18. By the end of the year, then, the special surveillance of shipping and trading documents had been practically all swept away. No special restrictions remained as far as this Island was concerned on imports, except in the case of British gold coins, rice and flour, and on dye stuffs from other than Imperial sources. The list of restrictions on exports were for the main part confined to various articles comprised under the head of war materials, wool, butter, cheese, and a few other minor commodities. None of the foregoing articles could be exported to destinations outside the British Empire, but as none of them are produced in Ceylon, local trade was not thereby affected.

19. More important is the list of articles the export of which is still prohibited to all destinations. These include all manufactures and products of wool, cotton, and linen, including wearing apparel, lubricating oils, British specie, empty receptacles of tin of a capacity of one gallon or over, rice, wheat, flour, sugar, and chillies. The prohibition on these is due to local conditions, and the reasons therefor call for further remark.

(a) *Cotton, Linen, and Woollen Goods.*—The export of these had been prohibited, except under license, in July, 1918, owing to the shortage in supplies, and the attempts which had been made to send up prices, already high, by exporting large quantities of the local stocks to India. The conditions of supply and prices throughout 1919 remained such as to require the continuance of these restrictions in order to safeguard the interests of the consumer. Licenses are readily given by the Department for the despatch of small parcels of wearing apparel, &c., to foreign destinations, and the number of applications dealt with has added appreciably to the work in the office. Any attempt, however, to export in wholesale quantities has been stopped.

(b) *Lubricating Oils.*—These are largely required for local machinery, and for the great number of steamers calling for stores, &c. The necessity of conserving a sufficient local reserve led to the continuance of the restriction.

(c) *British Specie.*—The export of British specie had been prohibited for some time, but it was not until the latter part of 1919 that the tremendous rise in the price of silver and the value of the rupee led to the necessity of restricting the import of sovereigns. The currency value of these coins, fixed by Ordinance at Rs. 15, was considerably higher than their gold value, and as a comparatively considerable number found their way into the Island by every mail boat from Australia, steps had to be taken to prohibit their import, except under special conditions.

(d) *Empty Receptacles of Tin.*—For some time it has been almost impossible to obtain supplies of tin plates from either Europe or America. Consequently the empty kerosine tin, which in the East is put to a variety of uses, ranging from a bucket to roofing sheets, has formed the only source of material for the local tinsmiths. The supply of kerosine tins is limited by the amount of kerosine imported in cases. The demand for the empty tins in India would send their price up to famine rates, unless exportation were restricted. Licenses, however, are issued for the export of tins filled with vegetable oils and other similar Ceylon produce.

#### RESTRICTIONS ON THE IMPORT AND EXPORT OF FOODSTUFFS.

20. During the first four years of the war this Island, which imports over three-quarters of the foodstuffs required for its population, had been in the happy position of ability to obtain practically all its requirements. In 1918, however, the failure of the monsoon and the depletion of the normal reserves in India, coupled with the difficulty in obtaining freight, led to considerable anxiety. By the end of that year the export of all rice from South India had been prohibited, and Ceylon was thrown entirely on Rangoon and Calcutta for its supplies. At the beginning of 1919 the position was therefore serious, and the crisis rapidly came to a head in April, when the Indian Government informed Ceylon that the exports from India would be curtailed to 140,000 tons for the first nine months of the year, as against 30,000 tons a month, the normal requirements of this Island. On urgent representations a further supply of 50,000 tons was allowed to be ear-marked for the use of estate labourers and other Indians resident in Ceylon. As the stock of rice at any one time in the Island never exceeds two months' supply, a system of food control and rationing of supplies had to be inaugurated at once.

21. As the Administration Report of the Food Controller deals with the whole position, it will only be necessary here to recount the situation as it affected this Department. Shortly after the appointment of the Food Controller, this Department drew up a scheme for the control of rice between the Customs and the Granaries and for its issues therefrom to the public, and at the same time it was arranged to place at his disposal the services of Mr. C. Suntheram, the Chief Appraiser of the Customs, whose work had proved invaluable during the critical weeks which witnessed the transition of the rice trade into the new system of regulation and control. At that period the Island was for some little time not far off starvation, and there was widespread distress before an Eastern population could be familiarized with the unaccustomed position consequent on rationing and restricted supplies. It was due largely to Mr. Suntheram's wide knowledge of the trade, his close touch and influence with the principal rice merchants, and his unsparing efforts in a time of great anxiety and heavy responsibility that a very difficult

situation was eventually overcome. In addition to Mr. Suntheram, I also temporarily lent the Chief Statistical Clerk, Mr. de Vos, and four other more junior clerks to form the staff of the "Deputy Controller, Chalmers Granaries," where they are still doing most useful work.

22. The import of rice from Calcutta and Rangoon was continued under the same system of telegraphic license issued to local merchants as had been in force the previous year; but ultimately, in September, it being considered desirable that the entire work should be placed in the hands of the Food Controller, the work of allotting and issuing the licenses was transferred to his Department. In order to supplement the supply from India, Government eventually succeeded in purchasing and importing about 27,000 tons of rice from Bangkok. This rice cost considerably more landed in Colombo than Indian rice. Government decided to sell it at a great reduction on the cost price, but, in order to meet part of the loss and to even up prices, imposed a cess of Rs. 3 per bag on Indian rice. This cess was collected by the Customs, along with the usual duties and dues, before the importers took delivery.

23. *Other Grains and Pulses used for Foodstuffs.*—The scarcity of rice led to an increased demand for other foodstuffs, but here, again, there was difficulty in obtaining supplies. The Indian Government had prohibited the export of nearly all grains, except from the port of Calcutta, and Ceylon merchants desiring to import from Calcutta were required to obtain licenses from the Indian authorities at that port. The supply of beans, however, from Burma was unrestricted by license, and considerable supplies were also obtained from Singapore and further East.

24. *Wheat Flour.*—In normal times flour is imported mainly from Bombay, but the supply from this source had been restricted to 500 tons per month since 1918. As, however, before the rice crisis the consumption of bread was confined mainly to the richer classes, this had proved sufficient, but soon as the scarcity of rice became pronounced and the price rose, the labouring classes began to turn to bread stuffs as a substitute. The price of flour had to be controlled, and at one period in July there was a prospect of a flour famine. The Indian Government, however, consented to increase our supply as the demand rose, and by the end of the year we were getting 2,000 tons a month from Bombay and Calcutta under a system of telegraphic licenses issued by this Department. This supply was supplemented by occasional consignments of Australian flour *via* Singapore, whenever freight could be obtained. No import license restrictions were placed on such flour, but the price was controlled.

25. *Chillies, Potatoes, and Onions.*—During the latter half of the year the supply of these commodities was restricted. They could only be obtained under a rationing system, on licenses issued by the Indian authorities, from Madras ports. Chillies were, however, obtained from further East, and there was no severe scarcity.

26. *Sugar.*—The principal source of our sugar supply is Java. Owing to difficulties in freight and the world shortage of supplies our imports were irregular, and prices fluctuated considerably. The prohibition on the re-export of this commodity, however, kept down fluctuations in price as well as conserved our local stocks, and there was never any severe shortage.

27. *Petrol.*—Supplies throughout the year were sufficient to meet requirements.

28. *Coal.*—The total quantity of coal imported during this year was 686,077 tons, exclusive of coal imported by Government and the Admiralty, which amounted to 256,810 tons. Though the quantity imported showed a very considerable increase over the imports of 1918, which only amounted to 218,350 tons, it was not possible to terminate the Coal Board, which held weekly meetings throughout the year. The export of coal from India was still subject to restrictions, but the imports, though large, were irregular. In October, owing to the lack of coal, considerable anxiety prevailed as to the possibility of bunkering steamers. Thanks, however, to the timely assistance of the British India Steam Navigation Co. and Messrs. Carson & Co., who are not members of the Coal Board, a very difficult situation was surmounted. Towards the end of the year large stocks of coal were received, and no further difficulties were experienced. The Coal Board proved its utility by co-ordinating the supply and distribution of coal.

29. From the foregoing paragraphs some idea can be gathered of the critical position in which the food supplies of the Colony have been placed last year. A constant finger on the pulse of supply and demand has had to be kept throughout the year on a large number of commodities. Scarcity in one foodstuff has led to increased demand on others, of which, in their turn, supplies have been strictly limited. Constant supervision in every direction has had to be maintained over local stocks and sources of oversea supply, and this work has fallen largely on the Customs. Special periodical returns have had to be furnished by the Statistical Department on the imports of many articles. The Appraisers' Department have been constantly called on for reports on the situation of the stocks in hand in the Pettah and on the state of trade. This was necessary, not only to ensure adequate supervision in actual cases of shortage, but to guard against possible demands on likely substitutes, and to ascertain beforehand how far such demands could be met by the ordinary importer, or whether action should be taken by Government to ensure, wherever possible, the maintenance or increase of imports from sources of supply in India and Australia. Work of this nature has made a heavy demand on the Customs Staff, and they have met it loyally and with willing efforts.

30. In the Administration Report for 1918 attention was drawn to the necessity for strengthening the Appraisers' Staff and the Statistical Branch, and of developing the Commercial Inquiry Bureau. Unfortunately there has been little opportunity for making progress in these directions, owing to the continued need for economy and the many calls on the time and energy of the existing staff. While on leave Mr. F. Bowes, C.M.G., sat as the representative of the Eastern Crown Colonies on an Imperial Commission which met to consider the Trade and Customs Statistics of the Empire, and on his return the task of re-forming our somewhat antiquated system of statistics will be taken up, along with the development of the Commercial Inquiry Bureau.

#### PREVENTIVE SERVICE.

31. The Preventive Staff at present consists of the Preventive Officer, 3 Assistants, 2 Tide Surveyors, 8 Tidewaiters, and 47 Watchers. Their duties are varied, both by night and by day. They examine the baggage of ships' crews and third class passengers from India and the Far East, search native vessels for prohibited and unmanifested goods, enforce the Plague Committee rules relating to permits, and examine lighters carrying cargo for export to see if they are provided with boatnotes. They also are on the watch generally to detect smuggling and other Customs irregularities. At night the staff provides a ring of watchers all along the harbour front and supervises coaling operations.

32. Since the shortage in the rice supply became acute in June, they have had heavy work in preventing and detecting the theft of rice, lying in the Customs premises, by the coolies at work in the harbour. Rice is a cargo which is particularly open to petty theft from the time it leaves the exporter's godown overseas until it reaches the retail consumer. At every stage of transport the bags leak or are "milked," and in every Customs warehouse used for the storage of rice there are quantities of loose sweepings, which are gathered up when the delivery of the rest of the consignment is completed. The temptation to pilfer these sweepings is great, and the aggregate loss would be very considerable if the offence were not constantly guarded against and severely punished when detected. Some idea of the extra work thrown on the Preventive Staff owing to this cause may be gathered from the returns of prosecutions initiated by the Preventive Staff for theft and criminal misappropriation. The monthly average for the first six months of the year was 10, for the last six months of the year 75.

33. Apart from the pilfering of rice, the commonest forms of offence are the smuggling of opium, ganja, and reconstructed stones. The importation of the first two articles is absolutely prohibited, while there is a heavy duty of Rs. 100 per carat on reconstructed stones.

34. The total number of cases instituted in court during the year was 571. Of the accused in these cases, 558 were sentenced to imprisonment, 45 were fined, and 10 were acquitted and discharged. The amount of fines paid into court was Rs. 232. Four cases were dealt with departmentally, and resulted in fines aggregating Rs. 475. Rewards for good work amounting to Rs. 960 were paid during the year to the subordinate staff.

35. Owing to the need for economy, the Preventive Staff have not yet been provided with a launch for their especial use, and no further progress has been made with the scheme for providing them with quarters in the immediate vicinity of the harbour.

#### PARCEL POST.

36. The Customs revenue derived from the parcel post continues to show a steady increase. The figures for the last five years are shown in the following table:—

| Year. | Number of Parcels. | Duty.<br>Rs.   c. | Year. | Number of Parcels. | Duty.<br>Rs.   c. |
|-------|--------------------|-------------------|-------|--------------------|-------------------|
| 1915  | .. 212,983         | .. 205,520 15     | 1918  | .. 208,374         | .. 305,711 45     |
| 1916  | .. 227,139         | .. 267,471 46     | 1919  | .. 216,399         | .. 392,346 35     |
| 1917  | .. 216,583         | .. 297,519 2      |       |                    |                   |

The total number of parcels received is less than in the year 1916; but shows a fair increase on last year's figures, while the revenue collected is far above all previous returns. The Customs Staff dealing with this work consists of the Chief Postal Appraiser, one Assistant Appraiser, and four taxers. There is no doubt that if the volume of parcel postal traffic continues to increase, both the present staff and the accommodation at their disposal will also have to be enlarged. Customs offences in the parcel post are by no means uncommon, and there is no doubt that many pass undetected, as it is impossible to open and examine more than a small percentage of the parcels received. Experience, however, has shown that offences are more frequent in certain classes of parcels than in others, and with this knowledge at their command, the appraisers probably detect a fairly large proportion of irregularities. The chief offences are under-valuation and infringements of the Merchandise Marks Ordinance. During the last year the total number of serious irregularities was 651, out of which 320 were cases of under-valuation, 290 offences against the Merchandise Marks Ordinance, 39 cases of misdescription, and 2 attempts to smuggle prohibited articles. In comparison with the total number of parcels received, the percentage of offences is not large, being almost exactly .03.

37. Registered letter packets and packets by ordinary letter post which are supposed to contain dutiable articles are dealt with separately; the former being sent over to the Customs Office for examination and delivery, while the latter are dealt with at the Post Office by the Postal Appraiser's Staff. The figures for these small articles are:—

| Year. | Registered Packets.<br>No. | Duty.<br>Rs. | Other Letter Packets.<br>No. | Duty.<br>Rs. |
|-------|----------------------------|--------------|------------------------------|--------------|
| 1916  | .. 4,676                   | .. 9,961     | .. 7,018                     | .. 785       |
| 1917  | .. 4,649                   | .. 9,073     | .. 8,322                     | .. 1,098     |
| 1918  | .. 5,392                   | .. 6,748     | .. 6,860                     | .. 1,290     |
| 1919  | .. 5,859                   | .. 19,490    | .. 6,461                     | .. 1,326     |

#### TALAIMANNAR ROUTE TO AND FROM INDIA.

38. During last year the goods service with India over this route suffered a severe set-back owing to the prohibitions placed by the Indian Government on the export of foodstuffs from South India. Not only was the export of rice wholly prohibited throughout the year, but during the last half of the year partial restrictions were placed on the exports of chillies, onions, and potatoes. The statement of duty collected on goods imported by this route since the service was opened is as follows:—

|       | Rs.          |      | Rs.          |
|-------|--------------|------|--------------|
| 1914* | .. 130,311   | 1917 | .. 1,364,989 |
| 1915  | .. 827,858   | 1918 | .. 1,152,590 |
| 1916  | .. 1,071,195 | 1919 | .. 426,437   |

\* 4½ months only.

39. It will be seen that there is a total decrease of Rs. 726,153 on the figures for last year. This is more than accounted for by the enforced drop in the duty on grain—Rs. 783,359, the total duty on grain for 1919 amounting to only Rs. 2,270. The duty also on sugar amounted to only Rs. 5,077—a decrease of Rs. 61,420. On the other hand, the duty on cotton goods—Rs 215,306—showed an increase of almost exactly 100 per cent.

40. The export trade by this route to India also declined during the year. The comparative figures are as follows :—

|      |    | Tons.  |      |    | Tons.  |
|------|----|--------|------|----|--------|
| 1915 | .. | 3,216  | 1918 | .. | 16,048 |
| 1916 | .. | 4,791  | 1919 | .. | 8,447  |
| 1917 | .. | 25,378 |      |    |        |

There is no doubt that in 1917 and 1918 the shortage of shipping in Colombo and the low prices realized for copra and coconuts led to the export of Ceylon produce over this route to India. Last year Ceylon exporters were able to obtain sufficient freight space direct from Colombo, and prices rose all round. Consequently they were no longer forced to dispose of their produce at low prices to Indian purchasers, or to ship indirectly *via* Talaimannar from Indian ports.

41. The popularity of the passenger service over this route has been well maintained, and there is little doubt, as was pointed out more fully in last year's Administration Report, that with the provision of more ample warehouse accommodation, which will facilitate the customing of all goods at Talaimannar, the traffic over this route in normal times is certain to show considerable development. It is hoped that allocations will be made in the Supply Bill for 1920-21 for the erection of additional quarters for the staff in the vicinity of the pier and additional warehouse accommodation.

42. *Public Works.*—The list of public works, immediately affecting the Customs, which were completed or were in progress during the year, includes no great undertaking, but is confined to a few minor improvements tending to greater comfort and efficiency.

(i.) The paved cartway between T 3 Warehouse and the old Export Warehouses was roofed over and enclosed with T 3 and E 3. This has given one large warehouse, with an additional accommodation of 8,097 square feet, which is now used for import cargo, and re-designated Nos. 11 and 12. The transshipment cargo formerly housed in T 3 has been transferred to the old Nos. 11 and 12 Warehouse, which is now re-labelled T 3.

(ii.) Warehouse No. 14 : This former Cask Warehouse has been converted into a Railway Receiving Office to provide facilities for the despatch by rail of small consignments of goods from the harbour.

(iii.) The Searcher's Office at the Baghdad gate was provided with a tiled roof and a verandah, in order to give better protection from sun and rain.

(iv.) Hydrants were installed for flushing the covered cartways running between the warehouses in the Delft and Fort areas.

(v.) The Landing Waiters' "rest" was removed to more suitable premises in the basement of the main buildings.

(vi.) Movable barriers were provided at the entrance gateways to the Baghdad area, in order to prevent accidents on the level railway crossing which lies right in front of the gates.

43. There is no doubt, in view of the expansion of traffic since the war, that considerable additional warehouse accommodation will have to be provided in the near future. The construction of the new Passenger Jetty, Customs House, which will complete the scheme of improvement on the York street front, is to be put in hand during 1920, so that during the next few years there is the promise of considerable activity.

#### MERCHANDISE MARKS ORDINANCE.

44. There were 247 cases of infringement of the Merchandise Marks Ordinance (No. 13 of 1888) during the year, and penalties amounting to Rs. 11,770 were imposed. The number of offences is almost the same as last year. The principal irregularities were :—

(i.) Failure to mark the length on piece goods ; this offence was most frequent on goods imported from the United Kingdom, which is our largest supplier.

(ii.) Failure to indicate the true country of origin on goods bearing inscriptions in the English language. The use of English words without a counter-indication of the true country of origin amounts to a false trade description. The majority of these offending goods were from Japan. There were no very striking cases of attempts on the part of foreign merchants to import articles more or less closely resembling well-known European brands, but there is a constant endeavour on the part of a certain class of Japanese traders to send over goods with a more or less English "get-up" and bearing inscriptions wholly in the English language, without any attempt to denote that they were really made in Japan.

#### COMMERCIAL TRAVELLERS.

45. Sixty-one commercial travellers made declarations during the year. Of these, 41 were British, 5 American, 6 Indian, 3 Australian, 3 French, 2 Swiss, and only 1 Japanese. It is interesting to compare these figures with those of 1918. In that year, out of 52 travellers, 30 were British, 11 Japanese, and 7 American. The commercial activities of Japan, and to a lesser extent of America, during the war would appear to be receding, now that the British manufacturer is once more able to expand his overseas trade. The entrance of the Indian and Australian houses is also indicative of expanding export interests.

46. From June 20 new rules, mainly on the lines of those in force in India, were introduced for dealing with travellers' samples. Where travellers bring in articles merely as samples and re-export them in their entirety, a refund is made of the whole duty paid. Where any articles are brought in for sale, a refund of only seven-eighths is made on those re-exported.

#### IMPORT OF DIAMONDS AND PRECIOUS STONES.

47. The duty paid on the import of diamonds and precious stones during 1919 shows a decrease on that of the previous year—Rs. 11,393, as against Rs. 15,328. The figures for 1919 are as follows :—

|   | Diamonds. |    | Other Precious Stones. |
|---|-----------|----|------------------------|
|   | Rs.       | c. | Rs. c.                 |
| Imported by travellers                    | 272,059   | 33 | 4,987 42               |
| Imported by local merchants               | 120,349   | 95 | 15,581 37              |
| Imported by local merchants (on approval) | 28,632    | 80 | 3,545 34               |

The value of diamonds re-exported without being sold was Rs. 241,600·13, and of other precious stones Rs. 3,545·34. These figures do not include small parcels of diamonds and precious stones for which import duty was recovered through the Postal authorities. The figures for these are :—

|                               | Value.<br>Rs. c. | Duty,<br>Rs. c. |
|-------------------------------|------------------|-----------------|
| Diamonds .. .. .              | 25,226 11 ..     | 1,891 97        |
| Other precious stones .. .. . | 69,134 4 ..      | 5,196 7         |

48. *Prize Ship Work.*—The accounts of the “Australia” were completed and sent to Government for transmission to the Admiralty. The Prize Court made order that the cargo of the “Tysla” should be sold and the proceeds paid into court. Steps have been taken to carry out these orders, and it is hoped that the sale will be completed before the close of the first quarter of 1920. A few minor questions regarding the cargoes of the “Steinturn” and “Moltkefels” were raised and satisfactorily disposed of.

49. *Wrecks.*—On July 9 the ss. “Grelcaldy,” 2,619 tons, with a cargo of wheat from Port Pirrie to Port Said, struck a submerged reef near the Maldives and stranded. She was re-floated and brought to Colombo. Repairs were effected in the dry dock, and the vessel eventually resumed her voyage. On the last day of the year the old pearl fishery brig, the “Rengasami Puravi,” was driven ashore in a gale on the sand spit opposite Dutch Bay and became a total wreck. On October 10 the “Mittau,” 2,878 tons, put into harbour with a fire in her hold, which was eventually extinguished. There were no other serious casualties.

#### CUSTOMS ADMINISTRATION IN THE OUTPORTS.

50. The following information is taken from the reports of the Collectors of Customs of the Southern, Northern, and Eastern Provinces :—

##### SOUTHERN PROVINCE.

###### Galle.

The total revenue collected at this port during the year 1919 amounted to Rs. 52,096·09, being an increase of Rs. 3,758·40 on that of the preceding year.

*Port Dues.*—The total collections for the year under this head amounted to Rs. 4,282·32, as compared with Rs. 1,664·60 the previous year, showing an increase of Rs. 2,617·72.

*Plumbago.*—No plumbago was shipped from this port during this or the preceding year.

*Other Exports.*—The total collection under Other Exports for the year was Rs. 44,317·87, as against Rs. 12,241·13 of the preceding year, showing an increase of Rs. 32,076·74. Besides this, duty to the amount of Rs. 10,117·85 was paid by demand draft on London, and was brought to account at Colombo. The increase under this head was due to large shipments of coconut oil effected during the year. It may be mentioned that 9,713 cwt. 1 qr. 6 lb. of coconut oil was shipped free of duty on Government account.

A statement is attached showing the revenue collected at this port during the years 1917, 1918, and 1919, together with a statement showing the quantities of the principal articles imported and exported during the same period :—

| Rubber ..          | lb.  | 93,451       | 61,190      | 326,193     |
| Tea ..             | lb.  | 47,525       | 1,480       | 38,968      |
| Citronella Oil ..  | lb.  | 140,294      | 56,910      | 237,746     |

Owing to the great scarcity of vessels calling at this port, the greater portion of the local products was sent by rail to Colombo for exportation; while grain, which is under control, and other foodstuffs for local consumption, were also brought in by rail.

The total number of overseas steamers which put in during the year was 14, of which 12 took cargo for London and 1 for New York, while the other returned to Calcutta in ballast after discharging 1,670 tons of coal at this port.

*Parcel Post.*—195 registered and ordinary parcel post packets from abroad to the approximate value of Rs. 4,946·60 were received and disposed of during the year.

*Hambantota.*

The total revenue collected at this port for the year 1919 amounts to Rs. 278·08, being a decrease of Rs. 120·11 on the revenue of the preceding year.

No ships, except the two Island steamers and coastwise dhonies, call at this port, and no goods are exported to ports overseas.

## NORTHERN PROVINCE.

*Jaffna Ports.*

The total revenue collected under all heads, including exports, at the several ports in this Province for 1919 amounted to Rs. 405,657·53, as against Rs. 447,794·83 in 1918, a decrease of Rs. 42,137·30.

*Imports.*—The revenue collected at the several ports in this Province on imports for 1919 amounted to Rs. 357,388·72, which shows a decrease of Rs. 13,630·15. As compared with 1918, the revenue under head "Grain" shows an increase of Rs. 31,347·99, due to more imports from Burma owing to prohibition of removal of paddy from other Ceylon centres. Revenue under head "Cotton Manufactures" shows a decrease of Rs. 26,233·46, as the bulk of the Indian cotton goods imported was brought by train *via* Talaimannar. The revenue under head "Sugar" shows a decrease of Rs. 11,446·38, due to the non-importation of sugar by the Ceylon Sugar Refineries, Ltd., during the year. The revenue under head "Other Goods" shows a decrease of Rs. 7,307·68, due to less importation of curry stuffs from India owing to Indian prohibition.

*Port Dues.*—The revenue under head "Port Dues" for 1919 amounted to Rs. 5,634·66, which shows an increase of Rs. 22·84 as compared with the previous year.

*Exports.*—The revenue under this head for 1919 amounted to Rs. 10,966·63, which shows a decrease of Rs. 27,785·30 (as compared with the preceding year) owing to less exports of copra and chanks during 1919.

*Shipping.*—The number of vessels that entered at ports in this Province during 1919 was 946 with a tonnage of 156,598 tons, a decrease of 385 vessels with a tonnage of 50,248 tons. The number of vessels that cleared at the ports in this Province during 1919 was 954 with a tonnage of 160,366 tons, a decrease of 420 vessels with a tonnage of 59,960 tons. The prohibition of certain exports from India is the chief cause of the decrease in the arrivals and departures of vessels.

*Miscellaneous.*—The principal imports are grain and other articles of food, cotton manufactures, cotton seed, rice bran, and earthenware. The principal exports are copra, chanks, coconut, tobacco, and skins. The total value of imports in 1919 was Rs. 4,021,066·82, as against Rs. 4,378,922·62 in 1918. The total value of exports was Rs. 1,875,449·06, as against Rs. 2,955,963·25 in 1918.

## EASTERN PROVINCE.

*Port of Batticaloa.*

The history of the port during 1919 was uneventful. There was very little overseas trade, and a considerable decrease on coastwise trade also, due to the falling off of trade with India.

