. fálan, " bridge " $(\mathrm{p} .7)=$ Geiger ; S. pálam.
18. fefalit, "red coral" (p. 49) = Geiger, fofali. I conjecture that in L.V. there is a slight clerical error, and fofaly is to be read.
19. FenidJa, " to occur" $(\mathrm{p} .185)=\mathrm{S}$. penenu : P. pañãayati.
20. fiddiya, " gall" (p.22) = S. pit ; P. pitta, " gall" + diya, " water."
21. FIDU, " buttocks" (p. 44) = Geiger, Fíndu, "hips."
22. forctán, " to cover," "clothe" (p. 184) = Geiger. Cf. below, III. 1 : 17. S. poruvanu; P. párípati.
23. fuhén, " to ask " (p. 189) = P. pucchati. The word is of especial interest, because a Sinhalese equivalent is no longer preserved.
24. furán, " to fill" (p. 192) S. S. purañu; P. púreti.
20. Gápiya, " cart " (pp. 62. 78) = Geiger ; Sheik Ali, Gádi-dapi, " yoke."
26. gomat, gUmafulu, " prince ${ }^{*}$ (p. 108) $=$ Geiger, goma, "princess."
27. GCI, " excrement" (p.23) =S.gú ; P. gútha.
28. Hafán," to chew" $(\mathrm{p} .181)=$ S. hapanu.
29. Haḉc̣ín, " to make a noise" (pp. 26, 182) = Geiger, " to bark": e.g., KUTTE" HALélaníyé," a barking dog."
30. Hard, "hard" (p. 25) = Geiger. See below, III. 1: 16.
31. harigadec, ${ }^{\prime}$ body ${ }^{\prime \prime}(\mathrm{p} .15)=$ Geiger, harigajpl'.

D
32. Haturd, " enemy " (p.99) = S. haturu.
33. HÁSfat, " millepede" (p. 46) = Hás, L.V. (p. 150) ; Híнe", Geiger, " thousand" + FAT, FAI, L.V. (p. 20) ; FÁi, K.V. ; fá, Christopher, "foot."
34. HEILAN, " awake " (p. 183) = Geiger, hélứ, " be awake."
35. HITU, " thoughts " (pp. 93, 135) = Geiger. HITUヘ́ ; S. hitu; P.citta.
36. HUGU, " asafœetida" (p.33) = Sans. hińgu.
37. innán, " to sit" $(\mathrm{p} .183)=\mathrm{S} . \operatorname{indinu}$; P. sidati.
38. irína, " to sit" (pp. 183, 190) = Geiger, mpinna; S. hitinu; Prákrit citṭhai. The r in inína is perhaps simply written by mistake ; but the K.V. likewise has iridé: In just the same way HURI, " is," "exists," and HURI are also interchangeable.
39. ÍṬu, "tile" (p. 57) = Geiger. Cf. L.V. (p. 81), ÍṬ andá wínu, " man who bakes tiles." The word is interesting: it corresponds to the Sanskrit isṭaká or isṭiká; in Sinhalese it is wanting.
40. kave, " blind " (p. 23) = Geiger; S. kaṇa. P. kána.
41. kekdri, "cucumber" $(\mathrm{p} .69)=\mathrm{S}$. kẹkiri ; P. kakkárí.
42. KIBÚ, " crocodile " (p. 45) =S. kĭ̆bul ; P. kumbhíla. The disappearance of the final L is purely Máldivian. Cf. mú, " root," but mCle', " a root "; má, " flower " (Geiger), but male', " a flower."
43. Kirín, " to weigh " $(\mathrm{p} .205)=$ S. kiraṇu.
44. Kiri-mal, " nurse " (p. 11) =S. kiri-mav; P. khira + mátu.
45. KOLU, "cheek" (p. 17) = Geiger, kó (cf. 42) ; P. cos. Perhaps = S. kopul.
46. $\quad$ коRе, " lame" (p. 24) $=$ S. kora; P. khonda.
47. котabiri, " coriander " (pp. 37, 69) = S. kota ${ }^{\text {mburu }}$.
48. KUJJÁ, " child," " son " (pp. 10, 175) = Geiger.
49. kelen, " to play " (p. 191) = S. kelinu ; Sans. keláyati, kheláyatí.
50. kurdbai, "young coconut" (p. 66) = Geiger, ku. rtmba; S kurŭubbá.
51. Lakond, " spot," " time " (p. 28) = S. lakuṇu ; P. lakkhaña.
52. madori, " a weight" (p. 120) = S. madata ; P. mañjitṭhá.
53. néva, " fruit" (p. 64) = Geiger ; Persian ; L.V.
54. MUGORI, " ichneumon " (p. 41) = S. mugatic.
55. Muṭó, " axe," " hatchet" (p. 84) = Geiger.
56. Narán, " to dance " (p. 183) = S. natanu; P. naṭcu.
57. NTANETI, "insight," " understanding " (p. 135) ; better " intelligent" $=\mathrm{S}$. nuvaneti .
58. stcí, " letter " = Geiger. $\quad C f$. below, III. 1:21.
59. sungan, " tax," " toll" (p.112) =S. sungam.
60. тabu, "arrows" (p. 56) $=$ Geiger, тambu ; S. tẹ $\check{m} b a$; P. thambha.
61. taburd-mat, "lotus flower" $(\mathrm{p} .68)=\mathrm{S}$. tă̈buru; P. támarasa.
62. tala, " palate" $(\mathrm{p} .18)=\mathrm{S}$. talla.
63. TELI, " pot" $(\mathrm{p} .60)=\mathrm{S}$. tẹli; P. tháli ; Sans. sthälí.
64. UDUN, " oven," " hearth," " fireplace " (p. 60 ; on p. 9 incorrectly written adUn) = Geiger, udun, undu ; S. udun; P. uddhana.
65. CFI, " twig" (p. 65) = Geiger, oft.
66. UGEN, " to learn" (p.185) =S. ugannu; P. ugganhíti.
67. ukule, " privy parts" (p.19) = S. ukul, " hip."
68. umagu, " hollow," " hole " (p. 1̃̃3) = S. uman (kaninu).
69. váda korán, " take revenge " (p. 99) = S. váda, " rage," " fury."
70. vehení," it rains" $(\mathrm{p} .185)=$ S. vahinu ; P. vassati.
71. vtyáfári-veri, " merchant" (p. 73) = Geiger. See III. 1: 22.

## II.-THE MALDIVIAN WRITING.

In the Memoir on the Inhabitants of the Maldica Islands by Lieutenants Young and Christopher there is the following remark on the Máldivian Alphabet :-
"The different written characters found on tombstones on the Maldiva Islands are of three kinds. The most ancient are called by the natives dewehi hakura, which in all likelihood were used by the first inhabitants, but now the knowledge of them is nearly lost, being confined to a few individuals. In the Southern Atolls a knowledge of this writing appears to have been retained longest, for it is not remembered in the Northern ones at all, whereas orders are now written at male in this character for the inhabitants of the Southern Atolls. No old manuscripts with this character are preserved. One peculiarity in the alphabet is, that some of the consonants change their form according to the various vowel-sounds with which they are united, the construction of the letter being altogether different. This character is written from the left hand.
"The next is the Arabic, which is written in two different ways, the old and new ; but the old method of forming the letters is now discontinued. From the appearance of the tombstones it is evident that the dewehr character was in use prior to this, for the freshest inscription in that character bore more signs of age than any we have seen in the Arabic. The multitude of inscriptions in the latter character is an evidence that it was very extensively spread and known throughout the islands Both of these characters were invariably carved in relief. The modern Arabic character was apparently introduced about the same time as the present native writing.
"The modern alphabet contains eighteen letters, and is called by the natives gabatr-tana. There are some auxiliary letters in it, derived from the Arabic and Persian, in common use, but not included in the alphabet. It is written from the right hand, and was introduced when the Portuguese garrison were overcome, and Muhammadanism re-established by a Chief and men from the Northern Atolls, and is now used throughout the Islands. . . . . .
" There are several kinds of táva writing ; and we are inclined to think that the one at present used was not so generally adopted until within the last fifty years, as many tombstones are evidently inscribed in a character differing from the gabayi-tána: the letters, at least, have a different sound, and the signs used for vowels are different.
" Letiers of the alphabet are used as numerals, and they reckon by twelves, as we do by tens." *

## Alphabets.

In the Table $\dagger$ which I have added to these Studies all four Alphabets are given completely.

The first two, (reproduced) in Columns I. and II., originate from the "London Vocabulary," in which they are entered at the end, with the remark that the first is called the divehi akUru Alphabet. $\ddagger$

The Alphabet in Column III. is (copied from) the one which Christopher gives as the "Ancient Form" of the Máldivian Alphabet.§

* Transactions of the Geographical Society. Bombay. T., pp. 68-6!.
$\dagger$ See Plate I.-B., Eá.
$\ddagger$ Photographic reproduction of "the divas alphabet" as given in the "London Vocabulary," and faithfully traced therefrom by Mr. D. A. L. Perera, Muhandiram, Head Draughtsman (and later Native Assistant), Archæological Survey, during the short time the book was in Mr. Bell's hands at Anurádhapura, appears in Plate V. 1.

As will be seen, the characters are more carefully delineated (dots and dashes, where given, being shown) than in Geiger:s Table, Columns I., II. [Plate I.]; which, moreover, reverses the proper order of the columns in the " London Vocabulary'"; and starts with $\boldsymbol{H}$ instead of $M$. -B., Ed.
§ See Plate II. for the Plate of Comparative Alphabets siven by Gray (Journal, R.A.S., 1878, now series, X.).

Christopher's copies of the Ancient Maldive (Evila) and Modern Máldive (Gabuli tína) Alphabets were reproduced correctly by Gray; except that Christopher, on the one hand, bega:l his Alphabets from $\mathbf{H}$ to $\nabla$, followed by an to p , whilst Gray, for his pirt. reversed this order. Both group the eight (8) letters, extra to the ordinary eighteen (18), thus : Persian ch, $p, t$; Arabic $z, y, j, y h, t h$ or $d h$.

Geiger, in his Table [Plate I.], has altered Christopher's letter transcripts RH, CH, J, GH, and TH or DH, to $\mathrm{R}, \mathrm{C}, \mathrm{J}$ (headed by small v), Greek $G$, and $t$ (underlined), besides substituting the sign' for Christopher's arieni transliteration. He adds the $\tilde{\mathrm{N}} .-\mathrm{B}, \boldsymbol{E d}$.

In Column IV., finally, I give the Modern Writing as I myself have learnt it, and as it is used in the Letters hitherto published.*

I intend, next, to detail the material, as far as it is accessible, and make a series of observations on it.

## Maldivian Writing.

We are still far from a history of the Script, and any far-reaching conclusion we make respecting the character of the Máldivian Writing must be considered rash and uncertain, until we have reliable copies-photographs, where this is possible-of the inscriptions still existing.

In regard to the "Ancient Form " of the Máldivian Writing in Column III., Gray has already written.

He shows its resemblance to the Ancient Sinhalese Alphabet of Twelfth Century Inscriptions, by simply placing the respective signs side by side. $\dagger$

In single characters the agreement is, in fact, immediately perceptible. The sign for $\mathbf{F}$ (11) resembles the Sinhalese $p$, being only somewhat inclined to the right: the same is the case with the signs for N (3) and T (13): in the signs for $\mathrm{E}(7)$ and G ( 15 ) the connection is unmistakable: in others it seems more obscure; but it always appears quite probable.

The question is, whether Christopher's "Old" Writing really

[^15]$\dagger$ Journal, R.A.S., 1878, new series, X., p. 183, with Table.
represents the oldest form of Máldivian Writing-whether it corresponds to the DIVEHI akURU.*

If this be the case-and I must remind the reader of what I have said about the uncertainty of our conclusions-a really remarkable result will follow.

The (Old) Máldivian Alphabet (given by Christopher) may especially be compared with the Sinhalese signs which were used in the Inscriptions of the Twelfth Century (as has been done by Gray).

But we know that the period about the Ninth Century was of out-standing importance in the history of Sinhalese Writing. $\dagger$ Before this, the universal Aṣóka Script, with extremely slight modifications, was in use (in Ceylon). Afterwards a Writing appears which in general is based on the Aṣóka Alphabet, but already shows traits of the Modern Sinhalese Writing. The revolution is quite sudden and immediate.

This can only be explained by supposing that, in the preceding period, the Writing used among the populace had gradually deviated from that used in Inseriptions, so that the latter could no longer be understood. For monumental purposes, also, therefore, they gave up using the old Asóka Writing of the lapidaries, and employed the more cursive Alphabet used in general intercourse.

As regards the Máldivians, it would follow that they did not borrow their Writing from the Sinhalese until the Ninth or Tenth Century; or that, if they brought their Writing with them, they did not settle in the Archipelago before this time. In itself it would be quite conceirable, either that (a) the Aryans coming from Ceylon were the first colonists of the Máldives, or that (b) they met with an older aboriginal population on the Islands.

But we must first see whether still older specimens of Máldivian Writing do not turn up.

[^16]
## "London Vocabulary" Alphabets.

I come now to the two Alphabets of the L.V., of which the first is said to correspond to the divefr akcrd.*

The Modern Máldivian Alphabet, as is well known, runs from right to left; the Old Alphabet is said to have had the reverse direction.

This agrees quite strikingly with the Alphabets in the L.V.
The more recent (of those given in Columns I. and II., Table) is clearly the direct source of the Modern Alphabet, and like this, also, has the right to left direction. We can without difficulty derive one from the other, by changing, in each letter, the vertical and horizontal stroke (which in the older form constituted the end of the letter) into a diagonal line, or, as-for example-in k.', v (7, 8, 9), by entirely omitting it.

On the other hand, the Writing in Column II. is clearly a reversal $\dagger$ of the Writing in Column I., which doubtless ran from left to right, like the Sinhalese. Only the signs for y (16) and $\mathbf{p}$ (18) offer any difficulty. The former appears in Column II. not as the reversal. but only as a slight variation of the (erquivalent) sign in Column I.; and in the case of $p$ (18)-if the modern form of the letter did not contradict it-one might easily believe in a simple interchange of the forms in Columns I. and II.

We have now, on the whole, got a complete history of the development of the Máldivian Writing, as (far as) shown in Columns I., II.. and IV.

[^17]Yet I cannot believe that the Alphabet in Column I. is the divehi akuru : the latter must, I think, be much further removed from the Modern Writing. Gray, however, has pointed out, correctly, that the modern signs for the nine letters H, R, N, R, B, L, K, A. $\mathbf{v}$ are nothing but the Arabic Numerals 1, 2, 3, 4. 5, 6, 7. 8, 9.

I should like to call attention to the statement in the Memoir quoted above, in which it is asserted as a characteristic phenomenon of the Ancient Máldivian Alphabet, that the separate letters appear in a different form, according to the vowel to which they are joined.* This points towards a Writing which is very closely related to the Assóka Alphabet.

It seems to me that both the Alphabets in Columns I. and II. are only archaic variations of the Modern Alphabet, but are widely different from the DIVEH AEURU. $\dagger$

I shall not lay too much stress on the left to right direction of the Writing in Column I. The Writing from right to left was certainly first introduced in Muhammadan times. It may indeed have been prevalent for a longer time, with fluctuations in its use. The Sinhalese Writing was always from the left, and yet inscriptions are occasionally found in Ceylon which have to be read in the reverse direction. $\ddagger$

[^18]
## Maldivian Orthography.

I should like to draw attention here to a few peculiarities of Máldivian orthography, which must be kept in sight all the more, as a fixed system apparently does not exist, and in the writing of single words variations are observed.

We dcal, first of all, with the use of the two signs (transliterated in the Table as) R (2)* and ' (8).
(i.) The first sign, R, expresses a sound peculiar to the Máldivians, to which the (cerebral) $t$ in Sinhalese is most closely allied. The sound is very difficult to describe and to imitate. It varies between $\mathbf{r} . \mathrm{H}$, and s ; is rather soft; and is, so far as I could observe, uttered by putting the tip of the tongue in the highest part of the palate. and letting the breath escape sideways between the teeth.
(ii.) As a sound value for the Máldirian sign (transcribed here as)' (8), Gray (following Christopher) gives a, because it is called by the Máldivians avieni; just as the other letters of the Alphabet (from the first letter onwards) are called havient, Ṛavient. navient, Ravieni, Bavient, \&c. $\dagger$

But that is quite wrong. The sign corresponds (a) more completely with the Arabic aleph and hamza.

It also acts (b) as a support for a vowel at the beginning of a word. as well as uithin a word when a vowel precedes. In this case it is, of course, not taken into account at all in the transcription of words. The Máldivians write ${ }^{{ }^{0}}{ }_{D}{ }^{\mathbf{D}} \mathbf{N}$, "stove " : $\mathrm{F}_{\mathrm{I}}{ }_{\mathrm{I}}$, " book "; we write simply UDUN, FOI. $\ddagger$

* Written Ry by Christopher and Gray.
$\dagger$ The sign for L has the name layu.
$\ddagger$ Geiger, in trying to represent the words, pronounced UDUN and For, as they are written by Máldivians, uses forms in which the vowel signs for U and o are added above, and that for $I$ below. These entirely ignore the avient base-sign (the evolution of the Arabic numeral $\Lambda=" 8$ "); and, further, make the representations read wrongly from left to right.

A far closer (though equally ugly) approximation to the Máldive
 represent the "semi-consonant" Avieni, and ( T ) with sukun above, within parentheses, the consonant, in English transcribed T , but pronounced by Máldıvians as a soft I.-B., Ed.

But the sign has also (c) another significance. Consonants like $\mathbf{T}, \mathrm{T}, \mathrm{R}, \mathrm{N}, \mathrm{K}$ often disappear at the end (of words), and in their stead (the Máldivian avient sign here represented by) 'appears in the writing. The sign is intended, I believe, to denote a closing of the top of the wind-pipe.

This may be brought into agreement with what Christopher says of (the letter sign) AVIENI, that, with the " sokun" (i.e., without vowel), it sounds like G.* In what Gunasékara wrote I also find g in such a place.

I always write (this AVIENI sign as) '. and am certain that this (mode) is correct.

My transliterationis, therefore, RA","land" (S. rata ; P. rattha) $=$ Christopher, $\operatorname{Rag}($ L.V., RA', p.111) ; FUA", "betel" $=$ Christopher, FUVAG; ó'," camel" (S. otu ; P. ottha) = Christopher, ó $\theta$; о', "stone (or kernel) of a fruit" = Christopher, ó $\boldsymbol{\sigma}$; ко', "having power" = Christopher. коя, Gunasékara, коя ; fоте', "a book" = S. potak; E ,"elephant" (S.ęt) = Christopher. E $G$.

The sign serves ( $d$ ) yet another purpose: it indicates the doubling of a consonant. Thus : кU'тá', "dog," is written for kuttá ; ka'tiri, " warrior," for kattiri ; rasraskalu Nát, " to the king," for rasraskalunnái; rá’Jé-gai, " in the kingdom," for ráJJé-GAI. $\dagger$

In both these cases, too, the sign (i.), which is expressed by R, may appear (in lieu of the arieni sign). In double

[^19]consonants, in fact, it is used in the L.V. : for example, kuJJá, "child" (p. 10) ; RaJJEHI, " in the kingdom" (p. 112); SIKKa, "seal" (p. 71), are written KURJí, RaRJEHI, SIRKA.

It must be understood that we cannot speak at all here of the sound-ralue of R . But the fact that the $\operatorname{sign}$ for $\mathbf{R}$ has been confused with the sign' (adopted here for AVIENI) can be explained in two ways.

In speaking, as we have already mentioned, R is mute, or nearly so: it is formed by closing the top of the wind-pipe. Also it can now be assumed that in many cases the old writing was preserved as historic ; so that one used op, "stone of a fruit," in uriting, but spoke it as $\mathrm{o}^{\prime}$. This might lead to considering ras an equivalent sign for '(avieni), and using it as equivalent.

Historical writing is found in the same way, with (final) $\mathbf{t}$ originally pronounced. The L.V. has et, "elephant"; fat, "leaf"; DAT, " tooth." I myself only heard (these words pronounced) E', FAĬ', DAĬ'; and Christopher also writes in this way, adopting the modern pronunciation.

In point of fact the sign for P -considering its resemblance in form to the sign for N -in uttertance apparently represents a nasal sound; and in this case would be written s..* This
consonant is expressed in the sarue way; thus: Gat is written $\mathbf{g}$ with the vowel sign 'a'(' above), followed by the quasi-consonant a with the vowel sign 'I' (, below)."
In the Modern Máldirian Alphabet (gabuyi tiva)—as contrasted with the Old Alphabet (DIVES AKURT) and the Sinhalese Alphabet-c" there is no inherent vowel : accordingly every consonant has either a vowel sign or the sokun ( ${ }^{\circ}$ above $=$ Sinhalese $\beta$ al sign) . in the latter case, if the consonant (be one that) cannot take the sokun, it is changed to one (of the six, viz., A, N, $\mathrm{y}, \mathrm{R}, \mathrm{s}, \mathrm{T}$ ) which can."

For transliteration (as distinct irom pronunciation) it might be well to adopt in every case the particular sukun-marked letter employed, placing it withir parentheses, either at the end of a word as mute, or in the middle, when used to double the preceding consonant. This would avond the indistinctly-marked sign', so liable to pass unnoticed.

In his footnotes the present Editor has followed this plan.-B., Ed.

* Christopher uses $\mathfrak{R}$ in transcribing some words (e.g., dernang, KaRNÁdi), where the $\underset{\sim}{\text { R clearly has the nasal sound of the consonant }}$ following. He does not seem ever to write it as the final letter having the sound of N.-B., Ed.
nasal sound is found occasionally, instead of the complete vanishing of the consonant, perhaps instead of the closing of the top of the throat; and was clearly heard by me. $C f$. Notes to III. 1: 3. It represents a transitional stage, the retention of which was apparently rendered possible by the rhythm of the sentence.

Even n, when final, shows a tendency to be pronounced as a velar, and can then be expressed by that symbol; and here again the closing of the top of the throat is a further stage of development.

The forms míhun, míhuí. míne", and míhu, "human being," are found, with no distinction between them.

## Maldivian Alphabet Signs.

In conclusion, two more remarks.
Originally the Máldivian Alphabet is said to have possessed only the (eighteen consonant) signs (numbered) 1 to 18 (see Table). For the signs (in the same Table, running from) 19 to 27 Christopher gives no older forms; and the signs 25 to 27 -sounds which generally occur only in foreign words-are also wanting from the Alphabets found in the L.V.

As regards the signs 19 to 24 , and the sounds which they are said to express, that for $z$ occurs only in borrowed words; whilst $\tilde{X}$ and T are very rare, the latter being regularly represented by R. On the other hand, $\mathbf{y}, \mathrm{c}, \mathrm{J}$ are found in real Máldivian words; although the last two, as in Siṇalese, may be more recent developments.

The strongest argument against the connection of the Modern Alphabet-and consequently the two Older Alphabets given (Columns I., II., Table) in L.V.-with the Ancient Sinhalese, is the form of uriting the vowel...

This has been borrowed directly from the Arabic writing. The vowel signs for $\mathrm{A}, \mathrm{I}, \mathrm{U}$ are identical with the Arabic futha. kasra, and damma: their long equivalents being shown by doubling the simple signs: for E. E, o, ó the vowel symbols are new formations from the borrowed material, easily explicable.

## III.-AIDS TO KNOWLEDGE OF THE MALDIVIAN LANGUAGE.

## 1.-Sentences in Maldivian, with literal line-for-line English version.

1. I asked (you) something: (you) answer give ma ehí ecceké: SUVábu déń must. Víné.
2. I need a book; the book to me give. mapa bénume fote'; fol mara badi (or di).
3. To that boy's father I it gave.
4. I gave the book to your brother. ma deni foi kalé bébé ata'.
5. On this tree the branches long (are). MI GAHU-GA' OFI DIGÉ.
6. In our garden are fifty-four aharameń-ge gótí-ga' huri fansás hatard coconut palms.
ruké.
7. We three persons (are).
aHARAMEŃ TIM-MÍHU'.
8. How many children are to you?
kita kUdí́ eba-tibíhé kalé-ge?
I have (Of me are) five children.
Ma-ge tibí fas kodiń.
9. (Is) this a poisonous snake?
mi viHa-Harufayet-ta:
This snake a poisonous one (snake) is.
mi hardfayi viba-harufayeké.
10. Honey very sweet thing (is).
mámul fara' fon ecceeté.
11. Of this fruit the taste sweet (is). mi méva raha fonyé.
12. My daughter younger (is) ma-ge ańheń-dari-fulo hagé my son than. FIRIHEŃ-DARI-FULA' VUREŃ.
13. This tree very large tree (is). mi Gahí vara' bopu gahe'.
14. This tree higher that tree than (is). mi gas uhé e gaha' vureń.
15. My house smaller your house than (is). da-ge gé kupayé kalé-ge geya' vuré́.
16. The coconut shell very hard (is). nári varań haré.
17. Yesterday very the wind strong (was);
íya vara' váe gadé;
clouds covered the sky.
vilá foruvaippé upoo.
18. The elephant stronger the horse than (is). e' Gadafadayé aha' vurex́.
19. The sun rises; the sun rose;
iru arani; iru arídíné;
the sun will rise.
iru aráné.
20. The sun sets; the sun set;
iru ossidjé; iru ossidáné;
the sun will set.
ird ossévé.
21. That servant to me brought a letter yesterday e nókird mara genáí Siṭiye' íya evening.
havíbu.
22. From the town a messenger came: he (that man) rabu'́
a merchant
BaLímínaku
ái: E míná viyáfári-veriyaku furuń fonuveni míheka.
23. I

| I | wrote | a letter | to you | here |
| :--- | :--- | :--- | :--- | :--- |
| ma | Liydíme | sitiye, | kalé | m-tanan | to come. annáń.

24. Whence (do) you come? kó́taku'́he tiya annani?
25. All (men) die must. enmét ves maruváx vávé.
26. Do not strike that dog: nu-talahare e balu-ga': it will bite you. eti dáe-geñfáné kalé-gáe-ga'.
27. Sleep well! Are you well?
gada रidi! Katé gada-ta?
This child weeps why?
mi KUJJí RONi KÍ-VEGE'́?
28. That fruit falls from the tree on to the ground. e Méva vetoni gahuś bimaré.
29. Of the tree the leares green (are). Green leaves. gas-gatic-ge fai fesé. fehi fat.
$\begin{array}{lllll}\text { 30. This dress white (is). } & \text { This sand yellow (is). } \\ \text { m } & \text { HEDUŚ } \\ \text { HUDU. } & \text { M } & \text { VELI RíNDU. }\end{array}$
Blood red (is). The sky blue (is).
lé rai. up̣u nulé.

## Notes to III. 1.

1. ecceké. The word ecce, or, more correctly, ecce', means "thing," "affair," "fact." Cf. ECCEṄ (for ECCE') nu-káti, " he eats nothing," L.V., p. 32, translation of Persian parhiz, "abstinence"; Sheik Ali, кoヘ̈-ECCE", "what?" literally, " what sort of thing?"
2. bénume. Cf. Christopher, bénán, " to want," "to desire." * The -me seems to be an Emphatic Particle, corresponding to the Sinhalese -ma.
3. sore-ge bafáyaś, or soru-bafáyaí. According to Ibráhim Dídí, bafí and bapá are used for "father"; the former belongs to lower class, the latter to higher class, speech. bafáyań is, I think, the Dative.

The $\dot{N}$ (as I heard it) here expresses the sound of a disappearing consonant, which in this case was R. Cf. Sinhalese $-\underline{t} \pi$. The nasal sound appears to be due to the sandhi of the context. In most cases there is a complete disappearance. or rather a closing of the top of the throat: thus, ata ( $\mathbf{4}$ ), fulat (12), gaha' (14), geya ( 15 ), aha' (18), is in every case the correct way of writing; not geya, flla, \&c. tmań is the Reflective Pronoun: eti a Demonstrative Pronoun.
4. Literally, "I gave the book to your brother's hand." According to Ibráhim Dídí, ma dini. "I give "; ma deni. or ma dini, " I gave."
5. -GA' or -gat. Suffix, which indicates place. Cf. mimardgaI, " in this town"; rard-gai hunfa míhí (L.V., p. l10), "the in-the-town-dwelling man," "tomnsman." To -GA' belongs, as dative, -Gítaí, -Gíta', " towards ${ }^{\prime}=\mathrm{S}$. langa-ṭ (III. 3: B l). The -É at the end of the sentence appears to correspond to the S. -ya. Cf. III. 1: 6, 9, 12, 13, \&c.
6. HURI. "Exists," " is," "there is" = Christopher, huri. $C f$. III. $2: 4,7$, \&c.

[^20]7. тim-мíнo'. Assimilation for tin-míнu'. Such assimilations are frequent everywhere in Máldivian. $C f$., for example, hardfayet-ta in 9 ( = harufayek-ta); ebbai, in III. 3:A 3 (for ek-bai), \&c.
8. Eba-. Particle, I was informed, of the Present Tense.
9. -Ta. Interrogative Particle. The termination -í, in mi harcfayí, is used emphatically. Cf. also mi gabí, III. $1: 13$; but mi gas, III. 1: 14 .
12. HAGU. "Young," speaking of length of life. In a general sense the is used for " young," "fresh," "new" $=\mathbf{S}$. lé. DARI-FCṭU means "son" or "daughter"; FUḶU is a socalled honorific. When required, FIRIHEÁ, " male," and aíheń, "female," can be prefixed. For the use of vureń. cf. the following sentences, III. 1: 14, 15. 18.
20. The Tenses were told to me most exactly in the series quoted ; but it still appears to me doubtful whether arádáné and ossidísé are Preterites. Cf. also III. 2: 20, the synonym irv tirividávé, as Future, "the sun will set"; tiri means "down," " low."
21. Gevíí. Literally, "having taken came he" $=$ S.genáváya. Cf. Máldivian áí= S. áláya, in III. 1: 22. íya henDTŃ, " yesterday morning."
22. viyáfári. "Gain" (L.V., p. 73). In the sense of " owner," " master" (L.V., pp. 75, 110), -vERI, or -vERIŃ, often occurs at the end of a compound word. Christopher, mas-verić, " fisherman " ; atolev-veri (L.V., p. 109), " master of an Atoll ": Christopher, DapU-veri, " countryman."
23. mi-tanań. Dative. " to this place," ${ }^{*}$ here $"=\mathrm{S}$. metana-ta.
24. tiya, or kalé-tiya. The latter is the more respectful Pronoun of the Second Person.
25. ves. According to Christopher $=$ "also": váné appears to be equivalent to the S. óné.
26. Eti. Used of animals and things; evé of persons, Pronoun, Third Person. -Gáa signifies "person." Cf. sif́gaGátak, "the lion," III. 3: C 4; hyal-gáto-GA", " to the donkey," III. 3: C 5.
27. Kalf gada-ta. According to Ibráhim Dídí, gada vevolíi.
28. Ibráhim Dídí gives méva veṭent, "the fruit fell"; ma vetidste, " I fell."

## 2.-Sentences in Sinhalese and Maldivian, with literal line-for-line English version.

1. Your mother, where (is she)?

Ŭ̆bé ammá, kó?
UMBA AMÁ, KOBÁHE ?
My mother and father in the house (are).
Magé ammat táttat gedaraya.
mage amá-yá bafí-yá gedara-gal.
2. Our sister in the kitchen being.
$\boldsymbol{A p e ́}$ sahotari kussiyé indagena.
aharameńge kokká badgé-gai herińge',
rice cooks.
bat uyayi.
bai Kakkani.
3. On the Máldives what kinds of fruits Máladivayiné mona gedi varga diveni-rájué-gat kó́ kahala faf-faló-taś

- are cultivated?
vevééda?
hedeni?

4. In our island many coconut palms

Apé divayiné bohoma polgas
aharameś-ge raredgai bívar divehi-rut-tań are.
tibet.
HCRI.
5. Of nuts fifty, the price how great (is it) ?

Gedi panahaka, mila kopamana-da?
fansís Kári-ge, aga kíhávaro?
6. We of coconut-palm wood our houses

Api pol-li-valin
afaravié́ diveht-rukań
apé gé
GÉ-TAŃ
build.
sádamuva.
atamevé.
7. On those islands rats very numerous are.

É divayinvala miyó itá bohóya.
e rattaku-gai mída-taí vara' gina-ko' hurd.
They (rats) to the coconut palms
Ovhu pol-gas-vala-!̣u
E MÍDA-TA' RUT-TA'
harmful are.
antaráya karati.
halák-kurá takacca evé.

| 8. Of this country | (the) climate | healthy |
| :---: | :--- | :--- |
| Mé désa | gunaya | sanípa |
| Mi ráJJÉ-GE | GOI | FASÉHAKAMU-GE |

is not; to us
neta; apa veta-t!
núvé; afarameý gátań anva
strangers from dysentery very much
paradésikuyó pácana-róyayen boho-sé
furdddehi mís míhoś béruhgá-balyin gina-mo' suffer.
peleti.
ádata-vé.
9. Yesterday my brother together with

Iyé magé sahódarayá samaga
íma mara bébé EkU
to the jungle $I$ went.
kelétéa
valań mama giyemi.
10. You there did what? Uïba ehedi kaḷé mokada? raléneń eta-gal kíńhé roḷefím?
11. We firewood gathered:
Api dara ekatu-kelemuva:
aHarameń dard ekd-koffím :

12. You to-morrow what will (you) do?

Ŭ̈ba heta karanné moknilu?
galémeí máday kố-ecce hadáś uluvani?
13. We to the shore going

Api múdu-varalata gos
aharamé́ gondudora' gos
for fishing $\quad$ in the boat will embark.
masun allan-te oruvakin yannemu.
kevilugamad dahare dóviyaka' arívome.
14. My father since he died now one year Magé piyá meri den avuruddak
ma-ge bappá nifá-vegeí mibíru eí aharu
(it) was.
viga.
vejuevé.
15. My mother still in life is; Magé mẹniyó tava-ma jívatva sitía ma-ge mamidí adivei furáỵa-eka ulavi; but she very old become, ehet é bohoma nákiyi, ekamaku éná vara' muskuli vefaye', very weak become, is.
durbalayi.
Dara' dera vefaye', dlani.
16. This woman four children has borne;

Mé ă̆buva daru hatura denek vadá-sitit:
mi ambi hatard dari vihayeppevé;
of my friends, one, her
magé mitrayek, éनgé
ma-ge rahumattterín kureí, ekaku, éxíge
youngest daughter, has married.
bálama duva, kárabeñda-gena-siti.
hagu ańheí-dariya', iní.
17. This man blind (is).

Mé minihá kanayi.
mi aÍHí kaño.
18. Of this man the wife deaf (is); to her Mé minihá-gé ă̈buva bihiriyi; é-ṭa мI míhé-Gé ambi bíru; Éváya our words heard are not. apé vacana esenné né.
ararameś-ge bas-taý nu-ivéte.
19. I this night well have slept.

Mama mé rẹ́ howda-ṭa nidà-gatimi.
ma mi ré rańgala nidalfíne.
I very early have risen.
Mama itá udayen negittemi.
ma vara' hendonu tedo-vejuíae.

Extra No.-1919.] máldivian lenguistic studies.
20. Haste make! (Make haste!)

Ikman karapan!
avafa' hada!
The sun in a short time will set.
Ira ikmana-ṭa basinnéya.
ird avafa' tirividíxé.
21. To us the road invisible somewhat (is);

Apa-ta maga no-penena tarama-ṭa;
afaramenna' magu yu-beléné;
very dark it will become.
bohoma andhakára vévi.
varaka' adiri bopu vidásé.
22. To us moonlight will it fall:

Apa-ṭa hangda-pána lẹbé-da?
aharamenna' havde-vare dénebá?
23. I do not know. I so think.

Mama no-danimi. lyama esé sitimi.
mara véxge. mara eheś hívani.
I in my mind accept (the idea).
Mama kalpaná karami.
ma hitu-gai gannani.
$\begin{array}{rlll}\text { 24. In the jungle } & \text { many } & \text { snakes } & \text { are found; } \\ \text { Kẹlé } & \text { bohó } & \text { sarpryó } & \text { inditi; } \\ \text { Valu-gai } & \text { Lakea } & \text { harcfá-tát } & \text { honvati; }\end{array}$

Uŭnbé divayiné situ Lańkávu-ṭu
kilé-ge rardí oledukarífa kalé
haring sailed how many days (were spent)?
neven ima-ta kopamaña kal gatavi-da?
opi-gos-lefí kihí duvahuó?
29. Of the king the house in what town (is it)?

Agr nuvara kóka-da?
RASKAMU-GE GÉ KOÁ RAREN-HÉ?
30. Of the there dwelling inhabitants the number Ehi kopamaña janayá vásaya-karad-da? etá-gal husta rayyatu'ti-ge adadá
(is) how large:
kifívard:

## Notes to III. 2.

1. imba $=\mathrm{S} . u m b r r$. Also used kalá-ge, or kalégefándGE, according as the person spoken to is of higher or lower rank. mamaí, " mother," is more respectful than amá. The form -yá occurs after rowels; -Á, -ái after consonants. Cf. III. 3: A l ; III. 3: B l.
2. коккá. "Brother" or "sister"; may be more clearly indicated by firiteń and ańHeñ. See III. 1: 12, Note. HURIŃGE' = S. indagena.
3. hedeñ. Passive of hadań, " to make "; in Sinhhalese also, according to Gunasékara, hedé, in the sense of "it is produced," "it grows," is used. The sign of the plural is represented by -TaŃ or -Ta, perhaps more correctly -TA'.
4. ko'. Gunasékara writes kog. Cf. p. 27. It serves here, like the S. kota, to form Adverbs. So in the following sentences.
5. faséta. In L.V., p. $139=$ Persian árám, "rest," "peace." According to Sheik Ali, faséhakam means "health."
6. eta-gai. "' Within." Cf. eti, III. 1: 26, and etá-gai, III. 2: 30 .
7. I recorded eku-коғfís, Ró-коғfím, \&c. коғfín $=$ ко'ғím. in Máldivian writing.

The forms are constructed in the same way as GEX'GOS-Fim, "we brought": kakhá-fím. "we cooked": htfai-fímu, "we caught." The Auxiliary Verb included in -fím I compare with the S. piyanu. As regards this use, see Geiger, Litteratur und Sprache der Singhalesen, p. 83.
12. uluvant. Plural ; the Singular would be clani. See III. 2: 15.
13. dóniyaka. dóni, according to Ibráhim Dídí, is employed on many islands instead of orv ; GONDUDORA' $=$ gonpudo', Geiger ; godudan. L.V., p. 7.
14. vejuevé. Gunasékara states that in colloquial Siņhalese vecca or vejja is frequently used in the sense of "was," "became." ntyá-vegeń: the meaning is not clear to me. miháru, míhár (mifaire), " present (time)."
16. vifayeppevé. Gunasékara has vehayeppevé. I find vifán, L.V., p. $186=$ Persian zádan: kurex́ $=$ S. keren, "out," " of," " under."
18. enáya', \&c. Passive construction, which at times is preferred in Máldivian: "to her our words are not heard." Christopher, Ivén, " to hear," "' to mind."
22. dénebí, or dénebé. Future, with an Interrogative Particle: "will be given?" See III. 2: 24 and 29.
23. né̛́gé Christopher, engedáń," to learn," "acquire" $=$ S. hengenu.
24. dí-gatiyá. Conditional ; cf. víyá, III. 3 : B 5 .
26. Dannuubé. See Note 22 above. HÉ is an Interrogative Particle.
27. diya, hivgi. fébi. Synonyms. meaning "past." aHard (older form, avaride) $=\mathrm{S}$. avurudu. mósamu-vár. cf. Arabic mausim.

## 3.-Stories * in Sinhalese and Maldivian, with literal line-for-line English version.

## A.-The Horse and the Donkey.

1. A horse and a donkey

Asvayek saha búruvek
aHak-ái himírak-í
together on the road were going.
eka maga giyóya.
empagu'́ ekkulavaye' hivgi-evé.

[^21]2. That donkey's back upon great load Búruváágé piṭa uda loku barak e himáru burikari macca lakka baru because there was, he very weary became. tibuna-nisá, úta bohoma vehesa viya. HURI-NI,
vara' ball vejJevé.
3. The donkey, the horse begged. from my load

E-tema himíru aHu-gáta' aheppevé ma-ge baruý something do thou take away; I to thee kotasak ara-ganin; mama u $\quad$ mbet-ta ebbai kalé vagaHare: ma kalé-ge
blessing wishing shall be.
stutivantava sitinnemi-yi kiya. héukaý gová veriyaka vanáme.
4. But the horse, this word not hearing,

went on.
giyéya.
hingi-evé.
to translate the book fully into Máldivian for his benefit. This was in 1890 (Letter, June 16: "I shall try my best to translate the Storics as soon as possible. with the greatest pleasure "); but, owing to Ahmad Dídi's repeated serious illnesses at Málé from Máldive " gift fever," as it is called, no progress could be made.

Five years later, Ahmad Dídí wrote (Letter, December 7, 1895): " The bouk of Pleasant Stories sent to mo for translation into the Maldivian language will be sent to you now very soon, with its translation."

Doubtless the book came back to Ceylon shortly aftermards; but it never reached the Editor.
If, mayhap, it fortunately fell into the hands of Professor Geiger (who was in Ceylon from December 8, 1895, to March 15, 1896), and is the source from which he drew the three "Stories" he gives, every satisfaction must be felt that Ahmad Didi's generous, though belated and unintentionally deflected, aid has borne such valuable fruit by appearing in the present publication--B., Ed.
5. A short time afterwards the donkey

Madu vélávaka-ṭa pasu búruvá
KUḌa IRU-KOLU FaHUŃ Himáre
to the earth falling, died.
bima veṭi, maléya.
bim macce veṭtigeń, maruvejuevé.
6. The donkey's master the horse s back upon

Búruvá himiyá ahu pita
himáru veri-míhá aho macca
the whole load laid.
mulu bara peṭevvéya.
horimá bard-ta láippevé.
7. Towards the in-misfortune

Vipattiya-ta
tadokanu-gai-yái
and-sorrow-being people,
saha duka-ta peminiyan-ta,
dati-gai-yá dlé mís-mínứ macca,
merciful be!
karunáa-karapan!
kUḷdVERIYAE. HURÉ!

## Notes to III. 3: A.

2. huri-Ni. Termination -NI $=\mathrm{S}$. -niyá. macca $=\mathrm{S}$. malu, matté
3. NAGAHAPÉ. Imperative : NAGAŃ, " lift up," "take."
4. KUDA ; KOLU. Both = "small." The former could be dispensed with.
5. bart-ta'. Gunasékara, again, has baru-tag. Cf.p. 27.

## B.-The Wise Judge.

1. Two women,
a child
daruvek
emme kujuayat -Ṭakín,
the one with the other quarrelling,
eki aniki-ta
ekaku macca anekaku kuí ardváigeń,
a Judge to came.
viniscaya-kárayek langa-ṭ áváhuyu.
emme ntyáyaveri gátań atuvejuevé.
2. The two women said, from me that child Ohu de-dena-ma kiróya, mamu darucá e de ańhenuý buni bahakí, timanná e kejué is born, that child to me belongs. vẹduvemi, duruvá magéya-yi. vihatfimevé. e kejfá thantága evé.
3. The Judge the executioner calling. Viniscaya-kárayá vadakaruıá-ṭa aņ̧̣agasá, niý́veri mini-mará-míhá govágeñ,

| the child | in two parts | cutting | it, |
| :--- | :--- | :--- | :--- |
| daruvá | deka-ta | kapá | eya, |
| e kujuáya' | defaliyaka' | falígen | eyiti, | to the two women give, he directed. strin-ṭa e de ańmenunna dehere, buni.

4. This word hearing, of the two women. one Mé racanaya asá, é strin-ycn, ekiyak
mi bas eHi, ańhevố hurex́, ekaku
silent remained.
nissabdava sitiyáya.
ax́gayiń nubune hiri.
5. 

6. The Judge that woman the child's mother

Viniṣcaya-kárayá é
niyáveri-míhí e kabulége dari-ge amá
to be recognising, the child to her
bava dẹna, daruvá é-ta
kấ karavara denigeń, dari e kabulégeya'
giving, the other woman to prison he sent.
dí, anik hiragé-tet yervéya.
Dífaya', anek-kabulége jela' foyovífíyevé.

## Notes to III. 3: B.

1. Suffix -Takáit, -Ţaka. "With reference to": ntyáyaveri, or miyá-veri.
2. defaliyaka'. Cf. with S. depalu-karanu, and falígeń with S. palanu.
3. Gunasékara writes faráigeń and maráré ; as also, in III. 3: A 3, vagaharé, and in III. 3: B 3, deheré, not DEHERÉ.
4. kabtlége. The more respectful expression for "woman": abi-kabclége (for a mbi-kabclége). " spouse" (Feminine); ftri-halége, "spouse" (Masculine), L.V., p. 13. kaś $=$ S. kiyá $:$ karavara $=$ S. niscaya-kota .

## C.-The Lion, the Ass, and the Jackal.

1. A jackal and a lion and an ass hunting

Hivalek-ut sinhayek-ut kotalurek-ut dadayam karaṇ-ta hiyalak-í vagak-Å* himárak-á sthíru kuríń on account of, into the forest went. onéra vegeń, vala-ta giyáhuya.
vala' vedé.
2. Hunting having finished, the booty gained

Dadayam koṭa nimarú, vigaha lẹbunárú
SIKÁRU Ko' aVadi vegeń, libunchí
meat in a heap collecting, the ass
mas godaka-ṭa ek-koṭa, kotaluráa! a

in three parts to divide, the lion
tun-bhágayaka-t. bedan-ṭa, sinha-tema
tim-baya' bahíń. Sí̌gá
commanrled.
añr-kaléya.
amRU-Koffiyavé.
3. The ass the whole thing collecting, three parts

Kotaluvá é siyalu dé ek-kota, 'tun-bháyuyak
himárd e hurihá takati ek-ko', tim-bai
making, to each one (the) desired share
kota, é é aya kemati bhágaya
koffá, ebekalakd hitáví baye’
to take he told.
ganna-lesa kícéya.
nagaí buneppé.

* SLNGA, S. sinha, "lion," is used elsewhere in the Story correctly.

The word here given, ragak, really means "tiger" (Sans. vyágra): mini-ká vagu, " man (or flesh) eating tiger."-B., Ed.
4. Thereupon the lion. greatly angered, É sañda siñhayá, bohoma kópavi-gena, e-hinde sí́gá-gátak, varà ruliyás-geñ́, that donkey killed. é kotalǔá mará-demméga.
E HIMÍRA Mará-LEYtPPÉ.
5. Then the jackal to divide, he told.

Pasura hivaláta bedan-ṭa, kívéya.
dey hiyal-gátu-ga báhà́, buneppé.
6. The iackal for himself a small part

Hivalá tamá-ṭa svalpa koṭasak
hiyalu timantaya' kUDa etikolei
taking, the rest all the lion
ara-gena, itaru siyalu déval sinh hayá-ṭa
nagáfaye’, ittro hurifá takacce siśgá
to take he told.
ganna-lesa kívéya.
nagań buneppé.
7. The lion thereupon. greatly pleased,

Sinhayá é-sañda, bohó santóshayen.
srígá e-hindu, vara' dfávegé́,
the jackal asked: "Thus to divide.
hivalá-gen esurca: "Mesé bedima-ṭ,
hiyal-Klreñ́ eht: "ttyaheń behi,
the reason what is (it)?"
karunuu kavaréda?."
Kamaki kobáhé?"

## Notes to III. 3: C.

3. ebekalake. Of. kaló, "person." Originally it signifies "small." and indicates the common people. (Bell, The Máldive Islands, p. 63.)
4. sńga-gátak. See Notes to III. 1: 26.

## IV.-MALDIVIAN LETTERS.*

## 1.-Maldivian Malim's Letter: $\dagger$ A.D. 1837.

(Christopher : Journal, R.A.S., 1841, VI., pp. 73, 74.)
In Galle being, of the Máldives to all people gáli-gal tibi, divehín-ge emme kaluña' of the Arab boats, $\ddagger$ of the Captain greetings arabu oḍi. málimí-kalégefínd ${ }^{1}$ Salám
at this time.
mi fahara'.
the Arab boats, Finladu § boats. the tribute boats,
arab opi, finladu opi, vedun oni, ${ }^{2}$

* In these Máldivian Letters the words printed in italic capitals appear in the original in Arabic characters.-B.. Ed.
$\dagger$ See Plate III. Geiger's line-for-line transcript of the Máldivian text follows Wilson's adaptation of Christopher's original manuscript, with some alterations in the transliteration only.

Christopher wrote out the Máldive (Gabcif táva) characters as they appear in Plate III., placing his English transcript below the Máldivian text, under each word, from left to right, and interpolating a word-for-word translation between the two lines.

By relegating the Máldive Letter to a separate Plate, Dr. Wilson, his editor, was ablo to amend this obvously unsuitable arrangement. He transcribed the text-as, mutatis mutandis, reproduced by Professor Geiger-giving (with slight modification) Christopher's translation below it.

Geiger evidently preferred not to utilize the previous translations of 1837 and 1881 respectively, but to re-translate the text of both Letters direct, as there are differences in his German renderings (not due to conversion into English) from those of Christopher and Bell.

The original translations are, therefore, reprinted in Appendis D for comparison.-B., Ed.
$\ddagger$ Geiger uses the plural, die Boote (" boats"), throughout. This is wrong: Opi faHtari (plural), "boats"; opi (singular), "boat."-B., Ed.
§ finladu. An island in Tiladummati Atoll, the penultimate Atoll of the group to the North.-B., Ed.
the (Chief) Judge's boats, Ahmad Dídís boats, fapiyáru opi, ${ }^{2}$ ahaminí dídí opi, ${ }^{2}$

fish from Himití (for) seventr-seren dollars,
himtí-mas ${ }^{\circ}$ hax-dina hat rixálaya:
fish of the Málé Atoll (for) sixty-seren.
mále-atolu mas EAS-DOLOS HATAKi.
fish of F.-f.- k. (for) forty-seven.
fídin-Fulu-kirí-mas $\dagger$ sális hataka:

* The date of the Letter (not giver in it) is fixed very approximately by the double intimation sent from Colombo. William IV. died on June 20, 1837. The Right Hon. James Alexander Stewart Mackenzie assumed the Governorship of Ceylon on November 7 of the same year. Christopher sent the Máldive Letter, with his Vocabulary, to Dr. Wilson in April, 1838.-B., Ed.
$\dagger$ See footnote * on page 52, infra.-B., Ed.

Extra No.-1919.] míldivian linguistic studies.
Thus having sold occurring, mi-hidan vikgaigen tibi agímiveve,?
many million strings (of) greetings. I write, lakka gina farde salám. mi liyuní, here being on Thursday. m-TaN-ví barusfati duvahun.

| God | if He permits, fourteen days | I |  |
| :--- | :--- | :--- | :--- | :--- |
| mát-kaláge | russevíyát, | Sadda | duvahe alu-gaḍu | shall remain. My resolve stands firm. furínemeve. 8 * hital hurit-meve.

## Translation.

The Captain of the Arabian ships (sends) greeting to all the Máldivians staying in Gdlle.

The boats which at present are in this harbour are the Arabian boats, Finladu boats, the boats with Presents, the (Chief) Judge's boats, Abmad Didi's boats, the boats of the Mándu House, and the boats of the Hiti-gas-daru House.

All the people are well at the present time.
You should send us the news which you have (learnt) at your port. I send the news which we have (heard) here.

A new Governor has come from England. The King of England is dead.

Many thousand greetings.

[^22]In this place we sold fish, thus : from Himití for 77 dollars, from Málé Atoll for 67, from . . . . for 47. *

A thousand greetings.
I write this from here on Thursday. God willing, I shall remain $\dagger$ here fourteen days yet. That is my intention.

## Notes.

1 The first sentence is wrongly understood by Christopher. kalégefánu is the title of the particular málixí. $\ddagger$

2 fafari. Obscure. In Christopher it is not translated. §
In what follows, the persons or families (mándu-GÉ, hitt-gas-dapo-gé, the latter being translated by Christopher as "bitter-tree-corner-house") to whom the boats belong are named.

For fapifáru, cf. L.V., p. 104 ; Bell, The Máldive Islands, p. 59 .

[^23]vedun opi is the boat which has to bring the Yearly Tribute of the Sultán to the English Governor in Colombo.

3 Christopher, gada veeba tibúveve. With eba, cf. above, III. 1 : 8, with Note ; gada-ve $=$ gada-vI.

* mi. Here mi, I believe, stands for ma : similarly below, mi LIYuní.
s sámiben. Only another method of writing sáhibe'. $C f$. above.

6 Homití. The island home of Hasan-bin-Adam. mentioned above. *

7 Obscure. Christopher translates agíniveve by "for the price." $\dagger$

8 alu-gapu furánemeve. Translated by Christopher as "sailed I shall be," ". I shall sail." I am in doubt with respect to the second word. $\ddagger$
alu is "slave," and gaḍu or gandpu often appears pleonastically at the end of words: e.g., fíre-gapu, "wound"; buru-gapu, "wheel." aled-gapu is a deferential mode of expressing the Pronoun of the First Person; just as in the following Letter (cf. Note ${ }^{13}$ ) for the Pronoun of the Third Person.
furínemeve belongs to furán, "to fill"; thus, literally, "I shall complete fourteen days." $C f$. also Note ${ }^{14}$ to the following Letter. $\ddagger$

[^24]2.-Missive from the Sultan of the Maldives:* A.D. 1795. (Bell, "The Máldive Islands," Cєylon. 1883, pp. 78-81.)

## Translation.

Hail! The glorious, renowned, most wise, nobly-born ruler, comparable to the moon and the sun, the heroic warrior Sultán Hasan Núr-ud-din Iskandar, the warrior, the great King of the earth, to the King of the Governor in Colombo, $\dagger$ many thousand greetings from here.

As friendship has existed between the former Kings of Your Excellency in Colombo and the former Kings of the Máldivian kingdom, we also bear friendship to Your Excellency in our hearts, and desire the same on Your Excellency`s part.

Should any kind of boat or vessel of this country be wrecked, if the place is known, Your Excellency should have the people brought away and care taken for their well-being.

If any one is known to Your Excellency who is inimicably disposed to this country, Your Excellency should not tolerate (such person).

Although it does not correspond to the dignity of Your Excellency, I have sent you a little present by the Under Treasurer, Ahmad. If he intimates any wish, you should (kindly) gratify it: if a mistake is made on his part, you should (kindly) pardon it.

I await his return by the first monsoon.

[^26]
## Notes.

1 furadína. Sans. pradhánc. But what is Kusa ? *
2 A difficult word. I should think it is corrupted from Sans. cháyá," shadow" ; here "image" $=$ S. sé.*

3 audána. I here take for Sans. avadána, in the significance of " heroic deed." *

4 Could the word, to which kiya seems to point, be a proper name? $\dagger$

5 Not completely clear. BeHerterit belongs to a Passive Verb, bahaṭtań (cf. bahatteavaige'). In Christopher it is = " to place," " to arrange." $\ddagger$

6 tima' manikufáno. Literally, "My (Our) Excellency." HI' FUḶU = HLŃ-FUỤU ; HEŃ, " heart"; fUḶU, a pleonastic epithet, as, for example, in Dari-fuler, and more frequently.

7 kibai'. Cf. quibat, " side," in Pyrard.
8 As regards opi and dóNi (here dóñe'), see Notes to III. 2: 13.

9 My helper gave me forms of verbs like ebíe-Mínứ diya, "they go"; ebíe-mítu'́ roni, " they weep," \&c. This ebáe is in each case put in for comparison.

10 Uncertain. Hathúne-kA appear.s to be related to Hév, " good.'’ кА' (S. lam; P. kamma) often forms abstract terms: e.g., ragmatriki above. which appears to be a corruption from ragyatterika.

11 For kudpa and koţa. cf. Notes to III. 3 : A 5.

```
* See footnote † on page 54, supra.~-B., Ed.
\dagger See footnote \dagger on page 56, supra.-B., Ed.
\ddagger Behe(^)TEFI fadai(\AA),"as existed before."-B., Eld.
§ HargíNU-ka(li)," wants," or " welfare."-B., Ed.
```

12 bapéri. This, as Bell states, is a title, which originally only belonged to the Treasurer (Sans. Bhándáágárika), but subsequently was also applied to other persons of rank. The word kevi is obscure. *

13 For mi alí, mi aludn, cf. Note ${ }^{8}$ to preceding Letter.
${ }^{14}$ The conclusion is not quite clear to me. According to Bell, the meaning is, " allow him (the Ambassador) to return in the (first) favourable monsoon." $\dagger$

In Christopher, vapáceennaváń, " to go," is found. To me the rerb appears to be merely periphrastic; like the use of the S. vadinu.

In furdvá kama' there must be included some idea like "return." $\ddagger$

[^27]
## SECTION II.

## THE GRAMMAR OF THE MALDIVIAN LANGUAGE.*

The desire to study Sinhalese in connection with the dialects most closely allied to it caused me, during my stay in Ceylon, $\dagger$ to follow the study of the still very little known Máldivian Language, so far as time and opportunity were available.

My interest has not diminished with the great distance which now separates me from my beloved Ceylon. On the contrary, it has only increased; and extends not only to the language, but to the people of the Máldives, their civilization, and their history.

I think that each one of us, within the sphere of his studies, has a special, narrower province, in which he busies himself with particular predilection and inward zeal, and to which he always returns. Such a province to me, at this time, are the distant Máldive Islands, surrounded by the blue waves of the Indian Ocean.

At first it was the special attraction of the new and unknown which drew me. I must confess, even at the risk of being blamed by one or other of my fellow students, that I was always very susceptible to this charm. With each step forward in the Máldivian wilderness $m y$ wish became stronger, to perform, in a modest sphere, the work of the pioneer, and at least to break a little new ground here and there.

Our knowledge of the Máldive Language up to the present time has been indeed scanty.

Only the first narrow track was cut by the "Vocabularies " published by Pyrard and Christopher. $\ddagger$ They gave searcely

[^28]any explanation of the Structure of the Language and the Grammar of the Máldivians. Of Máldivian Texts, only two incantations (given by Bell) are known,* as well as two short Letters, communicated by Christopher $\dagger$ and Bell. $\ddagger$

The results which these Texts afforded for the knowledge of Máldivian Grammar are. indeed, extremely scanty. Besides, there is much in the Letters, especially in the second, which is difficult and obscure.

I, therefore, at the beginning, directed my aim to recording simple Sentences, as well as connected Stories, in addition to isolated Grammatical Forms.

My helpers, when in Colombo, were Ibráhim Dídí; § and since (through the aid of my friend, A. Mendis Gunasékara, Mudaliyár) the Bengáli merchant Sheik Ali, who, having lived many years on the Máldives, was a past master in Máldivian.

[^29]We must always count on double uncertainty-first, the possibility of verbal error having slipped into Sheik Ali's communications. and secondly, that I myself, in spite of all my pains, can hardly have completely escaped errors and misunderstandings.

The Texts which I have collected in Section I., and which are printed in the Sitzungsber. der K. Bayer, Akademie d. W., 1900, include :-

## I.-Thirty Sentences in German and Máldivian.

II.-Thirty Sentences in German. Sinhalese, and Máldivian.
III.-Three Fables in German, Sinhalese, and Máldivian :-
A.-The Horse and the Donkey.
B.-The Wise Judge.
C.--The Lion, the Ass, and the Jackal.
IV.-Two Máldivian Letters (taken from Christopher and Bell).

I must state plainly, that the Fables, which ha re well-known titles, are not Máldivian originals, but have been translated, from English sources,* into Máldivian. In spite of this, I believe that with the publishing of the Texts a good step further forward has been taken.

I hope that, through the assistance of the British Government in Colombo (to whom I have applied), I shall succeed in

[^30]* See supra, page 42, footnote *.—B.. Ed.
getting more extensive Texts in the Máldivian Language; and especially copies of the Inscriptions which are still to be found on the Máldives. The knowledge of the Old Writing, in which these Inscriptions are cut,* seems, besides, to be confined to single persons.

I myself shall never again hare an opportunity of a journey to Ceylon, however willing I may be to undertake it. The greatness of the distance gives rise to many difficulties.

Thus, the principal object of my "Máldivian Studies" must be, to put in motion an energetic beginning to Scientific Investigation of the Maldivian Language on the very spot; where alone it can really be carried out with satisfactory results.

In the following pages I intend to arrange, first, the Grammatical Materials contained in the Texts collected by me; then to complete it from the Forms and Paradigms which I wrote down in Colombo.

It need hardly be said that herein no claim is put formard to a completely finished account of the Máldivian Language.

[^31]
## I.-SUBSTANTIVES.

## (a) Expression of the Numbers.

Definite Article Forms.
E',* " the elephant" ; emme ete", " an elephant"; etta'. "elephants."

мі́нÁ, " the human being"; EMME MínE', "a human being "; мí⿴囗Ń, " human beings."
mi gas, " this tree"; emme gahe', "a tree"; gas-ta', " trees."

FOI, " the book" ; FOTE', " a book."
OFI, " the twig" ; OFI-TA', "twigs."
MALE', " a flower"; MÁ, " flowers."
MULE', " a root "; Mú, " roots."
Compare the Plural Forms in the Text, like fas mudiń, "five children" (III. $1: 8$ ) ; hatard Dari, "four children" (III. 2: 16) ; ті́м-мíHo', " three people" (III. 1:7); kiHí dUVABUŃ, "in how many days?" (III. 2: 28) ; rapu-gai huri kabardn, " the news at the port" (Málim's Letter).

Further, mída-ta', " rats" (III. 2: 7) ; hardfá-ta', "snakes" (III. 2: 24) ; divehi-rut-ta", "coconut palms" (III. 2: 4).

[^32]Sometimes, in the formation of the Plural, the Substantive is doubled : faffal $\delta$-ta', "fruits" (from Fal-Faló) ; mís-mínu'́, "human beings" (III. 3: A 7).

The Particle indicating the Plural is pronounced тa, or, more accurately, ta'. I also heard tax́.

In Máldivian letters we find tan or ta' (cf. the Note).
In writing in Sinhalese characters, as is sometimes done by my friend, A. Mendis Gunasékara, Mudaliyár, at times tag appears. The G here is to express the closing of the top of the throat *

## Indefinite Article Forms.

Forms with the so-called Indefinite Article are sitiye', "a letter " (III. 1: 23) ; BAYE', "a share" (III. 3:C 3) ; ODIE', "a boat" (Sultán's Missive) ; balá-mítaku, "a messenger" (III. 1: 22; at the end of the sentence: míneka) ; ekaku, " one," " the one," Masculine and Feminine (III. 2: 16; III. 3: B 1 and 5) ; emie kejuayat-takíi (III. 3: B 1 ; from aK-takíl) ; aHak-ál hmírak-íl, " a horse and an ass " (III. 3: A 1); hyalak-í, vagak-í. hmárak-á, "a jackal, a lion, and an ass" (III. $3:(1)$ ).

## (b) Expression of the Cases.

## 1.-Genitive.

mi mítí-Ge ambi, " this man's wife" (III. 2: 18); e sord-ge bafíya", "to the father of the boy" (III. 1:3); fansás kápi-ge aga, " the price of fifty coconuts " (III. 2 : 5) ; RíJJé-ge goi, " the climate of the country" (III. 2: 8); dari-ge amá, " the child's mother" (III. 3: B 6). A Genitive Plural is gas-gaht-ge fat. "the leares of the trees " (III. 1: 29).

There is no need to remark that the Genitive formation (-GE) of the Máldivian Language is the same as the Sinhalese gé. As regards this, see Geiger, Litteratur und S'prache der Singhalesen (Ind. Girdr.. I.. 10. p. 62).

I have written the Máldivian -ge (not-gé); but I note that the length of the final vowel, the e, is rery uncertain. Not my own writing only, but that of the Máldivians also varies frequently (in this respect).

The Genitive relation can also be expressed by Compound Words.

Thus, e sord bafáya' is found, beside e sord-ge bafáya'. So also e himáru burikari macca, "on the back of the donkey" (III. 3: A 2) ; Himárd veri-míní, " the owner of the donkey" (III. 3: A 6) ; kalé bébé ata", " to your brother's hand " (III. 1:4).

## 2.-Instrumental.

EM-MAGUŃ ( = Ek-magoñ), " by means of the straight road" $=$ " on the straight road" (III. 3: A 1) ; DIVEHIRUEAN'," with coconut wood" (III. 2: 6) : baliyiń, " by illness" (III. 2:8) ; ax́gayiń, " with the mouth " (III. 3: B 4).

The first two admit of different meanings, but the last two show the same mode of formation as the Sinhalese, with Inanimate Substantives.

> 3.-Dative.
bafíya', " to the father " (III. 1:3) ; m-tana', " to this place $"="$ hither" (III. 1: 23) ; vala'." to the jungle," "in the jungle" (III. 2: 9) = S. kelé-tet; GEXA, " to the house," "in the house" (III. 2: 11) =s. gé $f a$; gonpudora", " to the sea coast," " on the shore (gone)" (III. 2: 13) : JELA", "to prison" (III. 3: B 6) $=\mathrm{S}$. hira-gé-ta ; tim-baya", " in three parts (to divide)" (III. 3:C 2) = S. tun-bhágayaka-ta; fuñ̃naka' ek-koffá, "in a heap gathering" (III. 3: C 2) $=\mathrm{S}$. godaka-ṭa ek-koṭa; dóniyaka" arínume, "we will embark on the boat " (III. 2: 13).

Compare, further, e de ańhenunna", "(give it) to the two women" (III. 3: B 3) = S. strin-t $a$; afaramenna'. "for us " (III. $2: 22$ ) $=$ S. apa-t $a$; TIMANNAYA', " for himself" (III. 3 : C 6 ) $=$ S. tamá-ṭa; faléys', " to you (I shall send)" (III. 2 : $26)=\mathrm{S} . u \breve{m} b a-t a ;$; E-EABOLÉGEYA", "to her (giving)" (III. 3 : B 6) $=\mathrm{S}$. é-t $a$.

Also -qáta. "to," " in the neighbourhood of": e.g., AHARA-meń-gáta', " to us" (III. 2: 8) = S. apa vetaṭa; ntyáyaveriGáta', " to the Judge " (III. 3: B l) $=$ S. viniscaya-kárayek langa-ta, Datives of the suffix -GaI.

The writing of the Dative raries between -an $-A^{\prime}$, -AR, -Ag, -A. I heard -a' or -aý (see the Text); but hare here used the spelling $-A^{\prime}$.

I think that the Máldivian Dative formation corresponds to the Sinhalese $-\underline{b} a$, the sound of which is very close to -RA ; and that instead of $R$ being suppressed after the disappearance of the short final vowel, the closing of the top of the throat has been introduced.

In just the same way, from the Sinhalese kota we get the Máldivian ko ", "haring done": from the Sinhalese otu. "camel," the Máldivian 6 '.

But mara, "to me," has retained the original Dative ending ( $=$ S. mata): e.g., foi Mara badi, "give me the book"; e nókire mapa genár siṭiye', " the servant brought me a letter" (III. 1:2 and 21), \&c.

The ending is preserved if there is a lengthening of the word, as, e.g., in the Sentence (III. 1: 28) e néva vetcni gahuí bimaré, "the fruit fell from the tree (on to the ground)" $=$ S. bima-ta. The é added at the end, which appears to correspond to the -ya ending sentences in Sinhalese, has in this place prevented the R from becoming mute.*

As in Sinhalese, the Dative appears in Máldivian in Sentences of Comparison.

Thus, e.g., mi gas Ché e gaha' vureí, $\dagger$ ' this tree is higher than that tree " (III. I: 14).

[^33]Finally, it seems as if the same case were used to express the agent, in the construction of Passive Sentences.

To this category belong the Sentences aharamenna' magu no-beléné varaka', " the road by us is not (to be) seen" (III. 2:21) $=$ S. apa-ṭa maga no-penena tarama-ta; ÉnáyA' - . . nu-птéte, " by her . . . is not heard" (III. 2: 18) ; tmannaya' dari nu-libéné, "by me the child is not taken" (III. 3: B 5).
4.--Ablative.

GAHCN', " (falls) from the tree" (III. 1: 28) ; Rapu'f, "(came) from the town" (III. $1: 22$ ) ; Mage bartí, " (a part) of my load" (III. 3: A 3) ; vilátun, " from Europe" (Málim's Letter); mafí-radten, "from the great King" (Sultán's Missive).

A suffix to indicate the Ablative is murex́ : e.g., AN'Hendí kUREN EKAKU, "one of the women" (III. 3: B 4)= S. é strin-gen ekiyak; mage rahumatterín kereí ekaku, "one of my friends" (III. 2:16) = S. magé mitrayek.

Of course, kureń corresponds to the S. keren. With regard to this, compare my Etymologie des Singhalesischen, No. 381.*

As an Ablative form, I mention viyífíriveriyake furdá, " (sent) by a merchant" (III. 1:2:).

In Sinhalese, pera means "in front of " (see Clough). Whether peren is used in the Ablative sense of "from," exactly corresponding to the Máldivian fcrty $\mathbf{y}$, I do not know. $\dagger$
5.-Locatice.

The Locative Case is expressed by the suffix -GaI, -GA'. Whether it is connected with the S. gává, " near," as Gunasékara, in a prirate communication to me, suggests, I do not know. In the Dative form the suffix is -Gíti'; which does not seem to confirm that connection.

[^34]Examples of the Locative are Mi GaHU-GA", " to this tree" (III. 1: 5) ; badogé-GAI, "in the kitchen" (III. 2: 2); aharameńge rard-gai, "in our country" (III. 2: 4): eta-GaI,* "there" (III. 2: 10; probably e-tag-gal =-e-tan-gai, cf. S. e-tana) ; valc-gai, "in the jungle" (III. 2: 24) ; divẹhl-rájJé-gal, " on the Máldives" (III. 2: 3) ; hituGAI, " in mind," "in spirit " (III. 2: 23).
a Locative is also dependent on the Verb talan, "to strike" (balu-ga', "the dog"), and on Dáe-Gannań, "to bite" (III. 1:26).

The Plural form e rattake-gai, ${ }^{\circ}$ on those Islands" (III. 2:7), which has risen from RaR-TAKU, is worthy of note.

The expression koÁ rareń-hé, "in what town?" is not very clear (III. 2 : 29).

> 6.-Emphatic Case.

The Máldivian Language also has an Emphatic Case, which ends in -í. Thus: mi gaHí, "this tree"; as well as mi gas (III. 1: 13 and 14) ; mi hardfayí, " this snake" (III. $1: 9$ ).

I also consider mí, in the sentence mí kalé-ge niYákań víyá, " if this is Your (Honour's) decision " (III. 3: B 5), as such an Emphatic Case.

## 7.--Prepositional C'onnections.

In conclusion, some relationships with Prepositions may be quoted.

Among these, of course, may be noticed : burikari macca, "on the back" (III. 3: A 2) : BIM Macce." (he fell) to the ground" (III. 3: A 5) ; AHU MaCCA, " on the horse" (III. 3: A 6) ; mísuínús macca, " (be merciful) to people" (III. 3: A 7); emine nujJayat-Takíi, "on account of a child" (III. 3: B 1); KLḌa ird-kole fahuś, "a short time afterwards" (III. 3: A 5) =S. madu vélávaka-ṭa pasu.

The Preposition macca is doubtless connected with S. matu, matté, mattehi, "above," "on." Cf. Etymologie des Singhalesischen, No. 1,043.

## II.-ADJECTIVES.

> 1.-Attributive.

The Attributive Adjective is found: e.g., in Vara' bopu GAHE, " a very large tree" (III. $1: 13$ ) ; FEHI FAI, " green leaves" (III. 1: 29) ; ÉNÁ-GE Hagu ańheń-dari, "her youngest daughter" (III. 2: 16) ; кcḍa etikolei, " a small part" (III. 3: C 6); au bopá-Síhtbex (i.e., -be"), " a new Governor " (Málim's Letter).
2.-Predicative.

The Predicative Adjective occurs: e.g., in minga raha FONYÉ, " the taste of this fruit is sweet" (III. 1: ll) ; mi HEDUN HUDU, "this dress is white"; mi veli rínde, " this sand is yellow"; Lé rat, "blood is red"; upe ncle, " the sky is blue " (III. $1: 30$ ).
3.-Comparative.

Examples of the Comparative of Adjectives are quoted under I. (b).

Our word "very" corresponds to the Máldivian vara' (also written vará́). Thus, e.g., vara' bali vejuevé, " he became very tired" (III. 3: A 2); nári varấ haré, " the coconut shell is very hard " (III. 1: 16).

## III.-NUMERALS.

## 1.-Cardinal Numbers.

The Máldivian Cardinal Numbers are mentioned by Ranasinha in Journal, R.A.S., Ceylon Branch, 1882, VII., No. 25̃, p. 241.

On pages 253 and 254 (idem) Bell deals with The Máldive Numerals. giving the Numbers from " 1 " to " 100 ," according to both Duodecimal and Decimal Systems.

From Ibráhim Dídís information, I, too, made a complete list, and repeat them here, with connected remarks :-

$$
\begin{aligned}
& 1=\text { еке' ; S. } e k \text {. } \\
& 6=\text { HAYE' ; S. ha. } \\
& 2=\mathrm{DE}{ }^{*} ; \mathrm{S} . \text { dek. } \\
& 3=\text { TINE } ; ~ S . t u n . \\
& 4=\text { hatare' ; S. hatara. } \\
& \overline{\boldsymbol{\sigma}}=\mathrm{FAHE} ; \mathrm{S} . \text { pas. } \\
& 7=\text { Hate' ; S. hat. } \\
& 8=\mathrm{ARE} \text {; S. atcu. } \\
& 9=\text { nuvaye' ; S. nava } \text {. } \\
& 10=\text { diHaye }{ }^{\circ} \text {; S. daha. }
\end{aligned}
$$

The forms probably correspond to the Substantive forms in -ak in Sinhalese, like dekak, tunak; e.g., pol-gedi pahak, " five coconut trees" (see Litteratur und Sprache der Singhalesen, pp. 65-66). The original forms are therefore екек, dek. tinek.*

It is striking that Pyrard (as printed) gives hec, dec, but tinet, ataret (also, further, atec) clearly. In Pyrard's time the final consonants were faintly sounded. $\dagger$

$$
\begin{array}{lll}
11=\text { EGíra } \quad . & . & \text { P. ekárasa, but S. ekolos } . \\
12=\text { bíra, or doḷos } & \text {. } & \text { P. bárasa, S. dolos. }
\end{array}
$$

[^35]| $13=$ TÉra | P. térasa, S. teles. |
| :---: | :---: |
| $14=\mathrm{SaUDa}$ | P. catuddasa, but S. tudus. |
| $15=$ fanara | . P. pañcadasa, but S. pahalos. |
| $16=$ Sóta | P. solasa, S. solos. |
| $17=$ Satára | P. sattarasa, but S. satalos. |
| $18=\operatorname{ARÁRA}$ | P. attthárasa, but S. atalos. |
| $19=$ onavihi | P. (ek)únavisañ, S. (ek)unvisi |
| $20=$ VIHI | P. visan, S. visi. |

The Numerals are of interest from the fact that some of them are more closely related to the Páli than the corresponding forms in Sinhalese.