*Arrivals and Departures.*—The total number of arrivals during the year was 144, against 172 in 1918. The total number of clearances issued for vessels to ports in India was 18, and the number of arrivals from India was 23.

*Imports and Exports.*—The principal imports from India are rice, cotton twist, unrefined sugar, jaggery, and curry stuffs. The chief exports to India are coconut, copra, coconut oil, and timber; but during the year under review no rice was imported owing to the restrictions made in India.

*Statistics.*—Statements are annexed showing—

A.—Revenue collected during 1918 and 1919.

B.—Paddy exported for the last five years.

C.—Import, export, revenue, and expenditure for the last five years.

## A.—Comparative Statement of Revenue collected at the Port of Batticaloa during the Calendar Years 1918 and 1919.

|                           | 1918.     | 1919.     | Increase. | Decrease. |

|                                | Rs. c.      | Rs. c.      | Rs. c.      | Rs. c.      | Rs. c.     |
| Revenue .. ..                  | 25,594 60   | 43,798 17   | 43,105 43   | 34,572 3    | 21,848 91  |
| Expenditure ..                 | 4,024 85    | 4,374 38    | 4,613 2     | 4,857 19    | 4,909 28   |

*Cause of Decrease.*—The general decrease of revenue is attributable to crippled condition of trade owing to the late war. The heaviest decrease under Grain is explained by the prohibition of the export of rice from India, which also caused a decrease under Warehouse Rent, Single. The decrease under Port Dues is due to the vessels having commuted at other ports.

*Wrecks.*—Schooner "S. V. Puravey," a coastwise sailing vessel from Point Pedro to Batticaloa, wrecked off the Vandaloo Point (25 miles, Batticaloa North). All hands were saved, and part of the vessel's riggings were salvaged, but in other respects the vessel was a total loss.

*Changes.*—The Sub-Collector of Customs of this port, Mr. A. V. Sela, was transferred to Colombo during the year, and Mr. A. E. Weerasinghe from the Head Office succeeded him.

## PART II.—TRADE RETURNS.

51. *General Remarks.*—The following table summarizes the value of Ceylon foreign trade, inclusive of Government transactions, during 1919, compared with the value for the preceding nine years :—

| Year. | Imports.    | Exports.                               |  |             | Total.      | Total of Imports and Exports (omitting Specie and the Value of Coal for use of Steamers). |
|-------|-------------|--|--|-------------|-------------|---|
|       |             | Produce and Manufacture of the Colony. | British, Foreign, and other Colonial Produce and Manufactures. |             |             |   |
|       |             | Rs.                                    | Rs.  | Rs.         |             |   |
| 1910  | 150,195,648 | 160,771,277                            | 5,700,330  | 166,471,607 | 316,667,255 |   |
| 1911  | 156,986,106 | 170,110,905                            | 10,416,054   | 180,526,959 | 337,513,065 |   |
| 1912  | 175,322,979 | 190,932,654                            | 8,022,248  | 198,954,902 | 374,277,881 |   |
| 1913  | 186,073,086 | 224,236,263                            | 8,750,691  | 232,986,954 | 419,060,040 |   |
| 1914  | 172,317,549 | 210,711,403                            | 7,652,443  | 218,363,846 | 390,681,395 |   |
| 1915  | 163,637,758 | 265,733,258                            | 7,642,729  | 273,375,987 | 437,013,745 |   |
| 1916  | 211,500,753 | 284,837,976                            | 12,667,929   | 297,505,905 | 509,006,658 |   |
| 1917  | 184,123,986 | 292,625,008                            | 11,535,449   | 304,160,457 | 488,284,443 |   |
| 1918  | 177,716,763 | 197,633,194                            | 13,692,140   | 211,325,334 | 389,042,097 |   |
| 1919  | 239,323,731 | 353,767,924                            | 13,286,855   | 367,054,779 | 606,378,510 |   |

The total value, exclusive of specie and coal for the use of steamers, was Rs. 606,378,510, which shows the remarkable increase of Rs. 217,336,413, or over 55 per cent., as compared with the value of the preceding year. The figures are also a record, surpassing those of the previous best year, 1916, by nearly 1,000 lakhs. This increase is largely accounted for by exports. The import figures for 1919 show an increase of 616 lakhs, and the exports 1,557 lakhs. The increases are no doubt largely due to greater shipping facilities. During the shortage of freight in 1918 large stocks of exports had accumulated in the Island, and also large orders for imports were hung up for want of freight space. By the end of 1919 these accumulations had been shipped, and the flow of both imports and exports had more nearly approached the normal. If the value of bunker coal is included the figures are still further increased, owing to the greater number of steamers calling for coal at Colombo during the year. The following table shows the value of Ceylon trade, inclusive of coal, during the last ten years :—

| Year. | Lakhs of Rs. | Year. | Lakhs of Rs. |
|-------|--------------|-------|--------------|
| 1910  | 3,321½       | 1915  | 4,495½       |
| 1911  | 3,523½       | 1916  | 5,212½       |
| 1912  | 3,886½       | 1917  | 4,983½       |
| 1913  | 4,329½       | 1918  | 4,065½       |
| 1914  | 4,022½       | 1919  | 6,392½       |

52. *Balance of Trade.*—The following statement shows the balance of trade during the last six years. These figures do not include specie and value of coal supplied to steamers :—

| Year. | Imports.    | Exports.    | Excess of Exports<br>over Imports. | Percentage<br>of Excess. |
|-------|-------------|-------------|------------------------------------|--------------------------|
|       | Rs.         | Rs.         | Rs.                                |                          |
| 1914  | 172,317,549 | 218,363,846 | 46,046,297                         | 26·7                     |
| 1915  | 163,637,758 | 273,375,987 | 109,738,229                        | 67·1                     |
| 1916  | 211,500,753 | 297,505,905 | 86,005,152                         | 40·7                     |
| 1917  | 184,123,986 | 304,160,457 | 120,036,471                        | 65·2                     |
| 1918  | 177,716,763 | 211,325,334 | 33,608,571                         | 18·9                     |
| 1919  | 239,323,731 | 367,054,779 | 127,731,048                        | 53·4                     |

The excess of exports over imports though much larger than in 1918 (53·4 per cent., as against 18·9 per cent.) is not so pronounced as in the years 1917 or 1915.

53. *Distribution of Trade.*—The distribution of Ceylon trade (exclusive of specie, value of coal supplied to steamers, and such rubber as is imported merely for purposes of export) between the United Kingdom, British Possessions, and Foreign Countries during the past ten years is shown in the following table :—

| Year. | Imports from     |                      |                    | Total Imports.   | Exports to       |                      |                    | Total Exports.   |
|-------|------------------|----------------------|--------------------|------------------|------------------|----------------------|--------------------|------------------|
|       | United Kingdom.  | British Possessions. | Foreign Countries. |                  | United Kingdom.  | British Possessions. | Foreign Countries. |                  |
|       | Lakhs of Rupees. | Lakhs of Rupees.     | Lakhs of Rupees.   | Lakhs of Rupees. | Lakhs of Rupees. | Lakhs of Rupees.     | Lakhs of Rupees.   | Lakhs of Rupees. |
| 1910  | 410½             | 852½                 | 187½               | 1,450½           | 774              | 224½                 | 666½               | 1,664½           |
| 1911  | 421½             | 859½                 | 208½               | 1,489½           | 873½             | 240                  | 691½               | 1,805½           |
| 1912  | 504½             | 943½                 | 255                | 1,702½           | 977½             | 264                  | 748                | 1,989½           |
| 1913  | 543½             | 981½                 | 280½               | 1,805½           | 1,056            | 283½                 | 990½               | 2,329½           |
| 1914  | 492½             | 916½                 | 258½               | 1,667½           | 1,155½           | 294½                 | 733½               | 2,183½           |
| 1915  | 354½             | 992½                 | 240                | 1,586½           | 1,470½           | 384½                 | 879                | 2,733½           |
| 1916  | 467½             | 1,218½               | 346                | 2,032½           | 1,317            | 375                  | 1,283              | 2,975            |
| 1917  | 326              | 1,174½               | 278½               | 1,779½           | 1,214½           | 550                  | 1,276½             | 3,041½           |
| 1918  | 286½             | 1,154½               | 272½               | 1,713            | 910½             | 700½                 | 502½               | 2,113½           |
| 1919  | 339              | 1,482                | 515½               | 2,336½           | 1,546½           | 536½                 | 1,587½             | 3,670½           |

The figures for Foreign Countries show a remarkable increase, due probably to the removal of all restrictions and the need for raw material.

The percentages of trade during the last four years are as follows :—

|  | 1916.<br>Per Cent. | 1917.<br>Per Cent. | 1918.<br>Per Cent. | 1919.<br>Per Cent. |
|--|--------------------|--------------------|--------------------|--------------------|

| Percentage of export trade of Ceylon taken by— |                    |                    |                    |                    |
| United Kingdom ..                              | 44·28              | 39·94              | 43·07              | 42·13              |
| British Possessions ..                         | 12·6               | 18·09              | 33·14              | 14·62              |
| Foreign Countries ..                           | 43·12              | 41·97              | 23·79              | 43·25              |
|  | 100                | 100                | 100                | 100                |

From the above two tables it will be seen that the value of imports is the highest on record. At the same time it must be remembered that owing to the great increase in prices, the volume of trade in many imports is less than in the years immediately preceding the war. A glance at the percentages of trade during the last few years is also instructive, as showing the fluctuations caused by the lack of shipping and the practical closure of many markets. The total trade with the United Kingdom has not varied greatly, being 31·39 per cent., as compared with 35·64 in 1916. The trade with British Possessions in 1918 rose to an abnormal degree (48·48 per cent.), as owing to the lack of communication with Foreign Countries we were thrown largely on to British India and Australia, while trade with Foreign Countries showed a corresponding drop to 20·25 per cent. During 1919 more normal conditions prevailed, and these percentages showed a more even distribution, being 33·61 per cent. with British Possessions and 35 per cent. with Foreign Countries.

54. Turning to the import trade, however, the fluctuations take a different course. Imports from the United Kingdom have shown a steady decrease since 1914, when they accounted for 23 per cent. of the total, to 1919, when they fell to 14·51 per cent. Imports from British Possessions rose from 59·97 per cent. in 1914 to 67·4 per cent. in 1918, dropping a little in 1919 to 63·43 per cent. Imports from Foreign Countries, which in 1916 totalled 17·02 per cent., fell in 1918 to 15·89 per cent., but rose in 1919 to 22·06 per cent.

55. The percentage of our export trade taken by the United Kingdom has shown a slight decline, from 44·28 per cent. in 1916 to 42·13 per cent. in 1919. The worst year was 1917, when it totalled 39·94 per cent. Exports taken by British Possessions have dropped from the remarkable position which they occupied in 1918, when they accounted for 33·14 per cent. For 1919 they stand at 14·62 per cent., as compared with 12·6 per cent. in 1916 and 18·09 per cent. in 1917. Exports to Foreign Countries show a corresponding recovery, from 23·79 per cent. in 1918 and stand at 43·25 per cent., as compared with 43·12 per cent. in 1916.

56. The following table shows the distribution of Ceylon trade among the principal countries during the last three years, and the percentage of trade absorbed by each :—

| Country.                                |         | 1917.      |           | 1918.     |           | 1919.      |           |

(The figures in brackets indicate the position of the countries in 1918.)

The most noticeable features are the improved positions of various Foreign Countries and the relative drop of several British Possessions. The United States of America have once more taken second place. During 1918 her trade fell to £2,951,314, as against £7,181,720 in 1917. This year it has risen again to £11,400,939. The abnormal drop in 1918 was solely due to lack of freight and trade restrictions, while the tremendous rise during the year under review is partly due to the shipment of produce, which could not be got away the previous year. France has risen from twelfth to sixth place. Siam from thirty-third to seventh, the rise being due to abnormal shipments of rice to supplement the restrictions on the supply from India. Holland has advanced from thirtieth to fifteenth on the list, while Belgium ninth, Denmark fourteenth, and Persia twentieth have again found a place, now that the restrictions imposed by the war are disappearing. On the other hand, Japan has dropped two places, from sixth to eighth, and Italy six places, from twentieth to twenty-sixth. The trade with certain British Possessions show the following notable diminutions:—British India from second to third place; Canada fifth to eleventh; New South Wales seventh to thirteenth; Victoria ninth to seventeenth; Natal tenth to eighteenth; Hong Kong twenty-first to twenty-seventh; Cape Colony seventeenth to twenty-ninth; and New Zealand eighteenth to thirtieth. Most of these Colonies owed their former positions to the abnormal conditions created during the war, and are now dropping back into their normal places.

### IMPORTS.

57. *General Summary.*—The value of imports during the last five years is shown in the following table:—

| Imports.                   | 1915.         | 1916.         | 1917.         | 1918.         | 1919.          | Increase or<br>Decrease as<br>compared with<br>1918. |
|----------------------------|---------------|---------------|---------------|---------------|----------------|--|
|                            | Rs.           | Rs.           | Rs.           | Rs.           | Rs.            |  |
| I.—(1) Live Stock ..       | 609,352 ..    | 1,021,232 ..  | 982,049 ..    | 860,970 ..    | 1,064,115 ..   | Increase 23½%  |
| (2) Food and Drink ..      | 79,435,485 .. | 93,797,298 .. | 87,923,785 .. | 78,974,491 .. | 104,793,946 .. | Do. 32½%   |
| (3) Narcotics ..           | 803,021 ..    | 1,230,309 ..  | 1,173,698 ..  | 1,483,804 ..  | 639,386 ..     | Decrease 57%   |
| II.—Raw Materials ..       | 33,786,083 .. | 44,704,858 .. | 32,357,082 .. | 37,601,490 .. | 65,325,670 ..  | Increase 73½%  |
| III.—Manufactured Articles | 48,618,513 .. | 68,970,827 .. | 61,589,872 .. | 58,796,008 .. | 67,500,614 ..  | Do. 14½%   |
| IV.—Bullion and Coin ..    | 5,196,584 ..  | 10,306,376 .. | 1,119,735 ..  | 19,920 ..     | 3,395,959 ..   | Do. is considerable                                  |
| Total ..                   | 168,446,038   | 220,030,900   | 185,146,221   | 177,736,683   | 242,719,690    | Increase 36½%  |

Removal of restrictions on trade, improved conditions in the shipping industry, and increasing prosperity account for the increase in imports, but the increase in value in many cases can be accounted for by the increase in cost price, and does not denote a greater volume of trade. For instance, under the head of Food and Drink, the quantity of rice imported showed a decrease of over a million cwt., or 16 per cent. in weight, though the value rose by over thirteen million rupees, or 25 per cent. The decrease in narcotics—i.e., tobacco and snuff—is due to smaller shipments, the requirements of the Island being largely met from stocks already in bond. The increase in raw material is mainly due to larger imports of coal from British India. The increase under the head of Bullion and Coin is due to the large importation of American gold dollars, which were subsequently exported to French India.

58. *Distribution of Trade.*—The following table shows the distribution of imports classified under the four main heads among the United Kingdom, British Possessions, and Foreign Countries for 1918 and 1919:—

| 1918.                      | Value of Imports (in Lakhs of Rupees) from |                      |                    |
|----------------------------|--|----------------------|--------------------|
|                            | United Kingdom.                            | British Possessions. | Foreign Countries. |
| I.—(1) Live Stock ..       | ..   | 9                    | ..                 |
| (2) Food and Drink ..      | 15   | 728                  | 47                 |
| (3) Narcotics ..           | 13   | 1                    | ..                 |

(The figures in brackets show the position of the countries in 1918.)

The noticeable increases in the above table are as follows :—Siam has risen from twenty-first place to fourth, owing to the special imports of rice. Persia rises from a negligible quantity to twelfth place, owing to largely increased shipments of kerosine oil in bulk. Mozambique attains sixteenth place through consignments of coal shipped from that source. A falling off has occurred in the position of Japan, whose percentage has dropped from 5·14 to 3·50; the causes of this are commented upon below. Natal drops from the seventh to tenth place, owing to the decreased import of coal from this source; Sumatra from the eighth to thirteenth, owing to a decrease in the import of kerosine oil. Though France has dropped from twelfth to eighteenth place, the relative percentage of imports from this country have advanced from ·43 to ·66 per cent. Her trade has only suffered relatively in comparison with greater increases by other competitors. Norway, however, has dropped from seventeenth to twenty-seventh place, owing to a decrease in shipments of paper, and Sweden from fifteenth to twenty-eighth place.

60. Comment was made in the report for 1918 on the development of Japanese trade during the war. A return to more normal conditions has shown that a large proportion of this development was due purely to the difficulty of obtaining goods from other markets, and the percentage of our import trade with Japan has now dropped from 5·14 per cent. of the total import trade of the Colony in 1918 to 3·50 per cent. in the year under review. It is still, however, high as compared with the average of the three years 1912-14, which was only 1·97.

The following table shows the fluctuations of our imports from Japan since 1913 :—

It will be seen that out of the principal commodities in which she had gained ground during the war, she is again losing it in beer and ale, biscuits, manures, made up apparel, copperware, hardware, acids, and cement. On the other hand, she is maintaining or improving her position as regards certain articles among which her products have a more favourable reputation, or are more suited to the local needs, such as silk and satin goods, chinaware, glassware, haberdashery, and perfumery.

61. A similar table is given below of the imports from her most important foreign rival, the United States of America :—

Statement showing the Value of following Imports from United States of America during the Years 1913–1919.

\* Included under nails and rivets.

In the three years prior to the war the percentage of American imports averaged 1·25. It has since steadily risen to 2·99 per cent. in 1917, 3·17 per cent. in 1918, and 3·36 per cent. in 1919. Before the war the main imports from this source were tinned fish, motor cars, hardware, and galvanized barbed wire. The trade in tinned fish has largely declined, but the trade in hardware showed a remarkable rise in 1919, while the import of motor cars has nearly doubled. She is now also sending considerable quantities of painters' colours, printing paper, toilet soap, galvanized iron sheets, hoop iron, and nails.

There is no doubt that the American iron and steel trades are making steady endeavours to extend their market in Ceylon, and may prove serious competitors with English manufacturers.

#### NOTES ON THE PRINCIPAL IMPORTS.

62. *Cotton.*—The value of cotton goods imported into Ceylon in 1919 has slightly decreased, being Rs. 18,488,565, as against Rs. 18,651,604 in 1918. The quantities imported owing to higher prices in many cases show an appreciable falling off. The imports of lace and net show a decrease in quantity of nearly 40 per cent.; the decrease in general piece goods is not, however, so marked, and amounts to almost exactly 10 per cent. The imports of raw cotton show a considerable decline in value, but not in quantity. The export of cotton goods is still prohibited, except under license.

The following table gives the quantities and values of cotton goods imported during the last five years :—

|                 |         | Quantity imported. |            |            |            |            |

63. The distribution of cotton goods as regards sources of supply is shown in the following table. The imports from the United Kingdom has decreased by nearly 17 lakhs. Imports from British Possessions (which in this case practically means British India) show an increase of 13 lakhs, and those from Foreign Countries an increase of nearly 2 lakhs:—

| From                | 1915.<br>Rs. | 1916.<br>Rs. | 1917.<br>Rs. | 1918.<br>Rs. | 1919.<br>Rs. |
|---------------------|--------------|--------------|--------------|--------------|--------------|
| United Kingdom      | 5,720,840    | 8,061,806    | 9,275,996    | 10,592,692   | 8,908,280    |
| British Possessions | 2,806,612    | 3,612,869    | 4,453,786    | 7,107,792    | 8,440,503    |
| Foreign Countries   | 956,222      | 1,283,705    | 1,332,242    | 951,120      | 1,139,782    |
| Total               | 9,483,674    | 12,958,380   | 15,062,024   | 18,651,604   | 18,488,565   |

64. *Silk Manufactures.*—The imports of silk goods have shown a remarkable increase in value, caused chiefly by a great increase in the import of silk and satin broad stuffs.

The following table gives details of various kinds of silk manufactures imported in 1918 and 1919:—

| Description.                | Value of Imports<br>in 1918.<br>Rs. | Value of Imports<br>in 1919.<br>Rs. |
|-----------------------------|-------------------------------------|-------------------------------------|
| Broad stuffs                | 556,949                             | 920,046                             |
| Handkerchiefs, scarves, &c. | 37,553                              | 84,547                              |
| Lace                        | 10,102                              | 2,425                               |
| Ribbons                     | 25,670                              | 42,254                              |
| Velvet                      | 2,340                               | 3,595                               |
| Other                       | 20,470                              | 56,118                              |
| Total                       | 653,084                             | 1,108,985                           |

65. The following table shows the value of silk goods imported from the principal countries for the years 1918 and 1919:—

| From                      | 1918.<br>Rs. | 1919.<br>Rs. |
|---------------------------|--------------|--------------|
| Japan                     | 414,443      | 584,035      |
| France                    | 86,032       | 196,757      |
| United Kingdom            | 49,417       | 74,501       |
| British India             | 30,749       | 73,146       |
| Hong Kong                 | 16,927       | 71,830       |
| China                     | 28,485       | 59,638       |
| Switzerland               | 25,342       | 29,495       |
| Straits Settlements       | 434          | 11,918       |
| Italy                     | —            | 6,363        |
| United States of America  | 1,251        | 1,014        |
| Burma                     | —            | 205          |
| India (excluding British) | —            | 80           |
| Total                     | 653,080      | 1,108,982    |

66. *Woollen Goods.*—The following table gives the description and value of woollen goods imported in 1918 and 1919 :—

| Description.             | Value of Imports<br>in 1918.<br>Rs. | Value of Imports<br>in 1919.<br>Rs. |
|--------------------------|-------------------------------------|-------------------------------------|
| Berlin .. .. .           | 1,157                               | 832                                 |
| Blankets .. .. .         | 130,406                             | 148,071                             |
| Carpets .. .. .          | 12,037                              | 36,551                              |
| Flannel .. .. .          | 42,697                              | 30,248                              |
| Cloth and stuffs .. .. . | 163,758                             | 61,271                              |
| Other .. .. .            | 71,797                              | 40,831                              |
| Total .. .. .            | 421,852                             | 317,804                             |

The total shows a distinct decrease in value as compared with 1918. This is due to the great decline in the import of cloth and stuffs, which has been checked by the great difficulty in obtaining supplies, and also by the great increase in price. The total value of these imports for the last five years is as follows :—

|              | Rs.     |
|--------------|---------|
| 1915 .. .. . | 299,489 |
| 1916 .. .. . | 491,222 |
| 1917 .. .. . | 440,190 |
| 1918 .. .. . | 421,852 |
| 1919 .. .. . | 317,804 |

67. *Manure.*—The import of manure, which fell to a very low figure in 1917, has maintained the improvement which began in 1918. The figures for the year under review show a distinct increase in quantity and a very marked increase in value over those for 1918. They, however, have not yet reached the level attained in 1916. The total quantity and value of these imports during the last six years are shown in the following table :—

| Year.        | Quantity.<br>Cwt. | Value.<br>Rs. |
|--------------|-------------------|---------------|
| 1914 .. .. . | 1,237,761         | 6,107,607     |
| 1915 .. .. . | 1,630,026         | 8,005,529     |
| 1916 .. .. . | 2,028,793         | 11,221,778    |
| 1917 .. .. . | 933,594           | 5,019,728     |
| 1918 .. .. . | 1,307,676         | 6,537,263     |
| 1919 .. .. . | 1,552,192         | 10,110,972    |

68. The following table gives the details of the various kinds of manure, the value, and principal country from which supplies are shipped. The largest supplier is British India :—

| Manures.                    | 1918.<br>Quantity<br>imported.<br>Cwt. | Value of<br>Imports.<br>Rs. | 1919.<br>Quantity<br>imported.<br>Cwt. | Value of<br>Imports.<br>Rs. | Principal Country supplying<br>the Article.              |

69. *Metals and Metalware.*—The imports of metals and metalware show a considerable improvement over the figures for 1917 and 1918, though they have not as yet regained the level attained in 1916. The nett increase over last year is Rs. 1,278,975. The largest increases are in galvanized iron, hardware, cast steel, iron nails and rivets, steelware, iron bars, and leadware. There were, however, noticeable decreases in hoop iron, tin slabs, and galvanized barbed wire. The two following tables show the value of these goods imported during the last two years and the distribution as regards sources of supply for 1919. The United Kingdom has regained the first place, which she lost in 1918, the total imports from this source being of the value of Rs. 4,010,079, as against Rs. 2,648,538 in 1918. Burma takes the second place on the list, owing to large shipments of pig lead, of which she is practically our

sole supplier. The United States has dropped to third place, largely owing to a reduction of 50 per cent. in supplies of hoop iron. The principal imports from the United States of America under the head of Metals and Metalware were hoop iron, hardware, galvanized iron sheets, nails, and rivets :—

70. *Spirits and Wines.*—The importation of spirits again showed a marked decline, being only 67,046 gallons, as against 81,624 in 1918 and 397,045 gallons in 1913. Brandy and gin showed slight increases, which were more than counterbalanced by a drop of 14,000 gallons in the importation of whisky.

The following tables show the total quantities imported for the last seven years, and the classified imports for 1918 and 1919 :—

| Spirits. |                   |         |                   |

71. There was a slight increase in the importation of wines, due largely to larger shipments of port wine. The following table gives details of the importations in 1918 and 1919 :—

| Wines.                  |  |                             |                 |  |                             |                 |  |

72. Rice.—The importation of rice was severely restricted, owing to circumstances on which I have already commented in the earlier part of this report, and fell from 6,472,152 cwt. in 1918 to 5,342,575 cwt. The following table shows the quantities imported from the various sources of supply during the last four years :—

| Country                        | 1916.<br>Cwt. | 1917.<br>Cwt. | 1918.<br>Cwt. | 1919.<br>Cwt. |

|                                | 8,073,964     | 7,754,121     | 6,472,152     | 5,342,575     |

The imports from India proper were cut off by the Indian Government early in the year, and fell from 3,618,640 cwt. to 862,355 cwt. A fixed quantity was allotted to us from Burma, thus raising our usual imports from that source, and the Ceylon Government obtained a further supply from Siam, which heretofore had not sent us any large quantities.

73. Sugar.—The import of sugar rose slightly in quantity, in spite of greatly enhanced prices. The market during the year showed considerable fluctuations, which were to some extent checked by the prohibition of export, but at no time was there any real shortage, though once or twice during the year stocks were low. The following table shows the quantities imported and the sources of supply

during 1918 and 1919. The most noticeable feature was the great decrease in shipments from the Straits and the corresponding increase in direct shipments from Java :—

|                          | 1918.             |                  |               |                 | 1919.             |                  |               |                 |

74. *Coal.*—The importation of coal, which had suffered from severe restrictions in 1917 and 1918 owing to the scarcity of tonnage and the difficulty of securing constant supplies from India, rose to a more satisfactory position on the termination of hostilities. More adequate supplies were obtained from India, the total imports from this source rising to 488,696 tons, as compared with 71,044 tons in 1918. In consequence the steamers which call at this port were able to obtain a more normal supply of bunker coal. The Coal Board which was formed in 1918 to control the import and distribution of coal still continued, however, to exercise its functions throughout the year.