Instead of SAUDA * (which is historically correct), I heard the expression sída.

The form for " 19 " is worthy of note. It shows that in the Prákṛit foundation of Sinhalese and Máldivian a form must have existed which corresponded to the Sanskrit una-vingsati (with omission of the eka).

The tens beyond 20 are :-

$$
\begin{aligned}
& 30=\text { TIRÍs } \quad . . \quad . . \quad c f . \text { P. tiq̧sarb, S. tis. } \\
& 40=\text { sáLís } \quad \text {. } \quad \text {. S. sális, but P. cattálísan } . \\
& 50=\text { fans.ís } \quad . \quad \text {.. cf. P. pañnásaņ, S panas. } \dagger \\
& 60=\text { FASDOḶOS }(5 \times 12) . . \quad c f \text {. below. } \\
& 70=\text { haidiba }(7 \times 10) \dot{\ddagger} . \text { Bell has hattiri. } \\
& 80=\text { atcita } \quad(? \quad \text { ADDIHA }) \\
& (8 \times 10) \ddagger \quad \text {. Bell has Ámi. } \\
& 90=\text { nuvadiha }(9 \times 10) \ddagger \text { Bell has Navai. } \\
& 100=\text { satéka .. .. Bell has; but L.V.. hiya } \\
& 1000=\text { HÁHE’ . .. HÁs in L.V. }
\end{aligned}
$$

[^36]I also give the Numbers between 20 and 30 ; as well as between 30 and 40,40 and 50 ; and the hundreds, as I recorded them :-

| 21 = EKÁvis. | 41 = EKÁțís. |
| :---: | :---: |
| $22=$ Bávís. | $42=$ bayalís. |
| $23=$ TÉVís. | $43=$ teyalís. |
| $24=$ Sauvis. | $44=$ saurayalís. |
| $25=$ fansavís. | $45=$ fansayalís. |
| $26=$ Sabbís. | $46=$ SAYatis. |
| 27 = Hatívís. | $47=$ SATÁtuís. |
| $28=$ Araivis. | $48=$ ARÁtíls |
| $29=$ onatrís. | 49 o onafansás. |
| $31=$ ettirís. | $200=$ dutsatta . |
| $32=$ ватtirís. | $300=$ TLÓSATÉKA. |
| $33=$ TETTIRİS. | $400=$ Hatarusatéka. |
| $34=$ Sauratirís. | $500=$ FASSATÉKA. |
| $35=$ fansatirís. | $600=$ HASATÉKA. |
| $36=$ Satirís. | $700=$ HAISATÉKA. |
| $37=$ SATLTIRÍs. | $800=$ ASSATÉKA. |
| $38=$ ARUTIRİs. | $900=$ nUVASATÉKA. |
| $39=$ oxasácís |  |

Of these Numbers, fasdoles, " 60 ," is of importance, because it confirms the existence of a Duodecimal System.

As I observed before, Bell (Journal, R.A.S., Ceylon Branch, No. 25, pp. 253-254) has quoted two complete Series of Numbers (up to " 100 "), a Duodecimal and a Decimal: the latter, on the whole, agrees with the one quoted by me.

Single derivations are to be seen in both the forms under consideration.

In the former, " 20 ," for instance, is dolos-are ( $=12+8$ ); " 24 ," FASSEHI (?) ;* " $30,{ }^{\prime}$ FASSEHI-HAYE' ( $=2 \times 12+6$ );

[^37]" 36 ," TIN-doluos ( $=3 \times 12$ ); " 40 ," tIN-doluos-hatare' $(=3 \times 12+4)$, \&c. It is concluded with HIYa $(=100)$, which comes close to $96(=8 \times 12)$.

The "London Vocabulary," with some errors, has the same Numerals. For example, " 20 " is given as dolos-are', " 21 " as dolos-Nuvaye.

So, too, in the case of the "Copenhagen Vocabulary," which contains only twenty-one Numerals.

Ibráhim Dídí's communications confirm Bell's statement (The Máldive Islands, p. 121) that the Duodecimal System has begun to die out; but they also show that for the number " 60," where Decimal and Duodecimal notation are both found, the form $\tilde{5} \times 12$ has become generally naturalized.*

For the combination of Numerals and Substantives, my Texts offer sufficient examples.

The Numeral stands in its original form, and precedes the Substantive.

Thus, ha bakari, "six sheep" (unedited Text); fansás hatare rek-é, "fifty-four coconut palms" (III. 1: 6); ті́м-mí\#U', " three men" (III. 1: 7); FAS KUDIŃ, "five children" (III. 1:8); fansás Káp̣i, "fifty coconuts" (III. 2:5) ; hatard dari, " four children" (III. 2: 16) ; De ańhenún, " two women" (III. 3 : B 1) ; tim-baya' baháń, "divide in three parts" (III. 3: C 2); SaUda duvahu, "fourteen days" (Málim's Letter) ; tin duvas," three days" (Journal, R.A.S., Ceylon Branch, No. 24, p. 122).

## 2.-Ordinals.

The Ordinals are derived by means of the suffix -vana. In Sinhalese of the present day the corresponding ending is veni; in Elu it is vana. or vanna.

[^38]"First" is furatama, L.V. = Sans. prathama.
We have:-
lst $=$ fcrutama.
2nd = dévana.
$3 \mathrm{rd}=$ tinvana.
4 th = hataravana.
5 th = fasvana.
6 th $=$ havaina.
7 th = hatvana.
8th = avvana.
9 th $=$ nuvavana.
\[

$$
\begin{aligned}
& \text { 10th = dihavana. } \\
& \text { 11th = EGáravana. } \\
& 12 \text { th = bíravana. } \\
& 20 \text { th }=\text { vihtvana. } \\
& 30 \text { th }=\text { tirísvana. } \\
& \text { 40th = sátísvana. } \\
& \text { 50th = Fansísvana. } \\
& 60 \text { th }=\text { FAS-DOLOS-vANA. } \\
& \text { \& } \text {. }
\end{aligned}
$$
\]

## IV.--PRONOUNS.

## 1.-Personal Pronouns.

Ibráhim Dídí gave me the following forms:-
ma, "I" ; kalé, " thou "; Éví, " he," " she"; aHaremeń, " we "; Kalémé́, " you"; Ebáe-míncí, " they."

From the Text we get the following forms :-
(a) Pronoun of the First Person.-Ma, " I" (mi in Málim's Letter) ; Genitive, ma-ge, " from me," " mine"; Dative, mara, " to me"; aHareí (III. 2: 24), or abarameń (III. 2: 6), "we "; Genitive, ahareń-ge (III. 2: 2), or afarameń-ge (III. 2: 4), " of us," "our"; Dative, aharemenna', " to us" (III. 2 : 22).
(b) Pronoun of the Second Person.-We have forms of two kinds : tiYa,* " thou" (III. 1: 24). and the more respectful kalé, " thou" (III. 1: 23; III. 3: A 3) ; Genitive, kalé-GE, " of thee," " thine"; Dative, kaléya'," to thee" (III. 2:26); Plural, kazémeń, " you."

In more polite speech one can unite kalé-tiya.*
imba (sic) corresponds to the Sinh " thy mother" = S. umbé ammá (III. 2: 1). Here, kalí-ge amá would be more polite, and kalégefínc-ge amá most polite of all.
(c) Pronoun of the Third Person.—ÉNA, "he," "she" (III. 2: 15) ; Genitive, éná-ge, " of him," " of her." "his," "her " (III. $2: 16$ ) $=$ S. ée-ge ; Dative, Éníya'," to him," " to her."

Of animals, one uses ETI (III. 1:26); and the same of things (III. 1:3). Cf. also Eyiti, referring to ktJJí, "child" (III. 3 : B 3).

[^39]For the Plural, the above-mentioned ebáe-mífuń, and for the Feminine EaŃ HEŃ, appear to be used, according to Ibráhim Dídí.

> 2.-Reflective Pronouns.

The Reflective Pronoun, also, is employed, clearly in more modest modes of expression, in place of the First Person : timań, "I" (III. 1:3) ; timańmeń, " we" (III. 2: 11), where it alternates in the same sentence with abaramen ; Genitive, timańmén-ge, " of us," " our" (III. 2: 11). In Sentence III. 3: C 6, timannaya', shows that timań ( $=\mathbf{S}$. tamá) is also used in Máldivian as a Reflective.

The use of the Reflective for the First Person is also found in Sinhalese; for api, "we," corresponds to the Prákrit appá. See Etymologie des Singhalesischen, No. 44.

## 3.-Demonstrative Pronouns.

In numerous places in our Text mi ( $=\mathrm{S} . m e$ ) corresponds to our "this."

In contrast, as the more distant Demonstrative, is $\mathbf{E}=$ S. $e$ (III. 1: 14). This $\mathbf{E}$ is employed just like an Article (III. 1 : 21).

A more respectful mode of expression, in reference to a woman, is e-kabulége (Dative e-kabulégeya') =S. ée-t $a$ (III. 3: B 6). For males, kalége* is the corresponding honorific ; at least, one says firi-kalége, in contrast to abi-kabulége-perhaps equivalent to "gentleman " and " lady."

## 4.-Other Pronouns.

The Reflective Pronoun timań was mentioned above.
"The other" is ane' : e.g., ane' (written anen) ambi, "the other woman" (III. 3: B 5) : ekaku-anekaku, " the one," "the other" (employed both for Masculine and Feminine), are used in contrast to one another.

[^40]Extra No.-1919.] máldivian linguistic studies.
"All" is emme (Málim's Letter), or emmeń (III. l : 20̆) ; cf. ituru hurthá,* " all the rest" (III. 3 : C 6). In emme, doubtless, the numeral $\mathrm{E}^{\prime}$ (EK) is contained; to ITURU the S. itiri is comparable. See Etymologie des Singhalesischen, No. 170.

The Interrogative Pronoun is koń, " which ? "
For instance, kon-ecce, " what ?" literally, " what thing?" (III. 2: 12) ; ко́́-кahala, " what kind of ?" (III. 2:3); кońtakuńHé, " where?" (III. 1:24) ; koÁ-IRU, " when?" (III. 2:27) ; кова́н́́, " where?" (III. 2: 1).

The - He at the end of several of these words is the Interrogative Particle.

In conclusion, I mention the following :-
kíN-hé, " what ?" (III. 2: 10); kí-vegeñ, " why ?" "what for ?" (III. l : 27) : and kita (or KIHá), " how many?" in KITA kUdiń, " how many children?" (III. l:8); and kiHá dUvaHUŃ, "in how many days !" (III. 2: 28); cf. kihávaru (III. 2 : 30).

[^41]
## V.-VERBS.

In Máldirian, as in Sinchalese, the Verb offers the greatest difficulty.

The materials accessible to me allow of no systematic representation of rerbal inflexions. Much-indeed the greater part-still remains obscure, and to try to explain too much would be rash, and scarcely profitable to the subject itself.

## 1.-Close and unmistakable agreements of the Maldivian with the Sinhalese.

In Máldivian, as in Sinhalese, the Transitive and Intransitive (Passive) Verb-roots are different.
1.-Passive.

In hadaf́, " to make," the Passice form is hedeń, " to be made," "produced," "cultivated"; Faffaló-ta' hedent, "fruits are cultivated" (III. 2: 3, with Note). In L.V. (p. 70) I find goríí hedení, " seed is cultivated," as a paraphrase of "field," "cultivated land."

In Sinhalese hadanu and hedenu correspond. The latter signifies, like the Máldivian hedeśs, " to grow " (of plants).

Another interesting word is veṭex, " to fall" (L.V., p. 83): e méva veteni (l.: -ṬT-) gahuń, " the fruit falls from the tree,"* S. veṭenu.

Passive, also, is feń bedeni, "it freezes" (L.V., p. 10), literally, " the water is bound," S . bendenu. For meaning, cf. np. basta yax.
belaí, "to be seen," "to be visible," is the Passive of balaý, "to -ee" (III. 2: 21). With Jehex́, in mósamo-vái Jehesi, " the monsoon has burst" (III. 2: 27), cf. JaHań, "to strike"; KEpEÁ, " to be wounded" (L.V., p. 24), with

[^42]kapań, " to strike," " to hew down" (ibid., p. 104): cf. further, Temeń, " to be moist" (L.V., p. 139) =S. temunu; TIBEŃ, " to be," " to live " $=$ S. tibenu.
2.-Infinitire.

In Máldivian, as the examples given above show, the Infinitive ends in -AŃ (perhaps written -EŃ), more frequently -ÉŃ, -ÉN. These forms doubtless correspond to the S. -anu, -enu, and, like them, go back to the rerbal forms in -ana of Páli. See Geiger, Litteratur und Sprache der Singhalesen, p. 75.

Short end vowels, which are still preserved in the Sinhalese (S. kapanu is derived from P. kappanañ), appear, according to the law of sound, to fall off in Máldivian.

Examples of the use of the Infinitive in our Texts are kurán (III. 3: C 1) =S. karanta, "in order to make"; as well as bahátí (III. 3: C 2. C 5) = S. bedanta, " to divide," dependent on amre-koffiyavé, and buneppé, "he commanded," " told."

In ahareń mardtáń vívé (III. 2: 24) = S. apa nasinta ónéya, " we must die," rásé appears to me to have a close correspondence, etymologically, with the S. oné; but I have found no satisfactory derivation of the word.*

## 3.-Gerunds.

The formation of the Gerunds also agrees in Máldician and Sinhalese.

To this I add that the use of Compound Verbs (in the sense of page 67 of my Litteratur und Sprache der Singhalesen), in which the preceding Verb appears in the Gerund form, is extremely frequent in Máldirian.

[^43]Four types noticed.-(a) The Gerund nátá, "without hearing" (III. 3: A 4) $=$ S. kan-no-di, corresponds to the first type of Sinhalese Gerunds kapá.

So, in the front rank of Compound Verbs, kakká-fím, "we cooked" (III. 2: 11). Cf. kakkani, "she cooks" (III. 2: 2); gová-geń, "having called" (III. 3: B 3); falá-geń, "having divided," "having cut up" (III. 3: B 3).

In nidai fíme, "I have slept" (III. 2: 19), and vihai fímevé, "I have borne" (III. $3:$ B 2), ai shows the length of the vowels: cf. vikkai-geń, "having sold " (Málim's Letter); FARÁI-GEŃ, " beginning" (III. 3: B 5) $=$ S. paṭangena.
(b) The second type of Gerund ( $=\mathrm{S}$. benda, bandinu, " to bind") I think I find in BEHI-GEŃ, "wrecked" (Sultán's Missive) $=$ S. bahinu; and in DENI-GEN, " having recognized" (III. 3: В 6) $=\mathrm{S}$. dena, dannu (from daninu).

If my idea is correct, the Máldivian form would be of interest. It still possesses the sound of I , which on account of the vowel modification is considered as originally present in Sinhalese forms like bẹnda (Geiger, loc. cit., p. 74).
(c) The third type (=S. idimi, idemenu, " to swell") occurs in EHI, "having heard" (III. 3: B 4) =S. asá; which, as a collateral form by the side of níhá (see above), is certainly remarkable, and presupposes a Verb eheń by the side of aHañ.

For Compounds, I mention vetticeń, "falling" (III. 3: A 5); ossi-díné, "will set" (III. 1: 20): cf. osseń; also trrivi-dáné, " will set" (III. 2: 20) : cf. tiriván (S. venu), " to become low," " to sink," " descend."
(d) We also find the "Irregular" Gerunds of the Sinhalese again in Máldivian. Thus. ko', " having made" =S. koṭa (III. 3: C 2) : cf. екко', " having gathered" (III. 3 : C 3), and in Compound Words ekkoffá (ek-кo'-fá) (III. $3: C 2$ ), both $=\mathrm{S}$. ekkota .

The Máldivian Adverb ко', as in gina-кo', "frequent very," is formed like the Sinhalese kota.

Also gos (= S. gos), " having gone" (III. 2: 13; Sultán's Missive), occurs, and is found in Compounds like opi-gosLefí (III. 2: 28), "having gone (in a ship)," and gen-gosFÍm, " we brought" (III. 2: 11) = S. genávemuva.
4.-Compound Verbs.

As regards Compound Verbs, these appear especially frequent as Auxiliary, i.e., in the concluding part of a Compound Verb which seems to correspond to the S. piyanu.

Thus, to the forms quoted above, like kakrá-fím, "we cooked," \&c., I add ró-қоғ-fís, "we kindled fire" (III. 2: 11) : also the Gerund forms dí-Faya',* "haring given" (III. 3: B 6) =.S. dí ; nagá-faye', "haring taken" (III. 3: C 6) = S. aragena.

Another Auxiliary Verb is DáŃ, "to go" ( $=\mathrm{S}$. yanu), in ossi-dávé, " (the sun) set," ará-dáné, " (the sun) rose"; in the Present, too, ossi-JJé, " sets" (III. 1: 19 and 20), where JJ must have originated from DY.

Also LaŃ (=S. lanu), " to put," "place," "lay," is used : e.g., mará-Leyippé, $\dagger$ " he killed" (III. 3:C 4). As the Sinhalese lanu gives an occasionally Causative meaning to the Verb with which it is connected, so the Máldivian lav́, in vețṬÁtlañ, " to fell," does to vețteń, " to fall."

In conclusion, I should like to note that, like the Sinhalese gena, in Máldivian the Gerund gex́ very frequently is seen at the end of a Compound Word, without perceptibly modifying its meaning.

I mention dent-gef́, " having recognized " (III. 3: B 6); FARÁt-GEŃ, " having begun " (III. 3: B 5) : FALÁ-GEŃ, " having divided" (III. 3: B 3) ; goví-GEÁ, " haring called" (III. 3 : B 3) ; vikkai-geń, "having sold" (Málim`s Letter) ; vețṭigeń, "fallen down" (III. 3: A 5) ; BEEI-GE'-GOS, "wrecked" (Sultán's Missive).

[^44]
## 2.--Tenses and Moods.

I restrict myself here to quoting the forms as they occur in the Text, and as I have noted them down, with occasional explanatory remarks.

## (a) Forms with a Present Significance.

Singular, First Person.-I distinguish three types in my collection; which, however, it is clear are very closely connected.
(i.) With the ending -ra, I noted ma vasganya, " I kiss," "smell." Forms of this kind must lie at the foundation of the present Siṇhalese karana-vá. ganna-vá (colloquial language), if my attempt to explain it (Litteratur und Sprache der Singhalesen, p. 81) is correct.
(ii.) The forms in the ending -NI appear to be more frequent.

Thus, ma dani, "I go"; ma ahani, "I ask"; ma hunnani, "I live"; ma hadani, " I make" ; ma ront, " I weep" ; ma heni, "I laugh"; ma vettudni (sic; but of. Note, supra), "I fall"; ma dini," I give"; also from the Text (III. 2: 23), ma gannani, "I take" (? perhaps a new formation).
(iii.) Contracted forms appear with simply a nasal at the end : ma bóń, " I drink "; ma ráhaí, " I do not hear."

Singular, Second Person.-The form agrees with the second form of the First Person : kalé hunvant, " thou livest"; tiya efrani, "thou doest"; as also in the Text (III. 1: 24), tiya annani, " thou comest."

From díś, " to go," there is derived, according to my Notes, the Second Person Singular dé ; and from róńs, "to weep," roníta; whilst for all other Persons and Numbers the one form roni is used.

An Interrogative form, which appears to belong here, is kalé dannumbé. " do you know?" " do you understand?" (III. 2: 26).

Singular, Third Person.-Here, too, we find the forms in -NI most frequently used.

Thus, (IRU) arani, " the (sun) rises" (III. 1: 19); (kokrá) Kakkani, " (the sister) cooks" (III. 2: 2) ; tlani, " (she) is" III. $2: 15$ ) $=$ S. sití ; (néva) veṭtcni, " (the fruit) falls" (III. 1: 28), but perhaps it should be changed into vețen (see supra, page 78, footnote ${ }^{*}$ ).

Also Éví DIYa, "he goes": with which I connect (IRU) OSSI-JJÉ, "(the sun) sets," JJ from Dy, as in Sinhalese (Geiger, loc. cit., Section 13, 2 b), the final $E^{\text {e }}$ being added, as is frequently the case, to mark the end of the sentence.

Plural, First Person.-From my Collections: aharamén kani, " we eat"; aharamé́ roni, " we weep"; aHarameń dant, " we go " ; afaramét rininá́, " we sit."

Also a form in the Text (III. 2:6) which is difficult to bring into connection with the foregoing, aHaramét aḷamevé $=\mathrm{S}$. api sádamuva, " we build."

Plural, Second Person.-I noted kalémét roni, "you weep" ; kalémeń irinnan. " you sit"; kalémeń dé, " you go."

Plural, Third Person.-From the Texts, hunnayi (sic), " they are," "they live" (III. 2: 24); hedent, " they are made," " they grow" (III. : : 3).

I myself noted roni, " they weep"; irannań, " they sit"; diya (or diyeyt), " they go." Also tibi, "they are "; tibúné (Interrogative), " do they belong "

## Prescnt Tense.

We can, therefore, next give with certainty a paradigm of the Present Tense of hadaís, "to make," in which the form hadani is the same for all Persons of both Numbers.

There is in this, again, a close connection between the Máldivian and popular Sinhalese, in which the one form karanavá is also used similarly for all Persons (Present).

Further, I can put together, from Ibráhim Dídi's statements, the Present Tense of the Verb Dávi, " to go," which apparently is irregular :-

Singular.
(1) ma Dani.
(2) kalé dé.
(3) Eñ́ DIYa.

Plural.
(1) aharameń dani.
(2) Kalémeń dé.
(3) Ebáe mifuń diya (diyeyi).
(b) Forms with a Future Significance.

Singular, First Person.-timanní fonctísame. "I will send" (III. 2: 26) $=$ S. evannemi; víneme, "I shall be " (III. 3: A 3) = S. sitinnemi; furánemeve (or furánenevé). "I shall depart" (Málim's Letter). With the ádjoined -É concluding the sentence, I also noted ma bai kánváné, "I shall eat rice"; abareń hifáńváneyé, "I shall catch," which, however, has almost the meaning "I must catch."

Singular, Second Person.-Ibráhim Dídí gives hránúvé, " thou wilt catch "; kalé bai káńváné," thou wilt eat rice." The first may, indeed, be the specific Future form.

A periphrastic construction, apparently, is seen in kalé hadá̀ dlani, " thou wilt make" (III. $2: 12$, Note).

Singular, Third Person.-There are many good examples of this in the Text: (IRU) aríné, " (the sun) will rise" (III. 1 : 19) ; ETI DÁe-GEŃ-Fáné, " he (log) will bite" (III. 1: 26) ; (IRU) tiri-vi-déné, " (the sun) will set" (III. 2: 20); (ADIRI) BODU-VI-DÁNÉ, " (the darkness) will be great" (III. 2: 21). Also, in my Notes, éví bal káNé, "he will eat rice"; and with the $E^{\text {e }}$ at the end of the sentence, hifíneyé, " he will catch."

Of Intransitive Verbs we have (IRC") osséné, " (the sun) will set" (III. l: 20); Ne-Libévé, " (the child) will not (by me) be taken" (III. 3: B 5) ; also (MAGU) NU-BELÉNÉ, " (the road) will not be seen" (III. 2: 21).

Plural, First Person.-The ending seems to be -Nú or -NUN. With this afarameń bai kínuń, "we will eat rice," in my Collection agrees; also mránúvé, "we will catch," with the -É marking the end of the sentence.

The form in the Text, aharamé́ aránume, "we will embark" (III. 2: 13), contains the Emphatic Particle -ME, which is common in Máldivian.

Plural, Second Person.-The two forms in my Collection, kalemeń bai kávé, "you will eat rice," and kalémeń mfanúvé, " you will catch," do not seem to agree.

In the Text there is found a periphrastic form, halémeń hadáń uluvani, "you will do" (III. 2: 12) $=\mathrm{S} . u \breve{m} b a$ karanné.

Plural, Third Person.-I have only written down the one form ebáe míhuń vai káné, " they will eat rice."

## Future Tense.

The construction of the paradigm of the Future is not free from doubt. I give it with all reserve :-

Singular.
(1) ma hadáname.*
(2) (Kalé hadánú.)
(3) ÉNá hadáné.

## Plural.

(1) API Hadíxć.
(2) (kalémeń hadánú.)
(3) Ebáe míhứ hadáné.
(c) Forms with a Preterite Significance.

Singular, First Person.-The forms ma ehí, "I asked" (III. 1: 1), and ma Hedí, "I made," show us that in the Transitive Conjugation the structure was just the same as in Sinhalese. The Preterite goes back to the old Past Participle of the type patita (Geiger, loc. cit., Section 55, 2 a).

The Máldician also shows the rowel assimilation in the root syllable (ehí, as opposed to the present aHaNi ; HEDí,
as opposed to the present HADANI), brought about by the I of the following syllable, just as the S. ẹhuvá and heduvá : it is, howerer, somewhat more ancient, inasmuch as it has still kept the I , whilst in Sinhalese it has been turned into $u$.

The Intransitive Conjugation shows just the same type as the S. idime-, idimunu-. To this form belongs ma deni,*" I gave " (III. 1 : 4)—which according to Ibráhim Dídi's assertion, may be also ma dIN-colloquial for ma díním, which occurs in III. 1: 3. Probably mi liyuni (Málim’s Letter). ma liycií-me, "I wrote" (III. 1:23), are formed in the same way, as Intransitive.

Of forms which deviate from the regular type, I have noticed ma Gatí, "I bought" (like the S . gattá, from gannu) ; also with the ending -L' instead of -I (as in Future Plural (1). -UŃ occurs with -̇́): MA DURI'̇́, "I saw" (S. dutuzá); ma bútí, "I drank"; ma rứŃ, "I wept." Irregular, also, is ma diYÁ-me, " I went"; vejJé-me, "I became," in ma tedctejuí-me," I rose" (III. 2: 19).

Finally, Compound forms frequently appear in the Preterite, in which the Auxiliary Verb corresponding to the Sinhalese piyanu is employed: ma ahá-fív, "I heard"; ma hí-FIŃ, "I laughed " ; ma rikeí fiń, " I sold." In the Texts, too, ma-midai-fí-me, " I slept" (III. 2: 19) ; ttmanví vihai-fimevé, " I hare borne (that child)" (III. 3: B 2).

Singular, Sccond Person.-The form is difficult to establish. According to kalé opi-Gos-Lefí, " thou hast sailed" (III. 2: 28), it would agree with the First and Third Persons Singular. But the following forms were given to me: kalé búdid, " thou drankést"; kalé kémc. " thou atest" : kalé rcime, " thou hast wept"; kalé diyámc. "thou wentest"; kalé gatíta, " thou boughtest."

[^45]Singular, Third Person.-The forms like BUN, " he said" (III. 3 : B 3 and B 5) ; EHI, " he asked " (III. 3 : C 7) ; INí, "(she) has married" (III. 2: 16), are clear.

Of the Intransitive forms, we have néva vețtenu (or vetteruni, cf. supra, Note), "(the fruit) fell" (III. 1:28); JEHUNI, " (the monsoon) burst" (III. 2: 27).

Also Irregular : áx, " (he) came" (III. 1:22)=S. ává; and genát, " (he) brought" (III. 1: 21) =S. geṭácá.

But a new type in -ppé also appears, which can scarcely be explained at first sight: beneppé, "he spoke" (III. 3 : C 3, C 5, C 6) ; fortvaippé, "c corered " (III. 1: 17) ; maráLeyippé,* "he killed" (III. 3:C4).

Enlarged forms in -Ppevé are clearly related to these, as in the Future, those in First Person Singular in -Ańamevé, and Third Person Singular in -Afievé, are related to those in -ańame, perhaps -áné. Such enlarged forms are aheppevé, "he asked" (III. 3: A 3) ; Lálppevé, " he laid" (III. 3: A 6); vifayeppevé, " (children she) has borne " (III. 2: 16).

In the same way forms of the first type are enlarged : fontrá-fiyevé, "he sent" (III. 3: B 6); amrd kof-fiyaté, "he commanded" (III. 3: C 2); as well as vejJevé, "was," "he became" (III. 2: 14; III. 3: A 2). Cf. marevejuevé, "he died" (III. 3: A 5; Málim`s Letter); also the forms hingi-evé, "he went" (III. 3: A 4), and atd-evé, "he has come" (Málim's Letter), are to be taken into consideration.

Periphrastic is nubune heri, " (she) did not speak" (III. 3: B4). Doubtful forms, resembling the Future rather than the Preterite, are (IRU) ARá-DÁNé; also ossi-Dáné, " (the sun) has risen," also "is set" (III. 1: 19, 20).

[^46]Plural. First Person.-The form appears to end in -m, -mu, -muý. In the Texts aharamé́ ekt-koffím, "we gathered"; aHarameń -gengosfím, "we brought"; aHarameń ró koffím, "we kindled"; aHaramế kakkáfím, "we cooked" (all in III. 2: 11).

I have recorded aHaramén búniúń, "we drank"; aHaramen rétmun, "we wept"; aharameń hingímun, "we .went."

Plural, Second Person.-A single form, kalémeń koḷefím (perhaps = ко́'-Lefím), " you did" (III. 2: 10).

Plural, Third Person.-The simple form buni, " they said," is attested (III. 3: B 2). Also we have, quite analogous to the corresponding forms of the Third Person Singular, Hingievé, " they went" (III. 3: A 1), and atc-rejuevé, " they came," or "had come" (III. 3: B 1). Cf. further, vedé, "they went" (III. 3:C 1), which probably is connected with the S . vidinu.

All the forms told me have the final -TA added to them. I should like to write this -TA'. and simply look upon it as the Plural Particle spoken of abore, were it not also occasionally found in my Notes in the Singular. Such forms are ebáe mínứ bútta, " they drank"; ebáe míhứ ríuta, " they wept"; ebíe míhoń diyata, " they went"; iyyegá ebáe mímón kéta bai, " they ate rice yesterday."

## Past Tense.

The paradigm of the Preterite of hadañ, " to make," if we wish to put it in tabular form, would perhaps be formed in the following way :-

## Singular.

(1) ma hedí, or ma hadáfrí.
(2) Kalé hedí (or ? kale hedímut).
(3) ÉNá hedí (or éná hadaippé, or éná-hadeppé).

## Plural.

(1) aHarameń hedím (-UŚ), or aharameń hadífím.
(2) (? KaLémế hadáFím.)
(3) EbÁe MíHUŃ HEDí.

Of DáNu, " to go," the following conjugation of the Preterite was given to me:-

Singular.

## Plural.

(1) Ma diyálŃ.
(1) aharameń hingímúń.
(2) Kalé diyámu.
(2) Kalémế diyámuta.
(3) ÉNÁ DIYA.
(3) ebáe míhứ diyata.
(d) Imperative Forms.

There are clearly two forms, (i.), (ii.). to be distinguished: a simple one, which, as in Sinhalese (Geigel, loc. cit., Section $62,1 a$ ), represents merely the root of the Verb; and a longer one, to which the syllable hare is added, which I cannot further explain.
(i.) Dí, "give" (III. 1: 2); Nidí, "sleep" (III. 1: 27): hada, " make" (III. 2:21) = S. karapan.

In nugané (III. 2: 25) and huré (Hure) (III. 3: A 7) the -É may be explained by the position at the end of the sentence ; or is it a plural?
(ii.) Nagatare, "take up," "lift" (III. 3: A 3) ; NUtalahare, "do not strike" (III. 1: 26) ; nc-marare, "do not kill" (III. 3: B 5) ; DEHERE, " give" (III. 3: B 3) ; and finally, in my Notes, dahare, " go."

## (e) Conditional Forms.

A Conditional unmistakably occurs in (hardfá) dágatilá, " in case (a snake) bites (us)" (III. 2: 24) ; (mí kalége niyákấ) víyá, " if (this) is (your judgment) " (III. 3: B 5). Here also belongs mát-kaláge russe-víyar, "if God wills it" (Málim's Letter); to which the S. russanu, "to have pleasure in," "t to like," is comparable.

The foregoing Notes on Máldivian Grammar give us, of course, only a general and incomplete picture of the Structure of the Language. They are a first attempt, and should be judged as such.

He who knows the many purely external difficulties and obstacles with which one meets in the East in researches which lie at the foundation of work such as mine; he who has - experienced how the best intentions and the most enthusiastic zeal are constantly checked and crippled by a thousand petty trifles, will judge the deficiencies of my work kindly.

Knowledge must be indulgent. It may be an easy thing to point out and criticise this or that defect ; but of greater worth than criticism is energetic co-operation.

## SECTION III.*

## I.-MALDIVIAN VERBAL INFLEXIONS.

Through my Colombo friend, A. Mendis Gunasékara, Mudaliyár, I have received a list of paradigms of Máldivian Verbs from my helper, Sheik Ali.

I publish it, in the corresponding form, all the more gladly because the inflexions of Máldivian Verbs are extremely remarkable ; and because my own compendia (Z.D.M.G., L.V., Section 383 seq.) are in many respects completed and improved by the new material.

At the same time, I avail myself of the opportunity of correcting my former statements about the personality of Sheik Ali. He is not a Bengáli, but is descended from an Arab family which emigrated from Cairo to India. Also, he does not follow any mercantile pursuit in the Máldives, but filled the important position of Supreme Muhammadan Judge there, and was a Member of the Cabinet for ten years. $\dagger$

This correction is really of importance, inasmuch as Sheik Ali, from his position of kází, of course, had opportunities of getting into far more intimate relationship with the Máldivian people than would have been possible to a trader. His notes, being those of a man of rank and education, carry authority.

[^47]Selected Verbs.
The Verbs selected, as examples. in the Present, Preterite, Future, and Imperative Tenses, are:-
(a) HADAN, " to make."
(b) KÁN, " to eat."
(c) balan, " to see."
(d) annan, "to come."
(e) DÁN, " to go."
(f) LRínnan, " to sit."*

## 1.-Present.

In order to avoid misunderstanding, if possible, I have, as a rule, inserted "now," "at present," Máldivian mпшо (mi $=\mathrm{S}$. Pronoun $m e+$ Hido, or Hindo, "time"; really $=\mathrm{S}$. sanda). Cf. E-HIDU, " then" $=$ S. $e-s a n d a$.
(a) HADAN, " to make," " prepare " $=$ S. hadanu:-

## Singular.

> Plural.
(1) timanmen . . . . . . yibidu hadayé.
(2) kalémen .. . . . . mitidu Hadamo.
(3) E-mígun .. .. .. mieido hadané.
(b) KÁN, " to eat" = S. kanu:-

Singular.
(1) timan .. .. .. m. kaní.
(2) iba .. .. .. m. kaví.
(3) Éná .. .. .. m. kané.

[^48]Plural.
(1) timanmen
M. KAMU.
(2) iburemen
M. Kamu.
(3) E-MÍHUN
m. Kané.
(c) Balan, " to see " = S. balanu:Singular.
(1) timan .. .. .. m. balamé.
(2) mba .. .. .. m. balaní.
(3) Éná .. .. .. m. balaní.

Plural.
(l) timanmen .. .. .. m. balamé.
(2) iburemen . . .. .. m. balamu.
(3) E-mís-ta' . . . . . m. balané.
(d) annan, " to come" = S. enu:-

Singular.

| (1) timan | .. | . | . M. anvaní. |
| :--- | :--- | :--- | :--- |
| (2) BA | . | . | . m. annaní. |
| (3) ÉNÁ | .. | . | . M. anNaní. |

Plural.
(1) timanmen .. .. .. m. annamuvé.
(2) kalémen .. .. .. m. annamo.
(3) E-mís-ta' . . . . . m. aUdé.
(e) Dán, " to go " = S. yanu:-

Singular.
(1) timan .. .. .. m. daní.
(2) IbA .. .. .. m. Daní.
(3) éná .. .. .. m. dé.

## Plural.

(1) trmanmen . . . . . m. damé.
(2) ibaremen . . .. .. m. damuré.
(3) E-MíнUN .. .. .. m. DEYÉ.
(f) irínnan, " to sit" = S. hitinu. The L.V. writes irínan; my helper, irinnán :-

## Singular.

| (1) timan | . | . | . m. irínnaní.* |
| :--- | :--- | :--- | :--- |
| (2) iba | .. | . | . m. irínnaní. |
| (3) éná | . | . | . m. irínnaní. |

## Plural.

(1) timanmen.. .. .. m. ifínnamu.
(2) iburemen.. .. .. m. mínnami.
(3) E-MÍHUN .. .. .. m. TRídeyé.
2.--Preterite. $\dagger$
(a)

Singular.
(1) timan .. .. .. iyye hadaifín.
(2) IbA .. .. .. iYye hadaifíno.
(3) éná .. .. .. iyye hadaifi.