75. The following table shows the quantities and sources of supply during the last four years. The most interesting feature, apart from the increase in supplies from India already noted, is the increase in supplies from African and Australian sources :—

| Country of Production.       | 1916.<br>Tons. | 1917.<br>Tons. | 1918.<br>Tons. | 1919.<br>Tons. |

| Total ..                     | 575,677        | 311,696        | 218,350        | 686,077        |

76. The imports of Admiralty and Ceylon Government coal during 1919 were 206,765 and 50,045 tons, respectively, as compared with 188,969 and 55,605 tons in 1918. The following table shows imports and exports of coal (exclusive of Admiralty and Ceylon Government coal) during the last ten years :—

| Year.   | Coal Imports.<br>Tons. | Coal Exports (including<br>Quantity supplied for<br>use of Steamers).<br>Tons. | Year.   | Coal Imports.<br>Tons. | Coal Exports (including<br>Quantity supplied for<br>use of Steamers).<br>Tons. |
|---------|------------------------|--|---------|------------------------|--|
| 1910 .. | 801,379                | 774,782  | 1915 .. | 641,586                | 626,815  |
| 1911 .. | 665,047                | 741,657  | 1916 .. | 575,677                | 613,779  |
| 1912 .. | 885,661                | 719,282  | 1917 .. | 311,696                | 304,229  |
| 1913 .. | 744,529                | 694,652  | 1918 .. | 218,350                | 306,655  |
| 1914 .. | 598,957                | 576,653  | 1919 .. | 686,077                | 657,991  |

77. *Kerosine Oil and Petrol.*—The imports of kerosine oil have recovered from the temporary decline enforced by lack of freight space during 1917 and 1918 and stand for the year at 5,290,046 gallons, a total which shows an increase of nearly 1,700,000 over last year's figures, and which surpasses all previous figures, except those for the year 1915. The imports of case oil show a slight decline; the total quantity imported was 681,716 gallons, as compared with 706,825 gallons in 1918. These figures are still much

below normal. The shortage is probably caused by the difficulty in obtaining tins. The imports of bulk oil, on the other hand, have risen from 2,905,870 gallons to 4,608,330 gallons, and the sources of supply show the most remarkable changes. Persia, which in 1918 dropped entirely out of the local market, in 1919 sent us over three-quarters of our total supply, while the United States of America, which had also sent no oil in 1918, supplied nearly half a million gallons. Imports from Sumatra dropped from nearly two million to just over half a million gallons. The following statements show the total quantity of oil imported during the last ten years, and the sources of supply for the last three years of bulk and case oil, respectively :—

| Year.   | Gallons.  | Year.   | Gallons.  |
|---------|-----------|---------|-----------|
| 1910 .. | 4,667,474 | 1915 .. | 5,675,959 |
| 1911 .. | 4,427,074 | 1916 .. | 4,960,786 |
| 1912 .. | 4,917,895 | 1917 .. | 4,288,547 |
| 1913 .. | 4,693,366 | 1918 .. | 3,612,695 |
| 1914 .. | 5,186,153 | 1919 .. | 5,290,046 |

| Countries.                    | 1917.            | 1918.            | 1919.            |

78. There was again a slight decrease in the amount of duty refunded on account of the rebate on kerosine oil and petrol. Since September, 1916, this rebate has been restricted to cases in which oil or petrol is used as a source of motive power in stationary oil engines and in engines of vehicles employed in the transport of goods. The following are the comparative figures for the last three years :—

|                 | 1917.           | 1918.            | 1919.            |
|-----------------|-----------------|------------------|------------------|
|                 | Rs. c.          | Rs. c.           | Rs. c.           |
| Kerosine oil .. | 39,750 28       | 28,644 39        | 27,916 84        |
| Petrol ..       | 41,274 78       | 31,550 84        | 27,401 89        |
| Total ..        | <u>81,025 6</u> | <u>60,195 23</u> | <u>55,318 73</u> |

79. *Petrol.*—The imports of petrol show a great increase of 495,389 gallons over the figures for 1918, and of 291,691 gallons over those for 1917. Supplies throughout the year came in satisfactorily to meet the increasing demands of motor vehicles. The sources of supply show the same great changes as in the case of kerosine oil. Shipments from Borneo, which used to send the bulk of our supply, practically ceased, and almost the whole of the supply imported during 1919 was shipped from Sumatra.

The following table shows the quantities and sources of supply during the last four years :—

| Countries.                    | 1916.          | 1917.          | 1918.          | 1919.            |

80. *Liquid Fuel.*—The imports of liquid fuel for 1919 show a large increase, being 2,972,240 gallons over the quantity imported in 1918, and very nearly double the quantity imported in 1915. Of the total quantity imported, 2,533,408 gallons were re-shipped as cargo in the ballast tanks of steamers. This quantity, however, is over two million gallons less than the amount so shipped in 1919. There is no doubt that with the increase in number of steamers which burn oil fuel, the import of liquid fuel for bunkering will continue to expand in the near future. The following table shows the quantities and sources of supply from 1915–1919 :—

| Country of Production.        | 1915.            | 1916.            | 1917.            | 1918.             | 1919.             |

81. *Tobacco, Cigars, and Cigarettes.*—There was a heavy decline in the import of tobacco, chiefly cigarettes, during the year. The import of cigarettes fell from 338,921 lb. to 144,971 lb. The decrease in the import of cigars is more apparent than real, as “beedies,” which had previously been classed under the head of Cigars, are now classified as cigarettes. The total import of beedies in 1919 amounted to nearly 17,000 lb. The decrease in the importation of cigarettes does not point to a decreased consumption. There were large stocks of cigarettes in bond at the close of 1918, which have since been cleared for home consumption. The quantities thus cleared in 1919 amount to 303,142 lb., as against 264,796 lb. in 1918. The following table shows the import figures for the last five years :—

| Year. | Cigars.<br>lb. | Cigarettes.<br>lb. | Manufactured<br>Tobacco.<br>lb. | Total.<br>lb. |
|-------|----------------|--------------------|---------------------------------|---------------|
| 1915  | 22,890         | 214,840            | 17,327                          | 255,057       |
| 1916  | 31,019         | 329,105            | 26,528                          | 386,652       |
| 1917  | 36,418         | 313,761            | 15,229                          | 365,408       |
| 1918  | 33,990         | 338,921            | 16,499                          | 389,410       |
| 1919  | 11,820*        | 161,796†           | 11,296                          | 168,087       |

\* This figure is exclusive of “beedy” cigarettes.

† Inclusive of “beedy” cigarettes.

The chief sources of supply are :—

|                          | Cigars.<br>lb. | Cigarettes.<br>lb. | Manufactured<br>Tobacco.<br>lb. |
|--------------------------|----------------|--------------------|---------------------------------|
| United Kingdom           | —              | 140,924            | 10,211                          |

| United States of America | —              | —                  | 625                             |

82. *Motor Cars.*—In consequence of the improved shipping situation, the prohibitive duty of 100 per cent., which was imposed on February 12, 1917, was reduced in March, 1919, to 7½ per cent., and from that date cars were imported in considerable numbers. Owing, however, to the difficulty in placing orders, the demand still considerably exceeds the supply. Nearly all the cars imported during the year were shipped from the United States of America; these shipments, however, include a considerable number of cars of American design, but actually manufactured in Canada. The following table gives the imports for the last five years :—

Imports of Motor Cars, excluding Motor Lorries and Chassis, 1915-19.

| Country of Production.   | 1915. |           | 1916. |           | 1917. |         | 1918. |        | 1919. |         |

83. *Provisions and Oilmanstores.*—During the last two years of the war the scarcity of tonnage and restrictions on the exports of foodstuffs severely reduced the importation of provisions and oilmanstores from the United Kingdom. The question of tonnage is no longer an acute consideration, but shortage of foodstuffs still exercises considerable influence, and our supplies of many articles remain much below normal. The following table shows the effect of the war on these importations, and in many instances the partial recovery since the war, especially in imports from the United Kingdom. We are still, however, mainly restricted to “substituted markets” for such articles as bacon, ham, and cheese, while tinned milk, which in pre-war years used to be imported almost solely from Switzerland and Norway *via* the United Kingdom, now comes from the United States of America and Australia in almost equal quantities :—

## EXPORTS.

84. The year under review witnessed a boom in the export trade of the Island, the total value of our exports rising to Rs. 399,957,029, an increase of 169 million rupees as compared with 1918, and of 83 million rupees over the previous record in 1917. The increase was partly due to the rise in price caused by the exceptional demand for several of our staple products, also to some extent to the increase in the tonnage available and the re-opening of former foreign markets as trade restrictions were one by one removed during the year. Large stocks, especially of rubber, which had accumulated during the previous year, were gradually cleared off until by the end of the year the shipments of exports once more reached the normal position.

85. The following statement gives the total value of the export trade since 1914 :—

|                          | 1914.<br>Rs. | 1915.<br>Rs. | 1916.<br>Rs. | 1917.<br>Rs. | 1918.<br>Rs. | 1919.<br>Rs. |

The most noticeable features are the remarkable increase in the exports to Foreign Countries, which rose from 46 million rupees in 1918 to 152 million in 1919, and the actual decrease in shipments to British Possessions, which fell from 62 million to 46 million, owing chiefly to large drops in the export of rubber and tea. The United Kingdom retains first place on the list, but her percentage has slightly decreased. The percentage of exports to the United States of America shows a phenomenal rise from 17·78 to 33·52. British India is third with a decreased percentage. France with a practically stationary percentage has risen from eighth to fourth place. Belgium, Denmark, and Holland re-appear on the list, as do Spain and Sweden lower down, while Norway rises from twenty-seventh to twelfth. The exceptions are Japan, which has fallen from twelfth to nineteenth, and South America from eleventh to twentieth. The British Possessions have almost uniformly come down in the scale. Canada falls from fourth to sixth place, and her percentage from 5·85 to 1·78, while exports to Victoria, Cape Colony, and New Zealand show a steady decline.

89. The following table shows the variations in the average prices of Ceylon's staple exports during the past five years. Despite the steady rise in the exchange value of the rupee itself, the rupee prices of all our staple exports have shown no falling off as compared with 1918, except in the case of

plumbago. The prices of cacao, bristle fibre, coconut oil, cinnamon, and copra have substantially risen :—

#### NOTES ON THE PRINCIPAL EXPORTS.

91. *Rubber.*—The exports of rubber rose from 46,289,969 lb. in 1918 to 100,822,149 lb. in 1919, an increase of over 100 per cent. The value of the rubber exported was Rs. 132,071,409, as compared with Rs. 62,252,430 in the previous year. This phenomenal increase was partly due to shipments of accumulated stocks as soon as the tonnage position improved and the restrictions on export were removed. The most noticeable feature was the increase of shipments to Foreign Countries, the value of such exports rising from Rs. 24,795,828 to Rs. 88,500,898. The largest increases were to the United States of America, which took half of our total exports, and to the United Kingdom. The greatest decrease occurred in shipments to Canada, which fell from 5,526,218 lb. to 707,029 lb. Probably, however, this decrease is more apparent than real. In 1918 the export of rubber to the United States of America was restricted, and Canada obtained her supplies by direct importation. In 1919, when the export restrictions to the United States of America were removed, Canada would obtain most of her requirements from shipments made primarily to the United States of America. Towards the end of the year the industry was somewhat adversely affected by the great rise in the exchange value of the rupee.

92. The following table shows the distribution of Ceylon-grown rubber :—

|  | 1917.<br>lb. | 1918.<br>lb. | 1919.<br>lb. |

| Italy ..                               | 548,127      | —            | —            |
| India (excluding British) ..           | —            | —            | 44,800       |
| Japan ..                               | 201,642      | 408,899      | 251,707      |
| Russia in Asia ..                      | 229,673      | —            | —            |
| South America ..                       | 19,066       | —            | —            |
| Spain ..                               | —            | —            | 25           |
| United States of America ..            | 32,791,537   | 17,207,969   | 66,331,559   |
| Total ..                               | 72,329,290   | 46,289,969   | 100,822,149  |

93. *Tea.*—During 1919 tea for the second time in the history of the Island yielded to rubber the position of our leading production. The figures, however, show a considerable improvement over those for 1918, the exports rising from 180½ million lb. to 208½ million. The total exports of tea for the period 1914–19 were as follows:—

| Year.   | Million Pounds. | Year.   | Million Pounds. |
|---------|-----------------|---------|-----------------|
| 1914 .. | 193             | 1917 .. | 195½            |
| 1915 .. | 215             | 1918 .. | 180½            |
| 1916 .. | 203½            | 1919 .. | 208½            |

The increase is largely due to the removal of all restrictions on export and the cessation of the tea control. A detailed statement showing the exports and distribution of shipment will be found in Appendix 7.

94. The following are the most notable increases and decreases compared with the previous year:—

| Country.                           | Total Shipment.<br>lb. | Increase.<br>lb. | Decrease.<br>lb. |
|------------------------------------|------------------------|------------------|------------------|
| United Kingdom ..                  | 140,647,501            | 46,288,847       | —                |
| British India ..                   | 6,136,696              | —                | 2,446,174        |

| Belgium ..                         | 540,765                | 540,765          | —                |
| Chile ..                           | 88,420                 | —                | 610,122          |
| China (excluding Hong Kong) ..     | 565,616                | —                | 856,119          |
| Denmark ..                         | 1,057,237              | 1,057,237        | —                |
| Mozambique ..                      | 206,058                | —                | 1,013,266        |
| South America (excluding Chili) .. | 558,739                | —                | 1,665,633        |
| United States of America ..        | 17,534,679             | 8,472,136        | —                |

The value of tea exported to British Possessions was Rs. 22,786,381, a decrease of Rs. 7,544,581, largely accounted for by the reduction of supplies for the armies in the subsidiary theatres of the war. The exports to Foreign Countries rose in value from Rs. 9,440,220 to Rs. 15,150,065, and those to the United Kingdom from Rs. 43,404,989 to Rs. 78,565,694.

95. *Products of the Coconut Palm.*—The products of the coconut palm exported are coconut oil, copra, desiccated coconut, coir fibre, coir yarn, coir rope, fresh coconuts, and poonac. The comparative table given below shows the fluctuations of this important industry during the war and the remarkable recovery during the year under review:—

|                             | 1914.        | 1915.        | 1916.        | 1917.        | 1918.        | 1919.      |

96. During the latter part of the war the industry was in a somewhat languishing position. Not only was exportation restricted, but owing to the decreased demand by shippers prices had fallen to a very low level. During 1919, however, the demand from every part of the world was keen, and owing to the

brisk competition prices in many cases reached a phenomenal level. For instance, comparing the figures of 1919 with those of 1918, the increase in the quantity of copra exported shows an advance of 72 per cent., but the value of exports rose 254 per cent. The only decreases are in the export of coir rope and fresh coconut. In the former case it is more than counterbalanced by the great increase in the export of yarn, while in the latter the explanation is that the exportation of the manufactured produce is far more profitable than that of the fresh nuts, which demand more freight space and are more awkward to handle.

97. The following table shows the distribution of coconut products between British Possessions, the United Kingdom, and Foreign Countries during the last six years :—

| Year. | United Kingdom.<br>Rs. | British Possessions.<br>Rs. | Foreign Countries.<br>Rs. |
|-------|------------------------|-----------------------------|---------------------------|
| 1914  | 18,555,438             | 1,524,584                   | 29,059,589                |
| 1915  | 24,764,579             | 1,698,847                   | 16,467,400                |
| 1916  | 19,539,868             | 3,526,585                   | 19,100,835                |
| 1917  | 13,860,481             | 9,427,013                   | 10,676,860                |
| 1918  | 13,541,623             | 16,234,945                  | 5,812,141                 |
| 1919  | 28,410,252             | 17,127,260                  | 41,493,535                |

98. *Plumbago*.—The plumbago industry appears to have fallen on evil days. Exports during 1919 fell to less than a half of the quantity in 1918, and the price per ton sank from the already low level of Rs. 318 to Rs. 259. The trade, which was once in a most flourishing condition, has been hard hit by competition from Madagascar. The export market was also affected by the heavy stocks already held in the United States of America, our largest customer, and the uncertainty of the steel trade. The following table shows the quantities and value of plumbago exported from 1914–1919 :—

| Year. | Quantity.<br>Cwt. | Value.<br>Rs. |
|-------|-------------------|---------------|
| 1914  | 284,562           | 4,254,201     |
| 1915  | 436,351           | 7,919,770     |
| 1916  | 668,214           | 22,494,943    |
| 1917  | 523,940           | 21,797,398    |
| 1918  | 304,340           | 4,840,630     |
| 1919  | 133,428           | 1,732,080     |

99. The distribution of exports for the years 1918 and 1919 was as follows :—

| Country.                 | 1918.             |               | 1919.             |               |

|                          | 304,340           | 4,840,630     | 133,428           | 1,732,080     |

100. *Arecanuts*.—The trade in arecanuts declined somewhat, the exports amounting to 150,457 cwt., as compared with 214,780 cwt. in 1918. The price, however, was well maintained, averaging Rs. 20·33 per cwt., as against Rs. 17·70 in the previous year. Arecanuts are used largely in veterinary drugs for horses, and the demand was in consequence affected by the termination of hostilities. Practically the whole of our supply is taken by British India. The following statement shows the quantities and value of this product for the last six years :—

| Year. | Quantity.<br>Cwt. | Value.<br>Rs. |
|-------|-------------------|---------------|
| 1914  | 93,200            | 1,798,439     |
| 1915  | 171,854           | 3,345,711     |
| 1916  | 123,205           | 2,801,520     |
| 1917  | 154,000           | 2,984,001     |
| 1918  | 214,780           | 3,801,687     |
| 1919  | 150,457           | 3,059,158     |

101. *Cacao*.—The quantity of cacao exported fell from 73,528 cwt. in the previous year to 58,884 cwt. This diminution was, however, compensated by a substantial rise in price from Rs. 32 to Rs. 53 per ton, and the total value of the exports showed an increase of Rs. 773,507. As in the previous year, the largest quantity was taken by the Philippine Islands—21,631 cwt. Shipments to the United States of America and United Kingdom rose to just over 13,000 cwt. in each case. The most noticeable decline was to Victoria—4,479 cwt., as against 15,531 cwt.

102. *Citronella Oil*.—The exports of citronella were 992,850 lb., as against 1,030,167 lb. in the previous year, but here, again, an advance in price raised the value of the exports to Rs. 896,243, or Rs. 21,183 more than in 1918.

103. *Cinnamon*.—There was a distinct boom in the cinnamon trade. The quantity exported—68,755 cwt.—nearly doubled, and the value—Rs. 3,695,895—nearly trebled the corresponding figures for 1918. The following statement shows the chief increases and decreases of exports to the principal countries compared with the previous year :—

| Country.                              | Quills.<br>Cwt. | Chips.<br>Cwt. | Increase + or Decrease —. |       |
|---------------------------------------|-----------------|----------------|---------------------------|-------|
|                                       | Quills.<br>Cwt. | Chips.<br>Cwt. |                           |       |

| Holland ..                            | 1,178           | 621            | +                         | 621   |
| Italy ..                              | 830             | 1,281          | —                         | 889   |
| Norway ..                             | 853             | 70             | +                         | 257   |
| Other Foreign Countries in America .. | 223             | —              | +                         | —     |
| South America ..                      | 532             | 400            | —                         | 1,039 |
| Spain ..                              | 3,706           | 200            | +                         | 200   |
| Sweden ..                             | 40              | 339            | +                         | 339   |
| United States of America ..           | 12,881          | 834            | +                         | 2,557 |

104. *Cardamoms*.—The export of cardamoms was considerably better than in 1918. The quantity exported was 4,870 cwt. (+ 1,321 cwt.), and the value due to a sharp rise in price, Rs. 908,500, as against Rs. 304,706. The chief purchasers were the United Kingdom (3,665 cwt.), United States of America (606 cwt.), and Norway (278 cwt.). British India, our largest customer in 1918, practically dropped out of the market. The following is a statement of the quantity and value of this product from 1914 :—

| Year.   | Quantity.<br>Cwt. | Value.<br>Rs. | Year.   | Quantity.<br>Cwt. | Value.<br>Rs. |
|---------|-------------------|---------------|---------|-------------------|---------------|
| 1914 .. | 3,496             | 707,885       | 1917 .. | 3,369             | 369,309       |
| 1915 .. | 5,190             | 839,431       | 1918 .. | 3,549             | 304,706       |
| 1916 .. | 3,901             | 501,889       | 1919 .. | 4,870             | 908,500       |

105. *Tobacco*.—The export of unmanufactured tobacco, grown chiefly in the Jaffna peninsula, was the lowest for many years, being considerably less than half the quantity sent away in 1918. Here, once again, the deficiency was largely made up by the rise in price, so that the total value of the exports—Rs. 659,106—was not more than Rs. 215,407 short of the corresponding figures for the previous year. The following table shows the quantities and values of the exports from 1914–19. Practically the entire supplies go to British India :—

| Year.   | Quantity.<br>lb. | Value.<br>Rs. | Year.   | Quantity.<br>lb. | Value.<br>Rs. |
|---------|------------------|---------------|---------|------------------|---------------|
| 1914 .. | 4,821,224        | 966,256       | 1917 .. | 3,442,614        | 651,670       |
| 1915 .. | 3,118,321        | 580,384       | 1918 .. | 4,736,824        | 874,513       |
| 1916 .. | 2,734,060        | 482,970       | 1919 .. | 1,739,392        | 659,106       |

106. The export of Ceylon-made cigars show an appreciable increase in quantity, but not in value. The export figures for the last five years are as follows :—

| Year.   | Quantity.<br>lb. | Value.<br>Rs. | Year.   | Quantity.<br>lb. | Value.<br>Rs. |
|---------|------------------|---------------|---------|------------------|---------------|
| 1915 .. | 2,291            | 1,185         | 1918 .. | 16,632           | 12,648        |
| 1916 .. | 14,950           | 10,935        | 1919 .. | 18,613           | 12,467        |
| 1917 .. | 13,398           | 9,332         |         |                  |               |

107. *Papain*.—The export of papain during 1919 was 225 cwt., valued at Rs. 124,811. The largest quantity (86 cwt.) was taken by the United States of America ; 81 cwt. were shipped to the United Kingdom.

#### TRANSHIPMENT CARGO.

108. The number of packages transhipped and re-shipped during the last five years is as follows :—

|         |         |         |         |
|---------|---------|---------|---------|
| 1915 .. | 714,202 | 1918 .. | 444,761 |
| 1916 .. | 587,645 | 1919 .. | 383,123 |
| 1917 .. | 437,356 |         |         |

Further details will be found in the Appendices.

## SHIPPING.

109. 4,130 vessels with a tonnage of 9,988,176 entered the various ports of the Island in 1919, which shows an increase of 424 vessels and of a tonnage of 4,318,618 compared with the previous year.

The following table shows the number and tonnage of the vessels under the four general heads for the past ten years :—

| Year. | Merchant Vessels (with cargo and in ballast). |           | Merchant Vessels (called to coal). |           | Native Sailing Vessels. |         | Warships and Government Chartered Vessels. |           |
|-------|---|-----------|------------------------------------|-----------|-------------------------|---------|--|-----------|
|       | No.   | Tons.     | No.                                | Tons.     | No.                     | Tons.   | No.  | Tons.     |
| 1910  | 2,430   | 7,235,146 | 720                                | 1,934,669 | 1,193                   | 161,821 | 49   | 141,273   |
| 1911  | 2,410   | 7,387,615 | 691                                | 1,872,580 | 1,203                   | 90,306  | 51   | 211,476   |
| 1912  | 2,430   | 7,610,101 | 764                                | 2,032,397 | 1,120                   | 96,989  | 38   | 177,110   |
| 1913  | 2,464   | 7,981,773 | 651                                | 1,816,376 | 1,115                   | 106,958 | 53   | 198,620   |
| 1914  | 2,523   | 7,041,986 | 615                                | 1,728,558 | 1,159                   | 103,541 | 104  | 464,450   |
| 1915  | 1,560   | 9,984,122 | 655                                | 1,937,572 | 1,847                   | 268,938 | 210  | 692,636   |
| 1916  | 2,035   | 4,480,703 | 737                                | 2,008,057 | 1,372                   | 106,646 | 436  | 2,279,437 |
| 1917  | 1,686   | 2,980,358 | 350                                | 877,732   | 1,306                   | 105,979 | 514  | 2,026,341 |
| 1918  | 1,654   | 3,204,518 | 506                                | 1,382,808 | 1,315                   | 96,274  | 231  | 985,953   |
| 1919  | 1,762   | 4,669,598 | 1,177                              | 4,086,379 | 1,018                   | 103,413 | 173  | 1,128,786 |

The number of vessels which called for coal is over double the number for 1918. The restriction in the import of rice from India and its export to the Maldives has caused a drop in the number of sailing vessels.

110. Omitting warships and transports, the comparative distribution according to nationality for 1918 and 1919 is shown below. The figures for 1919 include vessels which called to coal :—

| Country.                 | 1918.   |           | 1919.   |           |
|--------------------------|---------|-----------|---------|-----------|
|                          | Number. | Tons.     | Number. | Tons.     |
| British ..               | 1,362   | 2,390,822 | 2,168   | 6,467,584 |
| British Colonial ..      | 1,315   | 96,274    | 1,018   | 103,413   |
| Total British Vessels .. | 2,677   | 2,487,096 | 3,186   | 6,570,997 |
| American ..              | 4       | 10,596    | 31      | 87,499    |
| Austrian ..              | —       | —         | 1       | 4,915     |

The most remarkable feature in the above return is the increase in the number of Japanese vessels calling at Colombo. There is no doubt that the Japanese are rapidly extending their hold on the carrying trade in Eastern waters.

Colombo, April 29, 1920.

R. N. THAINE,  
Acting Principal Collector of Customs.

## LIST OF APPENDICES.

1. Details of Customs Duty collected on Chief Articles.
2. Statement showing the Total Collections made by the Department for the Year 1919 at the various Ports of the Island.
- 2a. Statement of Refunds made under Section 16 of Ordinance No. 17 of 1869, and rebates allowed under Section 5 of Ordinance No. 20 of 1898, for the Year 1919.
3. Total Value in Currency of the Imports and Exports of the Colony of Ceylon, omitting Specie, from and to each Country in the Year 1919.
4. Comparative Value of Total Imports from various Countries in 1917, 1918, and 1919.
5. Statement showing the Quantity and Value of Principal Articles of Ceylon Produce exported during 1918 and 1919.
6. Comparative Value of Exports to various Countries in 1917, 1918, and 1919.
7. Statement showing the Exports of Tea, the Distribution of Shipments, and the Increase or Decrease as compared with 1918.
8. Statement of Goods brought for Transshipment and Re-shipment to the Port of Colombo from different Countries during the Year 1919.
9. Statement of Goods Transhipped and Re-shipped from the Port of Colombo to different Countries, and the Increase and Decrease as compared with 1918.
10. Statement showing the Tonnage of Goods Exported and Imported separately to and from Colombo, exclusive of Transshipments from 1910.
11. Live Stock Imports from India in 1919.
12. Duty collected under "Other Goods" (i.e., other than Grain, Cotton Manufactures, Spirits and Cordials, Sugar, and Kerosine Oil) in 1917, 1918, and 1919.
13. Total Nett Tonnage of Shipping entered and cleared at the Ports in Ceylon during 1918 and 1919.
14. Number, Tonnage, and Crews of Vessels entered at Ports in Ceylon from each Country in 1919.
15. Number, Tonnage, and Crews of Vessels cleared at Ports in Ceylon to each Country in 1919.
16. Number and Tonnage of Vessels entered Inwards and cleared Outwards from and to each Country in the Years 1917, 1918, and 1919 (excluding those which called only to Coal).
17. Number, Tonnage, and Crews of Vessels of each Nation entered at Ports in Ceylon in 1919.
18. Number, Tonnage, and Crews of Vessels of each Nation cleared at Ports in Ceylon in 1919.
19. Total Number, Tonnage, and Crews of Vessels entered at each Port in Ceylon in 1919.
20. Total Number, Tonnage, and Crews of Vessels cleared at each Port in Ceylon in 1919.
21. Statement showing the Number and Nett Tonnage of British and Foreign Vessels (Sailing and Steam) which entered the Port of Colombo in each of the Years 1884 to 1919.
22. Harbour Dues collected at the Port of Colombo during 1919, with corresponding Figures for 1918.
23. Details of Port and Harbour Dues according to Character of Shipping during the Year 1919.
24. Recapitulation of Harbour Dues since first collected in 1883.

# THE EXCISE DEPARTMENT.

## REPORT OF THE EXCISE COMMISSIONER FOR 1919.

THIS report deals with the work of the Excise Department during the year 1919.

2. The Excise Ordinance, No. 8 of 1912, as amended by Ordinance No. 25 of 1914, was in force throughout the Island. Of the new regulations passed under the Ordinance during the year under review, the following are the most important :—

- (i.) Revised rules regulating the constitution, powers, and duties of Advisory Committees.
- (ii.) Rules for the conduct of voting by ballot for or against the existence of toddy taverns.
- (iii.) Rules exempting from the provisions of the Ordinance sweet toddy drawn from all palms for consumption or for the purpose of manufacturing jaggery in the Matara and Jaffna Districts. (This rule was framed in order to encourage the manufacture of jaggery, and the experiment, if it is shown to be successful, will probably be extended to other parts of the Island.)
- (iv.) Rules framed for the purpose of improving the distilleries in the Island.

3. A salary scheme for the Department was finally approved and came into operation with effect from October 1, 1919.

4. A system of examinations for the Subordinate Officers of the Department was instituted in 1919, and the first examination under these rules was held in August, 1919.

5. It was decided to introduce the arrack contract supply system in the Northern Province as from October 1, 1920, and a notice calling for tenders for the contract supply of spirit was published in December.

### II.—STAFF.

6. The sanctioned strength in 1919 was 1 Excise Commissioner, 1 Deputy Commissioner, 4 Assistant Commissioners of Excise, 1 Excise Adviser, 2 Superintendents of Excise, 13 Assistant Superintendents of Excise, 102 Inspectors, and some 229 peons, in addition to a clerical staff.

Mr. E. C. Ward continued to act as Excise Commissioner, in addition to his duties as Excise Adviser, during the whole year. The Deputy Commissionership was vacant throughout the year.

Mr. T. W. Roberts, C.C.S., remained in charge of the Badulla Division the whole year.

Mr. L. J. B. Turner C.C.S., was in charge of the North-Western Division, except during the period of his absence on long leave (March 2 to August 17, 1919), when Mr. B. de Saram, a Senior Assistant Superintendent of Excise, acted for him.

Mr. D. H. Balfour, C.C.S., continued to hold charge of the Southern Division, and Mr. G. F. de Livera, of the Northern Division, the whole year.

Mr. H. C. R. Anthonisz, Assistant Superintendent of Excise, was promoted Superintendent of Excise and attached to the Head Office.

### III.—COUNTRY SPIRIT.

7. Gate Mudaliyar J. V. G. Jayawardene continued to be in charge of the Distillery Circle throughout the year.

8. The Distillery Circle staff was strengthened at the beginning of the year by the appointment of an Assistant Superintendent of Excise, whose headquarters were fixed at Balapitiya. The Superintendent's staff in 1919 consisted of 1 Assistant Superintendent of Excise, 1 Personal Assistant, 7 Inspectors and 17 peons.

9. Distilleries were licensed in 1919 and in the two preceding years as follows :—

|                             | 1917. |    | 1918. |    | 1919. |
|-----------------------------|-------|----|-------|----|-------|
| In the Kalutara District .. | 171   | .. | 110   | .. | 107   |
| In the Galle District ..    | 51    | .. | 30    | .. | 26    |
| In the Matara District ..   | 9     | .. | 5     | .. | 5     |
| Total ..                    | 231   |    | 145   |    | 138   |

10. In 1919 173 stills, with an average capacity of 208 gallons, were worked, as against 178 stills (average capacity 209 gallons) in 1918 and 280 stills in 1917.

11. It will be seen from the above figures that since 1917 there has been an appreciable decrease in the number of distilleries worked. This is as it should be, as, under the rules framed for the improvement of distilleries, none of the existing toddy arrack distilleries can be licensed as from January 1, 1924. New distilleries that comply with Excise requirements as laid down in the rules referred to above will have to be constructed by the end of December, 1923.

12. The number of trees tapped for the distilleries worked in 1919 and approximate figures showing the quantity of toddy brought to them and the arrack manufactured therefrom are given below :—

|   |         | 1918.     | 1919.     |
|---|---------|-----------|-----------|
| Trees licensed to be tapped   | No.     | 198,461   | 191,992   |
| Toddy brought to the distilleries   | Gallons | 4,871,029 | 5,958,859 |
| Arrack manufactured therefrom in terms of 25 degrees under proof                | Gallons | 688,459   | 836,953   |
| Arrack manufactured therefrom in terms of proof spirit                          | Gallons | 516,344   | 627,715   |
| Number of gallons of arrack at proof spirit distilled from 100 gallons of toddy | Gallons | 10·6      | 10·5      |

13. According to the above figures, it would seem that 1 coconut tree in 1919 yielded 31 gallons, as against 24·5 gallons in 1918. The real explanation for this difference would appear to be that in 1919 the wholesale price of arrack had risen to a very appreciable extent, and that in consequence distillers found it worth while to exercise greater care as regards the supply of toddy.

14. The average wholesale price of arrack in 1919 was Rs. 270 per leaguer of 150 gallons, as against Rs. 138·50 in 1918. The price of arrack has steadily risen from January, 1919, and still shows a tendency to rise. In December, 1919, the price was Rs. 380 per leaguer of 150 gallons.

15. *Wholesale Warehouses.*—These are also under the supervision of the distillery staff. Warehouses were licensed in 1919 and in the preceding year as follows :—

|                      | 1918. | 1919. |
|----------------------|-------|-------|
| In Colombo District  | 7     | 6     |
| In Kalutara District | 39    | 42    |
| In Galle District    | 2     | 2     |
| Total                | 48    | 50    |

16. The number of successful prosecutions in 1919 was 128, as against the same number in 1918. Of the cases detected in 1919, 35 related to arrack, 70 to toddy, 11 to ganja.

17. In addition to the cases referred to in the preceding paragraph, 213 cases were compounded for Rs. 1,052·25. In 1918 139 such cases were compounded for Rs. 411·70. The increase in the number of such cases and the corresponding increase in the amount of fines is due to the strengthening of the distillery staff and consequent stricter supervision, and also partly to heavy fines being imposed in cases where smuggling was suspected.

18. For some years prior to 1918 little or no arrack was exported to India. In 1918 owing to the low prevailing prices in Ceylon a total quantity of 23,021 gallons at approximately 25 degrees under proof was exported to India. The quantity so exported in 1919 was 29,559 gallons. This liquor is taxed and treated as foreign liquor in India.

19. *Government Experimental Distillery.*—This distillery was not worked in 1919. Some alterations and additions are, however, being made to it with a view to manufacturing molasses spirit as well as toddy spirit.

20. *Arrack Rents.*—The arrack rents for the period October 1, 1919, to September 30, 1920, were sold in May, 1919. The Jaffna and the Chilaw rents were, as in the preceding rent period, sold under special conditions, which prohibited the removal of arrack from taverns other than those in Local Board towns and a few Sanitary Board areas.

21. A statement showing the results of the arrack rent sales from 1897 to 1919–20 is given in Appendix C. The rents fetched Rs. 7,432,429 for the 1919–20 rent period, as against Rs. 7,387,850 for the 1918–19 period.

22. The increase in the rentals for 1919–20 may be attributed to the cessation of the war and the resumption of trade generally. The increase, however, is noticeable, in view of the fact that in the 1919–20 period there were 123 arrack taverns less than in the preceding rent period, while the wholesale price of arrack at the beginning of 1919 was very little higher than in 1918.

23. Appendix E gives figures showing the selling price of arrack in the various rents. As compared with the previous year, the figures show that the price of arrack continues to show a tendency to rise.

24. *Consumption.*—Appendix F gives figures showing the consumption of arrack in the various districts during the five years 1915 to 1919, and the rate of consumption per head of population. The consumption in 1919 was 1,029,269 gallons, as against 1,015,386 gallons in 1918, thus showing an increase of 13,883 gallons. The rate of consumption per head in 1919 works out to ·25 gallon, as against ·24 in the preceding year.

25. The increase in arrack consumption may be attributed to—

- (i.) Resumption of trade and industries in consequence of the cessation of the war ; and
- (ii.) The influenza epidemic. In many districts people took to arrack in the belief that it acted as a preventive.

26. Still it has to be remembered that this increase occurred in spite of—

- (i.) A large reduction in the number of taverns (123 in number) ;
- (ii.) Smuggling of arrack from distilleries, which shows no tendency to decrease ;
- (iii.) Foreign liquor taking the place of arrack to some extent in places where there has been a wide closure of arrack taverns.

27. In the report for 1918 some figures were given to show the extent of smuggling in the distillery area. It was at the same time pointed out that these figures did not give a full indication as to the amount of arrack smuggled, as many distillers buried or in other ways concealed stocks of arrack and kept the same for disposal in the non-distilling period. The same remark applies to the figures (relating to 1919 which are given below to illustrate once again the extent of smuggling:—

*Taverns within the Distillery Area.*

|   | Rent Area. |          |
|---|------------|----------|
|   | Kalutara.  | Panadure |
| Consumption in 1919 for four months (January to April), i.e., during non-distilling period ..       | 5,583      | 634      |
| Consumption in 1919 for remaining eight months (May to December), i.e., during distilling period .. | 7,803      | 740      |

*Taverns outside the Distillery Area.*

|   |       |       |
|---|-------|-------|
| Consumption in 1919 for four months (January to April), i.e., during non-distilling period ..       | 2,193 | 1,694 |
| Consumption in 1919 for remaining eight months (May to December), i.e., during distilling period .. | 4,966 | 4,261 |

28. Reference has been made to the closure of a large number of taverns. As stated, there are in the 1919-20 rent period 123 taverns less than in the previous rent period. The majority of the taverns were closed by the several Advisory Committees.

29. Reference has also been made to the fact that foreign liquor is to some extent replacing arrack in areas where arrack taverns have been closed. In the North-Central Province, for example, there were three arrack taverns till the end of September, 1919. All three were closed as from October 1, 1919. The Anuradhapura tavern was closed by local option, and the other two by the Advisory Committee. The following figures illustrate the increase in the sale of foreign liquor in Anuradhapura town:—

| Period.                      | Whisky. | Consumption in Bottles. |       |  | Total. |
|------------------------------|---------|-------------------------|-------|--|--------|
|                              |         | Brandy.                 | Gin.  |  |        |
| October to December, 1918 .. | 199½    | 194½                    | 175   |  | 569    |
| October to December, 1919 .. | 608½    | 627                     | 2,989 |  | 4,224½ |

30. The following extracts from the reports of Mr. T. W. Roberts, Assistant Commissioner of the Central Division, and Mr. D. H. Balfour, of the Southern Division, may also be given:—

Mr. Roberts writes: "In the latter case (i.e., where foreign liquor taverns remain open close to arrack taverns closed by ballot) there has been a transference of taste from arrack to gin. Detections of illicit traffic have been made since the closings of October, 1919, in the areas of practically all the big taverns closed, and in some the volume of this traffic has been considerable . . . . . At Bandarawela and Passara the money spent on foreign liquor has increased by nearly as much as used to be spent at the arrack tavern in each of those towns. For the Province of Uva the consumption of arrack fell at the last quarter of 1919 by 2,602 gallons, worth Rs. 30,000; the consumption of foreign liquor rose by 893 gallons (worth Rs. 25,000), and of toddy by 8,668 gallons."

Mr. Balfour writes: "With the closure of the majority of arrack and toddy taverns in the Kalutara District, a foreign liquor licensee's sales in gin jumped up from 6 gallons to 106 gallons in two months! This was chiefly consumed by Tamil coolies. A similar increase was experienced in Matara coincident with the closure of arrack taverns in the town."

31. Appendix G gives figures showing the arrack rent revenue derived in recent years with reference to the population, to the number of gallons consumed, and to the number of taverns.

32. Appendix H gives figures showing the arrack rent revenue and arrack consumption with reference to population and area in each arrack rent area during the financial year ending September, 1919. The arrack revenue per head of population works out to Re. 1.79, and the revenue per gallon consumed was Rs. 7.13 for the whole Island, as against Rs. 7.64 in the previous year. The average consumption per head is .25, as against .24 in the previous year.

33. Appendix I shows the arrack rent revenue for 1918-19 and the arrack consumption for 1917-18 with reference to the population and area in each rent area. The districts which have the largest number of taverns per 100 square miles are Colombo 22.6 taverns, Chilaw 22.9 taverns, and Negombo 19.4 taverns. All three districts are densely populated. The average number of taverns per 100 square miles for the whole Island is 2.2, as against 2.7 for the previous year.

#### IV.—TODDY.

34. Appendix J shows the number of toddy taverns sanctioned and the amounts realized by rent sales for the five years 1915-16 to 1919-20.

35. The number of taverns sanctioned for 1919-20 was 667, as against 736 in the preceding year. In 1915-16 there were 810 taverns.

36. The amount of revenue obtained by the sale of toddy rents for 1919-20 was Rs. 2,008,832, showing an increase of Rs. 131,367 over the previous year's figure, which had hitherto been the highest on record.

37. Appendix K gives figures in regard to the consumption of fermented toddy and the number of trees licensed for tavern supply. As has been pointed out in previous reports, figures relating to the consumption of toddy can be regarded as only approximate. Considerable quantities of toddy are consumed in the topes or are in other ways illicitly disposed of. And it is well known that toddy renters resort to various tricks in order to under-state their receipts and the consumption in taverns with a view to depreciating the value of taverns, so that they can be purchased cheaply for the following year. Renters, for example, buy considerable quantities of sweet toddy from sweet toddy tappers and convert it into fermented toddy. The sweet toddy so purchased is not accounted for. The detection of this offence is extremely difficult.

38. However, these figures show that the quantity of fermented toddy consumed in 1919 was 4,570,395 gallons, as against 4,736,016 gallons in the preceding year, thus showing a decrease of 165,621. The decrease is not great. Had it not been for the influenza-epidemic there would probably have been an appreciable increase.

39. The number of trees licensed to be tapped for fermented toddy for taverns was—

|      | Coconut. | Palmyra. | Kitul. | Total.  |
|------|----------|----------|--------|---------|
| 1919 | 179,110  | 92,826   | 19,080 | 291,016 |
| 1918 | 174,817  | 97,218   | 23,475 | 295,510 |

40. Appendix L 1 shows the toddy rent revenue and consumption for the year ended September, 1919, with reference to population and area in each district. The toddy revenue per gallon consumed is Re. 0.41, while the toddy consumed per head of population is 1.0 gallon for the whole Island. The corresponding figures for the preceding year are Re. 0.33 and 1.2 gallons respectively. In 1918-19 there were 2.8 toddy taverns per 100 square miles, as against 3.10 taverns in the preceding rent period.

41. Appendix M shows the selling price of toddy in each district.

42. Appendix N shows the number of trees tapped for sweet toddy in 1919 and 1918. It must, however, be remembered that as from August, 1919, licenses are not required to be taken out in Jaffna and Matara, two important jaggery manufacturing districts.

43. As was pointed out in the previous report, sweet toddy licenses are taken out ostensibly for the purpose of manufacturing jaggery. It is, however, well known that a good deal of this toddy is fermented and illicitly sold. Still the following figures show that since 1913 there has been a steady and continuous increase in the number of trees licensed to be tapped for sweet toddy :—

|      | Coconut. | Palmyra. | Kitul. | Total.  |
|------|----------|----------|--------|---------|
| 1913 | 35,442   | 24,286   | 43,986 | 103,714 |
| 1914 | 35,405   | 40,356   | 52,024 | 127,785 |
| 1915 | 64,508   | 52,221   | 64,208 | 180,937 |
| 1916 | 76,651   | 59,403   | 65,110 | 203,164 |
| 1917 | 110,604  | 62,203   | 69,030 | 241,837 |
| 1918 | 116,584  | 75,883   | 74,722 | 267,189 |
| 1919 | 96,665   | 64,163   | 68,290 | 229,118 |

The figures for 1919 show a decrease as compared with 1918 in the number of trees licensed. But, as explained above, licenses were not required to be taken out in the Jaffna and Matara Districts as from August, 1919. Thus, in 1919, 62,283 palmyra trees were licensed in Jaffna District, as against 73,579 trees in 1918; while in Matara 8,476 coconut trees and 3,647 kitul trees were licensed in 1919, as against 16,589 coconut trees and 7,355 kitul trees in 1918.

44. It was with a view to encourage the manufacture of jaggery that the drawing of sweet toddy for the purpose of manufacturing jaggery was exempted from the operations of the Excise Ordinance in the two districts referred to above. Sweet toddy tappers in these districts are not now required to go to headmen to get licenses, nor are they required to have their trees marked. This Department has also taken certain precautions to protect the genuine jaggery manufacture and so encourage the jaggery industry. But at the same time there is no doubt that a very large number of sweet toddy tappers take advantage of this and do a large amount of illicit trade. The materials used in most Provinces to prevent fermentation are not efficient preventives. This is a constant source of danger to the toddy revenue. The question of prescribing a suitable preventive (e.g., fresh lime) will probably have to be considered, particularly if it is decided to extend the exemption order to other districts.

45. It is too early as yet to say definitely what the result of this exemption has been in the two districts in question. The Assistant Government Agent, Matara, is of opinion that there has been an appreciable increase in the production of treacle and jaggery.

46. *Toddy Taverns in the Distillery Area.*—In the report of the previous year it was pointed out that there were five taverns in this area. In 1919 there were only three. They meet to a small extent the licit demand for toddy, and at the same time serve to indicate the extent of illicit trade in this area. The following figures will illustrate this :—

|  | Gallons. |
|--|----------|
| Consumption in 1919 for four months (January to April), i.e., during non-distilling period | 5,040    |
| Consumption in 1919 for eight months (May to December), i.e., during distilling period     | 3,947    |

#### V.—FOREIGN LIQUOR.

47. The foreign liquor rules and licenses remained the same as in the preceding year. A few new brands of spirit were from time to time passed and included in the approved list.

48. Appendix O shows the number and kind of country and foreign liquor licenses issued during the period ended September, 30. It will be seen that in this year there was a further reduction in the number of licensed places. The following statement, however, illustrates the steady progress made in reducing the numbers of taverns of all classes since 1912-13 :—

| Year.   | Number of sanctioned Taverns. |        |                 | Total. |
|---------|-------------------------------|--------|-----------------|--------|
|         | Arrack.                       | Toddy. | Foreign Liquor. |        |

| 1916-17 | 771                           | 806    | 151             | 1,728  |
| 1917-18 | 738                           | 787    | 132             | 1,657  |
| 1918-19 | 689                           | 736    | 86              | 1,511  |
| 1919-20 | 566                           | 667    | 78              | 1,311  |

49. Appendix P gives the foreign liquor licensing revenue for the different kinds of licenses during the year ended September 30, while Appendix Q gives the foreign liquor revenue from license fees for a series of years. In 1919-20 there was a further fall (Rs. 6,953·75) in the licensing revenue. The decrease is due partly to the reduction in the number of licensed places, and partly to low consumption in 1918-19. It was on the volume of business done in this year that the licensing fees for 1919-20 in many cases had to be based.

50. Appendix R shows the imports of foreign spirits into Ceylon as from 1911. The imports in 1919 are the lowest on record. Shortage of stocks in England, freight difficulties, and the increased import duty no doubt contributed to this decrease. The foreign liquor trade is, however, again recovering, and the price of foreign liquor has shown a tendency to fall. This will probably result in larger import.

51. Appendix S shows the prevailing sale prices of spirits by the glass and by bottle in 1919. It will be seen that there has been an appreciable drop in the prices. In Colombo, for example, a gallon of whisky costs Rs. 43·50 when sold by the glass, or Rs. 36 when sold by the bottle in January. In December the prices dropped to Rs. 38·50 and Rs. 27 respectively. Similarly, the price of gin per gallon fell from Rs. 30·20 (by the glass) and Rs. 27 (by the bottle) to Rs. 25·20 and Rs. 22·50.

#### VI.—INTOXICATING DRUGS.

52. The regulations in regard to cocaine remained the same as in the preceding year. They are working satisfactorily, and enable this Department to keep a check on the import and sale of cocaine.

53. Ganja, including preparations and admixtures thereof, is also an excisable article, but the importation, possession, or sale of this drug (except in the form of a few pharmaceutical preparations that have been exempted from the operations of the Ordinance) is absolutely prohibited throughout the Island. Notwithstanding this, a large illicit trade in ganja is carried on in the Island, and this, in spite of numerous convictions and severe sentences passed on persons convicted of dealing in ganja. This illicit trade pays handsomely. In India ganja can be purchased from shops for Rs. 10 or Rs. 12 per pound. In Colombo ganja is sold *in retail* at about Rs. 150 per pound.

54. In 1919 223 persons were prosecuted for dealing in intoxicating drugs, ganja in practically every case. 171 of these were convicted. In the preceding year 291 persons were so prosecuted, and 219 convicted. The total fines imposed in 1919 amounted to Rs. 16,352·50, as against Rs. 31,002·25 in the previous year.

#### VII.—EXCISE OFFENCES.

55. Appendices T, U, and V give particulars in regard to Excise cases. In 1919 2,790 cases, involving 2,790 persons, were decided. Of these, 2,486 persons were convicted. In 1918 2,531 persons were prosecuted, and of these, 2,213 were convicted. The percentage of convictions to cases instituted was in 1919 89·1, and in 1918 87·6.

56. The total amount of fines imposed in 1919 was Rs. 80,708·75, as against Rs. 126,646·11 in the preceding year.

57. Appendix W gives some particulars of the cases compounded by the Department. In 1919 1,592 were compounded for Rs. 23,924, as against 1,597 cases compounded in 1918 for Rs. 21,035·20.

58. Appendix X shows the rewards paid in Excise cases in 1919. The total amount so paid was Rs. 23,044·62, as against Rs. 31,312·50 in the previous year.

#### VIII.—REFORMS.

59. *Local Option.*—As from 1919 the local option rules apply to all classes of taverns, including places licensed for the sale of beer and porter by retail. The following statement shows the results of ballots held in 1919:—

|  | Arrack. | Toddy. | Foreign Liquor. | Beer and Porter. |
|--|---------|--------|-----------------|------------------|
| Number of ballots held ..  | 87      | 32     | 4               | —                |
| Number of ballots in which 75 per cent. or more voted for closure .. | 39      | 16     | —               | —                |

60. *Advisory Committees.*—These bodies have now large unofficial majorities, and are virtually licensing committees in so far as taverns are concerned. Many closures by these committees were made on the recommendation of officers of this Department. The local superior officers of the Department are generally consulted in such matters, and some closures against their advice were certainly unfortunate. For example, large numbers of taverns, both arrack and toddy, were closed in the Kalutara and Panadura Districts. In both these districts there are a large number of distilleries, and a great number of trees tapped to supply these distilleries with toddy. These distilleries afford many facilities for smuggling, and with the present limited staff of Excise Officers it is impossible adequately to control them or to exercise a sufficient check on illicit practices in the topes. The closure of taverns on a big scale in these two distillery areas has accordingly resulted in an enormous increase in the volume of illicit trade.

61. It is evident that where important and large areas have gone dry, in so far as taverns are concerned, there has been—

- (1) A tendency for foreign liquor to take the place of arrack ;
- (2) A great increase in illicit trade of liquor.

To check this growth of illicit trade it will be necessary to strengthen the Excise staff. The question of doing so will probably have to be considered at an early date. Endeavours have, however, been made to meet one or two most urgent cases. For example, the staff in Anuradhapura has been increased by the addition of two Inspectors.

62. *Prohibition of "Off" Sales.*—As stated above, this experiment is being given a trial in the Jaffna and Chilaw Districts. The results obtained so far have not been very satisfactory. In both districts there has been an appreciable increase in arrack consumption. As regards toddy, there has been a fall in the Jaffna District, but this is largely due to the influenza epidemic and to the severe cyclone in December, 1918 ; the cyclone did a considerable amount of damage to the spathes of trees, and toddy taverns were accordingly unable to obtain sufficient supplies for some time. In the Chilaw District,

on the other hand, there was a slight increase. The consumption in the "on sale" taverns here rose, while that in the "off sale" taverns fell. This, as Mr. Turner points out, is the reverse of what was to be expected if the prohibition was to effect the sale of toddy. As, however, the Island is just recovering from the effects of the war, and as conditions were not normal in 1919, it has been decided to give the experiment a further year's trial.