## Plural.

(l) ttmanmen.. .. .. iyye hadalfímu.
(2) IBUREMEN $\ddagger$. . . iYYe Hadaifímo.
(3) E-Míhư .. .. .. IYYe Hadaifú.
(b) Singular

## Plural.

(1) T. I. Keí.
(1) т. I. हaifimú.
(2) I. I. KeÍ. §
(2) I. I. катғímu.
(3) É. I. Keí.
(3) É-M. I. Katfứ.

## * Written rrfisanf.

$\dagger$ The verbs hadan, bán, balan, aninan, dan, and irinnan, with the addition of iyxe, " yesterday."
$\ddagger$ fbUREMEN (or mbaremen) is, according to choice, interchangeable with kalemen, just as, in the Third Person. e-mís-ta' alternates with e-mfiens.
§ Sheik Ali here writes kekef; probably from oversight.
(c)

Singular.
(1) T. I. Belímu.
(2) I. I. balaifíno, or deeefímo.
(3) É. I. BALAIFI, or DEEEFI.

## Plural.

(1) T. I. balatfíno, or dekefímu.
(2) I. I. balatfínu, or dekefínu.
(3) É-M. I. badatfú, or dekefú.
(d) Singular. Plural.
(1) T. I. ATN.
(1) T. I. ADMD.
(2) I. I. aimu.
(2) I. I. ATMU.
(3) É. I. AI.
(3) É-M. I. AÚ.
(e) Singular.

Plural.
(l) t. I. diyain.
(1) т. I. DIYaíme.
(2) I. I. diyatmo.
(2) i. I. diyamu.
(3) É. I. DIYA.
(3) É-y. I. DTYAĹ.
(f) Singular.

Plural.
(1) T. I. INín.
(1) т. I. inímu.
(2) I. I. INí.
(2) I. I. inímu.
(3) É. I. iní.
(3) É-M. I. lNú.

## 3.-Future.* <br> Singular.

(1) timan mádan hadáfínan.
(2) iba mádan hadání.
(3) Éná mádan hadáfíne.

> Plural.

## 5.-Compound Verb Paradigm.

I add here the paradigm of the Compound Verb vaṭailín, " to cause to fall," " to fell," " to drop":-

Present.
Singular.
Plural.
(1) t. vatptallaví.
(1) т. vatpailamu.
(2) I. vaṭamaví.
(2) I. vatpamamu
(3) É. vaṭṭamaní.
(3) Ém. vatpeatlai.

Preterite.
Singular.
Plural.
(1) T. vaṭtailí.
(1) t. vatpaníno.
(2) I. vatpatidi.
(2) I. vatpailíno.
(3) É. vaţ̣aní.
(3) É-m. vatpailứ.

Future.
Singular.
Plural.
(1) T. vaṭtamíní.
(1) t. vatuallínú.
(2) I. vaṭtamání.
(2) I. vaṭamánú.
(3) É. vaṭtamání.
(3) É-m. vatpatiáne.

Imperative.
Singular.
Plural.
(2) vaṭ̣ailáh.
(2) Vaṭatladváh.

## 6.-Single Verbal Forms and Short Sentences.

(a) He dies : éná maruvaní.

She died: e-kabulége maruvi.
He will die to-morrow : éná mádan maruvání.
(b) He is eating rice now : éná mitárd bat kaní.

He ate rice yesterday: éná iyye bat kaifi.
He will eat rice to-morrow : éná mádan bat katfáne.
(c) All men must die : emmehá mís-takun mardoín vání.
(d) Thou drinkest water now : katú mieidu fen boní.

Thou drankest water yesterday: iba iyye fen boifímo.
Thou wilt drink water to-morrow: iba mádan fen bolfáne.
Drink water (Singular) : iba fen bói.
Drink water (Plural) : kalémen fen baffavá.
(e) We need rice to-day: tmanmennar* mi-adu bat bénun vejue.
(f) Put (Plural) the load down on the ground: bin-mattar* burabodi vaṭṭamavváh.
Put (Singular) the dish on the table: mézo-mattar * bó-tari vaṭtallín.

[^50]
## II.-MALDIVIAN LINGUISTIC SOUNDS.

[Preliminary Remarks.-By Christopher, I refer to Christopher's Vocabulary of the Maldivian Language, Journal, R.A.S., 1841, VI., Section 42 ; by Pyrard, I refer to Pyrard's list of words, elaborated by Gray, Journal, R.A.S., 1878, new series, X., p. 173 seq.; by L.V., to the Vocabulary, Persian and Hindústání, of the India Office Library, with a manuscript Máldivian translation; by K.V., to the Vocabulary in the Copenhagen Library. Cf. Sitzungsber. der K. Bayer, Akademie der Wiss., Cl. I., 1900, p. 647 seq. By Geiger, I refer to my own collections; by E.S., to my Etymologie des Singhalesischen, Abhdl. der K. Bayer, Akademie der Wiss., Cl. I., Bd. XI., Part 2, p. 177 seq.]

My account of the Máldivian Study of Sounds rests, I believe, on about four hundred and thirty authenticated comparisons. A glance at the list at once shows the close connection between Máldivian and Sinhalese.

Máldivian Grammar offers difficulties of many kinds.
We shall be obliged to admit in it the influence of the language of the original non-Áryan inhabitants of the Islands, or of intercourse with foreign nations.

But for a linguistic classification of a Language, the Study of Sounds is decisive.

## Máldivian Word Forms.

Máldivian words now show in their form all the influences which were fixing the character of Sinhalese down to the Tenth Century after Christ.*
(i.) Máldivian has lost all the original double consonants, all long vowels, and all aspirates. Double consonants and long vowels, as in Sinhalese, are new secondary formations.

[^51](ii.) The loss of the nasal before consonants takes place in Máldivian as in Sinhalese; and the process, regarded from the point of view of dialect, has progressed further.
(iii.) The same is the case with the change of the sibilant $S$ into $H$, and the loss of the latter.
(iv.) Mutes occurring between vowels had totally disappeared at the time when Máldivian branched off from its parent language.
(v.) Palatals had also gone through their characteristic transformation ( C to $\mathrm{S}, \mathrm{H}$ and $J$ to D ).
(vi.) Finally, the effects of vowel-assimilation and change are just as recognizable as in Sinhalese.

In one word, Máldivian must have separated from Sinhalese at a time when the latter had already, in respect of Sound, assumed the form which it has at present. And this, as I think I have proved, was about the year 900 A.D.

## Sinhalese Word Forms.

The secondary support of a nasal by the addition of the mute of corresponding sound doubtless belongs to the most recent specimens of the Sinhalese language.

I am thinking of word-forms like panduru, " present" (E.S., No. 765̃) $=$ P. paṇnákára; ban̆bara, "wasp" (E.S., No. 964) = P. bhamara.*

Professor Ed. Müller justly lays stress on the fact that such forms first occur in the Mihintále Inscription $\dagger$ (No. 121); which belongs to the end of the Tenth Century. $\ddagger$

But this Sound change also belongs to the period before Máldivian branched off.

This, at least as regards the changing of the $m$ into $\check{m} b$, is proved by the Máldivian word kabcru, "smith" (Christopher; L.V., 83) = S. ka m buru, P. kammára ; TABURU, "lotus flower"

[^52](L.V., 68) = S. tă̈buru, P. támarasa; also by the Máldivian maburd, "bee" (Christopher), which - with a more recent difference of sound - resembles the S. ba $\breve{m}$ buru, P. bhamara. In all these cases the Máldivian (cf. infra about this) has subsequently discarded the nasal altogether.

Lastly, there is another, certainly relatively recent, phenomenon in the Sinhalese language, of which it may be inferred that it preceded the branching off of Máldivian.

This is the occasional replacing of $p$ by $\breve{m} b$.* We see this in Máldivian kubd, " mast" (Christopher; L.V., 86), which, again, with the loss of the nasal, corresponds to the S. kŭ̈ba, P. kúpa.

Máldivian Words from Prákrit, \&cc, Originals.
But it is not entirely surprising that, in spite of its later separation from Sinhalese, Máldivian possesses words which originate from the Prákrit foundation of Sinhalese, but are wanting in Sinhalese itself. Also, in single words, it shows phonetic derivations from the mother language, which would lead one to decide on a different fundamental form than the one assumed for Sinhalese.

For example, Máldivian has retained the word futen, " to ask" (L.V., 189), which corresponds to the Prákrit pucchati. In Sinhalese there is only the word ahanu, likewise known to Máldivian.

Máldivian bis, " egg " (Christopher ; L.V., 45), corresponds to the Sanskrit-Prákrit bíja, according to special Laws of Sound which I shall have to discuss later; but in Sinhalese the word is not present. Two other words, also, have no equivalent in Sinhalese : HEki, " witness" (Christopher ; L.V., 105), and HUVAI, " oath" (L.V., 106 ; Christopher, HUVÁE) $=$ P. sakkhi, Sans. sákshin, and P. sapatha, Sans. ṣapatha.

For such phenomena there are different possibilities of explanation.

[^53]Even if words we meet with are not present in Sinhalese Literature, and are also unknown in the language of the common people at the present day, the possibility of their being used in former times is not excluded. They may have been replaced by synonyms.

For example, in older Sinhalese it is probable that a word puhanu, " to ask," may have existed originally, side by side with ahanu, but has fallen into disuse.

In other cases, under the influence of Literature and the Grammar of the learned, the borrowed word has got the upper hand of the true Sinhalese word.

For instance, bíjaya, " egg'"; sákshí," witness"; sapatha, " oath," are now used.

But it is also conceivable that the foundation of Máldivian is a Sinhalese dialect which does not find its expression in the literary speech and in the social language of the present day, but differs from the source of these, at least in small details.

## Máldivian and Sinhalese Word Forms.

We are also led towards this view from the circumstance that the phonetic form of single Máldivian words points to a different source from the form of the corresponding Sinhalese words.

Thus, for example, Máldivian firi, " male" (e.g., Firikanbali, " bull," L.V., 37) ; firi-kalége, " husband " (L.V., 13), are doubtless more ancient and closer to the P. purisa than the S. pirimi, with its enigmatical -mi.* Pyrard has the earlier form prris.

Likewise Hís, "thousand," is the direct and regular development from the P. sahassa; while the S. dahas, from its sound, clearly is related to the Numeral daha, "ten."

The two words tabu, " post," "pillar," and tiet, " something," "a little," are also interesting. With their dental m they agree with the P. thambca and thoka; but differ from the S. temba and tika.

[^54]In old Sinhalese there must have been equivalent forms; dental and cerebral: the former is continued in Máldivian; the latter in Sinhalese words of the present day.

Máldivian US, " sugar-cane," compared with S. uk, points to an earlier double form. The first corresponds to the $\mathbf{P}$. $u c c h u$; the latter, on the contrary, to ukkhu. As is well known, the Sanskrit ksh has, in Prákrit, in some cases turned into $c c h$, in others to $k k h$, without its being possible to make a sharp separation between the two.

On the other hand, the S. sohon, són, hón, "grave" (E.S., No. 1,659), agrees with the P. susána: whilst the Máldivian maHíno * presupposes an equivalent form, which occurs in the P. masána.

In many cases in which Máldivian shows older forms, this is explained by the fact that in Sinhalese the more recent form of the word was deceloped in the period after the separation of Máldivian.

As a rule, the words which in their enunciation show an earlier vowel than the Sinhalese equiralent, can be accounted for in this way. But, of course, the supposition is not excluded that, in one case or the other, it may be due to radical differences in dialect.

The first idea would only be confirmed beyond doubt. if in a single case in old Sinhalese-perhaps from earlier in-scriptions-a form of word can be referred to which differs from the present form, and agrees with the Máldivian word But, hitherto, I have not discovered such a case.

## Vowel Sounds

Words where the Máldivian shows a more primitive vowel sound than the Sinhalese are, for example :-
kura-fat, " razor" (L.V., 85) = P. khura, but S. kara.
hus, " empty " = P. cuccha, but S. his.
LONO, " salt" = P. lonu, but S. luṇu.
FURI, " full" = P. púrita. but S. piri.
mURI, " hammer " (Geiger) $=$ P. mutthi, but S. miti .
uINan, " to measure " = P. mináti, but S. mananu.
DIRI, " cummin " $=$ Sans. jira, but S. duru.
TIN, " three " $=$ P. tinn-an, but S. tun.
To this, also, may be added ABURAN, " to turn," "to wind," with the U vowel, contrasted with the S. ambaranu, if the verb goes back to the Sanskrit root bhur.

In Hma, "stone," contrasted with the S . hel, we might consider that in Prákrit the equivalent forms sela and silá are already present.

Noteworthy, also, are some cases in which the Sinhalese shows a change of sound, which is not caused by the following $i$-sound; whilst, on the contrary, the change of sound is wanting in Máldivian :-

TABU, " pillar" = P. thambha, S. temba.
Hat, "cock" (Ha't́) = P. capala, S. sevvul.
dAu, " net" $=$ P. jála, S. dẹ.
On the other hand, in Máldivian is found dekend, "on the right," "southern" = P. dakkhina; whilst S . dakuṇu does not show the expected change of sound. In Nat, "ship," but S. nev, it may again be a case of accepting double forms, nává and návi.

In such isolated cases, in which Máldivian, in contrast to Sinhalese, gives one an impression of greater age, the general character of the former is, of course, not in question.

Máldivian is a relatively recent dialectic derivation of Singhalese : it shares with Sinhalese all the characteristic linguistic phenomena.

## Double Consonants.

Double consonants are wanting, or have only arisen as secondary formations.

Thus, varyan, " to enter," "go in," has arisen, after loss of the vorrels through assimilation, from vadnav, and corresponds to the S. vadinu (E.S., No. 1,281 ) = P. vajati : also vikkan, "to sell," from viknan $=\mathrm{S}$. vikuṇanu $=\mathrm{P}$. vikkiṇáti; dakkay, " to show," from dakvan $=\mathrm{S}$. dakvanu.

We have instances of a simple loss of vowels in Máldivian, as in Sinhalese.

Examples: Dannan, "to know" = S. dannu, from daninu; gannan, " to buy" = S. gannu, from ganimu; konnan, " to dig" = S. kaninu.

But in these three cases, as well as in rannan, it seems to be a case of a double Infinitive suffix in Máldivian.

It is difficult to explain annan, " to come," in reference to S. enu; and hunnan, "to sit," "stay," "remain" $=\mathbf{S}$. indinu, hindinu.

Also in kekkula, " strong," " hard " (Geiger)-if I have written the word correctly, and it ought not, perhaps, to be written kekula*-as well as in kessan, " to cough" (Christopher; L.V., 29), the double consonant is striking; but in no case is it ancient.

It is self-evident that double consonants may appear at the point of junction of compound words, through assimilation.

Examples: vakkan, " theft," from vag, "thief" =S. vag ("tiger") + kan, "work," "deed" = S. kam ; ebbadu, " uterine brother," from EK + BADU, "womb"; EDDAḶU, "ivory," from ET, "elephant" + DaḶU, " tooth," \&c.

## Long Vowels.

Also, though long vowels are wanting in Máldivian, they have arisen secondarily by contraction.

Máldivian continues the process, which is to be observed in Sinhalese, in that, more frequently than in Sinhalese, an н between vowels is thrown out, and the hiatus removed by contraction.

The sounding of the $\boldsymbol{H}$ in Máldician, as is shown by other evidence, has become thinner and slighter than in Sinhalese.

Examples of such lengthenings, due to contraction, are :bés, " medicine" = S. behet, P. bhesajja.
bérd, " out of doors" = S. bẹhẹra, P. báhiran.

[^55]BíRu, "deaf" = S. bihiri, P. badhira.
FÍRU, " file " = S. pihiri.
míro, " pleasant" = S. mihiri,* P. madhura.
fáru, " wound " = S. pahara, P. pahára.
váré, "rain" = S. vaharé.
NÁRU, " nerve," " mind " = S. nahara, P. nahára.
dúla, " carpet" $=\mathrm{S} . d u h u l, \dagger$ P. dukúla.
Contraction also occurs in Fíla, " board" = S. paliha: it must have arisen from a fundamental form, FILIHA, FIHILA.

It is always worthy of note that where the Sinhalese shows a double form, the Máldivian appears only to know the further developed contracted form.

Thus, the Máldivian agrees with the Sinhhalese in mó, "pestle" $=\mathrm{S}$. mól, also mohol; BÁ, "arm" = S. bá, P. báhu ; FÁ, "foot" (Christopher) = S. pá, pada; FLí, " green stuff,"" herb " = S. palá, P. palása ; Hás, " thousand" $=\mathrm{S}$. dás, also dahas, P. sahassa; múdo, "ocean" = S. múdu, also muhudu, P. samudda; Lé, " blood " = S. lé, P. lohita ; úro, " pig" = S. úru, P. súkara, \&c. Also may be mentioned here, né, "nose" $=$ S. né'; and ré, "night" = S. rẹ.. (Cf. E.S., Nos. 757 and 1,225.)

A double form in Máldivian is Eís and kiyas, "saw" = S. kiyat. $\ddagger$

Some long sounds, indeed, remain unexplained. §
Thus, for example, MaHind, " grave" (Christopher) = Prákrit masána (already quoted above); bára, " 12 "= S.bara; téra, " 13 " = S.teles ; Bíṛ, " night," " shade " = S. batu ; DóNI, "boat" = P. dóní.

[^56]The relationship of mígu, " human being," "man," to S . minis is obscure.

Finally, in monosyllabic words, the vowel appears to be occasionally lengthened.

Examples: bon or bón, "to drink"; lan or lán, "to set," "place"; dan or dán, "to go"; o' or ó', "kernel," "grain."

Nasal.
As regards the dropping of the nasal before a mute, this, again, has gone further in Máldirian than in Sinhalese. The nasal in Máldivian is frequently quite dropped, where it is still retained in Sinhalese.

Nevertheless, dialectical variations seem to occur. In my Notes, chiefly, are forms with the nasal, as I heard them from the mouth of my helper, Ibráhim Dídí; whilst in the printed and manuscript Vocabularies forms (of the same words) occur without the nasal.

I have noted bangu-rá, "wine," "arrack" (Sans. bhańga + rasa*) : Christopher; L.V., 55, on the contrary, has bagu-rá. Also I have banpu, " body" (= S. banda, P. bhanda) ; ENDU, "bed" (=S.eñda) ; andiri, "dark" (=S. añduru, P. andhakára) ; INGIII, "finger" (S. ẹngili, P. ańguli) ; danḍi, "staff" (S. dandu, P. danda) ; ungulu, "cinnabar," " vermillion" (S. ingul, P. hinguli); тambu, "post," "pillar" (S. tẹmba, P. thambha): whilst, on the other hand, are to be set bapu, edu, adiri, IGIli, dapi, oguli, tabu, given by Christopher; L.V.; K.V.

Other words in which the nasal has fallen out are: ABI, "woman" (Christopher ; but Pyrard has amby) = S. ambu; agUrd, "charcoal" (Christopher; L.V., 9) = S. anguru, P. añgára; kIBU, " crocodile" (L.V., 45) = S. kimbul, P. kumbhíla; котabiri, "coriander" (L.V., 37) = S. kotainburu; KUKUN, "saffron" (L.V., 69) = P. kuńkuma;

[^57]vedun, " present" (Christopher) =S. vệdum, " reverence," "adoration."

For further comparison are noticeable: Máldivian taburu, "lotus flower" (L.V., 68) = S. tamburu; mabणro, "bee" (Christopher) = S. bă̈buru ; KABURD, "smith" = S. kămburu; as well as кUBU, "mast" = S. kumba (cf. above, pages 100, 101).

## Palatals.

The original palatals c (CH) and J throughout show in Máldivian the same changes as in Sinhalese, i.e., through s, which later becomes $H$, and occasionally $D . *$

I notice that, as regards the change of $s$ into $H$, the Máldivian continues a process in language which had already begun before its separation from Sinhalese.

In Sinhalese, double forms frequently occur, in which, as I have mentioned, the forms with $h$ must, as a rule, be regarded as the more recent. $\dagger$
(i.) In Máldivian. forms with $s$ have become extremely rare. Almost everywhere $\boldsymbol{H}$ appears; as much in the place of an original sibilant as of an originally silent palatal-the $\boldsymbol{H}$ being then, in many cases, completely dropped. Only where the s stands at the end, is it, as in Sinhalese, always retained.

For the change of the silent palatals into H (from s), a few examples may suffice:-

Initial.—HaN, "skin," "hide" = S. ham, sam, P. camma; HA(N)DU, " moon" = S. handa, sanda, P. canda; нат, "screen," "shelter" = S. hat, sat, P. chatta.

Medial.-FaHCN, "later" = S. pasu, P. pacchá; meHi, " flies" = S. mesi, P. macchiá ; chulan, $"$ to lift up " $=\mathrm{S}$. usulanu, P. uccáleti; кaнabu, "turtle" $=$ S. kesubu, P. kacchapa.

[^58]Final.-The s remains: as gas, "tree," but gaht-fat, "tree leaf"; as, "horse," but aHU-kotari, "mane"; fas, "five," but faht́r (Geiger), pahet (Pyrard); us, "sugarcane $"=\mathrm{P} . u c c h u$; US, " high $"=$ S. us, P. ucca.

The $\boldsymbol{I}$ arising from an original sibilant obeys just the same laws.

We have hakurd, " sugar" = S. hakuru, sakuru, P. sakkhará; нат, "seven" = S. hat, sat, P. satta, \&c. Medial fatan, " to .sew" = S. pahanu, P. pása, Sans. páṣa and pásalayati," binds" ; DIHA, " ten" $=$ S. daha, P. dasa, \&c.

The initial H is quite dropped in uI , "thread" $=\mathrm{S}$. hú : as is the medial H , with contraction following, in BÉs, " medicine " = S. behet, P. bhesajja.

An initial $H$ arising from an original palatal is dropped in rínnan, " to sit"-a word in many respects obscure, but which must be connected with S. hitinu, P. citthati.

That the H of very different origin, within the word, between vowels, readily disappears, we may see by a comparison with pages 105, 106. I mention here faulu, "clear," " public " $=$ S. pahala and pála, P. pákata, where the H fills the gap.
(ii.) As an example of the rarer change of C into D , we have Máldivian eduru, "teacher" = S. ẹduru, P. ácariya.
(iii.) Cases of $D$ from $J$ are frequent.

Initial.—DAU, "net" = S. dẹl, P. jála; DIRI, "cummin" $=\mathrm{S} . d u r u, \mathrm{P}$. jîra ; Dú, ${ }^{\prime}$ tongue $"=\mathrm{S} . d i v, \mathrm{P} . j i \imath h a ́$.

Medial.—MEDU, " middle" = S. mẹda, P. majjha; a(N)DUN, " collyrium" $=\mathrm{S}$. andun, P. añana; ado, " to-day" $=\mathrm{S}$. $a d a$, P. ajja.
(iv.) In two cases $H$ has arisen from $J$, instead of from $D$, between vowels: Máldivian rite, "pain" $=$ S. rudá (ridenu), P. rujá; and RIHI, "silver" $=$ S. ridi, P. rajata.

> Mute.

For the dropping of the simple mute between vowels, which was completed in pre-Máldivian times, we scarcely need special examples.

## Stop-gaps.

To fill a gap, as in Sinhalese, $\mathbf{Y}, \quad \mathrm{V}$, and H are employed. That $H$ has then regularly disappeared and a contraction taken place, we have already seen.
(i.) Examples of $Y$ (thus employed) occur in RIyan, "cubit" $=$ S. riyan, P. ratana; and in myare, " dog-fish shark" $=$ P. makara, where the Sinhalese, so far as I know, only uses the borrowed word.
(ii.) As contrasted, we have $v$.

Thus: avI, "sunshine" (Geiger; L.V., 2; K.V.) = S. avu, P. átapa; and huvar, " oath" (L.V., 106) = P. sapatha. We may also mention here faURU ( $=$ FavURU), "wall" $=\mathbf{S}$. pavuru, P. pákára; as well as HAU (pronounced HA'U, or, more correctly, HA'̛́), " cock" = S. sevul, P. capala.
(iii.) In some words the Máldivian has inserted x to prevent hiatus, where the Sinhalese has $v$.

Examples: Hiyaḷo, "jackal," cf. S. hival = P. sigála; hryani, "shadow" (L.V., 26), cf. S. hevan, sevan $=\mathbf{P}$. chadana; RIYAU, " sail," cf. S. ruval.

An i precedes the $\mathbf{y}$, because between the letter preventing hiatus and its preceding vowel there is an unmistakable connection.

In conclusion, it may be noticed that Máldivian, like Sinhalese, is determined in its pronunciation not merely by (a) the shortening of originally long sounds-of which we have already spoken-but by (b) the influence of accent, and by the two laws of (c) vowel assimilation and (d) change of sound.

## Accent.

We observe the influence of Accent, as in Sinhalese,* in the frequent qualitative alteration of the vowel of the second syllable.

In this way the U in akUrv, " alphabet" = S. akuru; dekond, " on the right" $=\mathrm{S}$. dakunu ; mapuld, "district "

[^59]$=$ S. madulu, \&c., from P. akkhara, dakkhina, mandala ; also I in rakis(-bopu), " bat" = S. rakas, rakis; cf. P. rakkhasa.

Occasional derivations of Máldivian from Sinhalese will be spoken of below.

## Vowel Assimilation.

Also as regards vowel assimilation,* it may suffice to refer
 through bieuru = S. bihiri, P. badhira; lui (i.e., lú, "as it is said") through lUHU = S. luhu, P. lahu; tUNI," thin" $=$ S. tunu, P. tanu.

## Sound Change.

For change of the sound of $A$, corresponding to the characteristic $e$ of the Sinhalese, we have e, with clear utterance, in Máldivian.

Change of sound also takes place in the formation of the Intransitive (Passive), as in Sinhalese.

Thus: balan, " to see"; belen, "to be seen," "appear"; kapan, " to cut down" ; keden, " to be cut down" (like S. ladanu, kedenu).

Examples of single words, in which both languages agree, are particularly numerous :-

DEN, "afterwards," "thereupon" $=$ S. dẹn, P. dáni.
ET, "elephant" = S. et, P. hatthi.
FEN, "water" = S. pẹ, P. páníya.
MEH, " flies" $=$ S. mesi, P. macchiá.
res, " multitude " = S. rẹs, P. rási.
veli, "sand" $=$ S. veli, P. váluká.
-vev, "pond" = S. vẹv, P. vápi.
Above, on page 104, DEEUNO, " on the right," "southern," has been referred to, where-as contrasted with S. dakunu-the change of sound through the $I$ is founded on the P. dakkhina.

In the same way there are words like HaU, "cock" (= S. sẹvul), and tabu, "pillar" ( $=$ S. temba), in which an $e$

[^60]in Sinhalese corresponds to a in Máldivian; but where the Sinhalese e cannot be explained by the influence of an $i$.

In a few cases the Máldivian has I corresponding to the Sinhalese $e$.

Thus: $\mathrm{I}(\mathrm{N})$ GILI, " finger," S. engili ; and BIRU, " impossible," which I compare with S. bẹri.

On the other hand, Máldivian e corresponds to Sinhalese $i$ in FeLI, " cotton material" $=$ S. pili, P. pati.

Finally, like E answering to the Sinhalese $e$, E is found corresponding with ée NÉ(-FAT), "nose" $=$ S. née; and Ré, " night" $=$ S. rẹ.

Thus, it is clear, Máldivian shares all the essential peculiarities of Sinhalese in respect of Sound.

## Other Comparisons.

In details, too, the direct dependence of Máldivian on Sinhalese is seen.

In kibú, "crocodile," as compared with P. kumbhila, there is the same arrangement of the vowels as in S. kimbul. We have the same change of consonants in Múdo, "ocean " (from MUHUDU), compared with P. samudda; and in BLLAT, "betel," compared with P. tambúla; S. muhudu and bulat.

The Rodiyá dialect here has preserred tabala.
But the Máldivian shows, besides, certain vocal peculiarities, which must have arisen after the separation from Sinhalese, and determine its dialectal peculiarities.

## Voucel Altcrations.

The vowels have undergone qualitative alteration of many kinds, through the effect of Sound-environment.
(i.) Thus, the vowel 0 frequently appears in the neighbourhood of labials: cf. BUNAN, " to speak," with S. baninu, P. bhanati; BUḶat, "cat," with S. balal, P. biḷala; bURA, "difficult," with S. bara, P. bhára; bUмa, " eyebrows," S. bẹma, P. bhama; FUNÁ, " comb," with S. paná ; also, perhaps,

FURu, "side," with S. pita, P. pittha.* We might, perhaps, admit the existence of a fundamental form in U as well as one in I, such as we really have in the P. puttha and pittha.
(ii.) Also, after $G$ and k , the vowel U has developed in many cases.

Thus, in gunan, " to reckon," S. ganinu, P. ganeti; gurai, "parrot," S. girá ; kuran, " to make," S. karanu, P. karoti ; kolli, " play," S. keḷi; kulu, "saliva," S. kela; kUren, suffix, "herefrom," S. keren; KEkURI, " cucumber," S. kelkiri, P. kakkári. $\dagger$
(iii.) The vowel o is found in Konnan, "to dig," "cultivate," S. kaninu, P. khanati; and in коц̣, "end," S. kela, but P. koti, the o of which, according to the laws of change of sound, ought really to become e.
(iv.) On the other hand, in many cases a dental causes the appearance of the vowel I.

Thus, dida, " flag," S. dada, P. dhaja; difa, "ten,"S. daha, P. dasa; tila, " surface," S. and P. tala ; тtмá," self," S. tamá ; A(N)Drri, " dark," " blind," S. aṇduru, P. andhakára. $\ddagger$
(v.) The development of the vowel $o$ from $a(e)$ in front of R ( $=$ S. $t$ ) is worthy of note. It occurs in MEGORI, " ichneumon," S. mugati.

We have the same before the final r , which then, according to the Laws of Sound, must become mute.

Thus, in o' (Christopher, og ; L.V., 78, ov), " kernel (of fruit)" $=$ S. eta, P. atthi : and in vo" (Christopher, vog. L.V., 60 , voN), " lamp" $=\mathrm{S}$. veta.

* o after $F$ occurs in roni. " swect," S. peni. On the other hand. cf. Fi'A," herbs," " green stutt,' S. palá, P. palúsa.
$\dagger$ On the other hand, kilat, " soil," "dirt," s. kalal.
$\ddagger$ More isolated cases are нолг, " lizard," S. húnu; ноNс, " lightning," S. hena; нокटRe, "Venus (planet)," S. Sikurá(dá), " Friday," \&c. In duas ( = Dewas), " day," the v is caused by $\nabla$, as in nura," nine," S. davas, nava. The preference for C in the second syllable, as has been observed in Sinhalese, explains mires. " pepper." S. miris ; fortviv, " to cover." s. poravanu. For st," blue," see infra.

In madori, "a (particular) weight," I originally occurs; S. madata, P. mañjitthá: in this, the $a$ of the Sinhalese has arisen secondarily, i.e., after the Máldivian separated off.
(vi.) If Máldivian $o^{\prime}$ is found in place of I , we have a derivation for o', "wax" (Christopher, 0 G ; L.V., 47, UN) : it corresponds exactly to the S. $i t i$ (E.S., No. 124).

## Root Vowel Changes.

In connection with vowel change, I must mention a remarkable difference between Máldivian and Sinhalese in regard to the vowel of the Root of the Noun.*

I should state, first of all, that in the scarcity of Máldivian texts it cannot always be established, with certainty, in which form, whether of the Root or of the Nominative, helpers have communicated the Máldivian words.

Further, I desire to record that, in my Etymology of the Siņhalese, I was not sufficiently consistent ; for in the Supplement to Clough's Vocabulary I put down sometimes the Root and sometimes the Nominative of the Substantive. In my later works, i.e., in Litteratur und Sprache der Singhalesen, I have aroided this inaccuracy.

With regard to Máldivian, I should like to draw attention to the fact that there is still danger for us at the present time of falling into the same mistake, less through our own fault than through the existing state of our knowledge. Of course, our acquaintance with Sinhalese always gives us some guidance.

We make, then, the remarkable observation, that in very numerous cases the end of the Root is different in Máldivian and Sinhalese, and that-
(1) Where Sinhalese has $u$, Máldivian has I .
(2) Where Siņhalese has $i$, Máldivian has $u$.
(3) Where Sinhhalese has $a$, Máldivian has U. $\dagger$

* As regards the formation of the Root of the Noun in Sinhalese, cf.
ciger, loc. cit.. p. 52 , Section 30 seq. Geiger, loc. cit.. p. 52, Section 30 seq.

[^61](1) Thus, we find in Máldivian the roots: aḷi, "ashes"; aVI, " sunshine"; bári, " night-shade"; boli, " mussel"; DARI, "child"; fant, " worm"; DUNI, " bow"; HUNI, " chalk," "mortar"; KARI, "bone"; KORI, "cage"; кUNI, "dirt"; MADPI, "smooth rock"; MUDI, " ring"; tari, "star"; tari, " cup," " dish"; all, " bright"; a(N)DIRI, "dark"; bari, "heavy"; HIKI, " dry"; kUdi, " small"; where the Sinhalese has alu, avu, batu, bolu, daru, pañu, dunu, huṇu, kaṭ, kotu, kunu, madu, mudu, taru, taṭu, aḷu, anduru, baru, hiku, kudu.
(2) Directly opposite to these are KIRU, " milk "; BIRU, "impossible"; bíRu, "deaf"; as against the Sinhalese kiri, beri, bihiri.
(3) Finally, occur edd, " bed "; fURU, " side "; Ha(v)DU, " moon"; HaNU, " grinding stone "; ко(N)DU, " shoulder "; Kuṭu, "saliva "; ladu, " shame"; madu, " boundary"; MADU, "dirt" ; MAGU, " way"; Náre, " sinew," " nerve"; tabu, " pillar"; tupd, " point," " top"; value, " hole"; MADU, "slow"; MEDU, " middle"; but in Sinhalese enda, pita, handa, hana, konda, kela, lada, mada, mada, maga, nahara, tẹ̆ba, tuda, vala, mada, meda.

Among these differences in vowel formation between Sinhalese and Máldivian there may, of course, be many cases where, with the former, it is a case of a secondary change of form, while the Máldivian represents the direct continuation of the old form.

We scarcely need lay stress on the fact that, in many cases, of course, the Root Vowel in Máldivian and Sinhalese agree.

> Consonant Chanyes.

More far reaching in their influence are certain specific Máldivian Laws of Sound governing the consonants.

In some few words v has come in, in place of the Sinhalese $l$. One finds interchange of the two sounds in Sinhalese and in Páli.*

In Máldivian kakuni, "crab" = S. kakulu, P. kakkataka; makUNi, "spider," S. makuṇu and makul = P. makkata : also vidani, " lightning" $=\mathrm{S}$. viduli; whilst Sinhalese vidu corresponds to the Máldivian VIDU.

General laws are :-
(1) Change of Sinhalese $p$ into Máldivian .
(2) Change of Sinhalese $t$ into Máldivian R , a sound peculiar to Máldivian, difficult to describe.
(1) For the gradual appearance of the change of $p$ into F we have interesting chronological support.

Pyrard, who spent from 1602 to 1607 on the Máldives, always, in fact, writes $\mathbf{P}$ for $\mathbf{F}$. The change of sound is of quite recent date.

Examples (of the change from $\rho$ into $F$ ) have already been given. I add :-

Initial.—FAS, "dust" = S. pas, P. paņsu.
fent, " vision" = S. penenu, P. paññayati.
FTYA, " foot" $=\mathrm{S}$. piya, P. pada. fí-vín, " to become rotten," " to stink" $=$ Sans. púta, púyati.
Fот, " book" = S. pot, P. potthaka.
FURó, "axe" = S. porova, poró (E.S., No. 922). FUTU, " son" $=\mathrm{S}$. put, pit, P. putta.
Medial.-Eafa, " cotton" = S. kapu, P. kappása.
Hafan, " to chew" = S. hapanu.
ufulyan, " to lift up" $=\mathrm{S}$. upulvanu.
cfiran, " to pluck out" = S. upuranu, P. uppáteti. BAFA, "father" (Geiger) =S. bapu.
(2) Examples of the change of $t$ into $\mathrm{R}-$ Christopher writes RH-are the following:-

$$
\begin{aligned}
& \text { ARA, " eight " }=\text { S. ata, P. attha. } \\
& \text { ARI, " under,"" underneath" }=\text { S. yati, P. hetthá. } \\
& \text { FARAN, " to begin" }=\text { S. patan. } \\
& \text { FLRC, " side" }=\text { S. pita, P. pittha. } \\
& \text { KARI, " sting," " prick" = S. katu, P. kantaka. }
\end{aligned}
$$

Extra No．－1919．］máldivian lingeistic studies．
koran，＂to cut down＂＝S．kolanu，P．kotteti．
ко⿱⺈⿵⺆⿻二丨．＂，＂cage＂＝S．kotu，P．kottha．
MADORI，＂a weight＂＝S．madata，P．mañjitṭhá．
mUGORI，＂ichneumon＂$=$ S．mugati．
naran，＂to dance＂＝S．natanu，P．natta．
muri，＂hammer＂＝S．mitic P．mutthi．
varan，＂to turn，＂＂to twist＂＝S．vetit
In a few cases my authorities varied between R and r ．
For example，I heard reivys，＂to sit＂：on which account I considered the word as related to S．hitinu：Sheik Ali writes the word irínnín ：in L．V．，183，we have irína．＊

I have noted farut，＂silk，＂which I conceive to be a compound of FARA＝S．pata，and UI，＂thread＂：the L．V．， 49，also writes it thus：but Christopher has Fardi．$\dot{\dagger}$

The regular replacing of the Sinhalese $t$ by the Máldivian r is very striking，both in the verb veṭtan，＂to fall＂；L．V．，183， vețẹen，Transitive vețṭálián，＂to fell，＂which appears to be comparable to the Sinhalese retenu（E．S．，1，404）；as well as in ÍṬU，＂tile＂$=$ Sans．ishtakía，P．itṭhaká．

In conclusion，I have to make some special remarks about the treatment of Initial and Final Letters．

## Initial Letters．

In initials the media and tenuis are interchanged．
（i．）Máldivian giguni，＂bell，＂and gedu，＂hump－backed，＂ ＂crooked，＂may be compared with Sinhalese kikini and kudu． In Christopher we find tori，＂bowl，＂＂shell（of egg）＂－－for which I do not know any etymology to propose ；in L．V．，64， there is Dori．
（ii．）In ARI，＂below，＂compared with Sinhalese yati，we have，perhaps，the falling off of an initial y ：possibly the word

[^62]goes back to an original form with H which corresponds to the Páli hetthá.
(iii.) More remarkable is it that in several words there is a change of an initial $y$ into $D$.

Such words are dagapo, "iron" = S. yakada; dan, " watch," as a division of time $=$ Sans. yáma; Dan, dán, "to go" $=$ S. yanu, P. yáti; Daturd, " journey" = S. yaturu, Sans. yátrá.
(iv.) In addition, I mention, too, JaHan, " to strike," which seems to correspond to Sinhbalese gahanu, gasanu; and where, perhaps-I give the comparison as an isolated one, with all reserve-turning of the initial into a palatal has taken place.

## Final Letters.

For the ending of words, the most characteristic feature of all lies in the consonants $\mathrm{T}, \mathrm{K}, \mathrm{R}$, and L becoming mute.
(i.) As regards T , it has, as a rule, become I , but the words are still (in historic writing) written with a T in the L.V.; as well as in the few (published) texts written in the Máldivian Alphabet; and also by Pyrard.

Thus, the written forms are at, " hand"; вat, "rice"; DAT, "tooth"; fat, "leaf"; rat, "red"; but they are pronounced AI, BAI, DAI, FAI, RAI; and so they stand in all my recent Notes from verbal communications.

For Gai, "body" (Christopher) ; gor, "manner," "account" (Geiger) ; mec, " pearl," we must accept the writing Gat, Gот. мUT $=$ S. gat, got, mutu.

On the other hand, нat, " sunshine " (L.V., lll) =S. hat, P. chatta, has the pronunciation Haí.

Where such a t is removed to become medial it is, of course, retained in the pronunciation; as, for example, ratu-Ló, "red metal," " copper."
(ii.) The I which occurs at the end of words like GuI, "cottage"; HUTAI, "oath"; val," wind" = P. gútha. sapatha, ráta, is to be regarded quite differently. In these instances -since it is a case of the simple $t(t h)$ of Páli, not of a double
consonant-the consonant must have been dropped in preMáldivian times. In fact, we have in Sinhalese, too, gú, " cottage," and vá, " wind."

The I in Máldivian is scarcely more than a sign of the lengthening of the final vowel.

A whole series of such spellings may be recorded.
Thus: bar, " share" = S. bá, P. bhága; fai, " leg" (L.V., 20; Christopher, fá) = S. pá, P. páda; kurubat, "young coconut" (L.V., 66) $=\mathrm{S}$. kurumbbá ; LeI, " blood" $=\mathrm{S}$. lé, P. lohita; ReI, "night" (L.V., 9; Geiger and Christopher, Ré) $=\mathrm{S}$. ré, from ráti; oI, "stream" $=\mathrm{S}$. ó, P. sota; UI, " thread" = S. hú; LCI, for Lư, " light," "easy" $=$ S. luhu, P. lahu.
(iii.) After E in Ex, "elephant," the T has not become I , but closing of the top of the throat has come in. We shall see that the same is the case with the other consonants becoming mute.

The word et must be written E' if we wish to record the present pronunciation. Christopher has EG, and by his italic capital $G$ he only wishes to indicate the closing of the top of the throat. Strange to say, Pyrard writes this sound as El-and he gives it also in other words where there was certainly not an L originally present at any time-instead of the closing of the top of the throat of modern pronunciation.*
(iv.) Incidentally, I mention here a change of T into S , which, indeed, is only apparent.

Examples: bés, " medicine" $=\mathrm{S}$. behte, P. bhesajja : kryas, kís, " saw " = S. kiyat.

I know no etymology for the latter word: but in the case of Bés we hare to deal with a $D$ appearing at the end of $a$ word, and originating from $J$; which probably would be used quite differently from the $\boldsymbol{\tau}$ of the words compared with it abore.

[^63]The likeness to bés at once gives us the etymology of the word Bis, " egg," which belongs to the Sanskrit bija.

K and P also become mute, and doubtless closing of the top of the throat comes in. Historic writing has here been only sporadically preserved.* We may, indeed, conclude from this that the disappearance of final K and R is older than that of T .
(v.) Examples for the disappearance of K are RU", "tree" (Pyrard, roul) $=$ S. ruk, P. rukkha; fUVa', "areca-nut" (Christopher, FUVAG) = S. puvak.

Here belong the numerous cases where there is a Substantive with a so-called Indefinite Article dependent on it, which corresponds to the Numeral EKa. In Siņhalese it is pronounced -ak, -ek, in Máldivian -A’, E' ; e.g., мíнe, " a man"; male', " a flower "; gahe', " a tree." $\dagger$

Instead of FUVA', quoted above, the L.V., 68, gives fuvan. The nasal sound appears here in place of the closing of the top of the throat; and I notice that the nasal is always pronounced (in this word): the exact transcription of the pronunciation would thus be fuvaí.

Such nasal pronunciation is not unfrequently found in Máldivian at the end of a word. Thus, for example, fahte, " later," "afterwards," corresponds to the S. pasu.
(vi.) At the end of the Root of a Noun a becomes v .

Examples: bIN, "earth"; DAN (Dam in Pyrard), " night watch"; dUn, "smoke"; fílay, " bridge"; HaN, "skin," "hide"; vedun, "present," \&c. = S. bim. -, dum, pálam, ham, vendum, \&c.
(vii.) But a nasal change, alternative to the closing of the top of the throat, under conditions which previously have not been fixed, appears specially often.

In the Sentences III. 2:7 (Section I., p. 36) the two Plural forms mída-tas and mída-ta", " the rats"-spelt according

[^64]to the pronunciation-stand side by side, and in general the Plural suffix is pronounced, sometimes -TA', sometimes -taN.

Similarly, there is variation in the suffix which means "towards," in the case of the expression Gáta' (Section I., p. 43: III. 3: A 3) and gátan (loc. cit., p. 36 : III. 2: 8). Instead of mir-tan, " to," mi-Ta" is spoken and written thus (loc. cit., p. 54).

Side by side with мíнuN, " people," we find мíнण'; and -E" by the side of -EN, as, for example, sí H ben (loc. cit., p. 50 ).

We may, indeed, say that for pronunciation, closing of the top of the throat and the nasal are interchangeable (in practice). The exact circumstances under which one or the other is found will only be understood when more extensive and exactly noted texts are at our disposal.
(viii.) Closing of the top of the throat, or, in its place, the nasal sound, appears instead of the R .

In this way the Máldivian Dative in -AN or -a is explained : which, as I have stated (Section II., p. 66), corresponds with the Sinhalese Dative in -t $a$. Thus, Máldivian gaha' $=\mathrm{S}$. gahata, " to the tree"; VALA', " to the forest" = S. valata.

Just so we have closing of the top of the throat instead of $\mathrm{R}(=$ Sinhalese $t)$ in ко' of the verb kURaN, " to make " $=$ S. kota.

Roots of Nouns in R are Ra',* "land" $=\mathrm{S}$. rata; $\mathrm{o}^{\prime}$, " kernel," " seed" =S. $e t a$; o', "camel" $=\mathrm{S}$. ot $u$; perhaps also o', "wax" (which I mentioned above) $=$ S. itic. In Christopher we find, again, the spelling rag, óg, o $G$ : in L.V., with the nasal, rav, ron, run, but certainly ra' : in Pyrard, ral, ol.
(ix.) Finally, (as regards) the behaviour of the sound L in Máldivian.

After a it becomes $\sigma$, and has also experienced a change, which is perhaps analogous to that of $\mathbf{T}$.

[^65]Accordingly, we have butuad, "cat" = S. balal; dad, "fisherman's net" = S. del ; FUḶat, "broad," "wide" $=$ S. palal; GAU, "stone" = S. gal; Kmat, "dirt," "clay" =S. kalal; MaU, "flower" = S. mal; RIYaU, "sail" = S. ruval; VAU, " forest" = S. val.* Also TEU, " oil" = S. tel.

If U or o precedes the original L , only a lengthening of the final vowel takes place.

Thus, mú, " root" = S. mul; каќ̛, "knee" = S. kakul; ківঠ́, " crocodile" = S. kimb bul; 白,"fork" = S. ul; во́, " skull" = S. bolu ; во, " thick," "coarse" = S. bol ; мо, " pestle," "pounder" = S. mohol, mól.

The correct spelling, also, should be Nagú, " tail," from NaGUL $=$ S. nagul; and Hat, " cock," from Ha ${ }^{*}$ UL $=$ S. sevul. In the solitary case known to me in which an I precedes L, the latter is turned into $\sigma$. Thus, we have Nu, " blue " $=\mathrm{S} . n i l$.

[^66]
## APPENDICES.

A.-PIONEERS IN MALDIVIAN LINGUISTIC RESEARCH.B.-THE LEYDEN VOCABULARY.C.-THE OLD AND MODERN MALDIVIAN ALPHABETS.
D.-MALDIVIAN LETTERS.
By H. С. P. Belu, C.C.S. (Retired).

## APPENDIX A.

## PIONEERS IN MALDIVIAN LINGUISTIC RESEARCH.

Professor Wilhelm Geiger's acquaintance with the efforts of preliminary explorers-more or less serious-in the field of Máldivian Linguistics is, not unnaturally, incomplete, and, to some extent, quite excusable.

But his references to Pyrard, to Christopher, and to Gray -all three well known to him, and the chief sources of our information prior to the learned Professor's own masterly "Studies"-are surprisingly inadequate, in riew of their exceptional respective merits.

It may be well, therefore, to put on record at least a brief synoptical " Bibliography" of contributions to our present knowledge of the Máldivian Language, in justice to the "spade work" done by earlier workers, however humble.
The notices of these "pioneers" and their labours, given below, are curtailed as far as desirable; it being left to those who wish for supplementary information to follow up the references to the original authorities.

## 1.-Ibn Batuta.

The famous Moroccan, Abú Abdulláh Muhammad, usually styled Ibn Batúta, " the Traveller, par excellence, of the Arab nation," was at the Máldives for eighteen months, in A.D. 1313-1314.*

In his Narrative are found some forty (40) Máldivian, or semi-Máldivian, words, somewhat disguised under Arabian garb.

The most notable is the early mention of two words in particular, now classed as modern "Anglo-Indian terms": - $\dagger$
(i.) Combild-mas: "Máldive fish," or "the dried bonito, which has for ages been a staple of the Máldive Islands"

[^67](Máldivian, kalubili-mas ; Pyrard, cobolly, or combolly, masse ; Ibn Batúta, noclb-al-mas).
(ii.) Gundara: Term applied to the Trading Boat of the Islanders, from which is acquired their present-day Sinhalese appellation, Gundarakárayó (Ibn Batúta, cunduraH).

## 2.-Francois Pyrard.

François Pyrard, a native of Laval, in Bas-Maine, France, sailing for the East in 1601, as " one of a company of French adventurers," was wrecked on the Máldives, July 2, 1602.
" The crew were taken captive : a few escaped ; some were executed ; many died from sickness." Pyrard himself spent five years (A.D. 1602-1607) in captivity on the Group, before being released by an expedition of "the King of Bengal," which attacked Jálé, and slew the Sultán.
" By conducting himself discreetly Pyrard won, as did Robert Knox some sixty to seventy years later in Ceylon, the favour of his guardians, and finally of the King."

The unique opportunity thus afforded enabled him to acquire a sound knowledge of-or, as he puts it, " a sufficiently large and exact acquaintance with"-the Máldivian Language, during his enforced sojourn at the Islands.

The result took shape, a few years after Pyrard had at length safely returned to France in 1611, in the publication of the Vocabulary, entitled Un Petit Dictionaire de la Langue des Maldives; which was printed at the end of the Third Edition of his Voyage (2 vols., 8ro., 1619).*

This very valuable Vocabulary of the early Seventeenth Century consists of nearly three hundred (300) Máldivian words : to these should be added at least half as many again, found scattered up and down Pyrard's book; making a sum total of well-nigh five hundred (500) words and phrases.

Pyrard prefaced his Vocabulary by this short Introduc-tion:-

I have remarked in many places in my book on the diversity of languages which are current throughout the East Indies.
As for the Máldives. they have a language apart, which is spoken only in these Llands; and the best is spoken in the Northern Islands, more immediately under the King. For, towards the South they speak barbarously, being further from the coast and from traffic with other nations.

Besides the vulgar tongue, there is also the Arabic, for the affairs of religion and the sciences, as Latin is with us; and is only spoken and understood by the priests and the learned.

[^68]I could have made a complete dictionary of the vulgar tongue, as my long residence had given me a sufficiently large and exact acquaintance with it; but, not to weary my readers, I will content myself with giving some of the principal and more necessary words, which will satisfy even the most curious.*

Pyrard's thoughtful consideration for his "readers" has, unfortunately, deprived modern students interested in Eastern languages of a wealth of Máldivian phraseology, which would have been of much philological value at the present day.

Elsewhere Pyrard wrote :-
There are two languages in use.
The first is that peculiar to the Máldives, which is a very full one. In the five years and more which I spent there I had mastered it as though it were my mother-tongue, and was quite familiar with it.

The second is the Arabic, which is much cultivated, and is learnt by them as Latin is with us. It is also used in their daily prayers.

Besides these, there are other languages, such as those of Cambaye, Guzerati, of Malalaca, and the Portuguese, which some learn for the sake of trade, and by reason of the communication they have with those peoples. In the Atoll of Souadou (Suvadiva), and towards the South, they speak a language hard to understand, rough and barbarous; but still it is the common (Máldive) language.*

## 3.-The Leyden Vocabulary.

The book containing this Vocabulary belonged to the Bibiliotheca Leydeniana, or Library of that distinguished scholar, Dr. John Leyden, who studied most branches of Southern Indian, and kindred, archæology $\dagger$

From its having subsequently found its way into the India Office Library, London, it is styled by Professor Geiger "The London Vocabulary."

[^69]The full title of the book (which Geiger does not give) is :-
"A Vocabulary, Persian and Hindoostanee [to which 'and Máldivian' was added in manuscript, to cover the Máldivian words and phrases subsequently inserted by hand]. Calcutta. Printed by Thomas Hubbard, Hindoostanee Press. mDCCCVIII."*

The period when the Máldirian words, \&c., were interpolated cannot hare been later than the opening years of last century.

As will be seen, Professor Geiger, throughout his "Studies," sets particularly great store by this "London Vocabulary"a confidence which has to be discounted, quâ the correctness of the Máldivian words and phrases as true equivalents for their Hindústáni and Persian counterparts given in the book, by the contra opinion of I. Ahmad Dídí Effendi, a Máldivian nobleman of exceptional intelligence and reliability, son of A. Ibráhim Dídí Effendi, Prime Minister at Málé, Dorhiméná-kilagefánu.*

## 4.-The Copenhagen Vocabulary.

Nothing very definite, or of value, is known regarding it.
From Professor Geiger we learn (supra, page 11) the bald fact that "a short manuscript Vocabulary of the Máldivian Language is found in the Library of Copenhagen "; with the personal note that he had, "by the kind mediation of Professor Fausböll, received the manuscript," and copied "its contents."

He adds that " the Máldivian Writing employed in this Vocabulary has a quite unique style."

In regard to the extent, and probable date, of the Vocabulary, the Professor affords no information. Here and there he utilizes it in his "Studies."

The inclusion in the Manuscript of a Missive of Sultán Muhammad Muin-ud-din (A.D. 1799-1833) may perhaps throw its date back to the first quarter of the Nineteenth Century.

## 5.-James Prinsep.

To a Note on the Nautical Instruments of the Arabs, $\dagger$ the world-renowned Oriental scholar, James Prinsep, added a short Note on the Máldive Alphabet, accompanied by a lithographed Plate (XLIX.), in which the regular eighteen consonants (some with vowel signs added) are given, and about a dozen words.

* For further particulars, see Appendix B.
$\dagger$ Journal, A.S. Bengal, 1836, V., pp. 784-794.

Of nine letters, or half the Alphabet, Prinsep noted that-
They are, in fact, the nine Arabic numerals, with a dash above them to distinguish them from the ciphers . . . .

The system of vowel marks is partly an imitation of the Arabic and partly of the Indian method; the long vowels being denoted by doubling the diacritical stroke : the nasal s is marked like the Sanskrit anuswara, but the letter N is also inserted.

Prinsep closes with an ingenuous admission :-
I pretend to no more knowledge of the Alphabet, or Language, than is comprehended in the Plate itself.

This doubtless accounts for his reversing the writing in the Plate, and his startling assertion in regard to the gabuḷ tána, or Modern Máldivian Script, that "the order of writing is from left to right, contrary to the Arabic mode "-the truth being just the other way.

## 6.-Willmott Christopher.

In 1834,* during a Marine Survey of the Máldives by the British Government, Lieutenants W. Christopher and I. A. Young, of the Indian Nary, were able to spend two or three months on Málé Island.

In that short period, and despite attacks of "Máldive fever," which shortened their stay, these two observant Naval Officers drew up a valuable Memoir on the Islands. $\dagger$

In addition, Christopher compiled a rery full Vocabulary of the Máldivian Language, running to close on eleven hundred $(1,100)$ words.

This Vocabulary, together with a Máldive Lètter in the original (reproduced supra, pp. 49-51), with transcript and translation, was placed in the hands of Dr. J. Wilson, in 1838, and appeared a year or two later in the Journal, R.A.S., 1841, VI., pp. 42-76. $\ddagger$

Further, Christopher had supplied Dr. Wilson with-
Troo facsimiles of writing in the Ancient Characters, or evela akURU, not re-written, as they probably are more faithful in the present form.

[^70]I also send a specimen of the sculpture of the former mode of carving the Arabic on stone. Whether this may enable a person to trace the time of the first visit of the Muhammadans to the Islands, I am not aware. The stone bears date 994 of the Hegiri.

Perhaps the Muezzin Tower (drawing) and Inscription may be interesting. The Inscription was written round the Tower, so that from my ignorance of Arabic I probably have not begun at the real commencement of it.*

None of these, except the Máldive Málim's Letter, saw the light ; they are probably no longer in existence.

Christopher's continuous Naval duties, culminating in a noble death, before the walls of Multán, in 1848, $\dagger$ were probably responsible for the non-fulfilment of that expressed intention, which would have further added to the scholarly debt he has laid all students of the Máldivian Language under, and, in some degree, doubtless have anticipated Professor Geiger's "Studies" by half a century :-

I propose hereafter to arrange, in a tabular form, the Substantives, Adjectives, \&c., and hope to give a general Introduction to the Grammar, as time permits; so that if any person should visit those Islands from a philanthropic, or any other, motive, he may have a help towards the acquisition of the Language.*

Christopher's remarks on the transliteration, \&c., of the Máldivian Language were summarized by Dr.. Wilson; and that summary has been partially reproduced by Gray. $\ddagger$

[^71]But to do Christopher full justice, his ipsissima verba* should be quoted in extenso :-

MALDIVE ALPHABET. $\dagger$
The native name is akuru fili. The consonants are as under, in the order the natives uniformly write them :-

Name. Value.

1. havieni .. h. The ordinary aspirate.
2. rhatieni. . re. This cannot be represented by a single letter. It, with the sign ${ }^{\circ}$, doubles the next consonant, and has no sound when itself a final. Its former sound was shri.
3. natieni .. n. This letter, with the sign ${ }^{\circ}$ over it, has the sound of $n$ in "man," and of the nasal $n g$ in "hang."
4. Ravieni . . r. The usual sound in "roar."
5. bavieni .. b. As in "bab." All the vowels derive from this, when coming before it, the sound of $m$, excepting $o$.
6. Lavieni .. $\mathbf{~}$. Reverting the tongue on the palate.
7. Kavieni .. K. As in "kid."
8. arieni .. - This letter takes the sound of the vowel affixed; but with the sign ${ }^{\circ}$ over it, $g$.
9. wavient .. w. Or v .
10. matient .. m. As the common one in "moon."
11. favieni .. f. As in "fife," interchanged at times with the aspirate $h$.
12. Davient .. D. The dental $d$, as in "dew."
13. taneni .. т. The dental $t$. The sukung $\left({ }^{\circ}\right)$ gives this letter the short sound of $i$.
14. Lámu .. L. This letter is, in some connections, pronounced with the sound of lya, but generally this peculiarity is unobservable.
15. Gavieni .. g. The common sound; always hard.
16. Navieni .. N. As láno (L) above, this letter sometimes has the sound of nya.
17. Savieni .. s. Common, with the sukung $\left({ }^{\circ}\right)$ as ss final in " lass"; never as $s$ in "has."
18. pavieni .. p. With the tongue reverted on the palate. This letter constantly gives a nasal sound to the vowel preceding it.
[^72]In addition to the former, some few letters have been adopted from other Alphabets. (They are) classed as follows:-

## Persian.

CE. As in " church."
P. As in " prop."
т. Reverting the tongue on the palate.

Arabic.
z. As in "zone."
Y. As in "year."
J. As in "joy."

GH. A guttural $g$.
(TH, DH.) A sound between the dentals $t$ and $d$.

Some of the above are not in ordinary use, while others are continually occurring.

The vowel-marks are as follows, and require particular attention, as they usually govern the pronunciation of the words. They are called fili by the natives :-
aba fili .. a (') .. This sound is more like $u$ in "mud," the short 26. It never can be sounded like $a$ in "mad," "bad," or in "can," "man": it is placed over the consonant.
Áb\& FILI.. Á(").. As in "father": placed over the letter.
ebe fili .. e (') .. Exactly the English short $e$ in "men," or French $e:$ placed over the letter.
Ebe fili.. E (").. The $a i$ in " main," "pain": placed over the letter.
ibi fili .. I (, ).. The short $i$ of "pin": placed under the letter.
tbf fili .. í (, ) .. The long sound in "seen," " me ": placed under the letter.
ово fili.. o (").. The o in "dote." It is never sounded as in "dot," "lot": placed over the letter.
óbó FILI .. ó ( $\xi_{i}$ ).. The long sound of $o$ : placed over the letter. UBU FILI.. ס (') .. As oo in "food"; this never has the sound of $u$ in " mud," "cud ": placed over the letter.
ÚBứ fili.. Ú (").. The same sound prolonged: placed over the letter.

A consonant following the double (long) vowels, when final, is scarcely heard, merely adding its softening influence to the terminating vowel. There are only six consonants which can terminate a syllable or word; and they do so only when the sukung $\left({ }^{\circ}\right)$ is placed over them. None but these six are used with the above sign ${ }^{\circ}$.

They sound as under : atieni, as $g$ in "bag"; .y, as $n$ or $n g$ in "man," "fang"; N, the same as the last ; RH repeats, or doubles, the consonant succeeding it, giving the emphasis to the syllable it terminates; unless the last letter of the word, when it has no
sound, and seems totally unnecessary, except for the division it causes between words, and (because) the natives cannot understand writing without its due insertion; s, as before mentioned, sounds as our ss in "pass," "grass," \&c.; т only remains : it is sounded like a very short $i$ with the sukung above : the word (genat, pronounced) gevai offers an easy illustration.

I was a long time searching out and comparing words to discover some uniform plan for the sound of the letters used with the sukung $\left({ }^{\circ}\right)$ over them; and at last was determined by the words in most common use, all concurring in one method of spelling, such (words) as fuwag, "betel nut"; rag, "island"; hang, "skin."

Christopher's Vocabulary stands to-day as the fullest and most reliable of all published up to date.

Professor Geiger has been so unduly obsessed, in these "Studies," with the peculiar merits he claims to have discovered in the "London Vocabulary" that Christopher's - possibly less pretentious, but at least as deserving-work has suffered in comparison, and failed to receive at the Professor's hands that high commendation it so justly demanded.

## 7.-Simon Casie Chitty.

In the Ceylon Government Gazette of December 11, 1830, above the signature "Indiophilus," appeared the following remarks.

They introduced a list of thirty-five (35) Máldivian words, side by side with their Sinhalese and English equivalents :-

It is commonly supposed that the Llands called Máldives, or Malayadwipas, lying South-west of Cape Comorin, were peopled by a colony of Sinhalese from Ceylon, probably at a very early period, anterior to their embracing the Muhammadan religion. The chief circumstance that seems to support this supposition is the striking affinity between the dfif language spoken by the natives of those Islands and the Sinhalese; although the former had received an accession of words frcm the Arabs and Bengalese, with whom they have great commercial intercourse.

In November last a Máldivian boat arrived at Calpentyn ; and having been given to understand that the Nakuda spoke Hindoostanee with tolerable proficiency, I sent for him, and, through the medium of an interpreter. succeeded in collecting a number of diff words, which I here exhibit, with their corresponding ones from the Sinhalese.

The writer of the abore was presumably Simon Casie Chitty, Mudaliyár, the author of that useful work (now out of print) The Ceylon Gazetteer, 1834.

For in The Ceylon Magazine, 1840-1841 (p. 10), there was published a very similar list of forty-two (12) comparative words (Máldirian, Sinhalese, and English) contributed to that Periodical by the Mudaliyár.

## 8.--James de Alwis.

Among the papers left unpublished by the late Honourable Mr. James de Alwis (the editor of the erudite SinhaleseEnglish version of the Sidat Sangaráwa, as well as of other valuable works) was discovered a short Note on the Máldivian and Sinhalese Languages, accompanying a list of two hundred and fifty (250) parallel words in English and Máldivian-taken from Christopher's Vocabulary - with the Sinhalese equivalents of some 140 .

This Note must hare been written shortly before 1866, in which year Mr. de Alwis brought out his English translation of the Attanagalu-vansa.

The Note was obviously left unfinished. It breaks off at the commencement of a sentence.

## Note.

During one of my trips to Galle, I was peculiarly struck, on hearing some Máldivian people speak, by the similarity which numerous words in their tongue presented to the vernacular Sinhalese. Curiosity thence led me to an investigation as to the relation which the former bore to the latter; and the following is the result, which I have great pleasure in communicating to this Society.

The Rev. Dr. Stevenson, of Bombay, in an Essay on the Language of the Aboriginal Hindús, considers the Sinhalese, "as well as the language of the Máldive Islands," a branch of the Dekkan, or Southern Family, of languages.

I have already devoted a portion of the Introduction to my forthcoming publication, entitled the Attanagalu-vansa, to prove the error of the Sinhalese being placed in the Southern class, there being unequivocal testimony to show its relation to the Páli, or the Northern class of languages; and as regards the Máldivian, all the testimony which may be deduced from the development of that tongue goes to establish the fact of its being a dead (?) derivative of the Sinhalese.

The following Comparative Table * of Máldivian and Sinhalese vocabularies establishes this fact beyond all manner of doubt.

It is compiled from the materials furnished by the Vocabulary of the Máldivian Language in the Royal Asiatic Society's Journal, 1841, Vol. VI., pp. 46-72; and it proves most important facts:-

1. That nearly the whole of the Máldivian Language is derived from the Sinhalese.

The Vocabulary from whence the above list was framed is extensive; and it is probable that I have overlooked many words

[^73]which had a Sinhalese origin, but which now bear meanings different from those which they originally bore.
2. That Máldivian was formed some time after Sinhalese commenced to draw from Sanskrit; which was about the Twelfth Century A.D. See my Sidat Sangaráwa, pp. clxiv, clxv.
(i.) Sinhalese $u$ is changed into Máldivian I: e.g., " lime" (S. hunu; M. HUNI), "all" (S. mulu; M. MOLI), "dirt" (S. kunu; M. KUNI).
(ii.) Sinhalese $p$ is changed into Máldivian $F$ : e.g., "axe" (S. poro; M. FURÓ), " book" (S. pot; M. FO(T) ).
(iii.) Sinhalese $i$ is changed into Máldivian U : e.g., "bare" (S. hus ; M. HIS), "blue" (S. nil ; M. N'́).
(iv.) Siṇhalese $l$ is changed into Máldivian $\mathrm{N}: ~ e . g ., ~ " c r a b "$ (S. kakulu; M. kakeni).
(v.) Sinhalese $j$ is changed into Máldivian s: e.g., "egg" (S. biju; M. BIS).
3. That this language is mixed with Tamil: e.g., "ladder" (T. éñi ; M. ÉNI).
4. That the

## 9.-Louis de Zoysa.

The heirs of Louis de Zoysa similarly found, amid the manuscript Notes of the deceased Mahá Mudaliyár, a Vocabulary of Máldivian Words and Sentences - 700 odd in all -transcribed in Sinhalese writing, with meanings, entered opposite each, also in Sinh ${ }^{\text {Salese.* }}$

This rough and undigested Yocabulary was evidently intended to be divided under separate Headings (of which a dozen are given); but other words and phrases, supplementing those entered in their respective divisions, appear in the list, quite haphazard.

The Vocabulary (which remained unrevised, and has never been published) naturally suffered in its orthography from the words being not recorded in the Máldive characters, but merely taken down according to sound.

It would, however, be not without some value to any one who, wishing to acquire a knowledge of ordinary Máldivian, is content to study it through the medium of every-day Sinhalese.

[^74]
## 10.-Albert Gray.

In 1878 Mr. Albert Gray, late of the Ceylon Civil Service, published in the Journal, R.A.S., new series, X., pp. 173-209, an Article entitled: The Máldive Islands: with a Vocabulary taken from François Pyrard de Laval.

The raison d'être for his Paper is given at the outset by Mr. Gray:-

It was Dr. Goldschmidt's task to investigate the history of the Sinhalese Language back to its Indian sources, to define as accurately as might be the influences of Sanskrit and Páli, and to note its correspondence and kinship with the other descendants of those ancient tongues; and, finally, to mark its history through the period when it was known as Elu down to the Sinhalese of to-day.

A study of Sinhalese and of the Sinhalese Inscriptions was, of course, the first and principal stage. But the work would not have been complete without an examination of the dialect of the Máldive Islands, where, as has long been known, a race of Sinhalese origin resides, and a language of Sinhalese descent is spoken.

It was during Dr. Goldschmidt's first year in Ceylon, while I was in almost daily intercourse with him, that a visit to the Máldives was suggested, which was fated never to be performed.

On my return to England, in 1876, it struck me that the Vocabulary which I now offer might be of some use to Dr. Goldschmidt, before he could visit the Islands himself, and it was chiefly with this view that I compiled it.

I presume that some advance in the knowledge of the Máldive Language may be made by re-publishing the interesting Vocabulary of Pyrard.

The only other Vocabulary with which I am acquainted is that given by Lieutenant Christopher, R.N., in the Journal, R.A.S., VI., o.s., p. 42. Mr. Christopher was engaged under the Indian Government in the Survey of the Atolls, and during his residence there he seems to have obtained a considerable acquaintance with the language.

As it will be of great importance to scholars to compare the language of the beginning of the Seventeenth Century with that of the Nineteenth, I have placed, side by side with Pyrard's, the words given (whenever given) by Christopher to express the same idea.

I have not thought it necessary to copy the whole of Christopher's Vocabulary, for two reasons: (a) the Journal, R.A.S., is accessible to all scholars; (b) the language as given by him is that of to-day. and any one who visits the Atolls will find living dictionaries of more than the thousand words or so given by Christopher.*

Before proceeding to give Pyrard's Vocabulary, Gray adds these useful hints:-

I must remind those who peruse it-
(i.) That Pyrard was a Frenchman : the Máldive words must, therefore, be pronounced as if they were French, in order to sound as Pyrard intended them to sound.
(ii.) That in old French printing $v$ is used only as an initial : elsewhere in a word $u$ is invariably used.

I am enabled to give, on the Plate opposite this page, ${ }^{*}$ lists of the Sinhalese and Máldivian letters in parallel columns, from which the resemblance between the Old Máldivian and Old Sinhalese will be apparent. The last nine of the Old Letters have been abandoned in favour of the first nine Arabic Numerals. Formerly the Máldivian Language was written from left to right, but since the supremacy of Muhammadan literature it has been written from right to left. It will be hard to find another historical instance of so radical a change.

Gray adopts the following convenient division, under two heads :-
I.-Pyrard's Máldive Vocabulary.
II.-Máldive Words and Expressions used in the course of Pyrards Narrative.

Under II. the words, \&c., are further grouped into-
(i.) Atolls.
(ii.) Islands.
(iii.) Names and Titles.
(iv.) Religion.
(v.) Maritime Terms.
(vi.) Judicial Terms.
(vii.) Botanical Terms.
(viii.) Diseases.
(ix.) Social and Miscellaneous.

Gray's Paper-as Geiger curtly admits in his all too brief reference to it-is " the first (published) attempt to discover the connection between the Máldivian and Sinhalese Language " -a "first attempt," in truth, but none the less of real importance as marking a very distinct step forward.

## 11.-A. Ibrahim Didi Effendi.

Presumably Professor Geiger intended to include, albeit anonymously, that most courteous and obliging of gentlemen, A. Ibráhim Dídí Effendi, Dorhiméná-kilagefánu, the present

[^75]Prime Minister to His Highness the Sultán of the Máldives, in the obscure footnote of acknowledgment in his "Studies" (see supra, page 11).*

The full extent of the Professor's debt to the Prime Minister -whom he had no compunction in "tiring" $\dagger$ by a flood of questions lasting for "three days" - must be left to supposition; though there are manifest indications of its value to be found in an occasional reference to "my helper Ibráhim Dídí," "Ibráhim Dídí," or bare "Dídí," in the "Studies."

Be that and the Professor's conscience as they may, it is both just and pleasing to record the fact that very substantial aid to a study of the Máldivian Language has been otherwise rendered, in his own unobtrusive manner, by the able, but unassuming, Prime Minister to His Highness the Sultán of the Máldives.

There was issued, in 1883, an "English and Máldive Vocabulary: a Practical Guide for His Highness the Sultán of the Máldives, Edited by Ebráhim Dorhiméná-kilagefánu. By His Highness' Command.'

This book, which is quarto in size, has the English Words and Phrases printed on the outer third of the paces, leaving space on the other two thirds for the Máldivian spelling of the English words with their actual Máldivian equivalents, entered in manuscript opposite, and divided into parallel columns.

The following summary of the contents of a Vocabulary so unique will sufficiently testify to its high aim and value.

On the three preliminary (unnumbered) pages is given the English "Alphabet " in ten varieties of type, capitals and ordinary, with the Máldive pronunciation entered above: the

[^76]$\dagger$ See footnute § on page 60, supra.
following page (also unnumbered) has "Figures" 1 to 100 , and one to a billion, running up in multiples of ten.

Then follows the "Index" of sub-heads.
This may be quoted in full, as well displaying the extent and broadness of this most valuable Vocabulary :-

| Subject. | Page | Subject. | Page |

26

The whole book consists of $7 \overline{7}$ pages, with 24 lines to a page, besides the first 7 containing the Alphabet, Figures, and Index. The total number of words given amounts to 1,600 and upwards, in addition to 250 sentences.*

Truly an undertaking of which the esteemed Prime Minister should have every reason to be rastly proud.

[^77]
## 12.-Abraham Mendis Gunasekara.

In addition to rery valuable aid - indispensable aid, to a great extent - rendered to Professor Geiger by A. Mendis Gunasékara, Mudaliyár, both as "intermediary" between the German Savant and his other "active helpers," the Máldivian Prime Minister and the late Sheik Ali, the scholarly Mudaliyár proved himself a tower of strength in helping the Professor in his comparative study of the two Languages, by his translation of numerous sentences into Sinhalese, and by suggesting the Sinhalese equivalents and derivations of Máldive words.*
The Mudaliyár has recently supplemented his good work, on behalf of Professor Geiger and his "Studies," by publishing, in his very useful little Sinhalese-English Dictionary, 1915, a list of Máldivian-Sinhalese words. with their English meanings. The list runs to $\mathbf{4 0 7}$ words.