63. Reference has been made in paragraphs 2 and 12 above to the measures taken to improve the distilleries in the Island.

64. *Appointment of Unofficial Excise Officers in the Planting Districts.*—This scheme continues to work satisfactorily, and the Department has received a good deal of assistance from these officers.

#### IX.—REVENUE AND EXPENDITURE.

65. The following shows the more important items of Excise revenue as from 1916-17 :—

|   | 1916-17.<br>Rs. | 1917-18.<br>Rs. | 1918-19<br>Rs. | 1919-20.<br>Rs. |
|---|-----------------|-----------------|----------------|-----------------|
| Amount of successful offers for arrack rents .. | 7,807,658       | 7,814,121       | 7,387,850      | 7,432,429       |
| Amount of successful offers for toddy rents ..  | 1,459,772½      | 1,648,506       | 1,877,465      | 2,008,832       |
| Amount of foreign liquor license fees ..        | 144,280½        | 129,118         | 97,591½        | 90,638          |
| Amount of country liquor license fees ..        | 15,750          | 16,250          | 12,050         | 11,900          |
| Total ..  | 9,427,461       | 9,607,995       | 9,374,956½     | 9,543,799       |

66. The total expenditure of the Department (including salaries of members of the Civil Service in the Department) for 1919 was Rs. 399,474. Taking Rs. 9,543,799 as the total revenue, the percentage of charges to receipts in 1919 was 4·18, as against 4·36 in the previous year.

#### X.—MISCELLANEOUS.

67. An entrance examination for learners was held in 1919, and 11 learners were appointed. Of this number, 1 died, 1 was discontinued, and 1 joined the Clerical Service after passing the Clerical Examination. Of the remaining 8, 2 are returned soldiers, and 1 was a clerk in the Department. One Assistant Superintendent of Excise was reduced in his grade, and one Inspector resigned his appointment.

68. *Co-operation with Employers of Labour.*—The relations between this Department and the planting community and other employers of large labour forces remain cordial. Such employers are invariably consulted where their interests are concerned. The systematic visitation of estates is also insisted on by all Assistant Commissioners.

69. *Staff Work.*—With few exceptions, the work of the officers of the Department continued to be satisfactory. I desire to acknowledge the good work done by all the Assistant Commissioners of Excise, but the special thanks of the Department are due to Messrs. Roberts, Turner, and Balfour for the very efficient work done by them in the Excise Administration of their divisions, and for great assistance they have rendered me.

Mention must also be made of the good work done by the Superintendents. Gate Mudaliyar Jayawardene continued to render very useful work, and Mr. Anthonisz, as my Assistant, gave me steady help.

Of the Assistant Superintendents of Excise, I would specially mention Messrs. De Saram and Parsons. The former acted as Assistant Commissioner of Excise for some months, and discharged his duties satisfactorily. Mr. Parsons, who was specially transferred to the Jaffna Circle, continued to render specially good work.

I have also to thank Unofficial Excise Officers for the aid they have so willingly given this Department.

April 7, 1920.

E. C. WARD.  
Acting Excise Commissioner.

[For Appendix C see page 9.]

## Appendix D.

Statement showing Results of the Arrack Rent Sales during the Financial Years 1915-16, 1916-17, 1917-18, 1918-19, and 1919-20, in terms of Twelve Months in each Rent Area.

| Rent Area.              | Financial Year<br>1915-16.<br>Rs. | Financial Year<br>1916-17.<br>Rs. | Financial Year<br>1917-18.<br>Rs. | Financial Year<br>1918-19.<br>Rs. | Financial Year<br>1919-20.<br>Rs. |

The revenue of 1919 shows a decrease of Rs. 4,009·27, but, as pointed out in last year's report, the revenue of 1918 included under Miscellaneous a sum of Rs. 7,500 withdrawn from the fixed deposit, and Rs. 4,750 refund of advances, which cannot be considered as revenue proper. The item of Rs. 8,080·46 under Miscellaneous for 1919 included a sum of Rs. 2,500 withdrawn from fixed deposit, and Rs. 5,000 loan obtained from Government. Apart from the head Miscellaneous, the revenue for 1919 shows an increase of Rs. 1,355 over that of 1918, testifying to the gradual recovery of the town after the outbreak of plague, but the revenue is still Rs. 3,000 behind that of 1917, the year before the plague. Assessment rate for 1919 was based on site value within the *tagaram* area, as houses had not in general been reoccupied or rebuilt by the end of the year. The expenditure includes a sum of Rs. 1,000, being first instalment of a contribution of Rs. 10,000 payable in this year, which Government decided the Board should pay towards the cost of dealing with the outbreak of plague; a sum of Rs. 750, being instalment and interest on the new loan of Rs. 5,000 received early in 1919; and a sum of Rs. 1,430 on account of draining the swamp.

2. *Public Health.*—The health of the town was satisfactory; except for the occurrence of a few cases of influenza, there was no outbreak of infectious disease.

3. *Water Supply.*—The improvements to the intake main pipe are still being carried on under the supervision of the District Engineer, and the work will, it is expected, be finished within a short time, when the question of extending services to private houses can be settled.

4. *Lighting.*—Twenty-two duplex lamps are in use; the Wells' lights were discontinued owing to the high cost of mantles.

## POST AND TELEGRAPHS.

### REPORT OF THE ACTING POSTMASTER-GENERAL AND DIRECTOR OF TELEGRAPHS FOR 1919.

THE statistical tables showing the comparative progress of the various business done by the Department during the last ten years that were discontinued during the war are resumed and published at the end of the report.

#### POST AND TELEGRAPH OFFICES.

2. On December 31, 1919, 551 post offices of various classes were open for business; of these, 160 were Telegraph Offices and 195 Money Order and Post Office Savings Bank Offices.

3. New Money Order and Savings Bank Offices were opened during the year at Nivitigala in the Ratnapura District and at Karativu in the Jaffna peninsula. The office at Karawanella in the Kelani Valley was closed, the residents being served from the Ruanwella office, less than 2 miles distant.

4. The following were added to the list of telegraph offices:—Tebuwana, Matugama, and Agalawatta in the Kalutara District; Nivitigala in the Ratnapura District; Magalla and Kamburupitiya in the Southern Province; Dandagamuwa in the North-Western Province; and Kotahena in Colombo. The railway stations at Ella and Opanake were opened for postal telegrams.

5. Additional village receiving offices were established at Aludeniya (Gampola), Aturaliya (Akuressa), Cheddikulam Railway Station (Mannar Line), Dambagalla (Moneragala), Eppawala (Anuradhapura), Godakawela (Rakwana), Pallewella Railway Station (Kandy Line), and Wahakotte (Naula). The office at Kalupahana (Haldummulla) was closed.

#### ARTICLES PASSING THROUGH THE POST.

6. It is estimated that a total of 44 millions of articles (exclusive of parcels) passed through the post, an increase of 1½ millions on the year 1918, but 5 millions less than in the year 1914, when the total reached the record.

7. Compared with the year 1918 inland letters increased by 2 millions, but post cards decreased by 1 million. There was a small increase in the correspondence to and from the United Kingdom, a slight decrease in that to and from India, and a considerable increase of approximately 1 million with other countries.

8. The extent to which the increase in rates of postage brought into force in November, 1918, affected the use of the post must be largely a matter of conjecture, as there are other considerations, such as activity in trade and rise in the price of paper, to be taken into account. But it may, perhaps, be assumed with confidence that the doubling of the rate for post cards from 2 to 4 cents was the cause of the marked decrease in the use of this form of correspondence, and that the drop in the number of postal articles sent to India was due partly to the application of the increased rates of postage.

#### RETURNED LETTER OFFICE.

9. The total number of undeliverable postal articles dealt with was 214,931, of which 200,414 were returned to senders. 14,817 had to be destroyed owing to addresses of senders not being ascertainable. Cheques and money and postal orders to the value of Rs. 18,183·75 found in letters opened in the Returned Letter Office were returned to the senders.

#### MAIL SERVICES.

10. The motor mail service between Matale and Naula was extended to Dambulla, in substitution of the former service by runners.

11. An additional mail service was established between Panadure and Horana, by which letters posted in the evening in Colombo were delivered the next morning.

12. On the opening of the railway extension to Opanake the motor mail service to Pelmadulla, Rakwana, and Balangoda was discontinued.

13. The time of the departure of the train from Bandarawela to Ella was altered to suit the mail service, and a saving of 24 hours effected thereby in the delivery of certain mails to Ella and Namunukula.

14. Mails between London and Colombo were conveyed with fair regularity by means of the weekly service between London and Bombay arranged by the Imperial Government with the Peninsular and Oriental Company. The route followed was from London through France to Marseilles, P. & O. (or B. I.) steamer to Bombay, special mail train Bombay to Madras, Indo-Ceylon train *via* Dhanushkodi and Talaimannar to Colombo, and *vice versa* for the homeward mails. The average time taken between London and Colombo was twenty-five days.

15. Towards the end of the year Orient Line steamers began their former service between England and Australia, calling at Colombo. The mails from England were sent through France to Toulon, and reached Colombo in eighteen or nineteen days from date of despatch from London. On the homeward voyage by vessels of this line the mails were landed at Naples.

16. Occasional use was also made of vessels of the Messageries Maritimes Line for the homeward mails.

17. The mainstay of the mail service to the Malay Peninsula and China was the monthly sailings between Bombay and the Far East, calling at Colombo, of the British India Line. This service was supplemented to the Malay Peninsula by the sailings of the same line from Negapatam (India) to Penang and Singapore, and by ships of the Nippon Yusen Kaisha (Japanese line) calling at Colombo on their voyages from Europe to Japan.

18. There were no regular sailings of any line between Ceylon and Australia. Troopships proceeding to Australia were frequent, and were freely used for the conveyance of the mails from Ceylon, and nearly every vessel from Australia that called at Colombo brought mails.

19. An alteration was made in the time of publication of the Post Office Daily List, by which postal information reaches up-country offices 24 hours, and offices in Colombo 3 hours, earlier than formerly.

#### PARCEL POST.

20. The total number of parcels passing through the post was 734,192, an increase of 18,797 over the previous year. The growth was general in the inland, Indian ordinary, United Kingdom, and "other countries" traffic; but the decline in the number of value-payable parcels received from India that began in the year 1918 was continued in the year under review, and may be due partly to a decrease in purchasing ability owing to high prices, and partly to severe Customs restrictions.

21. The number of parcels sent to the United Kingdom was 16,359 compared to 12,713 in the year 1918. In the reverse direction 27,831 were received, as compared with 23,494 in the previous year.

22. The assessment of Customs duty on parcels coming into Ceylon was vigorously executed, and the total sum collected was Rs. 351,244, an increase of Rs. 45,533 on the year 1919.

23. The attention of the public had to be drawn frequently to the necessity of careful and adequate packing of parcels sent on long journeys by land and sea. Owing to various causes, the use of boxes and baskets for parcels has had to be discontinued, and the parcels are sent on their long journeys in mail bags. The need for very careful packing to stand the numerous transfers from carts, boats, ships, and trains is obvious.

#### MONEY AND POSTAL ORDERS.

24. The total number of money orders dealt with was 865,031 of the value of Rs. 33,367,429, a decrease of 5,195 in number, but an increase of Rs. 2,696,984 in value over the year 1918.

25. 518,794 inland orders of the value of Rs. 21,364,776 were issued during the year, and included 68,320 official orders of the value of Rs. 7,745,541 issued free of commission. 96,512 inland money orders were sent by telegraph.

26. Nearly 9 millions of rupees was sent to India by means of money orders, and 1½ millions was received from India for payment in Ceylon, leaving a balance of 7½ millions remitted to India.

27. The number and value of the orders issued and paid in the service with the United Kingdom and other countries shows a normal increase over the previous year.

28. The rate of exchange for the conversion of sterling orders into rupee currency rose by stages from 1s. 6d. to 2s. 4d., and had but slight effect upon the amount of money remitted by the Money Order system.

29. The use of inland postal orders increased from 113,931 of the value of Rs. 420,602 in 1918 to 126,790 of the value of Rs. 475,718 during the year under review. The popularity of this means of remitting money is not so great as might be expected, and is probably due to the inability to send sums containing fractions of 50 cents. There are only ten different values of Ceylon postal orders, while in Great Britain there are 42, and by affixing stamps any value that is a multiple of one penny can be made up.

30. In British postal orders the number issued rose from 3,901 of the value of £2,040 to 12,840 of the value of £7,384, and was caused to some extent by the purchase of large quantities of orders to be used as currency on board ships proceeding to Europe. There was a dearth of British currency obtainable in Colombo for the use of travellers owing to the heavy loss incurred by converting it into rupees at the current rates of exchange. The same reason no doubt accounts for a fall in the number of British postal orders presented for payment in Ceylon.

#### POST OFFICE SAVINGS BANK.

31. The year saw the greatest activity in Savings Bank business, and was in every respect a record. The number of deposits rose from 65,202 to 105,241, and the amount deposited from Rs. 1,558,403 to Rs. 2,744,202. Withdrawals also increased, though not to the same extent, from 31,103 to 43,973 in number, and from Rs. 1,329,630 to Rs. 1,952,373 in amount. The nett increase in the total amount standing to the credit of depositors at the end of the year was Rs. 849,143.

32. A feature of the business of the banks and, perhaps, one of the causes of their popularity is the facility lately introduced to withdraw "On demand," by which a depositor can withdraw a sum not exceeding Rs. 10 at any Post Office on presentation of his pass book.

#### STAMPS.

33. The total value of stamps sold at Post Offices during the year was Rs. 5,696,980, or Rs. 1,363,379 in excess of the previous year. Of this total increase, it is estimated that Rs. 385,288 was due to the increase in the rates of postage brought into operation in November, 1918, and Rs. 153,723 to the increase in the number of articles posted.

#### TELEGRAPHS.

34. Inland private telegrams fell from 1,004,155 in 1918 to 749,814 in 1919, and telegraphed money orders from 120,276 to 96,512, a total decrease of 278,105 during the year, due to the increase in the charge for a telegram from 25 to 40 cents brought into operation in November, 1918. There was a slight increase in the number of State (free) telegrams sent.

35. No marked difference occurred in the number of telegrams to and from India.

36. To and from other countries, principally Great Britain, the number of private telegrams increased considerably, from a total of 106,271 in 1918 to 138,001 in 1919, or 30 per cent. The number of Government telegrams despatched by cable fell from 6,835 to 4,030.

37. No further changes were made in the charges for telegrams during the year, except the introduction of an "express" rate for Indo-Ceylon telegrams at double the rate for an ordinary telegram.

38. The Chamber of Commerce urged that the rates for cablegrams should be reduced on a sliding scale corresponding to the rise in the value of the rupee, but Ceylon could not act alone, and had to await action by the Indian Government in this direction.

39. Owing to cable interruptions and heavy traffic, both private and Government, in all directions, working cables were overloaded, and great delay in transmission ruled throughout the year, reaching on one occasion, during the transmission of the Peace Treaty telegram consisting of 14,000 words in May, 1919, to twenty days on ordinary telegrams.

40. Censorship on all private telegrams ceased at midnight on July 23, and press censorship was continued until September 4.

41. Owing to a block of Far East traffic at the Madras cable about the end of April, nearly 1,000 messages were diverted *via* Colombo over the Madras-Colombo land lines and handed over to the Eastern Telegraph Company at Colombo for onward transmission. The traffic so diverted on May 2, 3, and 7 was 475, 159, and 300 messages respectively. On the first-mentioned date as many as 170 messages an hour were exchanged between Colombo and Madras over one wire on Baudôt, this figure constituting a record for Ceylon.

42. The Central Telegraph Office again acted as intermediary for the exchange of traffic from India to the Far East and *vice versa* *via* the Colombo cable, and disposed of 1,145 messages between September 25 and 26. Since September 27 one of the Government lines from Colombo to Madras has been loaned to the Eastern Telegraph Company with special extensions to the cable offices at Colombo and Madras to enable that Company to work their traffic direct between Colombo and Madras over the Government land line. The arrangement is likely to be continued until additional cables between the Far East and Madras are laid in order to cope with the increased post-war traffic.

43. A saving of about 500,000 telegram bands was effected in Colombo by the telegram form being torn slightly at the top and the form itself being used for securing the contents. This system will be extended to other offices later.

44. The number of telegram deposit accounts at the Central Telegraph Office increased from 36 in the previous year to 47, in spite of the charges for the upkeep of these accounts being doubled from the beginning of the year. The value of telegrams handed in under this system during the year amounted to Rs. 577,529.50. About 50 per cent. of foreign messages accepted at the Central Telegraph Office are under the Deposit Account System.

45. The location of the Telegraph School in the Central Telegraph Office has enabled closer supervision to be exercised over the training, and the results have more than justified the change. All the candidates presented for the telegraph examination in August, numbering 24, passed, a record not attained while training was carried on elsewhere.

46. Thirty-four of the principal Telegraph Offices show that 80 per cent. of the telegrams handed in were transmitted within 10 minutes of acceptance, and 95 per cent. within 20 minutes, and also that 97 per cent. of the telegrams received for delivery were sent out to the addressees within 10 minutes of receipt.

47. New telegraph circuits were run between—

|                            |    |    |    |           |
|----------------------------|----|----|----|-----------|
| Chilaw and Puttalam        | .. | .. | .. | 32 miles  |
| Ratnapura and Nivitigala   | .. | .. | .. | 9 miles   |
| Matara and Kamburupitiya   | .. | .. | .. | 10½ miles |
| Neboda-Matugama-Agalawatta | .. | .. | .. | 10 miles  |
| Kandy and Wattagama        | .. | .. | .. | 8 miles   |

Inclusive of Railway Telegraphs, 31 miles of posts and 186 miles of wire were added to the telegraph system, bringing the total mileage up to 2,132 posts and 7,319 wire.

48. Eleven Postal Telegraph Offices were re-wired, 8 circuits re-arranged, and 3 offices shifted to new buildings.

49. Four special test boards were fitted for the Indo-Ceylon lines, and an additional double-duplex Baudôt set was installed at the Central Telegraph Office.

50. A new calling system for use in connection with a single wire superimposed circuit was installed on the police circuit between Bandarawela and Badulla. By means of a relay a local bell circuit is completed when a vibrator is actuated at the distant end. This is believed to be the first such arrangement in practical use. No single wire superimposed circuit can be called satisfactory, but the arrangement is certainly an improvement on its predecessors.

51. Twenty-five cases of thefts of wire from telegraph routes were reported. In two cases the culprits were detected, one of whom was sentenced to six months' rigorous imprisonment, and the other to a period of one month. The accused in another case was given one week's simple imprisonment for retaining stolen wire, and a boy was given ten cuts for a similar offence. The number of cases reported, compared with the number of convictions obtained, appears to indicate the necessity for deterrent measures. At the suggestion of this Department the Inspector-General of Police has issued instructions to his officers to press for severe punishment in all such cases.

52. A severe magnetic storm was noticed in Colombo on August 11 and 12. The up-country lines were affected most, the southern lines least, and those going in other directions were only partially affected. On the Colombo-Nuwara Eliya circuit a current varying gradually from 5 milliampères to 30 milliampères was recorded. The Morse simplex and duplex circuits were not affected, but quadruplexes and Baudôt failed.

53. In India the lines running north and south were not disturbed, those running north-east to south-west were slightly affected, while the disturbance was very marked on those running north-west to south-east. Press reports stated that disturbance was noticed in America and most other countries. The storm was the worst recorded for ten years.

54. The maintenance of the electric clocks and the time ball connection at the Flagstaff, hitherto attended to by the Survey Department, was experimentally taken over by this Department.

## THE TELEPHONE SYSTEM.

55. The following table shows the growth of the Government exchanges during the last three years, together with the number of outstanding applications for connections on December 31, 1919:—

| Stations.        | Number of Subscribers. |       |       | Number of Applications on Hand, December 31, 1919. |
|------------------|------------------------|-------|-------|--|
|                  | 1917.                  | 1918. | 1919. |  |
| Anuradhapura* .. | 17                     | 17    | 17    | —  |
| Ambalangoda ..   | —                      | 2     | 2     | —  |
| Bandarawela* ..  | 2                      | 2     | 2     | —  |
| Colombo ..       | 1,621                  | 1,630 | 1,656 | 490  |
| Diyatalawa* ..   | 6                      | 7     | 7     | —  |
| Galle ..         | 57                     | 59    | 66    | 1  |
| Gampola ..       | 9                      | 8     | 15    | —  |
| Hatton ..        | 13                     | 14    | 15    | 2  |
| Kalutara ..      | 31                     | 30    | 25    | 3  |
| Kandy ..         | 87                     | 95    | 111   | 1  |
| Kelaniya ..      | 4                      | 4     | 4     | 1  |
| Kotte ..         | 2                      | 2     | 2     | —  |
| Kurunegala ..    | —                      | 13    | 23    | 2  |
| Matale ..        | —                      | 15    | 24    | 1  |
| Matara* ..       | 13                     | 13    | 13    | —  |
| Moratuwa ..      | —                      | 4     | 5     | 4  |
| Nawalapitiya ..  | 6                      | 8     | 8     | —  |
| Negombo ..       | 19                     | 22    | 22    | 4  |
| Nuwara Eliya ..  | 81                     | 85    | 103   | 2  |
| Peradeniya ..    | 4                      | 4     | 5     | 2  |
| Polgahawela ..   | 3                      | 3     | 3     | 2  |
| Ragama ..        | 2                      | 5     | 6     | —  |
|                  | 1,977                  | 2,042 | 2,134 | 515  |

\* Local service only. Not connected with the trunk line system.

56. It is estimated that 8,847,549 telephone calls were dealt with during the year, against 8,352,234 in the previous year, an increase of nearly 6 per cent. Considering the fact that telephone extensions had received a check owing to want of stores and equipment, this increase should be regarded as satisfactory.

57. The number of calls made from telephone call offices amounted to 51,360, against 49,198 the previous year. The five busiest call offices were Wellawatta (5,002), Maradana Railway Station (3,720), Moratuwa (3,134), Grand Oriental Hotel (2,560), and Kalutara (2,381).

58. New call offices were opened at Dandagamuwa (restricted service), Kotahena, Magalla, and Tebuwana.

59. 1,415 test calls were made during the year. Wrong numbers were connected in 8 per cent. of the cases, and "no reply" advices were reported in 2·8 per cent. of the calls. 6·6 per cent. of the calls were reported "Number engaged."

60. The improvement in the night telephone service is maintained. The average speed of answer was 11 seconds, and 73 per cent. of the calls were answered within 10 seconds, against 58·6 in the previous year.

61. The average speed of answer at the Colombo switchboard was 8 seconds, against 8·8 in the previous year. The percentage of calls answered in 10 seconds increased from 84 in 1918 to 85·2 during the year under review.

62. The large number of outstanding applications is due to the non-arrival of additional sections to the board indented for some years ago, and to the underground cables in several directions being completely used up. The inability of the Department to provide direct exchange circuits was responsible for a large number of external extensions allowed during the year. As many as 85 such lines were provided.

63. Some misapprehension appears to exist as to the proper function of a telephone exchange. It was ascertained that as many as 800 calls a day were made by subscribers for "correct time," and there are many subscribers who repeat the request ten or twelve times every day. These calls are a drag on the service and are detrimental to the subscribers' own interest, because important business calls may be held up and even lost through the line being engaged. If the measured rate system of charging for telephone service were in vogue, every one of these calls would be charged for, and it would be well for subscribers to discourage their staff originating such calls.

64. The telephone development study of the city of Colombo was completed during the year, and the question of opening a second exchange to serve the southern parts is under consideration.

65. The anomaly of subscribers in the same locality paying different rentals owing to the older lines being charged as from Cinnamon Gardens, where an exchange existed some years ago, was removed during the year by all subscribers on the lower rentals being given notice of the termination of their agreements, unless they agreed to pay the rentals as from the Fort telephone exchange, from which they are actually served. All such subscribers agreed to pay the increased rental, which amounts to over Rs. 5,000 per annum.

66. In order to conserve the existing switchboard and to reduce the load on the positions, various departmental lines were transferred from the central exchange switchboard to their own sub-exchanges. Several additional subscribers' positions on the switchboard were secured by this change, and the departments concerned given inter-communication on their own boards instead of circuitously *via* the central exchange.

67. Five licenses for the installation of private telephone systems were granted during the year.

68. Junction lines were run from Kandapola to Maturata and Matale to Mausagalla for the use of planters.

69. The following circuits for the Police Department were provided :—Veyangoda to Pasyala, Matara to Kamburupitiya, Dandagamuwa Post Office to Police Station, Neboda to Matugama, Matugama to Welipenna, Matugama to Migahatenna, Horana to Anguruwatota, and Negombo to Dunagaha. The total mileage of wire used was 1,275.

70. Owing to increased demand for connections at outstations, an additional 50-line switchboard was fitted at Nuwara Eliya, and the boards at Anuradhapura, Gampola, Polgahawela, Nawalapitiya, and Hatton were replaced. An additional 50-line board was also fitted at the railway sub-exchange.

71. A selective telephone circuit was fitted in the General Post Office, connecting the offices of Postmaster-General; the Assistant Postmaster-General; the Chief Postmaster, Mails; the Chief Postmaster, Parcels; and the Postal Storekeeper.

72. The number of exchange lines connected to the Colombo central switchboard on December 31, 1919, stood at 1,656, an increase of 26 over the previous year.

#### REVENUE AND EXPENDITURE.

73. The revenue collected in cash amounted to Rs. 3,576,385, while the expenditure in cash was Rs. 2,847,631, leaving a balance of Rs. 728,754 excess revenue. Work done free for other Government Departments is valued at Rs. 603,182; but, on the other hand, no estimate has been framed of the value of services the Postal Department received free, such as conveyance of mails by the Ceylon Government Railway, stationery and printing, rent rates and taxes on Government buildings occupied by the Department.

74. The cash revenue exceeded that of the previous year by a sum of Rs. 710,240, chiefly due to the increased rates of postage and for inland telegrams. Money order commission and telephone receipts also show substantial increases.

75. The expenditure was actually less in 1919 than in 1918, but the reduced amount spent in other charges is more apparent than real.

#### STAFF.

76. Mr. F. J. Smith, Postmaster-General, left the Island on long leave on July 1, and the following acting appointments were made :—Mr. John Fox as Postmaster-General, Mr. G. W. J. Praat as Assistant Postmaster-General, Mr. A. G. Tillekeratne as Superintendent of Telegraph and Telephone Traffic, and Mr. E. S. Disanaike as Assistant Superintendent of Traffic.