## APPENDIX B.

## THE LEYDEN VOCABULARY.

Certain statements made by Professor Geiger (supra, pages 12, 13, and 15) in connection with the above book (which he calls the "London Vocabulary," owing to its present location at the India Office Library, London) being misleading, it is desirable to examine them.

This can best be done by the very " searchlight" which, under the Professor's manipulation, unaccountably gives a very blurred vision of the facts, viz., that "bundle of letters," received by him from Mr. C. H. Tawney, Custodian of the India Office Library.

Fortunately, the original letters bearing on the question (copies of which the bundle contained) are still a vailable in Ceylon.

They are quoted below; and speak for themselves with exceptional clarity. (Letter.s I., II.. III., IV.)

Taking the learned Professor"s assertions striatim:-

## A.

Mr. Tawney was so kind as to send the book to me. and with it a bundle of letters; from which it appears that some years ago, according to Mr. Bellis wish. it had bern sent to Colombo.*

Mr. Bell expressed no " wish," and made no application to the India Office, at any time, for the loan of the Vocabulary.

It came to him-unfortunately too late to work on himself, as he had left Colombo-gratuitously, from the ever-helpful hands of Dr. R. Rost, then in charge of the Indian Office Library; "at the suggestion," it would seem, of " Professor E. Kühn, of Munich University" (with whom Mr. Bell was never acquainted), after that Sarant had himself had the use of the book. $\dagger$ (See Letter I.)

[^78]
## B.

He (Mr. Bell) showed it to some native Máldivians, who were to examine the Vocabulary; but they came to the conclusion that it was full of mistakes and errors. and of little or no value.*

When the Vocabulary reached Ceylon, in June, 1890, Mr. Bell, a Member of the Ceylon Civil Service. had been already transferred to Anurádhapura, as Archæological Commissioner, to start operations in the Archæological Survey of Ceylon, of which he finally relinquished charge in 1912.

In the interval of twenty-two years, he had neither the spare time, nor the opportunity, of prosecuting his Máldivian Studies.

All that he could do, he did: he sent the Vocabulary to his generous friend. I. Ahmad Dídí Effendi, elder son of the Máldivian Prime Minister, who had, with much kindness, aided him very greatly, from time to time, in Máldivian matters, when attached to His Majesty's Customs at Colombo and Galle, in the Seventies and Eighties.

It is surely the irony of fate that the German Professor should cast a slur on a worthy son of a worthy father, A. Ibráhim Dídí Effendi, one of the Professor's three "active helpers" when in Ceylon. to whose patience and condescension the latter owed so much in the development of his own "Studies."
"Some native Máldivians" - to whom Mr. Bell is alleged to have shown the Vocabulary - have, in reality, like Falstaff's " rogues in bukram," swollen from a single individual-no ordinary "native" of the Islands, but one of the ablest of Máldirian noblemen.

Letters II., III.. IV.-as the Professor must have been a ware, from the copies filed in the "bundle of letters" sent to him, though he ignores them-clearly establish the fact that the whole burden of Ahmad Dídi's and his Himití referee's condemnation of "the book" rests on this, viz.. the incorrectness of the work as a Comparative Vocabular!! of the Hindústáni, Persian, and Máldivian Languages.

Professor Geiger is himself fain to make the confession : the " London Vocabulary is, indeed, not free from errors ; and a considerable number of words contained in it can be rejected at once as worthless." $\dagger$

[^79]To the Professor, however, " the mistakes" are not due to "ignorance "-regarding which Ahmad Dídí and his Persian Pandit apparently have no shadow of doubt - but to a "praiseworthy, though naturally impracticable endeavour" -and, therefore, unprofitable and foolish-" to give, wherever possible, a translation for every Persian and Hindústání word."
"There are," adds the Professor-a naïve admission--" in this Vocabulary numerous words (technical terms, \&c.) for which there neither are, nor can be, found equivalents in Máldivian."

Be it placed, nathless, to his credit, that Hasan-bin-Adam seems honestly, despite his "heavy handicap"-employing for the nonce the expressive metaphor of the Hunting Fieldto have made a plucky attempt, " mounted" at times on "Paraphrase," at times on "Transliteration," to "take impossible fences "-at which he, naturally enough, "came a cropper "-thereby showing us (as the Professor considers, with unconscious humour) that he quite "understood his task." *

## C.

I regret to be obliged to say that the Máldivians whose aid Mr. Bell sought. clearly did not take much pains in the matter : perhaps they did not possess the necessary knowledge of Persian and Hindústání. $\dagger$

The unworthy insinuation against " the Máldivians whose aid Mr. Bell sought " (i.e., Ahmad Dídí alone, though the

[^80]latter justifiably invoked the extraneous aid of a Pandit at Himití), as the Letters II. to IV. in the bundle must have apprised the Professor, without possibility of misconception, and the reiled sneer, no less at that Máldive nobleman's knowledge of Hindústání, than his trarelled friend's knowledge of Persian, may best be left without comment.

Copies of this Special Number of the Journal of the Ceylon Asiatic Society will, however, be sent to I. Ahmad Dídí Effendi (now an honoured Minister at Málé), and to his father, A. Ibráhim Dídi. Dorhiméná-kilagefánu, the Prime Minister, "equally for the delight and amazement of good men"-as the Maháucansa quaintly puts it.

## D.

At any rate they ("some native Máldivians ") were in error in calling in question Hasan-bin-Adam's knowledge of their mother-tongue.*

This is deliberately setting up the proverbial "man of straw "-with the usual result.

Nowhere, and at no time, have Ahmad Dídí and his Himití authority called in question Hasan-bin-Adlam's " knowledge of their mother-tongue.

The unjustifiable charge is the more strange, in view of Ahmad Díli's express and voluntary declaration (see Letter II.), that "the man seems never to have been acquainted with any other language than Máldician." albeit apparently perfunctory in his methods.

## E.

It is natural that I (in Germany). so many thousand miles away from the land of origin, was not in a position to verify all
 especially drplore the fact that this could not be done at the t'me that the "London Vocabulary" was in Bell's hands, and his Máldivian helpers were there. $\dagger$

[^81]During the time the " Leyden Vocabulary "was in Mr. Bell's hands it could not be put to direct use. He was, as stated above, stationed then, under Government orders, at Anurádhapura, in the North-Central Province, an interior district of Ceylon; and fully occupied with Archæological work.

To have sought to muster "Máldivian helpers," of all people, to " a pleasant walk, a pleasant talk," a mid the distant ruins of that "Buried City" - the ancient Capital of Lanká -would have met with success equaling that of the cynical invitation by a certain Walrus and Carpenter to the luckless " Oysters," when-" answer came there none!" For-

Green Earth has her sons and her daughters, And these have their guerdons; but we Are the wind's and the sun's and the water's Elect of the Sea.

## F.

The book was returned by Ahmad Dídí, from Málé, at the close of 1895.

It was restored by Mr. Bell to the India Office a few months later, with a letter of frank apology-distinctly due for the very great delay which had ensued, and for which full personal responsibility was, of course, accepted unreservedly.

To the apology was added expression of real regret that it had not beenfound possible to turn the Vocabulary to account, it having been "condemmed as incorrect and valueless" in the copies of Ahmad Dídi's Letters (II., III., IV.) annexed to Mr. Bell's Letter.

Some particulars regarding the Vocabulary (not given by Professor Geiger) were jotted down by Mr. Bell in a brief Note, before finally despatching the book to England :-

## The Leyden Vocabulary.*

In the Indian Office Library is -
"A Vocabulary. Persian and Hindoostanee [to which was subsequently added, in pencil, 'and Máldivian']. Calcutta. Printed by Thomas Hubbard, Hindoostanee Press. mdcccuili."

Size, 8vo., $9 \frac{5}{8} \mathrm{in}$. by $6 \frac{1}{2} \mathrm{in}$. ; binding, brown leather, mottled; cover, plain; back, six urn figurines between seven ornamental bands, all gilt.

This book. now the property of the Indian Office Library. London, belonged to the "Bibliotheca Leydeniana," formed by the learned Dr. John Leyden.

[^82]It contains 216 pages, of 18 lines (with exceptions) to the page. Each line consists of a Persian word ; as well as (to some extent) its Hindústání equivalent, opposite, in "Devanágari" character. Beyond this is given the Máldivian version, written clearly in the gableft tíva, or modern Máldive, characters.

Many lacunæ occur in the book.
Inside the cover, at the beginning of the book and on the fly-leaf, is written out, irregularly, the gabuei tana syllabary (vowels and consonants), starting thus : ma, mi, af, me, mo, $\operatorname{MH}(\mathrm{N}), \mathrm{MI}(\mathrm{N}), \mathrm{ME}(\mathrm{N}), \mathrm{MO}(\mathrm{R})$, $\mathrm{ME}(\mathrm{R}), \mathrm{MO}(\mathrm{R})$, and ending with

The blank page bəfore the Titlo Paga bears some Persian (?) writing, with date A. H. $1 \geq 23$.

On the pages of the fly-leaf at the end of the book there are transcribed, in two separate columns, what look like archaic variants of the gabuti tása Alphabet-that on the first page giving the consonants from in to $\tilde{\mathrm{N}}$; that on the second page the syllables from ma to ta, with dots and dashes. headed by the title "The Divas Alphabet." *

Of both these columns of antique writing, a very careful tracing was made by Mr. D. A. L. Perera, Head Draughtsman (now Muhandiram and Native Assistant) of the Archæological Survey. They have been reproduced by photography. and appear on Plate V.. 1 and 2.

## ANVEXURES.

## I.

(Letter. June 6, 1890, from Dr. R. Rost.)
My Dear Sir.
India Office, Whitehall, S.W.. June 6, 1890.
Professor E. Kühn, of Munich University, informs me that you are working at Máldive. At his suggestion, I send you a Máldive Vocabulary, which turned up in our Library some time ago.

As you may wish to have the use of it for some time, I enclose the usual voucher, which I would ask you to sign and return.
H. C. P. Belle, Esq., Ceylon Civil Service.

Ever sincerely yours,
R. ROST.
II.
(Letter, November 13, 1890, from I. Ahmad Didi.)
The Vocabulary has been printed in the Hijra 1223 (and the Hijra now is 1308), or eighty-five * years ago.

A man, by name Hasan-bin-Adam, of Himití (Nilandú Atoll), has given the Máldive equivalents to the Author, as he thought right; but I am confident that there are not ten correct in every hundred, having some acquaintance with the Hindústáni language.

I found, to my surprise, that the Máldive equivalents were greatly wrong, as the man mentioned above seems never to have been acquainted with any other language than Máldive; and even in the Máldivian sentences some are not completed.

I think it would be useless labour for you to take the trouble to edit this work.

## III.

(Letter, November 26, 1890, from I. Ahmad Didi.)
I have now gone through the whole Vocabulary.
Not being fully competent in Hindústáni, and not knowing Persian, I am unable to judge whether all the words are correct or not.

I am able to judge of those which I understand, by comparing them with Hindústání, but not with Persian.

I shall write for you the equivalents in Sinhalese of the correct words I am able to make out.

The person who has given the Máldive equivalents in the book has done so through interpretation, it seems: that is why so many of them are wrong.

## IV.

(Letter, December 7, 1895, from I. Ahmad Didi.)
Regarding the Hindústání. Persian, and Máldivian Vocabulary: which you handed me when I was in Ceylon. for translation either into English or into Sinhalese.

[^83]When I examined the book it was found to be a Persian and Máldivian Vocabulary. Two or three pages only contained the translation in Hindústání ; and, therefore, it was not possible for me (being not competent at that time in the Persian language) to go on comparing whether the Máldivian translations were correct or not.

When I came here, I heard about a man in Himití, who had for many years visited India, and had acquired a knowledge of the Persian language. To him, therefore, I forwarded the book for examination.

He wrote to me saying that the Máldivian translations are mostly incorrect, and do not agree with their Persian equivalents; and that, it seemed to him, the work had been done by a man who did not know the Persian language properly; or that he might have translated through the aid of Hinduistáni, even which language he may not have known well.

As the Himití man says that the book is worth nothing, I have to return it without the promised translation.

## APPENDIX C.

## THE OLD AND MODERN MALDIVIAN ALPHABETS.

In the compass of a limited Appendix, it is not possible to cover all the ground required for a full treatment of the Old and Modern types of the Máldivian Alphabet.

It must, therefore, suffice for the time being to offer an outline sketch, intended to bring out at least the salient features noticeable in the use of each, respectively.

Without question, Professor Geiger's learned "Máldivian Studies" have rery materially adranced general knowledge of the Construction and Grammar of the Dáldive Language, besides, to some degree, extending our acquaintance with its Vocabulary ; and these are chiefly material.

But, as touching the collateral branch, its Epigraphy-both the " Dives (or DIVEHI) aKURU," or Old, and the "gabutir tána," or Modern, forms of Máldive writing - the Professor, from no fault of his own, has been unable to add appreciably to the stock of information - in the case of the Ancient Alphabet confessedly very imperfect-already existing.

So far as concerns the gabuli táva Alphabet, as given by Christopher, of eighteen (18) Máldivian letters-or, including the Persi-Arabic modified incorporations, twenty-six (26) in all-with its Semitic vowel system of detached accents, \&c., nearly all particulars have long been recorded. The influence of the Arabic Numerals 1 to 9 , or the first section of the Alphabet, on its written character, as well as the right-to-left mode of writing, are now-a-days well-established facts; rightly attributed to the influence of the Muslim conversion of the Islands, which took place about the middle of the Twelfth Century.

In regard, howerer, to the dives akuru (literally, " the Island Letters "), the pristine alphabet of " divehi Rí ije," or "The (Máldive) Island Kingdom" - unless, perchance, one of the older forms of Bráhma lipi script should yet be discovered on the Group-the case is very different.

What little is known about the dives akero is based almost entirely on two authorities.

These are Christopher and Young's communications made to the Geographical and Royal Asiatic Sucieties, between 1836
and 1841 , or more than three-quarters of a century ago; and Gray's Paper, which was penned some five and thirty years later, and printed in the Royal Asiatic Society Journal of 1878.*

Beyond the welcome, and pro tanto successful, effort of Gray to show, by Tabulated Comparison (see Plate II.), the, more or less close connection between this evéla, or "Ancient," Alphabet and that of Mediæral Sinhalese lithic inscriptions, nothing has been printed tending to elucidate the real origin of the dives akurd Alphabet.

Writing in 1900-1902, Professor Geiger, despite his very persistent and highly important researches into the Structure of the Máldivian Language (conducted first at Colombo itself, during a three months' sojourn in Ceylon during 1895-1896, and subsequently in Germany), has to content himself, and his readers, with falling back wholly on (a) Christopher's partial syllabary of that well-nigh unknown Alphabet, and (b) Christopher and Young's joint assertion regarding an alleged special peculiarity, viz., that "the separate letters appear in a different form according to the vowels to which they are joined."

## I.-" Dives Akuru " Alphabet.

As stated, all that has been published up to date regarding the Old Máldivian script is contained in a short reference, found in the Memoir compiled by Naval Lieutenants Young and Christopher (Transactions, Geographical Society, Bombay), to " the most ancient character, called by the natives the deweht hakura"; and the valuable, but incomplete, delineation (eighteen letters only) of the Alphabet communicated to Dr. Wilson by the latter officer (Journal, R.A.S., 1841, pp. 42-76).

In the above Memoir (see supra, page 20) it is said that these characters "in all likelihood were used by the first inhabitants"; but " the knowledge of them," not being remembered in the Northern Atolls, was even then (1835 circa) "nearly lost," though partially used for "orders" to the Southern Atolls, where "the writing appears to have been retained longest"; that "no old manuscripts with this character (which is written from the left hand) are preserved"; and, finally, that "one peculiarity in the Alphabet is that some of the consonants change their form according to the various vowel sounds with which they are united, the construction of the letters being altogether different."

[^84]This last-mentioned "characteristic phenomenon" of "the Ancient Máldive Alphabet points," according to Professor Geiger (supra, p. 20), " towards a writing which is very closely related to the Asóka Alphabet."

The above represents, then, virtually the sum total of present-day outside acquaintance with the dives akuru.

It will be shown below, briefly, that this tantalizing dole of information, made eighty years ago, can at this day be considerably augmented.

Even now "old manuscripts" in dIVES akuru character might very possibly come to light, here and there, in the Southern Atolls, were these more distant groups exploited judiciously by systematic search.

At least it is certain that the Ancient Alphabet continues to be used, on occasions, in those Atolls; and songs, \&c., written therein may probably yet be obtainable.*

## (i.) Origin of the "Dives Akuru" Alphabet.

The obvious affinity of the old writing-not so much with Mediæral Sinhalese as to the Tulu of the Malabar Districts of Southern India, which lie opposite the Lakkadive and Máldive Islands; or, doubtless, even more nearly to an older Grantha type of Tulu-Malayálam, or Árya Eluttu, to which the DIveri akURU may well hare been closely akin - strongly suggests the former existence of a fuller list of characters, including aspirates. $\dagger$

The dives aklre Alphabet, so far as it is utilized at the present day, has manifestly been made to fall into line with the modern gabuli tása Alphabet, both in the current order, as well as the limit, of its characters.

Evidence has not been forthcoming hitherto -if such exists still on the Islands - concerning its original extent as compared with Sanskrit and other Indian alphabets; but it seems most probable that it once possessed, like them, a more complete complement of letters, embracing not only aspirated consonants, but additional sibilants also.

With the acceptance of Muhammadanism, and the adoption of an alphabet based on a compromise with Semitic script and mode of writing, the need for aspirated letters, and the palatal ( $(\stackrel{s}{)}$ ) and-except rarely-the cerebral $(s h)$ sibilants of Indian systems vanished. The dental surd $s$ with sonant $z$ sufficed usually.

[^85]Hence, as will be seen by Plate VI., the dives akurd Alphabet, as now surriving, is confined to the narrowed limits and changed order of the gabdẹt tána.

## (ii.) Syllabary.

There is evidence on record that Christopher must have been acquainted with all the basal "rowel-consonants" (i.e., those with inherent short A), as well as the rowel system, of the dives ancru Alphabet ; but that, with characteristic modesty, he confined himself in his manuscript (from which Dr. Wilson printed) to giving only the equiralent aksharas for the first eighteen (18) letters of the gaboli táva Alphabet.*

Inquiries pressed by the writer, when attached to H. M. Customs at Colombo and Galle in the Seventies and Eighties, elicited definite information that dives akuru characters exist corresponding virtually to the entire gabuici tása Alphabet, the only exceptions being (see Plate II.) the two so-called "adopted" or "borrowed" Arabic letters $g h$, and th or dh, sub-scribed with three dots, given by Christopher and reproduced by Gray.

Of what survives of the original dives akuru Alphabet, a duplicated syllabary of consonants (with short a only; except H, which is shown, exempli gratia, fully inflected) and rowels is now presented in Plates VI., VII.

The upper letters of each division exhibit the form (probably the purest) obtained from the Southern Atolls, the lower that of those from Málé, the centre of the Group. $\dagger$

From these the main characteristics of the Old Alphabet may be fairly grasped.

The basal forms - twenty-six (26) in all, inclusive of the sukun as a nasal - will be found illustrated on Plate VI., in

[^86]which (a) the letters ("vowel-consonants") commencing with $H$ (according to modern usage) and ending with $\mathbf{Y}$, and the sukun, are set out; besides (b) some variants.*

These are supplemented in Plate VII. by (c) the five initial vowels, short and long; their (d) medial signs; together with (e) the consonant H (the first of the Alphabet), as modified by all its vowel inflexions; and ( $f$ ) a few compound letters.

Finally, ( $g$ ) specimens of the writing are added.

## (iii.) Consonants.

The inflected forms of $\mathbf{H}$, as shown in Plate VII., definitely explode the long-standing "myth," viz., that " the separate letters appear in a different form according to the vowel to which they are joined "; except in so far, and only in so far, as the addition of vowel signs necessarily modifies the outlines of the consonants affected, as in Sanskrit, Sinhalese, \&c.

Ex uno disce omnes. Some consonants may assume a variant shape (see Plate VI.); but, whatever the shape adopted, the addition of rowels, or the sukun, in no way affects them, beyond the ineritable modification resulting from the attachment of the vowels, \&c.

A radical difference between the Old type of character and the New lies in the dives akurd base-consonants being, as stated above, like those of Sanskrit, Sinhalese, and other Indian cognate alphabets, actually "vowel-consonants" (i.e., each contains the short rowel a); whilst the gabdẹi tána letters are pure consonantal signs, quite vowel-less until vivified by the super-seript, or sub-script, accents common to Persian, Arabic, \&c.

The only indication of aspirates ( H excepted) and extra sibilants once forming part of Máldivian script is furnished by the occurrence in both Alphabets of aksharas for P and F (the simple breath-sound of the aspirated digraph PH ), and the occasional employment of sha in gabtepi táva.

[^87](iv.) Vowels and Vowel Signs.

The Old Máldivian Vowel-sign variations (the natural sequences of the markedly divergent forms of the Initial Vowels, as written in the Southern Atolls and at Málé) are well exhibited in Plate VII.

The distinctive shapes of the Southern-type vowels have manifestly given place elsewhere to a vowel system based on the a consonantal sign (the gabctur tána a), adapted so as to form the other vowels by the addition of the several inflexions.*

Abnormal, and even contradictory, usages seem prevalent. These ragaries are doubtless due to the want existing of a recognized standard in a very elongated series of Atolls, which stretch for over four hundred miles from North to South.

The Eight Vowels.

Initial and Medial forms are employed for both the short and long Vowels a, á, i, í, U, Ú, e, é, o, ó, in accordance with the Sanskrit canon; but not for the diphthongs ar, au, which, seemingly, have to be formed by the respective conjunct vowels.

$$
\mathrm{A}, \mathrm{~A}
$$

The short a, as stated, is inherent in the consonant; the sign for long Á is written separately, and, like the Sinhalese elapilla, to right of the letter.

## I, í.

The invariable broad rule followed in Devanágiri and similar Indian scripts, of using the super-script medial signs for I , í, meets with unlooked-for exception in the case of the dives aktru Alphabet.

As will be seen (Plate VII.), these signs differ only from that for long A in that, whilst the latter is detached, i, í should be united to the consonant (in the case of long í with a slight kink at start), and carried below it partially, or, in cursive script. fully round, to the lfft, after the manner of the Sinhalese uttara rakáránsaya (peculiar $r$ sign) in $\mathfrak{G}$, srí, and Old Máldive skí.

A not-improbable explanation of this anomaly may be that the Máldivians adopted Medial signs of the rare RI, rí vowel signs (which are written below the consonant in several old Indian alphabets) in lieu of those for $\mathbf{r}$, í. $\dagger$

[^88]$$
\mathrm{\sigma}, \mathrm{U}_{\mathrm{t}}{ }^{*}
$$

These signs are usually attached to the consonants below in accordance with that form (hook to right) of the pápilla used with certain Sinhalese consonants; but the alternative adoption for short 0 of a superscript form appears to be allowable for several, if not all, letters.
E, 壬.

The Sinhalese practice rules nearly. The vowel-consonant with short a, following a small circle, serves for short e; and for long é a similar double circle looped: these being the substitutes for the Sinhalese kombuua and its manner of employment.

$$
\mathrm{o}, \dot{\mathrm{o}} .
$$

Here the usage is apparently irregular. The kombuwe symbol is followed by the consonant inflected with either I or $U$ vowel signs; $\dagger$ whereas the Sinhalese and Indian fixed rule is to employ the consonant with short $a$ and long á respectively.

## SCKUN.

The wary semi-diagonal symbol (possibly an evolution of the two kinds of Sinhalese $a l$ mark rolled into one) employed for the sukun of the dives andru-as distinct from the small open superscript circle (Sinhalese, bindu) in gabuti táva-is written not merely above, but to the right of the letter with which it is used.

Undoubtedly the former should be classed with the strokelike Sanskrit viráma and upright al of Sinhalese; whilst the later bindu, or dot, is common as well to South Indian Prákrit manuscripts, and goes as far back as the early lipi of India.

For the use and sound-values of the Máldive sukun, see supra, pp. 27, 28.

## (r.) Writing.

The dives akuru Character is written in two wars :-
(i.) Ordinary; each akshara being formed separately.
(ii.) Cursive; with two aksharas united, usually by carrying the Máldive forms of the Sinhalese elapilla or ispilla signs round the head of its consonant to unite with the next letter.

Samples of (i.), the simpler form of the script, appear in (a) a list of birudas (eulogistic epithets) of Máldive Sultáns (Plate VIII. 3), and (b) the dives atcru transcript of the gabuḷi tána letter on Plate IX.

[^89]
## Epithets of Máldive Sultán.s.*

1. suvastí sRí-matta (? SRí-mata) †

Hail! With beauty endowed,
maHá sRí-bari $\dagger$
of great fortune the bearer,
2. KUSA FURADÁNA $\dagger$ SRÍ RANMAVALÓKA $\ddagger$
in wisdom pre-eminent, glorious war-lord,
3. ABÁRUNA $\ddagger$ (to the race) the ornament, in arts and sciences audánà accomplished,
4. kíriti kattiri bovanà mahá radun. renowned, a Kshatriya, of the Universe the Great King.

## Stanza.

The following "Stanza" (spelt as written, and quoted from " dioge rarvarv," a favourite Máldivian poem) affords a specimen of both styles: (i.) on Plate VI.; (ii.) on Plate VIII. 4:-

1. tavalkápi§ eruvi vao

With sea-coconuts loaded the ressel
2. bállate
was taken out, bíheti when going aground, into deep water
3. rara dioge adajaifu.
to sail, O! Dioge, to Aden.
The Máldire Islanders are expert and intrepid mariners, whose picturesque boats (M. ODPI) may be seen in most Indian ports, not infrequently.

At times-" sailing upon different stars (by means of their effective, if primitive, nautical instruments) in lieu of points of the compass "-they make greatly adventurous voyages,

[^90]from the "tempest-haunted" Atolls, in their small, lightbuilt, but most sea-worthy vessels, as far as Aden, Calcutta, Penang, Sumatra, \&c., braving the storms and formidable ourrents which sweep round the Indian Ocean and elsewhere.

Lo! our barque's upon the wave, Dangers of the deep to brave, Path 'mid ocean-wilds to paveTo Aden.
Guiding stars with kindly ray
Will direct us on our way
Through the darkness, day by dayTo Aden.
Seas of strife as wide as deep, Restless waves that never sleep, Currents of terrific sweepTo Aden.
Slender barque uf bosom'd sail. Breasting bold the sternest gale Till her haven's light she hail-

At Aden.

## II.-" Gabuli Tana" Alphabet.

Particulars regarding the gabult tána Alphabet, and its use, were afforded by Christopher (1833) : these were partially reprinted by Gray (1878), and have been touched on by Geiger (1900).

Details appear in the "Studies" (supra, pp, 20-29), in Appendix A, and in Plates I., II.

Some additional remarks may be offered.

> (i.) Variant uses of "Tána" Scripts.

Certain variations in the order of táva script are in vogue at the Máldives.

The Memoir already quoted says (supra, p. 21):-
There are several kinds of tixa writug; and we are inclined to think that the one at present used was not so generally adopted until within the last fifty years, as many tombstones are evidently inscribed in a character differing from the gabeti tana: the letters, at least, have a difterent sound, and the signs used for vowels are different.

Nothing seems to be known of tombstone epigraph; other than those in the Old and Modern Maldive character and Arabic. It is possible that Young and Christopher may be
referring to the dives akuru as the unknown tongue; or to some chance gravestones of aliens carved in their special script.*

Artificial transpositions of "TÁNA writing," smacking of semi-secret, semi-apparent " codes," employed by social classes or private individuals, are occasionally indulged in to this day - apparently pour passer le temps, rather than for any definite object.

Of these are the "hara tána" and "de-fa(t) tána" systems-nuances, pure and simple, of no real importance. $\dagger$

According to the de-fa(t) tava mode, the two halves of the gabuli tána (I., II.) are exactly interchanged, i.e., $H=m$, $\underset{R}{=}=F$, and so on; whereas in hara táva the mutation is effected between consecutive letters, i.e., H (HARA) $=\mathrm{R}$
 $r($ gabulit $)=\mathrm{r}$ (hara), \&c.

In the following Table, Columns I. and II. give the more usual eighteen (18) letters of the gabulut táva Alphabet arranged for de-fa(t) tána, so that the first nine balance the last nine placed opposite to one another ; whilst Columns III. and IV. show the equivalent hara tána letters matching those of gabclit tána.

| III. |  | $I$. |  | $I I$. |  | $I V$. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| R | . | H | . | M | . | V |
| H | . | R | . | F | - | D |
| R | . | N | . | D | . | F |
| N | $\cdots$ | R | . $\cdot$ | T | . | L |
| $\underline{\square}$ | . | B | . | L | $\cdots$ | T |
| B | . | L | . | G | . | V |
| A | . | K | $\cdots$ | $\cdots$ | . | G |
| K | -• | A | . | S | . | D |
| M | . | $\checkmark$ | $\cdots$ | p | . | 3 |

(a) gabclei táva $=$ Columns I: and II. together.
(b) DE-FA(T) TÁNA $=$ Columns I. and II. opposed.
(c) hara táva = Columns III. and IV. opposed to Columns I. and II.

[^91]
## Examples.

(a) kUla sundura kastiri bovata makí radun.
(b) Nuba udnuta nasriti lóḍada hamá tanud.
(c) uta purfuna akinvi lomara varí nafur.

## (ii.) The "Leyden Vocabulary" Alphabets.

The so-called " archaic variations" (see supra, p. 25) of the gabuli tána Alphabets attributed to Hasan-bin Adam (" transmogrified" by Professor Geiger in Plate I., both as regards the respective order of their appearance in the "Leyden Vocabulary" and their true delineation; but correctly represented in Plate V.) offer a strange puzzle.

It seems highly improbable, on the one hand, that-

> " Exceeding peace had made Ben Adhem bold,"
and that he, or other unsophisticated Máldivian, would have laid himself out deliberately to invent, from the ordinary gabulit táva of his day, spurious alphabets to be foisted on the erudite Dr. John Leyden as the "divas akuru."

On the other hand, there is the distinct opinion regarding Hasan-bin Adam's linguistic limitations contained in Ahmad Dídís Letters (see Appendix B, supra); coupled with the crushing condemnation, recently put on record by Abdul Hamid Dídí, another son of the Máldivian Prime Minister Ibráhim Dídí, that " the alphabets" are "pure inventions of Hasan-bin Adam," concocted to serve private purposes.*

Be the case-if there be any case-what it may for the genuineness of the two alphabets of the "Leyden Vocabulary" as "archaic variations" of the modern gabudi táva, of this, at any rate, there can be no question-they have nothing whatever to do with the Old Character, the true dives akurd.

[^92]
## (iii.) Origin of the "Gabuli Tána" Alphabet.

How did the gaboui tána Alphabet originate? A simple explanation, prima facie reasonable. is submitted tentatively.

With the gradual influx of Arab trade and the growing influence of settlers on the Islands. which culminated in the Muslim conversion of the Twelfth Century, the continued use of the cumbrous dives akuru script would steadily become more and more intolerable ; and must almost inevitably have given way to some Semitic mode of presenting the Máldive language in written form easy of expression, besides following the right-to-left practice of Arabia and Persia.

Hence it is but natural that the Old Writing should come to be supplanted, as far as practicable, by a simpler system based on Persi-Arabic lines.
Thus it could easily happen that the devisers of the New gabelei. or "Composed," Alphabet, looking for a satisfactory basal substitute for the objectionable indigenous form, found it readily a arailable to a large extent in two sets of Numerals.

These were, presumably, (a) the Máldive Numerals for 1 to 9 - some at least variants, without doubt, of the Sinhalese Numerals (Plate V. 3) and Lit Akuru (Plate V.* 4), ${ }^{*}$ or other and possibly closer Indian equivalents - which conveniently fell into place as the consonants (ten to eighteen) M, F, D, T, L, G, N, s, P ; whilst (b) the ordinary Arabic Numerals of like values were made to serve for the first nine letters $\mathrm{H}, \mathrm{R}, \mathrm{N}$, R, B, $\mathbf{I}, \mathrm{K}, \mathrm{A}(\mathrm{or} \mathrm{A}$ ), V .

For the rest, the Arabic, Persian, and Urdú alphabets would ineritably suggest adaptations for some at least of the remaining consonants needed. $\dagger$

No alphabetic revolution could be more smoothly effected: happy selection, compromise, and modification would meet all requirements with the least possible inconvenience.

## (iv.) Classified Table of the Máldivian Alphabet.

The arbitrary arrangement of the gabcti táxa Alphabet has naturally destroyed that orderly scientific classification (Gutturals. Palatals. \&c.) tounded upon Pronunciation, and

[^93]adopted by Grammarians in dealing with Sinhalese and other Indian Alphabets, which, there is no reason to doubt, once ruled also with the dives akurd.

Taking the Consonants and Vowels which at the present day constitute the full Máldivian Alphabet-Christopher's GH and TH ( or DH ) being excluded, but $\tilde{\mathrm{x}}$ added-these may be grouped, according to phonetic values, as follows :-*

> (จ.) Old "Gabuḷi Tána" Manuscript.

Various substances have from time to time been utilized in India and the Far East for writing on-prepared cloth, wooden boards, bhúrja bark, palm leares, metal plates.

[^94]The comparative poverty of their vegetation and products no doubt forced the Máldive Islanders to resort to yet another expedient.

In 1886 the Editor was able, with considerable difficulty, to procure from the Máldives a couple of old manuscripts, which proved to be written on strips, about a foot in length by five inches broad, of the Pandanus odoratissimus (Máldivian, má-karikeyo; Sinhalese, reṭakeyiyá).*

The use of this make-shift material had even then long been superseded by paper on the Group.

The prepared Pandanus leaves are formed into continuous booklets, of convenient size, by folding each strip in and out alternately, so as to make the rough inner surface alone available for receiving the writing, which is in some kind of "fast" black ink.

Two leaves, photo-lithographed from the more archaic manuscript, $\dagger$ appear in Plate VIII. Its writing offers striking comparison with that of the modern Commercial Letter of about 1875 (Plate IX.).

The short diagonals and vertical down strokes (specially marked in $R, N$, and $R$ ), the unusual type of $p$, the perpendicular B , with the general rugged boldness of all the characters, carry its age back at least to the first half of the Eighteenth Century, if not earlier.

The writing approaches in style the script of the oldest extant Missives in gabuḷi tána sent by the Máldive Sultáns to the Dutch Governors at Colombo annually: Missives written also to the Commanders at Galle are more recent. $\ddagger$

A transcript of the Arabic and Máldivian letters on the third leaf (which contains all the first 18 letters of the gabult táva Alphabet) is given below. §

The manuscript is a Máldivian fapita fo(t) (Sinhalese, mantra pota), or "Charm Book" of love spells, into which a fair proportion of Arahic enters.!

[^95]Professor Geiger devotes a paragraph (supra, p. 5) to a quotation from Christopher and Young's Memoir regarding "the old animistic worship, the belief in demons and spirits, in exorcism, and in magic," which plays an "important part in the life of the people (Máldivians)," despite the counter injunctions of " Islám, the official religion."

Side by side with Muhammadism there has continued to exist an older creed-not the less real because disowned-in demons and spirits, spells, charms, and the like. Anyone thrown in contact with the ordinary Islanders (particularly those of the Southern Atolls) will find demonolatry and nature worship as rife as of old. if pursued now-a-days less obtrusively.*

## POSTSCRIPT.

What has been said above, so far as it relates to the gabuli táva script, is based mainly on the material put together in 1838 by Lieutenant Willmott Christopher,* of the Indian Nary. and the Plate of the Modern, and a portion of the Old, Máldivian Alphabet which accompanied it, when printed in 1841.

That Plate was reproduced in a Paper, published in 1878, by Mr. (now Sir) Albert Gray, formerly of the Ceylon Civil Service, with a summary, below the Alphabet, of Christopher's remarks regarding the sound-values of the letters. (See Plate II.)

It was only to be expected that, in the fluxion of threequarters of a century or more, the form of the Máldive written character would undergo gradual evolution. This has been the natural course in the history of all scripts of long-continued life.

A comparison of the forms of the letters in Christopher's Table (Plate II.), and those appearing in the "Máldivian Commercial Letter" of 1875 circa (Plate IX.), provides expected testimony to this slow, but no less sure. process of mutation.

Thanks to the courteous aid of Abdul Hamid Dídi Effendí, the Máldivian Government Representative in Ceylon (who has himself carefully penned each character), the Editor is enabled to close this Appendix with a list of the twenty-four (24) letters which at the present time make up the full máldivian alpeabet, and exhibit the gabulit tína as it is written now-$a$-days, according to best authority.

That steady evolution has continued even since 1875 is illustrated by the form of the Máldician characters given in the Table on page 167.

[^97]In the absence of any standardized fount of cast type, the tendency in manuscript is manifestly towards a "running hand," with its inevitable result-progressive, though unconscious, " slurring " of distinctive forms.

The clear difference between such characters as R and N , N and z, in the gabulu tána of the Old Pandanus Manuscripts, and the Máldive Sultáns' Missives of the earlier years of the Eighteenth Century-those of the first quarter of the Nineteenth Century-and, finally, the "current script" of the later Nineteenth and present period of the Twentieth Centuries, is strongly marked.

Frankly, it must be admitted that the change, thus almost automatically evolved during a period of two centuries, has not made for greater distinctness or beauty in the writing: instead of amelioration, steady chirographic decline is perceptible. This has been due, without doubt, to the want of a recognized printed standard; such, for instance, as has for long ruled-with certain modifications not affecting its general bold attractiveness, teres atque rotundus-in the case of Sinhalese characters of ola manuscripts and printed books.

The gabuli tána letters which have undergone most change perhaps, during the course of the past two hundred years, are B and J.* These do not seem to be used ordinarily at the present day in their old stilted vertical shape.

The form of cerebral N given by Christopher, that was holding the field firmly more than a century earlier, appears to have yielded to the nasal more usually transcribed as the presumed palatal $\tilde{\mathrm{N}} . \dagger$ It is believed that the older form, as well as the variants of $T$ and c (see Plate II.), may still be employed at will.

The word KUSHa, among the birudas of the Sultans in their Missives of the Eighteenth Century, was written (when not spelt simply kUSa) alternatively by Máldivian dental s with three dots under, or by the Arabic character for cerebral $s h$ super-scribed with triple dots.

The present-day gabuli táva Alphabet has been arranged on page 167 in three Columns, from right to left according to Máldivian script.

[^98]Column I. gives the first nine letters of the Alphabet: these are virtually the Arabic Numerals 1 to 9.

Column II. shows the next nine, drawn from the Máldivian Numerals* of like values, several of which find obvious counterparts in Indian, and Ceylon, Numerical symbols.

In Column III., the remaining six letters are set out, presumably in their recognized alphabetic order.

With the list of Máldivian characters, Abdul Hamid Dídí further supplied their Persi-Arabic equivalents as written by Máldivians, appending this important Note :-

We do not use Persi-Arabic letters, unless we find it absolutely necessary to give Persi-Arabic pronunciation, when writing an Arabic or Persian word in Máldivian characters. But we could write Máldivian wholly in Arabic letters, with dots here and there to represent Máldivian t£̃a sound. $\dagger$

This accounts for the absence from the gabuli tána alphabet of the comparatively little-used characters transcribed by Christopher (see Plate II.) as GH, TH (or DH).

The following points should be noticed.
The penchant for modifying Arabic forms by triple dots sub-script is very marked: see R, G, N, D, c.

The Máldivian sign for $P$ is virtually $F$, subscribed thrice, or once : from z the super-script dot (teste Christopher, Plate II.) has disappeared.

T with quadruple dots above is an Urdú form.
The Arabic letter (here subscribed once and utilized as the equivalent of L ) is usually transcribed by $z$ with dot or line below.

[^99]Maldivian "Gabuli Tana" Alphabet, with English and Persi-Arabic equivalents,

| III. |  |  | II. |  |  |  | I. |  |

## APPENDIX D.

## MALDIVIAN LETTERS.

In his Máldivische Studien, I., 1900, pp. 678-684, Professor Geiger has copied-according to his own transliteration, and with independent renderings into German,* but without giving the Máldive writing-the only two Máldivian Letters (Texts, Transcripts, and Translations, in full) which have been yet published.

It may be well, therefore, to reproduce, in extenso, both these Letters, as first printed, accompanied in each case by a Plate in replica showing the Máldive script (see Plates III., IV.).
I.-Málim's Letter. Transcript (original Máldive Letter missing) and literary Translation appear in Christopher's own manuscript of 1838, published in the Journal, R.A.S., 1841, pp. 72-74.
II.-Sultán’s Missive. Appears in Bell's The Máldive Islands (Ceylon Sessional Paper XLIII., 1881).

To these is now added a third.
III.-Commercial Letter. This exhibits, side by side, the two forms of the Máldive Alphabet: (i.) the Ancient, or dives akuru, and (ii.) the Modern, known as gabuḷi tína.

## I.-Maldive Malim's Letter : A.D. 1837.

[The word-for-word Transcript and Translation, given below, written out (with a few trifling errors) by Christopher in his own clear handwriting, were supplemented by a Summarized Translation from the hand of his Editor, Dr. J. Wilson, which was subsequently printed in the Asiatic Society's Journal (loc. cit., p. 74).]

[^100]
## Transcript.*

The following is a specimen of the language. It is a copy of a letter written by the Máldive Málim of a boat at Colombo to his countrymen at Galle:-
At Galle stopping, of the Máldives to all
kalcngnag arabu odi
the people
(2) Málimí
kaLégefínu
salímen mifabarag
the Málim Chief's
saláms.
Now
$\begin{array}{lll}\text { MI } & \text { Rarhugai } & \text { hURHI } \\ \text { odi fafarhi } \\ \text { at this } & \text { port } & \text { are }\end{array}$ the boats:
(3) arabu opi finladu opi wedung odi Arab boat, Finladu boat, Present boat, fadmárd opi Faṇ̣iyáru's boat,
(4) ahammá dídí opi mándu-gé odi hityAhama Dídís boat, Mándu-house boat, Bitter-gas-dariu-gé odi mífaharag tree-corner (house) $\dagger$ boat. At present
(5) emme kalung gada we eba tibúwewe all people in health remain.
tiyá rarhugal hurhi
At your port (which) you have

[^101](6) kabareng
areng fonuwáti you must send. At this port
hURHI KABARU mi fondwíe (which) there is the news I hereby send.
(7) Wluátung au bodí símibeng atuewe

From Europe a new Governor has arrived.
WHÁtU RASGE
Of England the King
(8) MardwejJewe is dead.

SALámen mi rarho mas vikkí
saláms. This port's fish we have sold:
(9) Himití mas hang difa hai
the Himití fish for seven tens and seven
riyálayag mále atoluo mas
dollars; the Málé Atolu fish
(10) fas dolos hatakag fíding-fulu for five twelves and seven: the Fáding-fulu kirá mas* sátís-
weighed fish for forty-
(11) hatakag mifidang vikgaigeng
seven. Thus having sold it
$\begin{array}{llll}\text { tibi } & \text { agímiwewe } \dagger & \text { langea } & \text { gina } \\ \text { we are stopping } & \text { for the price. } & \text { Lacs } & \text { more }\end{array}$
(12) farhung salámen mi liyeni mitangwí strings saláms. This is written here
bárusfati duwahung
on Thursday the day.
(13) mái kaláge ressewíyái

If God permits (or pleases) in fourteen
dUwahu alugadu furánemewe
days I shall have sailed; $\dagger$
(14) hitai hurbi meve

I have the desire.

## Translation.*

The meaning of the above letter appears to be as follows:-
The Malim of the Arab boat to all the people of the Máldires stopping at Galle. The Chief's greeting. $\dagger$

The boats now at this port are the Arab boat of Finladu, the Offering boats of Fadiyáru and Ahamma Dídí, and the boats of Mándu-gé and Hiti-gas-darhu-gé.

All the people are in good health.
Send what news you have at your port. I hereby send what news there is at this port.

A new Governor is come from Europe. The King of England is dead.

Very many greetings.
We have sold at this port, Himití fish for seventy-seven dollars, Málé Atoll fish for sixty-seven, and Fádingfulu fish weighed (?) for forty-seven : having sold the fish, we are waiting for the price.

Very many greetings.
This is written on Thursday. If God permits, I shall sail in fourteen days; such is my wish.

## II.-Missive from the Sultan of the Maldives: A.D. 1795.

[This Missive of A.H. 1210 and its Translation are reproduced below, with the Notes which accompanied it, virtually as they were printed in The Máldice Islands (loc. cit., pp. 78-81). Supplementary matter is given in footnotes.]

It may strengthen the position assumed by Albert Gray (Journal, R.A.S., Vol. X., 1878) regarding the affinity of the Sinhalese and Máldive languages (whilst of interest on other

[^102]grounds) to insert here a facsimile of one of the Annual Missives of the Máldive Sultáns of the Eighteenth Century, with a Transcript in Roman characters, an English Trans. lation, and some Explanatory Notes.

As will be seen, the proportion of words in this Letter clearly traceable to Sinhalese, or Sanskrit, sources is large, amounting to at least 65 per cent.

## Translation.*

He (God) is bountiful (lit., the richest) !
Hail! Sultán Hasan Núr-ud-dín Iskandar, $\dagger$ Mighty Monarch of the Unirerse, a Kshatriya, endowed with beauty, possessed of great wealth, who imparts wisdom, (born) of illustrious race resembling the sun and moon, conversant with arts and sciences, of unsullied (fame), to the Ruler, namely, the Governor of Colombo $\ddagger$ countless (lit., many million-fold) salutations !

[^104]As the former Rulers at Colombo - Your Excellency's predecessors-and the former Rulers of this Island Kingdom (Máldives) preserved mutual friendship, Your Excellency and Ourselves have borne (reciprocal) friendship in our hearts. May this (amity) continue on Your Excellency's part!

Should any odi or dóni (Máldire boats) be driven ashore at any place with which (Your Excellency) is acquainted, (We request that Your Excellency will kindly) send for those (shipwrecked) persons, and enquire into their wants.*
(Further) should Your Excellency be aware of any persons ill-disposed towards this Island Kingdom, (We, also, request that Your Excellency will be pleased to) show them no countenance.

For Your Excellency's acceptance we send-all unworthy though it be-a small present by the hands of (Our Ambassador) Ahmad Kuda Badéri Kéri. †
(We beg Your Excellency will kindly) issue directions that his requests be attended to.

If he commit any fault (We hope that Your Excellency will) pardon it.
(We trust that Your Excellency will) allow him to return in the favourable monsoon. $\ddagger$ A.H. 1210 (A.D. 1795).

## Reply of the Dutch Governor.

[The Reply of the Dutch Governor, J. G. van Angelbeck, to the Missive of the Sultán, despatched from Colombo on December 2, 1795, is couched in equally friendly terms:-

AAN DEN GELUKKIGEN SULTAN HASSEN NOOREDIEN ISKANDER. KONING DER MALDIVOS.
Ik heb de eer gehad Uwer Hoogheids brief, en de daar nevens gezondene geschenken, uit handen ran Uwer Hoogheids Zendeling, Agamadoe Koeda Banderie Kewie, wel te ontvangen; waar voor ik Uwe Hoogheid zeer rriendlijk bedanke.

Dat Uwe Hoogheid geneigd is rriendschap met my te onderhouden, strekt my tot reel genoegen; en ik zal niet nalaaten, zoo veel mogelijk, alles toetebrengen, wat deeze vriendschap duurzaam kan maaken.

Nevens deezen biede ik Uwe Hoogheid zoodanige goederen aan, als by de ingeslootene Notietsie vermeld staan, met vriendelijk myner geneegenheid te willen akcepteeren.

[^105]Voorts bid ik God, dat Hy Uwe Hoogheid gelieve 'te zegenen met gezondheid en roorspoed, en Uwer Hoogheids Regeering steeds gelukkig te doen zijn, tot noch een reex van jaare.

Kolumbo. den 2nd December, 1~9.5.]

## Votes.*

(i.) The magniloquent birudas, " great swelling words of vanity." employed by the Sultáns in their Annual Missives to the Ceylon Governors, have strangely waxed and waned since the commencement of the Eighteenth Century. $\dagger$

Sultán Íbráhim Iskandar (A.D. 1721-1749) was content to affix to his name rannavalóka mafá radun. $\ddagger$

In 1750, under Sultán Mukarram Muhammad Imád-ud-dín, Máldivian official bombast reached the height beginning suvastí, \&c., § and attained its zenith some twenty or thirty years later.||

Re-action then ensued ; and in letters subsequent to 1805 circa, the Sultan's Arabic titles were followed merely by the epithets kula sendtra kattiri bowana mahá radun"expressions" which Christopher considered " unexplainable at the present day." ${ }^{-1 /}$
(ii.) suvastí . . . mahá Radun.-Adopting [provisionally] the translation given abore, the Sultán's title may be rendered into Sinhalese as follows:-Sepa véváa srimatvú: mahá ṣri dharannávú : prajñá pradhána karannávú (kalyána

[^106]dáyakavú) : şrí vansa eti: hira sañda bañduvú : pratyaksha ṣástra dhárivú : ṣubhra (kirti) ẹti: Kshatriya vañsa ẹti: lókayé Mahá Rája.
(iii.) MAHÁ SIRí baRI.-S. mahá ṣri-bhári, "possessed of immense (lit., great weight of) glory (or wealth)." Cf. siri bara in preamble of mediæral Sinhalese inscriptions.*

In place of bari some Missives give diri, which may $=$ S. dula, " glittering," " splendid," through dili.*
(iv.) kusa furadína. - Taken [provisionally] as = S. kuṣa pradhána. Besides the meanings (a) prajñáva, "wisdom," or (b) kalyána, " goodness," assigned here to kUSA, the compound will also bear the sense (c) S. jala pradhánav̂̂, "Lord of Waters," i.e., the Ocean, and (d) "Chief of Kusa (Dwipa)," a division of the universe. $\dagger$ Some Missives read KUSHa.
(v.) SADA IRA. - The order of Sanskrit compounds is followed ; ira (for hira) sa $\bar{\pi} d a=s a \breve{n} d a$ ira.
(vi.) Siáka Sástura.-For siáka, Subhúti Unnánse proposed Hindí sisána, "clever"; rendering the compound (a) daksha anuṣásakavú, " skilful teacher," or " commander," (b) dhúrta janayáta satruvú, " enemy of wicked men."
Dhammálóka Unnánse, deriving sLíka from the Sanskrit sáyaka, "bow," translated (c) dhanurdhravú, "skilled with the bow."
B. Gunasékara, Mudaliyár. suggested (d) Shiáka saturá (satru), "enemy of the Shias," the Máldivians being Sunnís; (e) S. siya, "own" + aka (Sanskrit aksha, "organs of sense "), "subduer of (his) passions"; (f) siya + aka, "eye" $=$ pratyaksha, and ṣástura = ṣástrucú, "experienced teacher." $\ddagger$

[^107](vii) audána. - Perhaps $=$ Sanskrit avadáta, "white," "unsullied."* Appears almost invariably in immediate connection with Kíriti, " renowned" (S. kirti, "fame ").
(viii.) bowana.-Older Missives give the truer form buwana (S. bhuwana, " world," " universe "). $\dagger$
(ix.) Rasge-fínu.-In early Missives of the Eighteenth Century sometimes written radunge-fánu; rasge-fínanse.
fánco, fánanse.-S. vahansé, honorific affix, by consonantal change through vanansé.
(x.) maniku-fánd-men.-Euphemistic plural-singular.
(xi.) Fadait-me.-"As," "in the manner" = S. paridden, by rejection of liquid medial consonant: $\mathrm{ME}=\mathrm{S}$. $m a$, intensive suffix.
(xii.) HIA-fulud-gal.-" In mind," locative $=$ Hit (S. hité) FUḶU (honorific) gai (Gátun, " near "), by euphonic assimilation.
(xiii.) Behigen gos.-S. behígana (bahinavá, "to descend") gos: Pyrard, behigue, "sailing with the wind and current": Drake's (old English) "spooming along before the sea."
(xiv.) ARAFÓDIGEA-NUVÁ.-"In all humbleness," "' unworthy though (the giver and the present) be."

Alternative forms in older Missives: ara hódí, aral hodí, aranu hóde, arainu hóde.
$C f$. Pyrard, vedon a rouespou [vedun ardvaifu], " the present paid to a delegate of the Sultán "', and Máldive Málim's Letter, vedun Opi, "Present boat."
(xv.) bapéri. - Originally confined to the "Treasurer," or Keeper of the Royal Stores (S. Bhándágáriká). The title, like Bandára, Bandá. in Ceylon, gradually acquired a wider use, though at first restricted to persons of high birth.
(xvi.) Kéví.-Perhaps = Néví, " tindal."
(xrii) ALU-GADU, ALU-GADU-MEN. -The ordinary designation employed by Máldivian Sultáns and nobles when writing of themselves in the first person.

[^108](xviii) GADU, KOLU, FULU.-Honorific suffixes, generally implying connection with Royalty.
(xix.) a malu . . . huanevíme. - Periphrasis for the simpler expression, occasionally found in these Missives, daturd (Hindústání játrá) avas-kuranvai, "(kindly) hasten (his return) voyage."
vapaigen.- $C f$. the respectful use of Sinhalese vadinavá, as applied to Buddhist Priests, \&c.

## Consonant and Vowel Changes.*

Some ruling Vowel and Consonantal changes from Sinhalese into Máldivian are noticeable in this Missive:-

## (i.) Consonants.

Sinhalese $t$ becomes Máldive R : S. pata ; M. Fardu ; R: S. pitatvenavá; M. Furuvá.

Sinhalese $d$ becomes Máldive н : S. dás: M. Hás.
Sinhhalese $n$ becomes Máldive L:S. unna: M. ULU 1 .
Sinhalese $p$ becomes Máldive f: S. pradhána; M. furadána.
Sinhalese $v$ becomes Máldive F:S. evanavá ; M. fondavímu.

> (ii.) Vowels.

Sinhalese $a$ becomes Máldive E:S. danvanavá, balavanavá : M. dennevi, be.llávumát.

Sinhalese $a$ becomes Máldive I:S. tamun; M. timan.
Siṇhalese a becomes Máldive o: S. evanavá; M. Fondavímu.

Siṇhalese $a$ becomes Máldive 0: S. ihata, karavanavá: M. inu, kurantai.

Sinhalese $i$ becomes Máldive u : S. innàáá M. hu inevíme.
Sinhalese $u$ becomes Máldive a: S. tamun; M. timal.
Sinh halese $u$ becomes Máldive o: S. bhuvana: M. bovana.
Sinhalese e becomes Máldive i: S. mé, tibenavá; M. m, tibí.

Sinhalese o becomes Máldive u: S. no-rusanavá; M. norussevemeve.

Sinhalese e becomes Máldive $\mathrm{E} ; \mathrm{A}: \mathrm{S}$. hẹngenavá, tẹna: M. eginje; tanaku.

[^109]
## (iii.) Exotic Words.

Independent of Singhalese, many words, purely foreign, or of probable foreign origin, occur:-

Persi-Arabic. - Iskandar, salám, rahmat, khabar, adá, hadíyá, taksír, múáf, musimu, sanat.

Tamil.—Dóñe (T. tóni), Mita (cf. T. michcham), Ras (cf. T. arasañ), opi (T.ódam), ALá, ALCN (cf. T. ál).

Malay.-Edr (? Malay ada, " be ").
Portuguese.-Gorinddóre* (Dutch, Gouverneur: cf. S. Governadóru).

## III.-Maldive Commercial Letter : A.D. 1875 circa.

The Letter in gabuli táva (of which a line-for-line Transcript in dives akcru $\dagger$ is given to right on Plate IX.), though short, and purely a "Business Communication," will not, as doubly reproduced, be without some service towards a comparative study of the Old and Modern Máldive Alphabets.

It was written in the Seventies of the Nineteenth Century, by Ali Didí Dorhiméná-kilagefánu, a Máldivian nobleman then resident at Galle. $\ddagger$ where his son, the present Prime Minister, Ibráhim Dídí Dorhiméná-kilagefánu. and one grandson, Ahmad Dídí Kuḍa Dorhiméná-kilagefánu. were educated.

[^110]Extra No.-1919.] máldivian livguistic stodies.181

* The preference of the writer, like that of the author of the fadita Fo(t) (see supra. p. 163), for R, as, on the other hand, of the official scribe who penned the Sultán's Missive of A.H. 1210 (A.D. 1795) for avient (a), may be contrasted, in interesting confirmation of the unsettled orthography of Máldivian words, permitting alternative ust of these letters, according to fancy.
$\dagger$ See supra, p. 66, note *. AGU is not onomatopoetic for "cargo",": it is from Hindústání áy, "steam" (cf. áy-ká-alat," steam engine"). Other Hindústání derivatives are adartco, nílu (ef. Arabic naul. "freight"), nácíta (cf. Persian nála-gí, "complaint").-B., Ed.
$\ddagger$ Year not given, but probably about 1875. or earlier.

## Translation.

## Praise be to God, the Most Highest !

The compliments (lit., salám) of (Ali Dídí) Dorhiménákilagefánu to Muhammad Marakkár Brothers (or Company).

Owing to the non-payment of the freight due on the rice brought by the steamer of the Spanish Agency, they (the Agents) have sent a letter to-day enquiring why it has not been paid, and intimating that legal proceedings will have to be instituted.

Please, therefore, take necessary action, so that they (the Agents) may get the money soon.
(Dated) May 17.*

[^0]:    * A bound copy of the German Text is in the Colombo Museum Library.

[^1]:    *Embodied in a Monograph on "The Máldive Islands" (Ceylon Government Sessional Paper XLIII., 1881 ; issued 1882 ).
    $\dagger$ Resolution of Council. Ceylon Asiatic Society. March 11. 1918.

[^2]:    * Professor Geiger used r, c. J, with small ${ }^{v}$ above, and final N with super-script dot. These have been supplanted in the English Translation by R, C, J, and $\dot{x}$; but want of semi-nasal (sañãaka) type has necessitated the employment of the bindu, or full anuswára, in such words as indagena, honda, de.

    For extra clearness Máldiviav words have been printed in small capitals, whilst $S$ inhalese, \&c.. appear in ordinary italic type.
    $\dagger$ The only other "Extra Number" of its Journal issued by the Ceylon Asiatic Society also related to the Mildive Lslands. It was published in 188., as part of Volume VII.. and contained ' Iln Batúta in the Máldizes and Ceylon," translated from the French by Albert Gray, late of the Ceylon Civil Service.

[^3]:    * Máldivische Studien I. (mit einer Tafel). Von W. Geiger. Vorgelent von E. Kuhn in der Philos.-Philol. Classe am 1. Dezember, 1900. München, 1901.
    $\dagger$ H. C. P. Bell, Ceylon Civil Service, The Mildive Islands: an Account of the Physical Features, Climate, History, Inhalitants, Productions, and Trade (Sessional Paper XLIII., 1881). Colombo. 1883.

    This valuable compilation, which contains the whole of our knowledge of the Máldive Islands up to the year 1533, has become ver: scarce. Even in Colombo it was impossible for me to get hold of a copy. I finally came into possession of one which formerly belonged to Dr. Rost.

    I may perhaps be permitted to borrow from Bell's work some notes on the Geography and Ethnography of the Máldives, as a general explanatory Introduction to my "Studies." I have not, of romrse, neglected to go back to the sources from which Bell himself drew.

[^4]:    * Geiger writes "die wichtigste rolle." This is over-stating the case. Gray (Journal, R.A.S., 1878, new series, X., p. 180) puts it better :-
    "The picture presented by the modern religious state of the tro branches of the Sinhalese family is curious mdeed. The one (Sinhalese) has held to the cosmopolitan principles, the atherstic creed and the simple worship of the Buddhist faith; the other (Araddivian) has adopted the exclusive monotheisti- and ceremonous fath of Muhammad. These religions have not. hwwever, altered to any extent the characteristics of the race, and both hare suffered the co-enistence of the older worship of demons ant of the elements-a cornmon minteritance of buth branches of the family, but an alien to buth their creeds." B., Ed.
    $\dagger$ Transactions of the Geoyraphichl Sucitiy, Bumbay, I., p. 76.

[^5]:    * Forbiger, Hundbuch der alten Geographie, こ Aufl.. II., p. 524 ; Lassen, Ind. Altertumskunde, 2 Au月., I., p. 246.

    $\dagger$ Bell, The Máldive Islands, pp. 78-81. [Plate IV.-B., Ed.]
    $\ddagger$ Bennett, Cєylon and its Capabilities, London, 1843. See Bell, loc. cit., p. 78, note 1, where the translation of a further Máldivian Letter, given in Campbell's Excursions in Ceylon, I., pp. 199-200, is mentioned.
    § Sitzungsber. der K. Bayer, Akademie d. W., 1896, pp. 213-215.
    || A. Ibráhim Dídi Effendi, Dorhiméná-kilagefánu, Prime Minister to His Highness the Sultán of the Máldives.-B., Ed.

[^9]:    * It is with pleasure that $I$ aval myself of this opportunity of publicly thanking my active helpers. I rejoice that in A. Mendis Gunasékara, Mudaliyár, I found a man specially fitted to act as an intermediary.
    [It should be emphasized that the scholarly Hudaliýar must not. of course, be in any way held responsible for some doubtful renderings which have crept into the Professor's Sinhalese transcripts here and there. See infra.-B., Ed.]
    $\dagger$ See Appendix B.-B., Ed.
    $\ddagger$ I indicate the "Copenhagen Vocabulary" by K.V., the "London Vocabulary" by L.V.
    § Professor Geiger has not reproduced any of this L.V. writing (see infra, page 22, top), unless it may be the three words in the gabuli tana alphabet given at bottom of his Table [Plate I.].-B., Ed.

[^10]:    * How and when dud this official record, belonging to the British Government, stray to Copenhagen-a "far cry" from Ceylon? No particulars are afforded. The year of the missive must be between a.D. 1799-1835.-B., Ed.
    $\dagger$ See footnote $\ddagger$ on page 1l, supra.-B.. Ed .
    $\ddagger$ See Appendix B. Professor Geiger has allowed himself—not wisely -to wander sompwhat from the strict facts, which he had before him in the" bundle of letters " kindly sent to him by Mr. Tawney.-B., Ed.

[^11]:    * See footnote $\ddagger$ on page 12 , supru.—B., Ed.

[^12]:    * For "garden" two words are recognized at llálé : bagícha; Gótl. With mad-kori as a "well-considered" paraphrase, compare the Málé
     beggar (lit., the man-who-saláms) away "-the very acme of "pretty" and euphemistic politeness. Cf. the former use in France of "les bons hommes" for " lepers." Other cases will readily occur to mind.-B., Ed.

[^13]:    * See footnote $\ddagger$ on page 12, supra.-B., Ed.

[^14]:    * If perchance sounded, the $s$ is never written. in HADC and KADU, according to the Málé standard.

    Such forms, in the "London Vocabulary," as, inter alia, ennav for annán, fefaly (older, fufcla) for fofaly, fuHen for aban, teli for badptya, egen for daskolain, sufficiently attest "a difference of dialect," well known to exist even at the present day. and quite to be expected, between the central Málé Atoll type and that of Atolls to the south, including, doubtless, a century or more ago, Nilandu Atoll, where the author of the " London Vocabulary " (Máldivian) lived.-B., Ed.

[^15]:    * The form of gabuli tína recorded by Christopher (see Plate II., Gray's reproduction) is that employed at Málé Islund (the Sultan's Capital) about 1835 , or more than three-quarters of a century ago. The present-day writing has naturally suffered some evolution.

    This standard typer, and, as such, that invariably used by A. Ibráhim Dídí Effendi, D rriméná-kilagefánu. Prime Minister, and other educated Málé officials, appears in a number of letters written-in beautiful cali. graphy-to Mr. Bell some years ago, and still carefully preserved. This style differs from the somewhat stilted form of the alphabet noticeable in Geiger's Table, Column IV. [Plate I.].-B., Ed.

[^16]:    * See Appendix C.
    $\dagger$ Geiger, Litteratur und Sprache der Singhalesen, Section 19-20.

[^17]:    * To prevent confusion. it should be noted again that Geiger has transposed, and otherwise altered. Columns I. and II., as they actually appear in the "London Vocabulary." They are shown in their true order in Plate V. 1. Therefore, when Geiger speaks of Column I., the second column in the " London Vocabulary" must be understood, and. vice $v \in r s \hat{a}$, Column II. for the first column.-B., Ed.
    $\dagger$ To bring out thig "reversal" of the writing clearly, the Editor has added (Plate V. 2) a third column to those reproduced from the "London Vocabulary," by printing through the back of the negative in the case of the second column.-B., Ed.

[^18]:    * See Appendix C.
    $\dagger$ The Alphabets exhibited in Columns I. and II. of Geiger:s Tabla [Plate I.] may quite possibly-indeed not improbably-be, as the Professor surmises, " archaic variations of the Modern Alphabet" (Gabuly tána) once in use on the Máldives.

    So far, however, no writings in either form have come to light.
    On the other hand, the true divehi akuru. or dives akurd, the Ancient Máldivian Alphabet, is nccasionally employed on the Southern Atolls to this day. The Editor obtained two copies of the full syllabary (one from Málé, central; the other from Fua Mulaku, almost at the Southern limit of the group) some years ago. See Appendix C.-B., Ed.
    $\ddagger$ Exceptio probat regulam. The romparatively few lithic Inscriptions found in Ceylon which read from right to left, styled pratiloma, occur only at caves, and are probably due to " masons' freaks." Cave records show occasionally further deviations from the normal, in the letters being cut upside down, and sideways: these aberrations are known as perali-basa.

[^19]:    * His original manuscript shows that Chrnstopher himself wrote words like the Máldive moli( R$)$, "all," Káetiwá(R), " musket," as moly and káetiwa, paying no attention to the final $\mathbf{r}$, it being silent.

    Further, he wrote the Máldive ra $(\stackrel{i}{i}), \mathrm{E}(\stackrel{\AA}{\mathrm{i}}), \mathrm{o}(\AA)$, and the like, as rag, EG, OG (the G being silent at the end of words); and Nefa(T), "nuse," FO(T), "book," as Nefat, for (the $T$ at end haring sound of soft I ).

    It was his editor, Dr. J. Wilson, who first printed these (and similarlyterminated) words as mCli, fáetiwa; rag, eg, og; and nefay̆, Foĭ.-B., Ed.
    $\dagger$ The sign, "called by the Máldivians avient," is most nearly represented by the Arabic numeral $\wedge$ (" 8 ")-an meerted $\nabla$.

    Being a base-letter sign, Gray rightly styles it a "consonant," or " semi-consonant." "The initial vowels are formed by the quasiconsonant A" (i.e., the Maldive adaptation of Arabic A) "with the appropriate vowel sign; and the second of two vowels following a

[^20]:    * Christopher writes benang I throughout replace his ng by t.

[^21]:    * The Professor does not say where, when, or how he acquired these three "Stories," the originals of which he admits (infra, Section II.) are in "English."

    The following explanation is possible :-
    The tules occur (with several other like fables) in a small bookentitled Pleasant Stories, formerly in the possession of the present Editor. When attached to His Majesty's Customs at Colombo in the Eighties, and able to give some little attention to the Máldive language, ho got, by viva voce questioning, from chance Máldivians visiting the Port, rough summarized translations of some of these "Stories."

    Subsequently his good friend, I. Ahmad Dídi, elder son of A. Ibráhim Didi (who was returning to Málé, on the completion of a sound English education at the Richinond College, Galle), kindly undertook

[^22]:    * furánemeve here has nothing to du with flrív, " to fill": it = S. pitatvenavá, "start." Both Christopher (lit.," I shall have sailed ") and his editor, Dr. Wilson (lit., " sailed I shall be," "I shall sail"), were, therefore, quite right in their renderings.

    The word is in use throughout the Maldives from North to South, in the sense of "starting (on a voyage)," "sailing." Thus: ma bUNBAYa(n) DAHARÁ FURANf (Málé); Ma bUNBÁRA E(R)NÁVE FURa(R)Néví (Fua Mulaku), "I will sail for Bombay."-B., Ed.

[^23]:    * Geiger leaves fádin-futud-kirá-mas untranslated. Christopher (Wilson copying, with omission of "the") has "the fidivg-futu weighed fish." Both misunderstand kIRA in the particular connection. " Until recently the different pieces of dried bonito, or 'Máldive fish' (Kayt-bili-mas, S. ŭmbalakada), had a relative ralue to one another. Thus, 4 medu mas (the middle slices) $=2$ gade mas (the pieces along back and belly; considered best) $=7$ himit mas (whole fish divided into four pieces; at Himití, and other islands of Nilandú and adjoining Atolls) $=$ their weight of hrrá mas (pieces between head and medu and Gapu pieces)." (Bell, The Múldive Islands, p. 94.)

    The words, therefore, mean "kirí pieces (of Máldive fish) from fádiffolu Atoll."-B., Ed.
    $\dagger$ See footnote * on pace 5 1, supra; also footnote $\underset{\leftarrow}{\text { ¢ }}$ on page 53. infra. -B., Ed.
    $\ddagger$ Dr. Wilson supplemented Christopher's word-for-word translation with a running version of his own, intended to do little more than give the " summarized meaning" of the Máldive letter.

    Geiger, not aware of this, has turned his guns on Christopher, whom he here unconsciously wrongs. Christopher-not incorrectlytranslated málimf-kalégefánu sadíy, " the aalím of the Málim Chief." This Welson spoilt by separating the first two words, and rendering thus: '" the Málin. The Chief's salam."
    kalégefáce is about equivalent to the Sinhalese Rálahámi; kilagefanu to Sinhalese Nilamé.-B., Ed.
    § See footnot $\ddagger$ on page 49, supra.—B.. Ed.

[^24]:    * The fame of Himití Island, in Nilandú Atoll, rests on the particular class of " Máldive fish " it specializes in.-B., Ed.
    $\dagger$ The meaning of the sentence mi-hidan $\mathrm{FI}(\mathrm{R})$ faigen tibi aginiveve is: "This is the price at which we have sold just now" (or "for the present ").-B., Ed.
    $\ddagger$ See footnote * ou page 51, supra.
    Geiger is all abroad in his rendering here.
    Christopher partially misunderstood SaUDa DUVAHU, which he translated (Wilson copying) "in fourteen days."

    The sentence means: " It is my intention (Hitai hunf-meve) to sail (lit., start) on the fourteenth day, God willing.'-B., Ed.

[^25]:    * See Plate IV.
    $\dagger$ evsa-foradína; stíka; addína. Regarding these, and all the other epithet ${ }^{3}$, see the full explanations (ignored by Geiger) suggested in the Notes which accompanied the previous translation of this Missive of Sultán Hasan Núr-ud-din (Bell, The Máldive Islands, pp. 78-81). They will be found reprodu'ed in Appendix D.-B., Ed.

[^26]:    * furcti kama'," starting" (i.e., sailing).-B., Ed.
    $\dagger$ Eiyá = S. kiyá, "called." goronu dórefe kiyá rasgefana(i), "to the Ruler styled the Governor"; not " to the King of the Governor" (an den König des Gouverneurs), as Geiger has it.-B., Ed.

[^27]:    * kevt. Perhaps = névi, "tindal" (Bell, The Máldive Islands, pp. 63, 80 ).—B., $E d$.
     monsoon" (or "season ").-B., Ed.
    $\ddagger$ See footnote ${ }^{*}$ on pages 51, 56, supra.-B., Ed.

[^28]:    * Cf. Sitzungsber. der K. Bayer, Akademie d. W., 1900, p. b4l seq.
    $\dagger$ From December 8, 1595, to March 15. 1896. (Reise nach Ceylon in Winter, 1895-1896.)-B., Ed.
    $\ddagger$ See Appendix A.-B., Ed.

[^29]:    * Published in the Journal, R.A.S., Ceylon Brunch, 1881, VI., p. 121. $\dagger$ Journal, R.A.S.. 1840, VT.. p. 73.
    $\ddagger$ Bell, The Míldive Islinds, Colombo, p. 7 s .
    § Cf. the Account of my Journey in the Sitzungsber. der K. Bayer, Akademic d. W., 1896, p. 214 .
    [Professor Cieiger does the scantiest justice in these "Studies" to that very courteous gentleman, A. Ibráhim Dídí Effendi, Dorhiméná-kilagefánu, Prime Minister to His Highness the Sultán of the Máldive Islands, to whose kind consideration the Profeasor owed so much in the prosecution of his Máldivian research.

    With infinite patience and condescension the Prime Minister seems to have allowed himself to be "bombarded" for three days on end by a continuous "fire" of wearying linguistic questions, until-the Professor is fain to admit-hr. very naturally, "irew tired" (frmüdet schien).

    The invaluable and, untrudgingly rendered, has been barely acknowledged here, or elsewhere (see supra, page 11, footnote *); though the Profesonr pars besul and well-deserved compliments to A. Mendis Gunasékara, Mudaliy'ar, and the late sheik Ali.

    The following pararraph (kindy translated by Mr. C. H. Collins, Honorary Secretary of the Ceylon Branch of the Royal Asiatic Society) appears in G:iger's Ceylon Tayebuchblättrr uncl Reiseerinnerungen (Wiesbaden, 1898):-
    " A favourable opportunity oceurrod, on wheh I had, indeed, not reckoned My rezourceful friend, Gunasékara Mudaliyár, came to know that the Prime Minister of the Sultán of the Máldives. Ibráhim Didi Effendi, was staying in Colombo.

[^30]:    "I sought him in the house of his ho-t, whech was nut far from my bungalow, and found him prepared to acqueace in my desirts. Not without a certain natural dicmuty, such as the more dintinguished Muhammadans often possers. and at firt not mithout a certain hesitancy, he met me in the rerandah. His mistrust. if his hesitancy proceeded from that cause, quickly vamshed, and we understood each other excellently.
    "For three days a lively play of question and answer went on. When Díti seemed tired, one of his companiuns took wer the conversation in his place. He was an intelli rent man. and, like Dídi himself, spoke tolerable English."

    Small wonder-as the Professor himself adde ingenuously-that the "servants stood around. stariner and amazed, and perhaps consulered me, with my singular tastes, a trifle cracked! " (hielt mech mit meint $n$ absonderlichen neigungen vitllt icht auch fur + in wenig etrrucht l).——B.. Ed.]