77. In the Telegraph Engineer's Branch, Mr. A. Leslie Cook retired on the ground of ill-health, and the connection of Mr. V. W. Goss, who had been on war service since the year 1914, with the Department was definitely terminated. Mr. R. H. Thwaites, who had acted as Assistant Engineer on several occasions, was confirmed in that appointment, with effect from January 1, 1917.

78. Mr. J. R. Stapleton, the officer in charge of the Wireless Station, left the service in September on the expiration of his agreement; and Mr. F. T. Hubert was appointed to act as officer in charge, with the assistance of Mr. C. N. de Hoedt as maintenance officer in charge of the machinery and apparatus.

79. Three clerks, two postmasters and signallers, one telegraph inspector, and one monitor in the Telephone Exchange died during the year; two clerks and two postmasters retired on pension; two telephonists resigned their appointments; and five postmasters and signallers were dismissed.

General Post Office,  
Colombo, May 13, 1920.

JOHN FOX,  
Acting Postmaster-General and Director of Telegraphs.

#### APPENDIX.

Table I.—Estimated Number of Articles which passed through the Post during the Year 1919.

|                         | Letters.    | Post Cards. | Printed Matter,<br>Samples, &c. | Total.     |
|-------------------------|-------------|-------------|---------------------------------|------------|

# RAILWAY.

## REPORT OF THE GENERAL MANAGER FOR 1919.

I HAVE the honour to submit my report on the working of the Railway Department for the year 1919. The general remarks apply to the calendar year 1919, and the statistical figures to the financial year October, 1918, to September, 1919.

2. During my absence on home leave from April to November, 1919, Mr. D. McMillan acted as General Manager, and my thanks are due to him for so kindly undertaking the duties.

3. The revenue for the financial year (excluding Rs. 1,354,797 on account of traffic conveyed and work done free for other Government Departments, and also Rs. 367,018 representing freight charges normally leviable on account of rice and foodstuffs, which were carried free for the public on Government instructions) amounted to Rs. 16,901,830, as compared with Rs. 16,910,153 in the preceding year, or a decrease of Rs. 8,323, due mainly to a large falling off of Rs. 610,502 in Foreign Goods Traffic. The total tonnage of Foreign Traffic conveyed to and from India was 35,056 tons, or a decrease of 117,981 tons as compared with the previous year, which was entirely due to the prohibition of the export of South Indian rice to Ceylon *via* Talaimannar.

4. The increases were Coaching Traffic, Rs. 700,589; Live Stock, Rs. 3,027; Miscellaneous, Rs. 6,372; and Motor Traffic, Rs. 16,634; whilst Goods Traffic, both Foreign and Local, showed a falling off of Rs. 734,945, due mainly to the causes given in the preceding paragraph.

5. Parcels and other Coaching Traffic, such as horses, carriages, and bicycles, showed increases in receipts, with a falling off in number conveyed, the decrease in the number of parcels being 41,310.

6. Passengers also showed a falling off in number, chiefly third class. The increases in amounts and decreases in numbers conveyed are due to enhanced fares for Passengers, Parcels, and H. C. D. Traffic brought into force in January, 1919.

7. The fares for season tickets were not raised, and this class of traffic showed an appreciable increase of 3,289 in number of season ticket holders as compared with the previous year.

8. Cooly Traffic increased considerably, the number conveyed in excess of the preceding year being 41,738. This increase was entirely due to South Indian coolies travelling at cheap fares.

9. Under Goods Traffic, the total quantity of local goods conveyed during the year, including railway material and free goods, was 952,461 tons, or an increase of 1,888 tons. Increases were rubber, 4,725 tons; tea, 8,988 tons; tea and rubber packing, 4,852 tons; manure, 9,313 tons; and rice, 1,745 tons; whilst decreases appeared under coconut produce, 3,341 tons; plumbago, 2,282 tons; sundry goods, 12,664 tons; and railway material and free goods, 10,030 tons.

10. Traffic under Live Stock showed a small increase of 2,107 in number, due to the conveyance of a larger number of cattle and sheep on the Main and Mannar lines.

11. The expenditure for the year (including a sum of Rs. 95,706 spent on new works and added to maintenance, as compared with Rs. 76,275 in previous year) was Rs. 9,389,408, or Rs. 289,995 in excess of the previous year. This increase is made up of Rs. 173,634 under Personal Emoluments, due to increase of salaries and additional appointments; Rs. 96,930 under Other Charges, due to enhanced cost of materials; and Rs. 19,431 under New Works Maintenance.

12. Briefly put, the results of the financial year's working give an increase in working expenditure of Rs. 289,995, as against a decrease in receipts of Rs. 8,323; but as regards the latter figure, it must be borne in mind that, apart from a loss of Rs. 610,502 on account of discontinuance of rice traffic from South India, the Railway conveyed free for the public, between June and October, rice traffic representing in ordinary course a sum of Rs. 367,018 in freight charges.

13. When allowance is made for this, and for the fact that the cost of materials of all sorts has been constantly rising, the apparent falling off as compared with the previous financial year is more than accounted for. Shortage of imported rice from India and Burma was the main cause of the considerable decrease, not only by the total cessation of the South Indian rice supplies, but also because the Government decided, under the exceptional circumstances, to grant the concession of free conveyance of rice for several months to assist the population.

14. Little progress was made during the year in the direction of making up ground lost during the war, a total of only Rs. 482,547 being spent on works chargeable to capital account. No new engines were received (with the exception of a pre-war order for two for the Kelani Valley line), and no new rolling stock was turned out on account of traffic requirements, only 31 goods vehicles being built on renewals account in lieu of old wagons scrapped.

15. It will have to be recognized that in the future the nett revenue contributed by the Railway will be less than in the past—considerably less during the next few years—for not only is the very high price of all materials likely to continue, if not still further, to increase, but salaries and wages must also increase, in order to keep pace as far as possible with the general increased cost of living, and there is the further question of reduction of hours of duty for the staff, all vital questions leading to increased cost of working without corresponding increases in revenue.

16. The same thing has happened and is happening on railways all over the world and must be faced here. There are heavy arrears of maintenance and demands for works in connection with safety, traffic, progress, and accommodation for the staff, which must be attended to, irrespective of the volume of the receipts. It is not so much a question now of getting supplies from outside the Island (though it is often a slow business in getting them), but rather the greatly increased prices as compared with the pre-war rates. The cost of imported articles as charged to the Department is, in practice, higher than the actual cost to the Government, from the fact that such articles are debited to us at the rate of Rs. 15 to the £1; but, on the other hand, the "temporary allowances" paid to the Railway Staff, in addition to their salaries or wages, in connection with increased cost of living, are not being debited to the Railway, as they are paid from a general Government Fund.

17. A small increase in passenger fares and parcels rates of 12½ per cent. (not applicable to through Indo-Ceylon and cooly fares and rates), with an increase of 50 per cent. for H. C. & D. traffic, was introduced on and from January 1, 1919, and still remains in force.

18. On March 3, 1919, a partial resumption of the train service, including the running of a reasonable number of Sunday trains, was introduced to supplement the very restricted service previously in force in connection with war retrenchment.

19. Small extensions of Tyer's tablet system were carried out during the year on the Matale, Kelani Valley, and Mannar sections, and between Maradana and Fort.

20. A small section of narrow gauge line was added to the railway mileage in Colombo on and from March 10, 1919, by the extension of the Kelani Valley line from Maradana to Fort. The scheme of extension of the same line was also completed on May 2, 1919, by the opening of the sections from Dela to Opanake, thus giving the projected rail facilities for the Pelmadulla, Rakwana, and Balangoda districts.

21. No further section of the Badulla extension was opened during the year.

22. We were fortunately free from serious trouble on account of slips and washaways, though heavy rains on the Northern section of the line in November and December caused some interference with traffic.

23. I am also glad to be able to record that there were no serious accidents during the year.

General Manager's Office,  
Colombo, April 16, 1920.

G. P. GREENE,  
General Manager.

## APPENDIX.

*Capital Account.*—The total capital cost of the open lines, including amounts expended on additional accommodation and improvements to September 30, 1919, is Rs. 141,451,370, or an increase over the previous year of Rs. 1,267,355, which is made up as follows:—

|                          | Rs.        |                                   | Rs.       |
|--------------------------|------------|-----------------------------------|-----------|
| (1) Badulla extension    | .. 234,973 | (4) Duplication of Main line      | .. 47,594 |
| (2) Pelmadulla extension | .. 266,240 | (5) New and minor works (capital) | 482,547   |
| (3) Stations extensions  | .. 236,001 |                                   |           |

*Loan Account.*—The outstanding on Railway Loans on September 30, 1919 (sterling loan converted into Ceylon currency at 1s. 4d. per rupee) was Rs. 55,666,141; or a decrease of Rs. 300,000 as compared with the previous year.

*Interest and Sinking Fund.*—Payments of interest and sinking fund on account of Railway Loans to September 30, 1919, amounted to Rs. 2,827,062, as compared with Rs. 2,825,880 in the previous year.

*Results of Working,* inclusive of new works charged to maintenance, but exclusive of credits on account of services rendered free to other Government Departments and to the public:—

|             | 1917-18.      | 1918-19.      | Increases. | Decreases. |
|-------------|---------------|---------------|------------|------------|
|             | Rs.           | Rs.           | Rs.        | Rs.        |
| Receipts    | .. 16,910,153 | .. 16,901,830 | .. —       | 8,323      |
| Expenditure | .. 9,099,413  | .. 9,389,408  | .. 289,995 | .. —       |
| Balance     | .. 7,810,740  | .. 7,512,422  | .. —       | 298,318    |

*Earnings.*—After deducting working expenses and interest and sinking fund, the nett amount contributed to the general revenue of the Colony amounted to Rs. 4,685,360, as compared with Rs. 4,984,860 in the preceding year. This amount includes a total of Rs. 482,547 expended on new works and charged to capital account.

*New Works and Additional Rolling Stock.*—The expenditure under this head amounted to Rs. 578,253, of which a sum of Rs. 95,706, not properly chargeable to capital, was added to the ordinary working expenses.

*Length of Line.*—The total length of the line open for traffic on September 30, 1919, was 727½ miles (610½ miles broad gauge and 117½ miles narrow gauge), or an increase over the previous year of 15½ miles, due to the opening of the extensions of the Kelani Valley narrow gauge line from Maradana to Fort and from Dela to Opanake during the year. The average mileage was 721 miles.

*Traffic Train Mileage, 1918-19.*

| <b>Total ..</b>                 | <b>1,999,118</b>   | <b>2,019,765</b>   | <b>20,647</b>       | <b>44,901</b>       |

The increases on the different sections are due to increased train service, and the decrease on the Mannar line to the curtailment of goods trains consequent on the discontinuance of South Indian rice traffic.

From the foregoing statement it will be seen that, with the exception of coolies, the number of first, second, and third class passengers conveyed during the year has fallen off by over 2 per cent. The decreases are 41,723 on the Chilaw line, 47,695 on the Kelani Valley line, and 294,391 on the Coast, Main, and Northern lines. The Badulla and Ratnapura sections show increases of 5,781 and 9,411 respectively, and the line to Opanake, a section of which was opened for traffic during the year, an increase of 50,783. Foreign Traffic also shows an appreciable increase of 77,040, and the Mannar and Uda Pussellawa lines show small increases of 2,499 and 2,025, respectively. The increase in the number of coolies is on account of South Indian coolies travelling at cheap cooly fares.

*Comparative Statement of the Number of Periodical Tickets and the Receipts therefrom (all Tickets reduced to Monthly Tickets.)*

| <b>102,198</b> | <b>119,757</b> | <b>17,559</b> | <b>—</b>  |        | <b>291,667</b>       | <b>321,792</b>       | <b>30,125</b> | <b>—</b>  |

The number of season ticket holders carried during the year shows a large increase, due to the growth of the suburban districts of Colombo. The average number carried per month was 9,980, or, assuming that each season ticket holder made 25 journeys per month, an addition of 5,988,000 to the ordinary passenger traffic for the year.

Although the amounts under the different heads of other Coaching Traffic show increases, the numbers conveyed have fallen off.

In Parcels Traffic the total decrease was 41,310 in number, the principal decrease being 21,463 parcels forwarded from Fort and Maradana.

Decreases are also noticeable on the Mannar and Chilaw sections of 15,225 and 9,454, respectively, due to a falling off in Fish Traffic. The Pelmadulla and Ratnapura sections show increases of 3,606 and 951, respectively.

| <b>Grand Total</b> ..                            | <b>1,111,349</b>                      | <b>10,153,377</b> | <b>995,907</b>                        | <b>9,173,611</b> | <b>—</b>  | <b>—</b>  | <b>115,442*</b> | <b>979,766*</b> |

\* Nett.

The table shows a total nett decrease of 106,063 tons in ordinary Goods Traffic, as compared with the previous year, which is more than covered by the large falling off (117,981 tons), due to the discontinuance of rice from South India *via* Talaimannar.

*Rubber.*—A fairly large tonnage in excess of the previous year was conveyed, due no doubt to larger areas in bearing. The principal increases are Matale 347 tons, Kalutara South 542 tons, Alutgama 309 tons, and Dehiowita 440 tons.

*Tea.*—The market for tea was steady throughout the year, and nearly 9,000 tons more than last year were conveyed from different parts of the line to Colombo. Towards the total increase Kandy contributed 938 tons, Nawalapitiya 1,509 tons, Rozelle 534 tons, Haputale 735 tons, Ella 1,443 tons, Hatton 480 tons, and Galle 427 tons. Ratnapura, however, naturally shows a large decrease of 1,148 tons, due to the extension of the Kelani Valley line thence to Opanake.

*Tea and Rubber Packing.*—This traffic naturally shows an increase of 4,852 tons, made up chiefly of locally manufactured packing from Rambukkana and Moratuwa of 652 tons and 1,814 tons, whilst imported packing shows an increase of nearly 900 tons.

*Manure.*—The tonnage conveyed shows an increase of 9,313 tons, of which 3,528 tons represent the quantity conveyed from stations in Colombo to the Manure Works at Kelaniya and Hunupitiya in excess of last year. The total tonnage distributed from these two stations shows increases of 1,664 and 3,548 tons, respectively.

*Coconut Produce.*—The traffic under this head fell off to the extent of 3,341 tons. The most noticeable decreases are Negombo 715 tons, Alawwa 1,276 tons, Polgahawela 506 tons, Potuhera 669 tons, Paiyagala South 654 tons, Galle 1,309 tons, and Matara 1,557 tons; whilst Mirigama shows an increase of 730 tons, Kandy 890 tons, and Ambalageda and Weligama 1,061 tons.

*Plumbago.*—The decrease in plumbago was due to the closing of a number of pits for want of demand. Decreases are noticeable on all sections of the line, the principal being 1,008 tons at Galle.

## REPORT OF THE ENGINEER OF WAY AND WORKS FOR 1919.

I HAVE the honour to submit my report for this Department for the year 1919.

The running track mileage open in September, 1919, was 754 miles 33 chains, and the total track mileage 864 miles 58 chains, as against a total track mileage of 846 miles 65 chains in 1918, the increase in 1919 being chiefly due to the opening of line through to Opanake.

*Expenditure.*—The total expenditure on account of maintenance for the financial year was Rs. 1,882,788·97 (excluding special expenditure on new works under this head), as against Rs. 1,973,699·99 in 1918, the drop in expenditure being due to the failure to secure permanent way materials urgently required.

*Permanent Way.*—Owing to the failure of supplies of permanent way materials, our programme of renewals was again very restricted, and considerable management was required to enable us to keep traffic going. Only 269 tons of new rails were available to put into the road, and 67,982 broad gauge sleepers and 18,000 narrow gauge sleepers were used. The previous year's supplies were 461 tons of rails, broad gauge sleepers 73,769, and narrow gauge sleepers 12,358.

*Slips and Washaways.*—There were no slips or washaways of any magnitude to record. In December there was heavy rain and flooding of the line in the Northern Province, which was the cause of some damage to the railway. Considerable damage was caused by floods to the public road at Elephant Pass, where the central cylinders of the road bridge adjoining our railway bridge were scoured out, thus cutting off communication by road between the mainland and the Jaffna peninsula. Road traffic was afterwards restored by diverting it over our railway bridge.

*New Works.*—Our programme of new works was again restricted, and amounted in value to Rs. 416,243·52, as compared with Rs. 549,286·03 in 1918. No new works of any importance were begun, and a great deal of the expenditure incurred was in carrying on works already commenced.

*General.*—The year under review has been an uneventful one, except for the grave situation caused by the shortage of rice supplies to the Colony, which reached its most acute stage in June. This Department had already in operation a system of supplying rice to its employees, and by extending this system to areas not previously dealt with, we were able efficiently to control issues and to feed our staff through a very difficult time.

*Staff.*—Mr. G. E. Hooper again kindly acted for me from April 7, 1919, to November 24, 1919, and Mr. A. G. Cooper, Assistant Engineer, returned from war service in Mesopotamia and assisted Mr. Hooper in administering the Department.

D. McMILLAN,  
Engineer of Way and Works.

## REPORT OF THE LOCOMOTIVE, CARRIAGE, AND WAGON SUPERINTENDENT FOR 1919.

I HAVE the honour to report that the whole of the rolling stock, plant, and machinery has been kept in the best possible running order during the year ended December 31, 1919. Stores and materials have been coming forward somewhat better towards the end of the year, but a great deal must be done in the near future to bring the stock up to what it was in pre-war days.

### Mileage.

The total engine mileage for all lines in the year under review, including service, wayside, and yard shunting, was 3,377,630 miles 60 chains, as compared with 3,052,911 miles in the previous year, or an increase of 10·63 per cent.

Train mileage for all lines for the period in question was 2,353,793 miles 60 chains. Comparing this with the previous year's figures of 2,074,998 miles 40 chains, there is an increase of 278,795 miles 20 chains, representing 13·43 per cent.

The total vehicle mileage for this period was 52,474,568 miles 32 chains, as compared with 48,396,217 miles 55 chains, or 8·42 per cent. This increase in mileage has been brought about by restoring the train service, which had been reduced in the earlier part of the preceding year.

The consumption of fuel increased 5 lb. per engine mile. This increase in consumption is due to the coal not coming up to the usual quality, and represents an increase in the working expenses of approximately 7 cents per engine mile.

The consumption of oil per engine mile was .07 pint. There is also a slight increase over the previous year's working in this direction. The cause of this is due to the fact that our ordinary sources from which we received our supplies failed us, and we were compelled to use oils which we could purchase in the local market.

The motor vehicle mileage during the twelve months under notice as compared with the previous year was as follows :—

|                        | 1918.<br>Miles. | 1919.<br>Miles. | Increase.      | Decrease.     |
|------------------------|-----------------|-----------------|----------------|---------------|
| Motor mail service ..  | 177,505½        | 176,692½        | —              | 812½          |
| Albion touring cars .. | 75,743          | 90,371½         | 14,628½        | —             |
| Mail lorry service ..  | 9,675½          | 9,939½          | 263½           | —             |
| Excise cars ..         | 10,797½         | 5,552½          | —              | 5,245         |
| <b>Total ..</b>        | <b>273,722½</b> | <b>282,556½</b> | <b>14,892½</b> | <b>6,057½</b> |

#### *Expenditure on all Lines.*

|   | Rs.              | c.        |
|---|------------------|-----------|
| Total expenditure for the twelve months October, 1918, to September, 1919, including new works and Motor Department, &c. .. | 5,178,022        |           |
|   | Rs.              | c.        |
| Less work done for other Departments ..   | 349,273          | 59        |
| Less expenditure on account Motor Department ..   | 191,629          | 14        |
| Less Railway Works Extraordinary ..   | 144,644          | 93        |
|   | 685,547          | 66        |
| <b>Total working expenses, exclusive of new works, Motor Department, &amp;c. ..</b>   | <b>4,492,474</b> | <b>45</b> |

The working expenditure for the financial year October, 1918, to September, 1919, amounted to Re. 1.40 per engine mile, as against Re. 1.33 in the previous year. The increase of 7 cents per engine mile is entirely due to the increase in the consumption of fuel.

#### *General Remarks.*

During the year under review no new rolling stock of any description was built in the Locomotive workshops. Two engines which were ordered for the Kelani Valley line in the year 1914 were received and put into traffic towards the latter part of 1919.

The work done by the Locomotive, Carriage, and Wagon Department for other Departments is still being carried out to the same extent as in the preceding year, and all our resources have been fully taxed.

Mr. K. C. Strahan, Assistant Locomotive, Carriage, and Wagon Superintendent, resigned his post in the Ceylon Government Railway on the termination of war, and Mr. T. A. Whittaker, Assistant Locomotive, Carriage, and Wagon Superintendent, has been offered the post of Chief Mechanical Engineer on the Uganda Railway. Mr. R. Malthus, District Locomotive Superintendent, accepted service under the Government of Jamaica, and has been transferred there. I should like to place on record my appreciation of the good work done by these officers during their periods of service in this Department.

I also wish to record my appreciation of the manner in which Mr. F. C. French carried out the duties of Locomotive, Carriage, and Wagon Superintendent during the period I was on leave. I returned to the Island and resumed duties in October, 1919.

E. W. HEAD,  
Locomotive, Carriage and Wagon Superintendent

#### REPORT OF THE TRAFFIC MANAGER FOR 1919.

I HAVE the honour to submit my report on the working of the Traffic Department.

The expenditure of the Department was Rs. 2,217,590, as compared with Rs. 2,186,815 for 1918, an increase of Rs. 30,775, or 1.40 per cent.

The traffic train mileage was 2,019,765, as compared with 1,999,117 for the previous financial year, an increase of 20,648, or 1.03 per cent.

With regard to receipts, the item represented by "warrants" is a considerable one, and it includes the free conveyance of all rice and other foodstuffs from June 2 to the end of the financial year. This was ordered by Government as a measure of relief owing to the food crisis.

The increases in expenditure and train mileage are explained by the opening of the extension to Opanake, the extension of Kelani Valley passenger trains to Fort, and the general increase in train service as from March 3, 1919, which included the re-introduction of Sunday trains.

The improved passenger train service, which operated from March 3, is below what is normally required to meet the general convenience of the travelling public, and will have to be further improved as soon as it is possible to do so. Additional passenger rolling stock is required to meet the increasing demands, as our present stock on hand is not sufficient to meet the needs of a full train service, and at the same time leave a margin for special traffic, such as at the Christmas and Easter Holidays and during pilgrimages, and for cleaning and repairs. A certain amount of extra stock will be turned out during the financial period 1919-20, and additional stock is being asked for in the 1920-21 Estimates. Whilst referring to passenger train service and rolling stock, I should like to record the fact that the question of running steam rail motor services has been revived, and I hope to see provision made for commencing these during 1920-21. As a commencement, it appears to me that frequent steam rail motor services, say, between Maradana and Mount Lavinia on the Coast line and between Fort and Pannipitiya on the Kelani Valley line, to fill up the gaps in the ordinary train service, would not only result in financial profit, but add very largely to the convenience of those living in these suburban areas, inducing a larger number of people to live out of Colombo.

The time keeping of trains showed the following results as compared with 1917-18 :—

|  | 1917-18. | 1918-19. |
|--|----------|----------|
| Total number of trains run (passenger, mixed, and goods) | 47,309   | 50,609   |
| Total minutes late arrival at destination                | 260,919  | 173,886  |
| Percentage of trains to time                             | 64       | 74       |
| Average minutes late arrival per train                   | 5.52     | 3.43     |

The train service was interrupted on the Northern line beyond Parantan from November 18, 1918, to November 21, 1918, due to washaways, and on August 1, 1919, by an earthslip between Nanu-oya and Ambawela, traffic having to be transferred at 131½ miles.

No progress has been made with the extension of the train control system owing mainly to high cost of materials, but the question is being brought up again for consideration in connection with the Estimates for 1920-21.

The following comparative figures of loading of wagons are submitted :—

|  | 1917-18. | 1918-19. |
|--|----------|----------|
| Total number of goods wagons available for traffic, all gauges and classes | 1,664    | 1,659    |
| Total carrying capacity, tons  | 22,321   | 22,302   |
| Average load per wagon per trip, tons                                      | 7.45     | 6.86     |
| Percentage of average load to average carrying capacity                    | 57.57    | 52.97    |
| Tonnage conveyed per wagon per annum                                       | 636.30   | 513.40   |

The decrease in the average load per wagon is mainly due to the stoppage of rice traffic from South India by the rail route, which was formerly conveyed in full truck loads.

The decrease in tonnage per wagon per annum is entirely due to the fact that there was a falling off in tonnage conveyed of 233,412 tons.

The main items of interest during the year have been :—

|                      |    |   |
|----------------------|----|---|
| January 1            | .. | Fares and rates for passengers and parcels increased by 12½ per cent. with the exception of through fares and rates between Ceylon and India <i>via</i> Talaimannar and season tickets. |
|                      |    | Withdrawal of all return tickets, except at double the increased single fares less 1 cent.  |
|                      |    | H. C. and D. traffic rates increased by 25 per cent.  |
| March 3              | .. | Improved train service introduced, including Sunday trains.   |
| March 10             | .. | Extension of Kelani Valley line from Maradana to Fort for passenger traffic.  |
| May 2                | .. | Opening of extension to Opanake, and new stations at Watapota, Kahawatta, and Opanake opened for all traffic.   |
| June 1               | .. | All Indo-Ceylon fares, rates, refunds, &c., taken over by Traffic Department from Accountant's Department.  |
| June 2 to November 2 | .. | Rice and other foodstuffs conveyed free.  |
| August 1             | .. | Earthslip between Nanu-oya and Ambawela. Through traffic resumed on August 2.   |

*Staff.*—Mr. R. H. Dawson returned from war service on March 5 and Mr. J. J. P. Felix on May 22.

Mr. R. H. Dawson on home leave from June 11.

Mr. J. J. P. Felix appointed to fill vacancy of Assistant Traffic Manager as from February 3.

Mr. W. G. Hills was acting as Assistant Traffic Manager from March 24, 1919, to May 21, 1919, and again from June 11, 1919.

Mr. J. A. de Bruin, Station Superintendent, Maradana, and Mr. J. W. Fernando, who was acting as Assistant District Traffic Superintendent, were appointed to the posts of District Traffic Superintendents on a year's probation from March 24 and April 15, respectively.

Mr. R. F. Gooneratne and Mr. N. A. Perera continued to act as Office Assistant to Traffic Manager and Chief Clerk, respectively.

T. E. DUTTON.  
Traffic Manager.

## REPORT OF THE RAILWAY ACCOUNTANT FOR 1919.

I HAVE the honour to submit my report for the working of this Department during the year ended September 30, 1919.

*Office Changes.*—Mr. Vincent de Silva, Chief Clerk of this Office, was appointed Second Assistant Accountant in February, 1919.

*Personal.*—Mr. H. Thorpe, Assistant General Manager and Accountant, left Ceylon for England on leave on August 15, 1919, and I was appointed to act for him, Mr. Vincent de Silva acting for me, and Mr. R. de Fonseka for Mr. de Silva.

*Expenditure.*—The establishment charges for the year were Rs. 247,975, or Rs. 41,455 in excess of that for last year, this increase being due to additional appointments, increases of salaries, and to enhanced cost of stores and tickets. The percentage of expenditure to gross receipts was 1·36.

*Financial Transactions.*—The total receipts, payments, transfers, and transactions with the Stores Department dealt with during the year amount to Rs. 39,554,495.

*Stores and Materials for Open Lines.*—The total quantity of material conveyed for the Maintenance Department during the year was 22,943 tons, and freight charges written off on this account calculated at Engineer's rate amount to Rs. 91,354. In addition to this, coal was conveyed for the Locomotive Department to the extent of 48,111 tons. Firewood was also conveyed by special trains on Sundays, for which Traffic wagons ran 2,787,563 miles, as against 2,551,943 miles in the preceding year.

*Other Services rendered Free by the Railway.*—Owing to abnormal rise in the price of rice and foodstuffs, the tonnage on which freight charges amounting to Rs. 367,018 were written off during the year total to 23,857 tons.

*Railway Stores Department.*—The annual stock-taking was supervised by me at the close of the financial year, i.e., September 30, 1919. The value of stores on hand was Rs. 3,556,838·36, as compared with Rs. 3,344,192·46 at the close of the preceding year, the increase of Rs. 212,645·90 being due to the high prices ruling throughout the year for stores, and to the fact that stores imported from England have been debited to the Railway at the rate of Rs. 15 to the pound sterling.

W. C. DAVEY,  
Acting Assistant General Manager and Accountant.

# FOREST CONSERVANCY.

## REPORT OF THE CONSERVATOR OF FORESTS FOR 1919.

### I.—CONSTITUTION OF STATE FORESTS.

#### I.—Alteration in Area.

1. (i.) *Reserved Forests*.—The previous total of 921·37 square miles was increased to 921·67 square miles by the inclusion of Madolwitiya, 197 acres 1 rood 15 perches, in the Pelmadulla Range of the Colombo Division, the only reserve proclaimed during the year.
2. (ii.) *Proposed Reserves*.—A small area of 1 acre and 13·3 perches was added to the Rakwana plantation in the Colombo Division, and awaited settlement at the close of the year. Otherwise no new proposals were submitted, and the total area of proposed reserves was reduced from 4,019·71 square miles to 4,019·40 square miles by the transference of Madolwitiya to reserves. Proposals in course of preparation include the collection of data for the reservation of timber and fuel blocks along the Northern Railway in the Kurunegala Division and a preliminary report on the forests in the Kalutara District submitted at the close of the year. The completion of the surveys of proposed reserves in the Jaffna Division will, after settlement, affect the acreage of proposed reserves in that Division in 1920.
3. (iii.) *Other Crown Forests*.—The area was reduced by 5,988 acres alienated for sale or lease.

#### II.—Demarcation.

4. (i.) *Reserved Forests*.—New work was confined to the Kurunegala Division, in which 340 chains 8 feet wide were opened in the Sellankandel reserve, and 25 chains 7 feet wide in the Badagamuwa reserve. The same Division carried out re-clearing of 380 chains of existing boundaries in the Sellankandel reserve and 1,189 chains in the Attavillu reserve. In the Colombo Division 300 chains were re-cleared in Masimbula and Marahela reserves, and 15 new boundary pillars erected. The total expenditure on these operations was Rs. 836·82.
5. (ii.) *Proposed Reserves*.—The Jaffna Division spent Rs. 500·08 in completing the opening of 578 chains, for survey purposes, in the Madu and Mavillu proposed reserves, and in erecting 150 boundary posts in the Karunkalikulam proposed reserve. In the Batticaloa Division 1,555 chains of existing boundaries were re-cleared in four proposed reserves, and 10 boundary posts re-erected in one forest at a cost of Rs. 494·75.
6. The total expenditure under demarcation amounted to Rs. 994·83, the large reduction being accounted for by the practical completion of demarcation work in the Jaffna Division in the previous year.

#### III.—Forest Surveys.

7. The annual statement of the progress of forest surveys in the Jaffna Division, kindly furnished by the Surveyor-General, gives the following results :—

|  | Name of Reserve.             | Extent. |    |    | Total.  |    |    |
|--|------------------------------|---------|----|----|---------|----|----|
|  |                              | A.      | B. | P. | A.      | B. | P. |
| Surveys completed and plans sent to the Settlement Officer during the financial year 1918-19 | 1. Mandakel-ar ..            | 26,628  | 0  | 17 |         |    |    |
|  | 2. Chunnivil ..              | 5,692   | 3  | 19 |         |    |    |
|  | 3. Akkiriyan-Kilinoch-chi .. | 59,661  | 1  | 33 |         |    |    |
|  | 4. Neenthavil ..             | 20,092  | 1  | 32 |         |    |    |
|  | 5. Nagapaduwan ..            | 10,335  | 0  | 33 |         |    |    |
|  | 6. Pallai ..                 | 1,146   | 3  | 25 |         |    |    |
|  | 7. Mavillu ..                | 36,153  | 0  | 2  |         |    |    |
|  |                              |         |    |    | 159,710 | 0  | 1  |
| Surveys completed during the financial year and plans in course of preparation               | 1. Madu ..                   | 55,776  | 3  | 5  |         |    |    |
|  | 2. Veppal ..                 | 26,115  | 2  | 17 |         |    |    |
|  |                              |         |    |    | 81,892  | 1  | 22 |
| Total approximate extent ..  |                              |         |    |    | 241,602 | 1  | 23 |

8. A summary of the work carried out by the Survey Department in connection with the reservation of forests in the Jaffna Division shows the following final results :—

|   |               | A.      | B. | P. |
|---|---------------|---------|----|----|
| Surveys completed and plans sent to the Settlement Officer from 1916 to September 30, 1919 .. | 23 forests .. | 446,445 | 1  | 34 |
| Surveys completed and plans in course of preparation ..                                       | 2 forests ..  | 81,892  | 1  | 22 |
| Total ..  | 25 forests =  | 528,337 | 3  | 16 |

9. Final figures of the proposed reserves in the Jaffna Division in which survey operations are complete will appear in the next year's report, as the final settlement reports of the remaining forests are expected in 1920.

10. Further work was carried out by the Survey Department in defining portions of the Marahela and Masimbula reserves in the Colombo Division in connection with certain encroachments.

11. Surveys carried out by the Forest Department include four excisions, totalling 3,675 acres, in the Pankulam proposed reserve of the Trincomalee Subdivision, and twenty chena plantations

granted on re-forestation agreements in the Batticaloa Division, totalling 400 acres and 16 perches, the total cost of all operations being Rs. 112.

12. The progress of chena plantation surveys in the Batticaloa Division is illustrated by the following statement.

| Number of Chena<br>Plantation.  | Name of Chena<br>Plantation.                 | Extent<br>surveyed<br>during<br>1919. |    |    | Total. |    |    |

| 142   | Periya Pullumalai                            | 4                                     | 0  | 0  |        |    |    |
|   |  | <hr/>                                 |    |    | 400    | 0  | 16 |
| Total area of surveyed chenas to end of 1919  |  |                                       |    |    | 3,146  | 1  | 5  |

The total cost of surveying the twenty chenas was Rs. 64, or 16 cents per acre.

13. A survey was commenced of the railway fuel re-forestation areas in the Nuwara Eliya Range of the Nuwara Eliya Division.

#### IV.—Settlement.

14. Final reports were received for two forests, 39,640 acres 2 roods and 9 perches in the Jaffna Division during the year, and final orders published for five forests in the same division, comprising 71,967 acres 1 rood and 23 perches for which final reports were not issued during the year. Out of 446,445 acres 1 rood and 34 perches, for which plans were submitted by the Surveyor-General, 299,341 acres 2 roods and 15 perches have now been finally settled under the Waste Lands Ordinance and declared Crown. Village settlements continued in the Anuradhapura Division, and several important forest areas are gradually being included in settlement operations in the Colombo Division, rendering the question of constituting new reserves and revising the boundaries of existing reserves and proposed reserves a matter for serious consideration. This task will be facilitated by the separation of the Western Province and Province of Sabaragamuwa into separate divisions, for which sanction was well within view at the end of the year, and was accorded early in 1920.

## II.—MANAGEMENT OF CROWN FORESTS.

### I.—Regulation of Management.

15. (a) *Control and Preparation of Working Plans.*—The year brought no additions. Work was again confined to those in operation in the three small plantation areas in the Kurunegala Division, of which the short period Sundapola working plan expired.

16. (b) *Preliminary Working Plan Reports.*—None were received, and the only operation reported was the collection of data in the Kurunegala Division for the formation of a proposed working circle along the Northern Railway in four working sections for a systematized plan of timber and fuel production. No advance was made in connection with the reports received in the previous year for the re-forestation of patanas in the Uva Division, owing to change of staff and the time of officers being fully taken up elsewhere.

17. (c) *Enumeration Surveys.*—The first steps undertaken for the enumeration of large forest blocks for the preparation of working plan reports were commenced in the Talangoda forest of the Nuwara Eliya Division, near Elahera, the work being carried over eight blocks representing 7,000 trees. It is being continued, and it is intended to apply the same procedure to other important areas whenever it is possible to detail special officers for the work. In fuel blocks worked for the railway on clear-felling contracts, enumeration of timber trees was carried out for future supplies in most divisions.

18. (d) *Sample Plots.*—The usual measurements were recorded by divisional officers, except in the Uva Division, in which it was found that the records of plots opened in the previous year were incomplete, and required further checking in the field. The total expenditure incurred on maintenance of the plots was Rs. 82.25. The opening of new plots is advocated in some divisions, as the existing areas either represent types of forest which, when worked, are replaced by other types, or furnish negative data owing to the unsylvicultural composition and condition of their growing stock.

19. *Plan of Operations.*—All divisions completed their programmes for the year as far as funds permitted, except in the Batticaloa Division, where the continued prevalence of influenza prevented the full utilization of the vote under Sowing and Planting. As in the previous year, the main attention of the Department was necessarily devoted to the outturn of timber supplies to Government Departments.

and Railway fuel, and until the annual requirements of these Departments can be placed on a definite basis, resulting in a definite programme of some years' duration, the Department will be handicapped in the matter of adjusting the supply of timber to the sylvicultural possibility of the forests, and of working to any fixed plan of operations. At present the satisfaction of pressing indents, usually received too late to admit of matured arrangements, is the burden of the Department, though every year's work suggests possibilities of improvement, which are gradually forming shape. The urgent attention of the whole staff, however, to these supplies necessarily precluded at present any ambitious or systematized plan of working.

## II.—Communications and Buildings.

20. (a) *Roads and Bridges*.—No new roads were opened by the Department, attention being confined to repairs of 80 chains of the Sundapola plantation approach road in the Kurunegala Division, improvement of  $1\frac{1}{2}$  miles of forest roads in plantations in the Uva Division, and maintenance of roads and inspection paths in the Batticaloa, Kurunegala, and Nuwara Eliya Divisions. The cost incurred amounted to Rs. 279 and Rs. 205·10 for maintenance of roads and paths, respectively.

21. The Department has charge of 279·70 miles of roads, 37·32 miles of bridle paths, and 193·11 miles of inspection paths.

22. The extension of the new service road for the Kandapola re-forestation scheme was continued by the Public Works Department.

23. (b) *Buildings*.—New works consisted of a shed for cart and bulls for the Forest Ranger, Murunkan, and quarters for a Forest Guard at Bandarawela. The cost of the above was Rs. 182·50.

24. Repairs to buildings, mainly the annually recurrent repairs to Forest Guards' quarters, cost Rs. 3,137·50, against Rs. 2,921·59 in the previous year. As stated in last year's report, the desirability of maintaining buildings for guards in some beats is doubtful, as they are frequently unoccupied. On the other hand, quarters are lacking for these officers in some divisions where they are essentially required, but until the provision of suitable quarters for range officers is complete, little general improvement can be anticipated for the quartering of Forest Guards. The matter is being dealt with in proper order, and considerable advance is made each year.

25. The sum of Rs. 2,805·58 was spent as rent for quarters occupied by officers of the Department.

26. *Miscellaneous Works*.—These include the sinking of a well to supply the labour with water in the Vannivilankulam teak plantation in the Jaffna Division at a cost of Rs. 126; fencing of Forest Guard's quarters in the Galle Division, Rs. 40; the cutting of vistas at view points in the Udawatakelle reserve, Kandy, Rs. 83·20; and clearing and repairing wells in the Batticaloa Division, Rs. 76.

## III.—Protection of Forests.

27. (a) *General Protection*: (i.) *Prosecutions*.—Cases of the year numbered 2,103, against 1,357 in the previous year. These include 312 cases pending from 1918, while 74 cases remained outstanding. Of the above, 1,152 cases were withdrawn, and 842 convictions secured out of the 876 cases finally brought to trial, or a percentage of 96 of successful cases.

28. There were no serious cases of illicit felling of timber during the year. The most important cases reported were attempted theft of calamander in the Kalutara District, in which two out of five persons charged were fined Rs. 100 each, their appeal against the judgment being dismissed; and one case of theft of some timber from a forest dépôt in the Batticaloa Division, in which the accused was sentenced to one month's imprisonment and a fine of Rs. 20. In the Galle Division a case instituted against three wealthy Moormen in the District Court, Tangalla, for the appropriation of ranawara (avaram) bark from protected areas was unsuccessful.

29. The number of cases brought was swelled by the increase in the number of chena cases, which rose from 956 to 1,567. This increase occurred only in the Uva Division, in which a wholesale correction against the illicit clearing of chenas was much needed.

30. (ii.) *Compositions*.—Cases of the year numbered 1,524, of which 1,145 were dealt with by Government Agents, with an average recovery of Rs. 11·44 per case. Of the balance dealt with by the Department, an average of Rs. 13·61 per case was recovered, the total amount credited as compensation being Rs. 18,260·09, against Rs. 11,887·92 from 989 cases in the previous year. The most important case was the recovery of Rs. 931·20 equivalent to double royalty value for timber illicitly removed in the Colombo Division under cover of a headman's permit. Government Agents' recoveries were practically confined to chena irregularities.

31. (iii.) *Chena Offences*.—The following table of permits issued, chena irregularities, and Forest Department action in respect of the latter furnishes interesting figures:—

| Division.    | Permits issued. | Area to be cultivated. | Area cleared in excess of Authority. | Area cleared illicitly. | Area for which Permission was accorded for cultivating, but Permits not issued. | Area reported on by Forest Officers. | Irregularities brought to the Notice of Government Agents. |
|--------------|-----------------|------------------------|--------------------------------------|-------------------------|---|--------------------------------------|--|
|              | No.             | Acres.                 | Acres.                               | Acres.                  | Acres.  | Acres.                               | No.  |
| Jaffna       | 488             | 2,455½                 | —                                    | —                       | —   | 505                                  | —  |
| Anuradhapura | 2,535           | 8,906½                 | —                                    | 1,506½                  | —   | 4,804                                | 687  |
| Kurunegala   | 1,594           | 3,650                  | 31½                                  | 56½                     | 7   | 2,756                                | 97   |
| Colombo      | 1,036           | 2,893                  | 75                                   | 300                     | —   | 1,311                                | 17   |
| Nuwara Eliya | 2,427           | 8,840½                 | 145                                  | 242½                    | 49½   | 7,828                                | 164  |
| Batticaloa   | 970             | 3,941½                 | 18                                   | 131                     | 1,364½  | 3,941½                               | 4  |
| Galle        | 7,491           | 15,918                 | 246                                  | 33                      | —   | 2,227                                | 106  |
| Uva          | 3,309           | 4,749                  | —                                    | 1,571                   | —   | 325                                  | 45   |
| Total        | 19,850          | 51,354½                | 515½                                 | 3,840½                  | 1,421½  | 23,707½                              | 1,120  |

32. A comparison of this statement with that shown in last year's report indicates that the number of chena permits issued has been almost doubled, involving the loss or waste of over 50,000 acres of forest land. Of this area, less than half was inspected by officers of the Forest Department, owing partly to lack of staff to cope with the ever-increasing areas sacrificed to this form of cultivation, and

partly to the late issue of permits from Kachcheries. One divisional officer reports that out of 3,309 permits granted, covering an area of 4,749 acres, usually cleared in July, only 411 permits had been issued by the end of that month, the remainder following in August, after clearing had been practically completed; in September, after burning had taken place; and even in October, after the chena crops had been sown. It was thus impossible to differentiate between authorized and illicit chenas. Other divisions report the non-observance of chena rules and procedure by headmen, making co-operation between revenue and forest officers impossible. It is not to be expected, with the increased tendency to issue chena permits to all classes of people, that any material advance can be made on the lines of increased paddy cultivation under the large tanks released by Government, or that the local cultivator will be tempted from his chena-clearing pursuits to the sterner work of opening large tracts for the production of the country's staple food. As regards control, it is obvious that with the rapidly increasing acreage given to chena cultivation, increased staff is necessary, if inspection work is to be carried out efficiently, and in any case this work falls heavily upon a Department, the proper work of which has increased out of all recognition during the years of the war.

33. The value of inspection work carried out by the Department was, however, illustrated by the detection of a large chena of 300 acres cultivated with kurakkan, in the Kolonna korale of the Colombo Division. An inquiry was held on the ground by the Government Agent and the Assistant Conservator of Forests, when the offender who advanced a claim to the land, which he subsequently renounced, was fined Rs. 100, and half the crop was confiscated and sold, the proceeds realizing Rs. 2,000. A further 75 acres were cleared in excess of permits granted in the same village, but no action was taken by headmen until the clearings were detected and reported by the Forest Ranger.

34. In the Anuradhapura Division unauthorized chena clearing is reported to have been carried out late in the year, resulting in the deforestation of timbered land. The agitation in regard to temporary food production led to relaxation of chena regulations, but beyond detecting offences after the evil had been committed, the Department is unable to exercise control over the chena problem. Fortunately the policy may be expected to undergo a change for the better in the near future, with the object of restricting the indiscriminate clearing carried out in the past, and enforcing the chena regulations.

35. It is to be hoped that with the favourable terms granted by Government for the opening of paddy lands, and the more ambitious venture of throwing open some thousands of acres under the large tanks and irrigation works, this decadent form of cultivation will decrease as a larger acreage of paddy cultivation becomes available. In any case it is imperative that chena cultivation should be confined within the limits imposed by law, and not encroach further into the remaining older forest.

36. (b) *Protection against Fire.*—Twenty-six cases of setting fire to Crown forests are reported from the Galle Division, in which 24 culprits were dealt with. The fires were not serious. A small fire occurred in one teak block at Vavuniya caused by sparks falling from passing trains. In the Uva Division the unrestricted firing of patanas continued and again did immense damage. The usual firing of grass lands in the Tamankaduwa district of Anuradhapura, for the purpose of obtaining early crops of green grass for graziers' cattle, was again in evidence. The Divisional Forest Officer, Galle Division, reports a state of things in parts of his Division akin to the Province of Uva, namely, the grass or surface fire which is annually passed over the margins of undulating grass lands lying between paddy fields and the surrounding forest, which is gradually receding year by year as wider margins are created by the fire. The soil is bad and the forest of a poor type, but its existence is necessary for the protection of the slopes and of the paddy fields below. The evil is being combated, but a general remedy for the unrestricted firing of Crown lands has yet to be found. The sum of Rs. 180 was spent in the Batticaloa Division on fire protective measures.

37. (c) *Protection from Cattle.*—"The Forest (Amendment) Ordinance, No. 24 of 1918," which came into force at the end of 1918, authorized the shooting of stray cattle in plantations where it is found impossible otherwise to prevent the nuisance. Licenses for the purpose are issued by the Government Agents, and officers in charge of plantations and watchers are being provided with guns. Damage occurs most frequently at night, and instances are known where cattle are driven into the plantations purposely by villagers, and immense damage is caused in the efforts to drive them out. The shooting of stray cattle has, however, already produced salutary effects in some localities. When possible, cattle are seized and impounded.

38. (d) *Protection against Game.*—Teak plantations suffered somewhat severe damage by wild animals. Elephant, sambur, deer, and pig frequent the clearings, and as these extend from year to year they become more and more vulnerable, and the damage observed is greater. Sambur are troublesome in the up-country plantations of the Uva Division, where they break through the fences and destroy seedlings. In the Nuwara Eliya Division the material available for fencing is usually sufficiently strong to keep out the deer, and some are hare proof as well. In the Jaffna Division plantations the area set aside for growing castor on behalf of the Department of Agriculture was partially destroyed by deer, which caused only inconsiderable damage the year before; teak suffered severely in places from the incursions of wild pig. In the Colombo Division the porcupine is found to be the most dangerous enemy in plantations.

39. (e) *Protection against Injuries from Natural Causes.*—The principal damage sustained was the occurrence of a mildew which attacked the Karri gum (*E. diversicolor*) in the up-country exotic plantations in the Nuwara Eliya Division, and the outbreak of fluted scale among young stems of *Ac. melanoxylon*. The former is attributed to the unusual duration of a very wet south-west monsoon, which adversely affected Karri unused to such conditions in its native habitat. Observation tends to indicate the inability of the leaves to cope with the excessive moisture, mineral salts, &c., brought up by the roots during the rains, the drainage of the soil being too free to cause root rot. The older leaves died off in July and August, new shoots resembling coppice or pollard shoots appearing during the early stages of the process on the stem and branches between the proper branch nodes of the plant. Finally, only the smallest leaves remained on the tips of the branches, and on the "adventitious" shoots, and in several cases these, too, succumbed in exposed spots. In less exposed areas, however, only 10 per cent. died, and with warmer weather ensuing the balance recovered, and appear to be progressing well. No serious damage has so far resulted from the fluted scale, except in cases where *Acacia melanoxylon* became

so weakened that it fell a victim to the Karri disease. Wire-worm and cut-worm continue to damage seedlings, and experiments made to reduce these insects are in progress. Defoliation and death was observed among *Acacia decurrens* growing in estates as a result of the protracted monsoon. The disease spread to one estate fuel block and caused 80 per cent. casualties.

40. Of phanerogamic pests, *Loranthus* is a serious menace to the *Melanoxylon* plantations. For this reason the existing indigenous wind belts, which are merely sources of infection, have been cut out, and a zone of *Loranthus* proof species is being established round the *Melanoxylon* blocks.

41. In the dry low country a long drought followed by torrential rains was the cause of numerous casualties among teak, and everywhere considerable difficulty was experienced in contending with the weeds which luxuriate in new clearings.

42. *General.*—The urgency of supplies and intensive re-forestation work, coupled with shortness of staff, have curtailed to some extent the ordinary protective work of the Department, and have further delayed the application of the new rules under the Ordinance to the question of private timber transit, which is much needed in some divisions. In others the inadequacy of the present system of checking stations in charge of poorly paid officers results in quantities of questionably private timber passing down the rivers. The question of the alienation of forest lands in the Kalutara District for rubber cultivation became urgent during the year, and, in spite of the paucity of officers prevailing in the Department, a preliminary report was prepared, and plans submitted showing the areas which it is intended to retain as Crown forests, and formulating a basis on which the alienation of land not required for forest purposes may proceed, in the absence of facilities for preparing detailed reservation proposals for separate tracts of forest.

#### IV.—Sylviculture.

43. (a) *Natural Reproduction.*—The seed crop was reported fair from most divisions, but though reproduction was observed in some localities, mainly chenas and plantations, it is not, unless artificially assisted, capable of replacing even reasonable exploitation. The reservation of all remaining nedun trees as seed bearers is advocated owing to the threatening extinction of the species. Large collections of seed of hora, lunumidella, and nedun were made in the Colombo Division, and of calamander in the Galle Division.

44. (b) *Artificial Plantations:* (i.) *Regular Plantations.*—The area of new plantations formed during the year was 910 acres, raising the total of regular plantations from 4,986 to 5,698 acres, the total in last year's report being incorrectly shown as 5,986 by a clerical error. The above figures include 125 acres 3 roods of formed chena plantations taken over from cultivators in the Batticaloa Division, and exclude 153 acres cleared for chena cultivation in the Kurunegala Division but not yet formed, and 45 acres abandoned in the Jaffna Division.

45. The Jaffna Division faced the heavy task of forming departmentally 246 acres cleared for railway fuel supplies, and of maintaining 330 acres of stocked teak plantations. Of the former, a considerable area consisted of large areas only partially cleared in the previous year and carried forward for planting in 1919. In view of the extent of the area, the use of baskets for teak was permitted in order to assist stocking where reproduction from direct sowing was found defective; and in view of labour difficulties and the short duration of the planting season, this course was justified, and led to good results. Unfortunately damage occurred from heavy floods in December and caused numerous casualties in some of the more low-lying parts. The sowing of margosa was a failure, as in other divisions, while an area allotted for growing castor at Iranamadu sustained heavy damage from deer, due to late and imperfect fencing.

46. In the Anuradhapura Division the teak plantation areas were extended by the addition of 152 acres cleared and planted in the north-east monsoon; the usual clean weeding of plantations of the first and second year was carried out assisted partly by prison labour. The opening of small blocks of teak with intervening protective belts will not be continued, and each year's clearing will in future form one continuous block to prevent the teak from coming under the influence of any avoidable shade.

47. In the Kurunegala Division clear felling was in progress over 400 acres, but it was found necessary to extend the contracts into the following year rather than attempt the impossible with areas not properly prepared and with labour forces disorganized through the easy methods of obtaining land for temporary food cultivation. Thus, only 46 acres were taken up for planting, and operations were not successful. An experiment made with dhall—*Cajanus indica*—as a nurse for mahogany and satinwood, over 23 acres, failed, after successful germination of the former, as a result of inadequate supervision by subordinates, and gave no results which, as was hoped, could have justified this method of regeneration as the standard operation in the division. The experiment is to be given a further trial, but with the scattered blocks at present forming the plantation areas of the division, the cost of fencing is prohibitive. This division having been thrown into some disorganization by the previous necessity of supplying an enormous outturn of firewood for the railway, which was beyond the adequate control of the staff available, requires a period for recovery, and supplies have now in consequence been reduced as far as possible to admit a systematic and more effective re-forestation scheme.