[^31]:    * With the exception of tombstone records-of which Mr. Bell, when at Mále in lyon. copied three or four carved in the old characters (Dives aktre), as well as the new (Gabele tana)-it is improbable that real inscriptions have survived on the Islands, save such Arabic epıgraphs as that round the Tower of the Chief Mosque at MáléB., Ed.

[^32]:    * The mute sound (closing of the top of the throat) which appears in Máldivian at the end of a word in the place of different consonantshere, e.g., for t-is regularly transcribed by me as (the sign)' in the words which follow. The Máldivians themselves, who have no fixed orthography, write this sound variously as a or R. The symbol for R is very close to N and (Avieni, shown as) ', and are interchangeable.
    [See supra, pages 27-28, footnote $\dagger$. The Máldive sign for r is easily differentiated from that for $\mathbb{N}$ by its having but one loop, instead of two, in the upper or horizontal part of the letter ( $c f$. Máldivian Letters given in Section I., Plates III., IV.). The sign for aviens is quite unlike both $\underset{\sim}{R}$ and $\mathbb{N}$, resembling roughly the Arabic numeral $\Lambda$, " 8 ." - B., $E d$.]

[^33]:    * This is the general rule, but it is liable to occasional exceptions :
     "Moor"; also femró $(\hat{i}) \operatorname{Re}(\dot{\AA})$. " arecanut tree" ; and in Anglo-Máldivian words, such as Agc-bót, "stemmer" (" "earéo-boat," onomato-poetic).-B.. Ed.
    $\dagger$ The word verext, which also is found in Sentences III. I: 12, 15, and 18, after the Dative, is not cloar to me. 「Pussibly connected with the Sınhalese expletive riru.-B . Erd.

[^34]:    * The Ablative with kuref is used, as in Sinhalese, with the Verb AHań, " to ask" : e.g. Hical-ktréf EHi, " he asked the jackal" $=\mathrm{S}$. hivalá-gen esuca (III. 3 : С'フ).
    $\dagger$ The Siṇhalese form peren, "before " (from Elu pere). does not appear ever to have the force of S. lavá $=$ Máldivian FCREN, "by," or "from."-B., Ed.

[^35]:    * The Copenhagen Manuscript (see Sitzangsber. der K. Bayer, Akademie d. W.. 1900, p. 149), in fact, has Hatarek, fahek, \&c.
    $\dagger$ Gray s salutary warning (Journal, R.A.S., 1879, X., p. 185) is not heeded by Geiger: "I must remind those who peruse it (Pyrard's Vocabulary) that Pyrard was a Frenchman. The Máldive words must, therefore, be pronounced as if they were French, in order to sound as Pyrard intended them to."-B., Ed.

[^36]:    * sauda is given by Bell. The form also appears in the Málim's Letter published by Christopher (see supra, page 49), and likewise in the " London Vocabulary." Cf. on this subject Sitzungsber. der $K$. Bayer, Akademie d. W., 1900, p. 649 seq.
    $\dagger$ Cf. my Litteratur und Sprache der Singhalesen. p. 93. In Bell (The Máldive Islands, p. 121) I find also fanas and farsas.
    $\ddagger$ Clearly new formations, which are just being introduced.

[^37]:    * Geiger queries fassehi doubtfully for " 24 "; but it is, or was, thus used in the Duodecimal System of the Máldivians. Thus, Pyrard has Passee as equivalent to "ringtquatre." It may also have been = S. pas-ctsı, " $25{ }^{\prime}$; and possibly partook. then, of like confusion in accounting, as nowadays between the "Indian four anna piece" ( $=24$ pice) and the " Ceylon trenty-five cent piece."-B, Ell.

[^38]:    * Ibráhim Didi told me that dolos." 12 ," belongs to the "common language," but bára to the "better language."

[^39]:    * I do not know how tiyaheí (III. 3:C 7) is to be explained.
    [Abdul Hamid Dídí Effendi writes :-" tryanen means 'like that.' TIYA, ' that,' is quite distinct from TIYA, ' you' (last syllable long). Further, kalk, 'you,' cannot be combined with tifa.' See supra. page 34, note 2:.-B., Ed.]

[^40]:    * A still higher rank is kalégefínu: e.f., in málmíhalégefánd, "Captain" (Málim’s Letter). For formation, cf. Maniktfáno," nobleman," "distinguished man"; Plural, MaNCKU fanume'; Dative, manuka fantmennai (Sultán's Missive). For more about honorifics, see Bell, The Máldive Islands, p. 63.

[^41]:    * hURI, or huri (both are well attested) signify chiefly "is," " exists" (III. 2: 4 and 7; Málim's Letter).

[^42]:    * Ibráhim Dídi gave me veteni for "fell" and retuni for "falls"; but I betheve that the reverse is correct.

[^43]:    * The Professor could have found it in Malayalam éndum (enam, éne) of the Indian West Cuast, corrupted from Tamil véndum.

    The Máldivians have absorbed very many foreign phrases, owing to their intercourse with India, \&c. Hence such hybrids, inter alia, as gordnu doreve (Sultán's Missive, supra, page 54) = Governor-turai (English + Tamil), and gÉge síman, " house-goods," "furniture" (Sinhalese + Tamil). $-\mathrm{B}, E d$.

[^44]:    * Cf. -fí, in ek-kof-fá (III. $3: \mathrm{C} \boldsymbol{2}$ ).
    $\dagger$ Leytpré $=$ Latppé ; cf. forulatppé, láippeté, vihayeppevé (III. 1: 17; III. 3: A 6 ; III. 2: 16).

[^45]:    * The root dí (rf. Geiger, loc. cit.. Section 53, 3) is only included in the Intransitive Conjugation fur external reasons.

[^46]:    * From the Compound Verb mara-lati, in which lań has a Causative significance.

[^47]:    * See Sitzungsber. der K. Bayer, Akademie d. W., 1900, p. 641 seq.; Z.D.M.G., L.V., p. 371 seq. Málduzische Studien, III., Von Wilhelm Geiger (Vorgelegt in der Philos.-Philol. Classe am 3. Mai, 1902).
    $\dagger$ Sheik Ali ibṇ (son of) Sheik Abdul Kádir, died at Colombo in January, 1907. He was fadiyard, or Chief Judge, of the Máldive Islands, when living on the Group.-B., Ed.

[^48]:    *. The following forms in ordinary colloquial use were recorded at Málé by Mr. Bell in 1879 :-

    Present : hadanf, kaní, añíté, dani, iriníné. Preterite: hadifa, hafi, ati, diya, iri(N)diya. Imperative: hadaharé, kataré, ádé, anaharé, antáré, bahi(G), daharé, ipinsawaharé. Pant Participle : hadáfá, kágin, káfá, aisgin, aistá, gosgn, gostá, ipi(n)dawáfá. -- B., $E d$.

[^49]:    * The same verbs in connection with Mádan," to-morrow.

[^50]:    * Pronounced trmanmenna'. Cf. Z.D.M.G., L.V., p. 375; as well as below, in "Study of Sounds."

[^51]:    * Geiger, Litteratur und Sprache der Singhalesen. Ind. Grdr., I., 10, p. 40.

[^52]:    * Geiger, Litteratur und Sprache der Singhalesen, p. 48, Section 25, 5.
    $\dagger$ Wiener Zeitschr. f. d. Kunde des Morgenlandes, XVI., Section 79.
    $\ddagger$ Geiger, loc. cit., p. 20.

[^53]:    * Geiger, loc. cit., p. 44, Section 20, 2 b.

[^54]:    * May it not possibly be a contraction from pirimi(nis), "male (human being)" = Máldivian FIRI-3ifion ?-B., Ed.

[^55]:    * Abdul Hamid Dídi states:-"The cerrect spelling is kekkcta: but the word means 'patient,' not 'hard,' 'strong.' '一B.. Ed.

[^56]:    * In S. also miyuru (E.S., No. 1,091, 2).
    $\dagger$ In S. also diyul (E.S., No. 597).
    $\ddagger$ Vat (L.V., 20), vai (Christopher), "left arm," is difficult. I believe that it is contracted from VA", "left" $=\mathrm{S}$. vam, P. váma (cf. NA", L.V., 26," name "), and $\pm \mathbf{x}, \mathrm{AI}=\mathrm{S}$. at, P. hattha.
    § Those long in utterance, arising from the dropping of a final consonant, will be spoken of further below.

[^57]:    * In spite of Ed. Múller's objection (W.Z.K.M., XVI., 78), I hold to the derivation of S. rá from P. rasa. An argument for it is the equivalent Sinhalese form raha. Besides, for Máldivian the form ras in Pyrard is direct testimony.

[^58]:    * Geiger, loc. cit., p. 46, Section 23. The Máldivian palatal c is as little connected as the Sinhalese with the original palatal: like the latter, it has rather arisen from ti. We see this from MaCA', MACCA", "on," and Matt (S. matu), " above " : Geiger, loc. cit., p. 38, Section 13, 2.
    $\dagger$ Geiger, loc. cit., p. 4u, Section 21.

[^59]:    * Geiger, loc. cit., p. 31, Section 6.

[^60]:    * Geiger, loc. cit., p. 34, Section 9.

[^61]:    + In all these cases we are dealing with a Root vowel, which has arisen from an orisinally reduced (undetermined) vowel.

[^62]:    ＊The Málé written standard requires r for mpnany，or irincin：
    
    $\dagger$ The proper spelling of farct is（as noted by Geiger）with r，not r：farui férany，＂silk cloth．＂－B．，Ed．

[^63]:    * Quite possibly Pyrard may havo written t , which his early Seventeenth Century publishers misprinted L. Christopher, in his manuscript, urites $G$ without modification. having made it clear that g final was $=$ the avieni sign with sukun (i), and should not be pronounced. It was Dr. Wilson who changed $\mathbf{a}$ to italic $G$ in printing Christopher: Vocabulary in Journal, P.A S., I $\searrow 41$, VI.-B., Ed.

[^64]:    * See supra, page 98, in the examples, Sentences (e) and (f).
    $\dagger$ But, if no longer at the ond, e.g., myalik-A vigalak-í," a jackal and a lion," with vowel A; alan FTEジaks' (Dative)." on a heap"; dónixaki', " to a boat."

[^65]:    * Within the word, retaining the R : e.g.. RARUN," from the land "; rapo-gat," in the land."

[^66]:    * Here, again, within the word L is retained; e.g., MALE', "a flower"; valu-vagu," tiger."

[^67]:    * Gray, Ibn Batúta in the Máldives and Ceylon: translated from the French of MLM. Defrémery and Sanguinetti. (Journal, C.A.S., 1882, Extra Number, VII.)
    $\dagger$ See Yule and Burnell, Hobson-Jobson, 1886.

[^68]:    * Hakluyt Society's Edition of the Voyage of Francois Pyrard. See footnote * on page 7 , supra.

[^69]:    * Gray, The Máldive Islands: with a Vocabulary taken from François Pyrard de Laval, 1602-1607. (Journal, R.A.S., 1878, new series, X., pp. 181-182.)
    $\dagger$ A. C. Burnell (South Indian Palæography, 1878, p. 49) quotes his epitaph at Batavia.

    It runs: "Sacred to the memory of John Casper Leyden, M.D., who was born at Teviotdale, in Scotland, and who died in the prime of life at Molenvliet, near Batavia, on the 29th August, 1811, two days after the fall of Cornelis.
    "The poetical talents and superior literary attainments of Dr. Leyden rendered him an ornament of the age in which he lived. His ardent spirit and insatiable thirst after knowledge were perhaps unequalled: and the friends of Science must ever deplore his untimely fate. His principles as a man were pure and spotless: and as a friend he was firm and sincere. Few have passed through this life with fewer vices, or with a greater prospect of happiness in the next."

[^70]:    * There is some confusion as to the year- whether 1834 or 1835 . The Memoir (page 55) says the two Lieutenants landed on Málé on June 4, 1834: a footnote adds that Young had to leave on August 17, owing to continuous fever; and that. "after struggling against the fever for some time," Christopher himself was forced to quit "on the 9 th September, 1835."
    $\dagger$ See footnote * on page 8, supra.
    $\ddagger$ Journal, R.A.S., 1841, VI., pp. 42-76.

[^71]:    * Christopher's Manuscript Vocabulary (now in the Ceylon A.S. Library, Colombo).
    $\dagger$ In the terrible night attack of the 9 th September, 1848, Christopher received his death-wound.
    "Captain Christopher," wrote Sir H. Edwardes (A Year on the Punjaub Frontier)." had, from his first arrival with the steamers at Mooltan, shown the usual willingness of his profession to co-operate with his brother officers on shore.
    "On the night in question he had once already conducted some reinforcements to Colond Pattoun's assistance; but the fighting at the outposts still raged with unabated fury. Another reinforcement came up, but had no guide. 'Will no one show us the way?' asked the officer of the party, looking round on the tired occupants of the trenches. 'I will, replied Christopher, and putting himself at their head, steered them with the steadiness of a pilot through ditches and gardens, under a roaring fire of musketry. A ball hit him in the ankle, and shattered the joint to pieces.
    "A few weeks later (9th October, 1848) he was borne by the grateful British officers to a rude grave, beside a well, near the village of Sooraj Khoond, and I myself read the service over him.
    "A better or braver man fell not beneath the walls of Mooltan."
    $\ddagger$ See footnotes $\ddagger$ and $\mathfrak{\xi}$ on page 9 , supra.

[^72]:    * See footnote * on page 130, supra.
    $\dagger$ As the gabuli tana and dives akURE characters appear in the Plates, they are not reproduced here.-B.. Ed.

[^73]:    * Not reproduced. Mr. de Alwis was, therefore, in a humble way, the pioneer in the field of comparison, more fully worked by Gray and Geiger later.

[^74]:    * His heirs kindly placed the collection of words, \&c., at the writer's disposal ; and a copy was made.

    Mr. Albert Gray wrote (loc. cit., p. 176) in $1878:-$
    " No attempt can yet be made to discuss the question of Máldive Grammar ; though, if my information is correct, Louis de Zoysa, Mudaliyár, is collecting materials for the purpose."

    In reply to an enquiry by Mr. Bell, in 1881, the Mahá Mudaliyár replied, May 1, 1881 :-
    "I have no notes on Máldivian Grammar. I had a collection of Máldivian words and a few phrases, but unfortunately I have mislaid them." These came to light after his death.-B., Ed.

[^75]:    * See Plate II.-B.. Ed.

[^76]:    * In this he merely writes in general terms at the commencement :
    "It is with pleasure that I avail myself of this opportunity of publicly thanking my active helpers"; and then proceeds incontinently to induce undesirable and embarrassing comparison by specifically naming one of the three.

    Was it not said forcibly of a well-known " History of Frederick the Great ":-
    "It would have been a graceful and proper thing to acknowledge the help in a Preface; but Neuberg. his generous aider. was too modest to ask for this, and Carlyle too egoistic to think of it."-B., Ed.

[^77]:    * A bound copy of this unique Vocabulary, written up in full in the standard dialect of Málé, the Capital of the Máldive Islands. was most generously presented to the writer by the Prime Minister some years ago. It has proved of great assistance in furthering study.

[^78]:    * Mr. Tawney hatte die Gúte, mir das Buch zu úbersenden und dazu ein Konvolut von Briefen, aus denen hervorgeht. dasa es vor etlichen Jahren auf Wunsch Herrn Bell's nach Colombo geschickt wurde. (Geiger, Máldivische Studien I.. pp. 64!. 650.)
    $\dagger$ In a Letter, to the writer, of March 19, 1890, the late Mr. D. W. Ferguson quotes Professor Kuhn as stating that he had "received the Máldıvian Vocabulary from the India Office Library."-B., Ed.

[^79]:    * Bell legte es einigen eingehorenen Máldivianern vor, welche das Vocabular prüfen soliten, aber zu dem Ergebnisse kamen, dass es voll sei von Fehlern und Irrtumern und nahezu keinen Wert besitze. (Geiger, loc. cit., p. 651.)
    $\dagger$ Das Londoner Vocabular, mit dem ich mich nun anf grund der eigenen Beobachtungen zu beschäftigen habe, ist freilich nicht frei von Irrtümern, und eine beträchtliche Zahl von Wörtern scheidet für uns als wertlos von vornherein aus. (Geiger, loc. cit., p. 650.)

[^80]:    * Aber die Irrtümen erklären sich zum Teıl als blosse Schreibfehler und entschuldigen sich damit, dass es eine durchaus feststehende Orthographie im Máldivischen uberhaupt nicht gibt, und die Worter, welche ich als wertlos bezeichne, fallen nicht der Unwissenheit des Uebersetzers zur Last, sondern erklären sich aus dem an sich ja löblichen aber naturlich undurchführbaren Bestrehen, wo moglich zu jedem Persischen und Hindustani-Wort eine Uebersetsung beizuschreiben.

    Nun finden sich aber in dem Vocabular zahlreiche Worter, z. B. technische Termini u.s. w., für die es im Máldivischen kein Aequivalent gibt. noch geben kann. Da half sich denn Hassan bin Adam auf doppelte Weise: entweder gab er statt der Cebersetzung eine erklarende Paraphrase oder er setzte das Persische (bezr. Arabische) oder Hindu-stani-Wort in Máldivische Buchstaben um.

    Von den " Paraphrasen,' um diesen Ausdruck der Kürze halber zu gebrauchen, sind übrigens viele ganz verstandig und beweisen uns zum mindesten, dass der Uebersetzer seine Vorlage verstand. (Geiger, loc. cit., pp. 650, 651.)
    $\dagger$ Ich bedauere, sagen zu mussen. dass die Máldivianer, an welche Herr Bell sich gewendet hatte, sich die ihnen gestellte Aufgabe offenbar nicht allzuschwer machten, vielleicht auch nicht die nötigen Kenntnises: im Persischen und Hindustani besassen. (Criger. lcc.cit., p. 6ia.)

[^81]:    * Jedenfalls thaten sie Unrecht daran, die Kenntnis der eigenen Muttersprache bei Hassan bin Adam in Zweifel zu ziehen. (Geiger, loc. cit., p. 650.)
    $\dagger$ Es ist aber naturlich. dass ich, so viele tausend Meilen vom Ursprungslande entfernt. nirht im stande war. alle neuen Wörter des LV. zu verifizieren, und aus diesen Grunde vor allem behlage ich es. dass dies nicht geschah zu der Zeit. als das LV. in den Händen Bell's und seinar Máldivischen Gewàhrsmänner such befand. (Geiger, loc. cit., p. 652.)

[^82]:    * See supra, Appendix A, pages 127-12s.

[^83]:    * Lunar years. By the Christian Era reckoning, eighty-two years (A.D. 1890-1808).-B., Ed.

[^84]:    * (i.) Transactions of the Bombay Geographical Society, 1836-1838 (reprint, 1844); (ii.) Journal, R.A.S., 1841 ; (iii.) Id., New Series, X., 1878.

[^85]:    * Thirty or forty years ago Mr. Bell procured a few songs, \&c., from Máldivian Islanders, both in dives akcru and gablei tána writing.
    $\dagger$ Unleca the dives akuru followed the limitation of the Elu Alphabet. which dispensed with aspirates.

[^86]:    * Lieutenant Christopher met the travelled French sarant, Monsieur Antoine d'Abbadie, at Tujurrah, in 1841.
    " I never saw Christopher ; for I was blinded by ophthalmia when he called on me. He promised to send me a copy of the Old Máldive syllabary ; and I thanked his messenger warmly the following day, a few hours before Christopher set sail to receive his death wound on the Indus (1848). When I recovered my evesight, I saw with regret that he had sent me a list of consonants (34), vocalized only in a, followed by a tantalizing ' \&c.' I boarded the Indian Navy Warship; but Christopher was then gone." (Extract from a letter to Mr. Bell, dated February 2, 1887, Basses Pyrenées.)

    The letters in Christopher's list, as copied by Monsieur d'Abbadie, show 18 with short $A$, and 16 with either long Á or short .
    $\dagger$ The letters as written in the Southern Group were given by Ahmad Dídí, of Fua Mulaluu Island; the others were kindly supplied by Ibráhim Didi Effendi, Dorhiméná-kilagefánu (now Prime Minister). from Málé.

[^87]:    * No uniformity has ruled so $\mathrm{f}_{\mathrm{a}} \mathrm{r}$ for the order of the " adopted," or " borrowed," consonants of the Modern Máldive Alphabet as contrasted with the first eighteen letters. These should start with $H$ and end with p correctly; though the latter half (ar to D ) has been sometimes (as by Gray) transposed with the first hali. making the last letter $v$.

    Christopher (reproduced by Gray ; see Plate II.) gives (from Persian) c, $P, T$, (from Arabic) $z, Y, J, G H$, th (or $D H$ ) ; omitting $\tilde{\mathbf{N}}$. Ceiger (adopting-for these nune only-the order of the pseudo-gabcti tana in the " Leyden Vocabulary ") print= (Plate I.) Y. z. c. J, т, ※, p, Greek $\gamma$ for GH, and tunderlined for TH (or DH). In Plate VI. the order of the first seven (as copied from the dives akcru manuscript alphabets obtained by Mr. Bell) runs I. T. C. Y. z. J. P: but definite authority is not claimed for this obviously unsystematic jumble.

[^88]:    * See the lower line of Vowels on Plate VII.
    † See Burnell. South Indian Palæography. 1878; Faulmann, Das Buch der Schrift. 1880 ; Holle. Tabel ran Oud-en-Niew Indishe Alphabetten, 1882.

[^89]:    * Note the variant Medial signs for long $\dot{t}$ (Plate VII.).
    $\dagger$ In the form employed in the Southern Atolls. a vertical stroke heads the long $\delta$, both Initial and Medial.

[^90]:    * See, too, supra, p. 54, and Appendix 1 .
    $\dagger$ See infra, Appendix D (Sultán's Missive: A.D. 1795).
    $\ddagger$ Sanskrit Rañívalóka: lit., "Warfaro o'erseer" (rana, "war," "battle"; avalóka." seeing." "supervising"). A biruda of the Rásthrakútas (Ep. Ind., VI.. 189).; Cf. Avalókitéṣvara, " the lord who looks down (in compassion)." abáruna (not found in Sultáns' Missives) $=$ perhaps, S. ábharana, "ornament."
    §tivankári, " the hard (shelled) coconut" (cf. S. távara, "firm"). This. the double-coconut (Lodoicea Seychellarum), from its fruits being carried by currents from the Seychelles and cast ashore frequently on the Máldive Islands obtained the names Coco-de-mer ("sea coconut") and Cocos-des-Máldives.

    In former days it was highly valued as an imagined sovereign remedy for all surts of alments. See Hak Soc. Pyrard. I. 230.

[^91]:    * When at Mále in 1879, Mr. Bell did not notice any graveyard records inscribed in scripts other than dives aktre, gabcti tána, and Arabic; but closer search might possibly have revealed such.
    $\dagger$ Abdul Hamid Didi writes:-"The Hara and DE-FA(T) forms of writing and conversation are still in use among the higher classes of Máldivians ; sometimes in the presence of ordinary people."

[^92]:    * "c The alphabets you have sent me should not be taken seriously as Máldivian letters. They are pure inventions of Hasan-bin Adam, of Himiti. He must have composed them in order to prevent others reading his private writings. It is not the first time that I have seen. and known, persons writing or inventing such letters for their own personal use. I enclose herewith a modern specimen of such fancy letters.
    "The letters contained in the photographic print (Plate V.) cannot. of course, be called the dives akcrc Alphabet: they are. as you say, formed from gabcli tana letters." (Extract from a letter to Mr. Bell.)

    The "specimen" of tína writing sent - playfully styled angirési (English) Tina-is formed on the stiffest angular lines. not unlike the form of Column 1 (i.) on Plate V.

[^93]:    * For the Sinhnle e Numerals and Lit Aluru (or Lit Illakkam), see C. A. S. Journal, 1352. Appendix. slvi., xlvii.

    The connecticn of the Sinhalese 1,2,3, and 7 with the Máldive Numerals 15 clpar; the others $(4,5.6,8,9)$ are open to doubt: for them the Naldivians may hise preferred some Indian prototypes.

    Máldive $s$ may te an adoption from Perid-Arabic.
    $\dagger$ Thus: Christcpher's z with one dot above; ©H, TH (or DH) with three dots below; $\mathbf{P}$ formed by similarly sub-scribing Máldivian F . On the other hand, r. т. X.J, Nappear to te free of Semitic influence.

[^94]:    * The classification by A. Mendis Gunasékara. Mudaliyár, in his Sinhalese Grammar, 1891, p. 22, is adopted. being easy of comparison in Ceylon. The sukun, in its nasal capacity. hke the bindu by Gunasékara. is put last, unclassified.

[^95]:    * There is an interesting reference to the use of Pandanus leaves, as a pis-aller for writing material, in the Maháwansa.

    When King Watṭagámiṇi was fleeing from his "Damila" enemies, he hid in the Vessagiri forest, where he was fed by the Théra Mahá Tissa, of Kuppikala Vihára. "Thereon the king, glad at heart, recording it upon a kétaka leaf, allotted lands to his vihára for the use of the brotherhood." (Geiger, Maháwansa, XXXIII., 48-50.)
    $\dagger$ This little book, as folded, measures $5 \frac{1}{2} \mathrm{in}$. by $4 \frac{1}{2}$ in., and has 7 pages of 65 lines. The other book is slightly larger.
    $\ddagger$ The oldest gabdif tana Missive discovered by Mr. Bell in the Dutch Records Office, Colombo, is dated October 16, 1713.
    § Arabic words are printed in italic capitals.
    il For specimens of Máldive tavíd, or "charms," see Bell, Journal, R.A.S. (Ceylon), 1881, VII., No. 24, pp. 119-124.

[^96]:    * Bell, The Máldive Islands, p. 58.
    $\dagger$ Noticeable is the preference given to r (i.) in lieu of the atrient $\operatorname{sign} \Lambda$, for mute terminations-here printed ( R ) ; (ii.) for the nasal (e.g., TIR, ARHER) ; and (iii.) for duplicating consonants; also the exceptionall: frequent use (as in Sultáns' Missives of early Eighteenth Century) of the cerebral N.

[^97]:    * For particulars of the gallant death of this brave Officer at Multan, in 1848, see supra, p, $130 \dagger$.

    One who knew him intimately wrote: " Lieutenant Christopher. of the Indian Navy, was a very old friend of mine-indeed I was his ' best man at his wedding, at Aden, in, I think, 1844. You may depend on the accuracy of whatever he put on paper. He was an earnestly religious man." (General H. W. B. Bell, R.E., January 1, 1880.)

    The closing words of Christopher's Letter to Dr. Wilson, in forwarding his Vocabulary of the Máldinvan Language (MS. in C. A. S. Library), pathetically bespeak the "Christian Soldier" fated to give a noble life for his country within a few years: " May) you continue to prosper under the fostering care of Our Heavenly Father."

[^98]:    * The strange type of D found in the fadita fo(t) (see Plate VIII.) does not occur in Sultáns' Missives.
    $\dagger$ Formerly, at least, association of different classes of nasals was allowable: thus, e.g., HUNYA (dental and cerebral). Further, the honorific plural suffix in manikufanumeña, and the like, appears with its final nasal looped, but bent to left-apparently the form of palatal $\tilde{N}$ (Plate I.) now, and may be of old, utilized also for cerebral N (see Alphabet, p. 167, and cf. Dóñe, Plate IV., line 10).

[^99]:    * Sultán Ibráhim Iskandar's Missive of A.D. 1749 is dated in Máldivian Numerals ( M N D ) ; as is that of Sultán Gházi Hasan Izz-ud-din's Missive of A.D. 1765 (m N G L ), in addition to the Hiira Year 1178 in Arabic Numerals ( H н K i).
    $\dagger$ In proof Abdul Hamid Dídí gave the Máldivian title dorrmená emiagerino written in Persi-Arabic characters.

[^100]:    * See supra, pp. 49-52, 54-56, for Mrs. Willis's English rendering of the German.

[^101]:    * For the Málim's Letter, Christopher, in his manuscript, employed diacriticals; transliterated Máldivian nasal both as N and NG ; the mute $\Lambda$ at the end of words by $G$; ? by $R H$, or by doubling the connected consonant ; and $\mathbf{x}$ final by r .
    $\mathrm{H}_{1 s}$ editor, Dr. Wilson, converted Christopher`s silent g into italic $\boldsymbol{G}$, as well as using italics instead of subscribed dots for cerebral consonants; inserted a short diagonal stroke at foot between duplicated consonants; and changed I into short $\mathbf{1}$.

    Geiger abandoned rg for single $N$, and 1 for the original $x$ final; adopted x with superscribed dot (here printed $\mathrm{N}^{2}$ ) for final semi-nasal; substituted apostrophe (') sign for mute $A$; and $a$ with small superscript ${ }^{*}$ for RH ; restored diacritical dots; and utilized hyphens ireely.
    $\dagger$ Christopher has rendered minot-gé and hiti-gas-daru-gé correctly, except that dard means "under." M. hiti-gas $=S$. kohomba-yaha, Azadirachta Indica.

    Abdul Hamid Did! writes:-These "Houses" (GÉ) are both in Málé Island. minde-gi: is, at the present time, the residence of the exSultán"s brothers (Mando-gé manifuley). hiti, "bitter"; Gas. "tree"; DARU (or DORO), "under" $=$ together: " the House under the Bitter Tree."

[^102]:    * Geiger's Translation (1900) is as follows :-

    Uebersetzung : Der Kapitän des Arabischen Schiffes (sendet) an alle in Galle weilenden Máldivianer Grüsse. Die Boote, welche gegenwärtig in diesem Hafen sich befinden, sind die Arabischen Boote, die Boote des Finladu, die Boote mit den Geschenken, die Boote des Richters, die Boote des Ahmed Didi, die Boote des Mándu-Hauses und die Boote des Hiti-gas-darhu-Hauses. Alle Leute sind zur Zeit wohlauf. Ihr sollt die Neuigkeiten schicken, die ihr in eurer Stadt (erfahren) habt; ich schicke (auch) die Neurgkeiten, die wir hier (gehört) haben. Aus England ist ein neuer Gouverneur gekommen. Der König von England ist gestorben. Viele tausend Grusse. Wir verkauften an diesem Platz Fische (und zwar) solche aus Himití für 77 Dollars, solche aus dem Mále-Atoll für 67, solche aus . . . für 47 Tausend Grüsse. Ich schrieb dies hierorts am Donnerstag. Wenn es Gott erlaubt, werde ich noch 14 Tage bleiben. Das ist meine Absicht. (Geiger, Máldivische Studien, I., 680.)
    † See supra, p. 52.

[^103]:    * Bell (The Máldire Islands, 1882, p. 78) followed Christopher's system of transliteration generally, except in using (1.) ₹ (amusuára) for his NG, where some nasal pronunciation seemed required, and (ii.) the apostrophe (') where it seemed to be mute.

    In the Editor's footnotes to Ceiver's Múllic an studies, as well as the present reprint of the Sultan's Missive of A.D. 1795, each Maldive character has been transeribed by an equivalent somgle Roman letter, irrespective of pronunciation. Máldive JVIENi sign, shown as A, bears various sound values, according to its usage in Máldivian, whether nasal. duplicative, or simply a mute termination (1). For rH, r is adopted. Words, or portions, written in Arabic are printed in italic capitals.
    $\dagger$ Several other spellings (e.g., dósíye, dóns̃e); but all with $\tilde{x}$ (presumed palatal, or variant cerebral). -ingly or second. Máldivians usually style their Voyaging Vessels furadi udi, or datcre odi.

[^104]:    * The German Translation of 1900 runs :-

    Ueberst tzuitg: Hell! Von dem glorreichen, hoch-beruhmten, hochweisen, aus edlem Geschlecht entsprossenen, dem Mond un der Sonne vergleichbaren Herrscher, dem heldenhaften Krieger, Sultan Hasan Núr-ud-dín Iskandar, dem Krieger, dem Grosskönige der Erde an den Konig des Gouverneurs in Colombo von hier viele tausend Grusse. Wie zwischen dem früheren Kónige Eurer Excellenz in Colombo und dem fruheren Kónige dieses Máldivischen Reiches Freundschaft bestanden hat. so tragen wir auch zu Eurer Excellenz Freundschaft im Herzen, und wir wünschen (das Cileiche) von Eurer Excellenz. Sollte irgend ein Boot oder Fahrzeug dieses Landes verschlagen werden, so sollst du, wenn es ein Eurer Excellenz bekannter Platz ist. die Leute holen und für ihr Wohlergehen sorgen. Wenn Eurer Excellenz jemand bekannt wird, der diesem Lande fiendlich gesinnt ist, soll Eure Excellenz es nicht dulden Obwohl es der Würde Eurer Excellenz nicht entspricht, habe ich dir durch den Unterschatzmeister Ahmed ein klemes Geschenk geschickt. Wenn er einen Wunsch äusiert, sollst du ihn erfullen. Wenn ein Versehen von seiner Seite vorkommt, sollst du es verzeihen. Mit dem ersten Monsun erwarte ich seine Zuruckkunft. (Geiser. loc. cit., 683-684).
    $\dagger$ "The Maldive Sultans have assumed the fulsome cognomen Iskandar-applied by Arab and Persian writers to Alexander the Great (Iskandar al Rini)-perhaps by virtue of supposed descent from the wide-ruling Iskandar Dhul'lkarnein ('the two-horned'), a traditional Persian King of the F.rst Pace, contemporary of Abraham, and tenth descendant from Noah." (The Máldive Islands, p. 76.)
    $\ddagger$ See supra, p. 56.

[^105]:    * See supra, p. 57.
    $\dagger$ This "Assistant (lit., Small) Treasurer" was sent also in 1793 and 1794.
    $\ddagger$ See supra, p. 5 S .

[^106]:    * In the elucidation of these birudas valuable aid was received, in 1881. from the late learned scholars Waskaduwe Subhúti Unnánse, Dhammálóka Unnánse, of Ratmalána, and B. Gunasékara. Mudaliyár. Chief Translator to Government.

    Suggestions very kindly offered by A. Mendis Gunasékara, Mudaliyár. appear in some of the present footnotes to the Notes.
    $\dagger$ By gracious permission of the Ceylon Government, Mr. Bell was enabled to have all survivingoriginals of these Missives (i.) photographed and (1i.) lithographed to exact size, at his own charges. Some of the Missives are chnice specimens of callicraphy. written hoth in red and in hlack charartors. There are many gaps. The earliest Missive in gabcli tina characters discovered in the Dutch Records Office, Colombo. is dated 1713 ; the latest 1825 . They awat editing.
    $\ddagger$ First appears in extant Missive of 1732. Prior Missives seem to contain no birudas.
    $\S$ His first Missive (September, 1750) opens: surastí sirimata mati sir: Jatarinsa kiriti acdína.

    Variant epithets. dropped later, are: ray-miba, daníla, víraSINGA, ALDA, which occur combined with more usual birudas.
    $\sigma$ The epithets mean: "Great Ruler of the World, a Kshatriya of pure race."

[^107]:    * Cf., too, STribhara (lit., ${ }^{*}$ bearer of wealth or glory ${ }^{`}$ ): one of the birudas of a Seventh Century Pallava King, probably Narasinhavarman I. (Epigraphia Indica. X.. p. 5). A. Mendis Gunasékara, Mudaliyár, would derive diri from the Sanskrit dhira, "learned," "brave"; which seems preferable.
    $\dagger$ As the Máldive Rulers style themselves in Arabic. on their Coins, as-Sultín Ul bar wà bahśr, "Sultán of Land and Sea," the epithet kusa furadina may, perhaps, be better translated "Lord of the Ocean" (S. jala pradhánaeví).
    $\ddagger$ Taking siáka sístcra atodáa kantiri together, A. Mendis Gunasékara, Mudaliyár, would translate: "The Kshatriya (Ruler, famed for) heroism (or glorious achievements, secured by the power) of his (Sanskrit swakiya) arms (Sanskrit sastra)."

[^108]:    *Whence Sanskrit avadána, "glorious," "heroic" (see supra, p. 57, ${ }^{3}$ ). Avadána also means "dividing."
    $\dagger$ bowana maha radun. Cf. Sanskrit bhupati náyaka, "Chief of Kings "(A. Mendis Gunasékara, Mudaliyár).

[^109]:    * See supra, p. 135, for James de Alwis's similar comparison, and passim for Geiger's.

[^110]:    * morcnidure "Governor." The latter portion is not (as presumed in 1882 ) $=$ T. tura, . lord, $\because$ \&c.: the complete word is a corruption, doubtless through Porturuese, of the Latin Gubernator. The transliteration greatly exercised the Maldivian State Secretaries; for the first part of the word appears in Missives under a variety of forms (e.g., govorani. abresat, gorsi, govan, goun, and a dozen others). more or less close. Of the "Commander" at Galle, they made nubudónu.
    $\dagger$ The two texts only differ in the dives akere version omitting the Arabic heading, and inserting saling at the end in place of the signature (illeghle) at foot of the gabctor tana writing.
    $\ddagger$ Ali Didi dred in 1878. "Much of his (Ahmad Didi, a relative of Sultán Muhammad Múin-ud-din, A.D. 1799-1835) ability was inherited by his son Ali Didi (recommended by the Sultán in 1850 to the notice of Lord Torrington). who became a domiciled Ceylon subject, and resided at Galle until his death." (Bell, The Haldive Islands, p. 37.)