48. The Nuwara Eliya Division successfully added 278 acres to the area of re-forested fuel blocks, consisting of Australian *Eucalypti* and *Acacias*. Of the former, the best germination results are obtained from *Eucalyptus paniculata* and *Eucalyptus pilularis* (blackbutt), both of which are of great durability and value as sleeper woods, while the latter, owing to its rapid growth, is extremely suitable for supplying vacancies. In spite of difficulties with staff and labour, the re-forestation of this area at an initial cost of Rs. 36 per acre is a striking success, and points to the very sufficient organization of the work. The value of the up-country re-forestation scheme is fittingly described by the divisional officer, who states:—"The artificial regeneration of the railway fuel areas up-country will, when it comes to bearing, probably result in one of the most paying permanent investments yet taken up by the Ceylon Government. The increment of these plantations can only be said to be remarkable. We have one area 3½ years old, which can show a volume of over 200 yards per acre. This will reach 400 yards per acre in the next two years, and 1,000 yards in ten to eleven years. The species, *Acacia melanoxylon* (Australian blackwood), is a valuable timber, and is replacing a native jungle of common species, which only produced at a maximum 600 yards per acre after one-hundred years' growth. This being so, the nature of the investment can, perhaps, be realized to a small extent, especially in view of the approaching

world timber famine." Of other species tried, Karri is the least adapted to Ceylon conditions, as it becomes unhealthy after rapid growth for two or three years. Of Conifers, *Cupressus Macrocarpa* and *C. Knightiana* have been long established in the Island. The former gives the best results. *Sequoia Sempervirens* has been newly introduced into Ceylon for these plantations; favourable results are expected as soon as the best silvicultural conditions for the species have been ascertained. Very little success has, on the other hand, resulted from the previous year's attempt to reproduce native species in 6 acres of cleared jungle, with the single exception of sapu; the greater part of the area is being replaced with exotics.

49. In the Uva Division similar work in the Ohiya and Haputale plantations has not met with the same success as in the adjoining Nuwara Eliya Division. The chief difficulty has been clearing of areas disproportionate in extent to the capacity of the scanty and inferior labour force available. The result is the insufficient stocking of some areas and the predominance of weed. The problem was, however, faced with energy and the end of the year saw 42 acres of older plantations fully re-stocked, and 84 acres of new clearings planted, with *Acacias* and *Eucalypti*, and these areas are now in good condition, though the seedlings were rather small at the time of planting out. With added experience and the limitation of each year's clearings to areas within the scope of the staff and labour, excellent results should still be obtainable, though much work remains to be done. Good results were obtained with *Syncarpia laurifolia*, and 2,000 basket plants put out are thriving. Jarrah (*E. marginata*) failed to germinate, and similar failure was recorded in the Nuwara Eliya Division. Excellent natural reproduction of Toona was observed at Haputale, and in view of its suitability to local conditions and the increasing demand for this timber, the species should be encouraged, as it gives an early return. Both in the Nuwara Eliya and Uva Divisions, in which the successful re-forestation of fuel blocks is of the utmost importance and value, the chief necessity is the construction of good lines to house the labour, and the establishment of a permanent labour force. The success or failure of the re-forestation scheme depends principally on this factor, but up to the present it has not been practicable for Government to vote funds for a building scheme. The need is, however, felt more acutely each year.

50. The Galle Division added no new areas, and confined expenditure to the re-clearing of strips in the Kottuwa calamander plantations, and dibbling 10,000 calamander seeds in nurseries. The Colombo Division added 5 acres to the Mitrigala mixed plantation of hora, nedun, and calamander, and attended to the maintenance of 61 acres of existing plantations. Hora seeds were also sown in firewood felling areas, but were killed by draught. Calamander continues to grow well at Dunkalahena and Rakwana.

51. The Batticaloa Division took over 125 acres of re-forested teak plantations from chena cultivators, and carried out the usual operations of pruning, thinning, coppicing, cutting out of dead and dying poles, over 625 acres of older plantations, and supplied vacancies in 64 acres, at an average cost of Re. 1.87 per acre for maintenance and Re. 1.26 per acre for supplying vacancies. The total area of plantations in the hands of the Department in this division is now 2,415 acres and 37 perches, all of which have been re-forested by chena cultivators, without cost to Government. The plantations are in good condition, and their improvement in recent years illustrates the value of personal interest and supervision by the divisional officer and his staff.

52. The expenditure of the year amounted to Rs. 37,662.48, but the year's programme was curtailed by the uncertainty regarding provision under the vote. Additional expenditure was subsequently sanctioned, but this was non-effective in those divisions whose planting season is limited to the short period of the north-east monsoon. In consequence it was not possible to utilize the full provision eventually voted. There is no reason, however, to be dissatisfied with the year's work, which was attended by unusual difficulty owing to the rice position, increased rates for labour, and local food production schemes, which nearly everywhere rendered the labour forces scarce.

53. (ii.) *Chena Cultivation*.—In the Batticaloa Division 413 acres were handed over to chena cultivators on the usual re-forestation agreements, the total in the hands of cultivators at the close of 1919 being 1,516 acres and 8 perches. The sum of Rs. 806 was recovered as rent. Planting operations suffered considerably from drought, wild animals, rodents, and snails, the last being a new enemy in teak plantations.

54. In the Kurunegala Division seven new chena agreements aggregating 105 acres were entered into. These are isolated areas, and do not form part of a definite or extensive scheme, and up to the present have not been attended with much success.

55. In the Western Division a large area of 600 acres was, on the instructions of Government, given on agreement for chena cultivation, to be followed by re-forestation. This undertaking, which is of considerable magnitude in a locality where the population is unaccustomed to this form of work, originated from the food crisis, and advantage was speedily taken by the cultivators to clear as large an area as possible for immediate sowing. As the area granted for this form of cultivation was one of the many denuded timber and firewood areas in this division awaiting re-forestation, the results are anxiously looked forward to, as a means of taking up the question of re-forestation of all the denuded areas which still remain Crown forest in this district.

56. (c) *Operations for the Improvement of the growing Stock*.—Five acres of the Haputale plantation were cleared of weed and creepers to encourage natural re-generation of Toona. In the Batticaloa Division clearing was continued in the planted strips of the Kanthalai reserve. No new strips were opened.

57. (d) A yield of 17,483 lb. of castor seed resulted from the sowing of castor carried out on behalf of the Department of Agriculture in the previous year at Madawachchi, Iranamadu, and Madu Road. The work was discontinued at Madawachchi after the harvest had been reaped, on account of the suppression of teak, and confined to 20 acres of low-lying land at Vavuniya and 60 acres at Iranamadu, of which 48 were included in the previous year's area. Germination was successful, but the plants were badly damaged by deer at Iranamadu, and the area was re-sown. Flood caused damage at Vavuniya, but a heavy crop is expected. The castor is an unwelcome visitor in the plantations, and further sowing in the clear-felled areas will not be advocated owing to the difficulty of dealing with the areas after the castor has been removed.

58. Padauk seed obtained from Burma was germinated successfully in nurseries in the Mitrigala plantation of the Colombo Division, and the seedlings were reported to be doing well. A small arboretum was commenced at the Forest Department bungalow, Nuwara Eliya, containing with various *Eucalypti*, *Pinus longifolia*, *Sequoia sempervirens*, *Cupressus macrocarpa*, *Syncarpia laurifolia*, as an experiment

to test the effect of altitude on these species. Seeds of balsam of Peru and mahogany were sown in patches in the Udawattekele reserve and germinated well. A small experiment was begun in the Jaffna Division to ascertain the comparative results of planting the native species of palai, ranai, and milla (a) in a cleared area, (b) under light shade in jungle from which large and shapeless trees had been removed.

59. Careful observations were made by the Divisional Forest Officer, Nuwara Eliya, on the effects of frost on exotic species in the small arboretum at the Forest Department bungalow and valuable information was recorded.

#### V.—Exploitation.

##### (a) System of Management.

60. (i.) *Major Forest Produce: Selection Fellings.*—The remarks of the previous year apply to the exploitation of Crown forests to meet the indents of Public Departments and sleepers for the Railway. As far as possible extraction is limited to areas other than reserves and proposed reserves except in the Galle Division, in which careful selection fellings are reported. In other areas the ever-growing demand for supplies necessarily resulted in excessive exploitation of under-stocked areas without adequate provision for natural regeneration. The staff of the Department is still insufficient for systematic and regular control, and present methods of selection tend to deplete the forests of their valuable material to the benefit of inferior species. The utilization of only mature timber is aimed at, but owing to the large extent of areas under exploitation, and the difficulty hitherto experienced of framing definite extraction programmes considerably in advance, unsylvicultural methods of exploitation are to some extent inevitable. The Department is still without the means of preparing regular working plans, but enumeration work has already been commenced in one large area, and will be extended as circumstances permit. In the meantime the present form of exploitation of areas not intended for reservation forms the best safeguard for the preservation of the more valuable areas awaiting systematic treatment, and the utmost advantage is taken of securing all valuable timber from lands destined for alienation for other forms of cultivation.

61. (ii.) *Clear Fellings.*—These proceeded in the Jaffna, Anuradhapura, Kurunegala, Nuwara Eliya, and Uva Divisions, followed by re-forestation as recorded elsewhere, to meet the Railway fuel demands, which remain abnormal. The Galle and Colombo Divisions contributed with selection cutting. It is probable that the present fuel supplies will remain constant, at least for some years, and endeavour is now being made to concentrate extraction over fewer larger areas, and to reduce the number of scattered units which have resulted in some divisions, owing to the peculiar difficulties of contract work in the Department. The present method of extracting all firewood for delivery at the line side is using up frontage too rapidly, and limits the depths of forest to be cut over to the capacity of the contractors for transport, which is usually less than a mile. It is proposed, therefore, to enlist the assistance of the Railway to construct on the Northern Railway and at Pattipola a short broad gauge extraction line into a suitably large block of forest to admit of a single large programme ensuring a regular daily delivery, and admitting of a concentrated scheme of re-forestation. The most suitable area for the purpose is now under investigation. The present shortage of labour may, however, render any scheme of magnitude impracticable for some time, owing to local food production schemes, which have absorbed much of the available labour. To counteract this tendency, private firewood has been accepted from persons offering to supply it, and has proved indispensable. The Department would be glad to see the Railway fuel supply reduced from its present extent to dimensions involving less strain on the Department both in meeting the supply and coping with the subsequent work of re-forestation, both of which are far too heavy for the staff and labour available.

62. *Coppice Fellings.*—None.

63. *Improvement Fellings.*—None, apart from the cutting of dead and dying Toona trees in the Haputale plantation, which were utilized for supplying boards to the Public Works Department.

64. (ii.) *Minor Forest Produce.*—The usual collecting rights were sold, the results of which will be found elsewhere. In view of the high demand for avaram (*Cassia auriculata*) bark, the collection of this produce was, with the approval of Government, extended to the Wilpattu and Yala Game Sanctuaries.

##### (b) Agency of Exploitation.

65. (i.) *Departmental Agency: (a) Major Produce.*—Sales from depôts consisted of the following, as shown in the comparative table below:—

| Description.             | 1919.     |             | 1918.    |             | Difference. |                       |
|--------------------------|-----------|-------------|----------|-------------|-------------|-----------------------|
|                          | No.       | Cubic Feet. | No.      | Cubic Feet. | No.         | + or —<br>Cubic Feet. |
| Logs ..                  | ..        | 17,665 ..   | ..       | 9,393 ..    | ..          | + 8,272               |
| Rejected sleepers ..     | 3,059     | = 7,262 ..  | 433      | = 877 ..    | + 2,626     | + 6,385               |
| Scantlings ..            | ..        | 3,564 ..    | ..       | 2,355 ..    | ..          | + 1,209               |
| Poles ..                 | 11,082    | = 4,369 ..  | 5,149    | = 3,048 ..  | + 5,933     | + 1,321               |
| Ebony, tons ..           | 73.30     | ..          | 77.81    | ..          | ..          | — 4.51                |
| Firewood (Cubic yards .. | 12,158.75 | ..          | 13,186.5 | ..          | ..          | — 1,027.75            |
| Tons ..                  | 6,659.57  | ..          | 5,542.9  | ..          | ..          | + 1,116.67            |

66. The considerable increase in sales of timber in the log results from extraction of satinwood from fuel blocks in the Jaffna Division for sale at Jaffna, sale by auction of inferior trees felled in the Kumbalpola planting area in the Kurunegala Division, and similar sales in temporary depôts in the Galle Division. In the Jaffna Division there is always a ready market for palu and satinwood, which is only limited by the limitation of funds for extraction. There was a good demand for rejected sleepers, which were more numerous than in the previous year; while the Jaffna Division records an increase of over 1,000 tons in the sale of firewood, due to the depôt being continuously fully stocked throughout the year and the exhaustion of private supplies. The small depôt, which served for the receipt and issue of some 2,500 tons of firewood ten years ago, now has to find accommodation for nearly 7,000 tons yearly; together with an accumulation of sawn timber brought by sea from the Batticaloa Division. It is in consequence uncomfortably crowded, and as it has to be kept as fully stocked as possible, great difficulty is experienced in handling material. Temporary relief was obtained by permission to use the unoccupied ground opposite the depôt and on the other side of the Customs railway; but the construction of the much-needed depôt at the Customs depôt is unfortunately no nearer fulfilment. The sale of firewood

by measure, in which the Nuwara Eliya and Uva Divisions are concerned, showed a decrease in the former division, which is not explained. The increase under poles is due to the demand for this class of timber created by the flood damage sustained in Jaffna at the close of 1918.

67. The following are the details of sleepers and other material supplied to Public Departments:—

| Description.              | 1919.    |             | 1918.   |             | Difference. |                 |
|---------------------------|----------|-------------|---------|-------------|-------------|-----------------|
|                           | No.      | Cubic Feet. | No.     | Cubic Feet. | + or —.     | No. Cubic Feet. |
| Sleepers { Broad gauge .. | 38,837   | = 116,511   | 42,072  | = 126,216   | —           | 3,235 — 9,705   |
| { Narrow gauge ..         | 19,139   | = 28,708½   | 33,270  | = 49,905    | —           | 14,131 — 21,197 |
| Telegraph posts ..        | 1,848    | = 7,130     | 2,094   | = 7,808     | —           | 246 — 678       |
| Poles ..                  | 11,969   | = 940       | 5,499   | = 5,373     | +           | 6,470 — 4,433   |
| Other sawn timber ..      | 740      | = 579       | 51,567  | = 938       | —           | 50,827 — 359    |
| Scantlings ..             | 7,176    | = 14,198    | 40,450  | = 40,596    | —           | 33,274 — 26,398 |
| Timber, logs ..           | 5,142    | = 115,494   | 6,997   | = 128,979   | —           | 1,855 — 13,485  |
| Fuel { Cubic yards ..     | 462,618½ |             | 512,362 |             | —           | 49,743½         |
| { Tons ..                 | 118½     |             | 122     |             | —           | 3½              |

68. The general decreases shown above are due either to non-delivery of material awaiting acceptance at the end of the year, or to restricted output owing to rice shortage and the difficulty of diverting the labour from local food production, which resulted in failure to complete contracts in nearly all divisions. The indent for firewood was on the slightly reduced scale of 400,000 cubic yards for the year, but supplies had constantly to be increased and accelerated during the period owing to temporary coal crisis, and threw much extra work on the Department near the close of the financial year. The work is now more evenly distributed, the Kurunegala Division supplies in particular being very heavily reduced. The Colombo Division more than doubled its supply, mainly through the intervention of private fuel supplies; while the Jaffna Division, which suffered less acutely at first from the rice short, age, responded to an urgent demand for increased supplies, at very short notice, with an additional output of nearly 20,000 yards. The Department is preparing for a sustained demand of firewood of the same magnitude for a period of years, and improved organization is becoming practicable in the light of experience gained.

69. The sleeper supply was again below requirements, owing to contractors' difficulties in obtaining labour and to the unusual number of rejections. The remarks in the previous year's report apply to the present position, and the reduction of the sleeper supply, which involves the excessive exploitation of one or two species only of the Ceylon hardwoods, must be a matter for satisfaction to the Department, in that the old practice of using of the exploitable forests as rapidly as possible is yielding to a more conservative policy as regards the few remaining exploitable areas.

70. As regards sawn timber, the Department undertook the supply of sawn bridge planks for the Public Works Department as usual, but restricted the supply of sawn timber on local indents, in pursuance of the decision to discontinue this wasteful method of utilization, and to introduce the supply of timber in the log for general purposes, for conversion at the Government Factory and other central depôts which may in the future be established. The Government Factory was kept fully stocked from the time that deliveries commenced.

71. Bills rendered for the above supplies show the following average cost of production:—

|                          | 1919. |    | 1918. |    |                             | 1919. |    | 1918. |    |
|--------------------------|-------|----|-------|----|-----------------------------|-------|----|-------|----|
|                          | Rs.   | c. | Rs.   | c. |                             | Rs.   | c. | Rs.   | c. |
| Broad gauge sleepers ..  | 4     | 25 | 3     | 56 | Sawn timber, per cubic foot | 2     | 3  | 1     | 84 |
| Narrow gauge sleepers .. | 2     | 9  | 2     | 1  | Timber, per cubic foot ..   | 1     | 9  | 1     | 0  |
| Firewood ..              | 1     | 76 | 1     | 64 | Fuel, per ton ..            | 5     | 15 | 4     | 56 |

72. The all-round increase in rates is a sign of the times, timber in the log and firewood alone approximating the previous year's rates.

73. The total value of material supplied to Public Departments or sold to private parties from depôts (including the Central Timber Depôt, for which separate figures are also furnished below) was—

| Division.             | Royalty on Supplies to Public Departments. |     | Cash.    | Value of Material sold to Public Departments from Depôts. |          | Total.            |
|-----------------------|--|-----|----------|---|----------|-------------------|
|                       | Rs.  | c.  |          | Rs.   | c.       |                   |
| Jaffna ..             | 82,288                                     | 80  | 71,480   | 52  | 2,081    | 25 .. 155,850 57  |
| Anuradhapura ..       | 80,952                                     | 40  | 19,461   | 94  | 2,170    | 66½ .. 102,585 0½ |

| Difference, + or — .. | 119,330                                    | 67  | + 60,120 | 33  | — 12,497 | 46 .. — 71,707 80 |

74. The decrease is due to the slightly reduced fuel supply for the Railway and the non-completion of contracts in certain divisions, against which must be set the improvement in the Central Timber Depôt sales and local sales in the Jaffna Division.

75. *Central Timber Depôt.*—Marked improvement in the sale of satinwood and the strong demand for flowered logs accounted for the increase. The sale of ebony was also maintained well in excess of the previous year.

76. The actual quantities sold were:—

*Ebony.*—664 logs weighing 72½ tons realized Rs. 13,866·47, or an average of Rs. 190·73 per ton, against an average of Rs. 112 per ton in the previous year. The best price obtained was Rs. 842 per ton, against Rs. 247·30 per ton. The prices are excellent in view of the class of ebony mainly sold, viz., dead and fallen material purchased for local purposes.

*Satinwood*.—130 logs containing 4,860·52 cubic feet were sold for Rs. 38,220·86, the best rate obtained being Rs. 23·30 per cubic foot for a fine flowered log. The previous year saw only 13 logs sold, and Rs. 6·50 the highest rate obtained. The quantity of satinwood exported from the Island during the year was, according to the Customs returns, 152 tons, and as an increasingly active market is expected in the near future, steps are being taken to increase the depôt stocks.

77. Supplies to the depôt consisted of 20 satinwood logs containing 690 cubic feet, 34 tons of dead and fallen ebony, 17 pieces of calamander, and 82 logs of various species, out of which 28 specimens of eleven species were forwarded to the Department of Overseas Trade (Development and Intelligence) for the Imperial Forestry Exhibition, 28 pieces to the Venesta Co., Ltd., to be tested for tea boxes in the 3-ply trade, and 6 logs of lunumidella (*Melia dubia*) were despatched to Bombay for testing purposes in the factory of the Indian Air Board at Simla.

78. Stock in the depôt at the close of the year consisted of 738 logs valued at Rs. 97,623.

79. Supplies to Public Departments from the depôt dropped further to Rs. 1,454·83, the requirements of these departments being met on the advance account.

80. The following supplies were delivered; through the depôt, to the Inspector-General of Prisons, for making furniture for Government Offices :—

|              | Logs. |               | Logs. |
|--------------|-------|---------------|-------|
| Satinwood .. | 55    | Tirukondal .. | 1     |
| Ranai ..     | 43    |               |       |
| Milla ..     | 20    | Total ..      | 138   |
| Teak ..      | 4     |               |       |
| Halmilla ..  | 15    |               |       |

Equal, 1,455·18 cubic feet = Rs 4,220·15.

81. (b) *Minor Produce*.—None extracted through departmental agency.

82. (ii.) *Purchasers : (a) Major Produce*.—Below are compared the figures for 1919 with those of the previous year :—

|                         | 1919.   |    | 1918.   |    | Difference.<br>+ or —. |
|-------------------------|---------|----|---------|----|------------------------|
| Timber, cubic feet ..   | 394,825 | .. | 286,712 | .. | + 108,113              |
| Poles, cubic feet ..    | 133,430 | .. | 112,228 | .. | + 21,202               |
| Firewood, cubic yds. .. | 33,666½ | .. | 32,088  | .. | + 1,578½               |
| Charcoal, cubic feet .. | 5,000   | .. | 4,521   | .. | + 479                  |
| Alampal, cubic feet ..  | 140,850 | .. | 142,065 | .. | — 1,215                |

83. The corresponding revenue resulting from the above is distributed among divisions as follows :—

| Division.  | 1919.<br>Rs. c. |    | 1918.<br>Rs. c. |    | Difference.<br>+ or —.<br>Rs. c. |
|--|-----------------|----|-----------------|----|----------------------------------|
| Jaffna ..  | 3,865 78        | .. | 2,644 91        | .. | + 1,220 87                       |
| Anuradhapura ..  | 3,938 92        | .. | 6,015 76        | .. | — 2,076 84                       |
| Kurunegala ..  | 6,925 48        | .. | 7,664 36        | .. | — 738 88                         |
| Colombo ..   | 55,607 21       | .. | 42,046 92       | .. | + 13,560 29                      |
| Nuwara Eliya ..  | 28,416 80       | .. | 26,604 61       | .. | + 1,812 19                       |
| Batticaloa ..  | 8,249 38        | .. | 5,405 31        | .. | + 2,844 7                        |
| Galle ..   | 9,832 30        | .. | 9,082 57        | .. | + 749 73                         |
| Uva ..   | 7,310 88        | .. | 7,770 61        | .. | — 459 73                         |
|  | 124,146 75      |    | 107,235 5       |    | + 16,911 70                      |
| Paper credit for timber removed by Public Departments .. | 23,744 95       |    | 33,495 64       |    | — 9,750 69                       |
| Total ..   | 147,891 70      |    | 140,730 69      |    | + 7,161 1                        |

84. A slight increase in demand for logs occurred in the Jaffna and Batticaloa Divisions, but the only considerable increase recorded was in the Colombo Division, in which there was much activity in the local manufacture of tea chests, stimulated by shortage of freight accommodation for Momi chests from Japan. There was a reduction of Rs. 10,000 in the value of timber extracted by Government Departments.

85. (b) *Minor Forest Produce*.—The total revenue derived from this source was—

| Division.  | 1919.     |    | 1918.     |    | Difference.<br>+ or —. |
|--|-----------|----|-----------|----|------------------------|
| Jaffna ..  | 8,757 30  | .. | 4,475 58  | .. | + 4,281 72             |
| Anuradhapura ..  | 5,179 30  | .. | 6,554 55  | .. | — 1,375 25             |
| Kurunegala ..  | 5,596 40  | .. | 10,154 80 | .. | — 4,558 40             |
| Colombo ..   | 329 20    | .. | 428 20    | .. | — 99 0                 |
| Nuwara Eliya ..  | 3,575 35  | .. | 1,508 83  | .. | + 2,066 52             |
| Batticaloa ..  | 5,735 35  | .. | 8,949 67  | .. | — 3,214 32             |
| Galle ..   | 2,453 50  | .. | 3,705 64  | .. | — 1,252 14             |
| Uva ..   | 4,937 97  | .. | 1,250 30  | .. | + 3,687 67             |
|  | 36,564 37 |    | 37,027 57 |    | — 463 20               |
| Paper credit for minor forest produce removed by Government Departments .. | 51,491 29 |    | 54,633 55 |    | — 3,142 26             |
| Total ..   | 88,055 66 |    | 91,661 12 |    | — 3,605 46             |

86. High prices ruled at auction sales for the collection of a varam bark, decreases in the Kurunegala and Batticaloa Divisions being counterbalanced by large increases in the Jaffna and Nuwara Eliya Divisions, the total being only Rs. 500 lower than the record recoveries of the previous year, although the Wilpattu and Yala Game Sanctuaries were excluded from further exploitation in 1920.

The sale of the right to collect shed horns was still in abeyance. It is clear from information gleaned that very large collections of shed horns have been universally made in anticipation of the withdrawal of export restrictions, and there will one day be a rich harvest for the highest bidders as soon as the yearly auction sales are renewed.

87. (iii.) *Free Grants*.—Forest produce for the value of Rs. 65,600·17 was removed as free grants during the year, an increase of Rs. 5,000 over the previous year. The main increase was in the Batticaloa Division.

### III.—FINANCIAL RESULTS.

88. The income for the financial period October 1, 1918, to September 30, 1919, is composed of the following :—

|   | Rs.     | c. | Rs.       | c. |
|---|---------|----|-----------|----|
| Cash credited at the Treasury ..  | —       |    | 325,654   | 39 |
| Value of supplies from Depôts to Public Departments ..                                      | 22,124  | 70 |           |    |
| Royalty on supplies to Public Departments ..  | 499,793 | 87 |           |    |
| Twenty-five per cent. excess royalty on supplies of squared timber to Public Departments .. | 39,032  | 94 |           |    |
| Sixteen per cent. supervision charges on the above work ..                                  | 204,035 | 83 |           |    |
| Value of free grants ..   | 65,600  | 17 |           |    |
| Estimated value of timber on land sold ..   | 26,842  | 54 |           |    |
| Royalty on forest produce removed by the Public Works and Irrigation Departments ..         | 53,639  | 16 |           |    |
|   |         |    | 911,069   | 21 |
| Total ..  |         |    | 1,236,723 | 60 |
| Deduct Expenditure ..   |         |    | 440,235   | 81 |
| Surplus ..  |         |    | 796,487   | 79 |
| Surplus in 1918 ..  |         |    | 827,320   | 94 |
| Surplus in 1917 ..  |         |    | 630,376   | 67 |
| Surplus in 1916 ..  |         |    | 293,939   | 26 |

89. The actual financial condition of the Department was as follows :—

| In favour of the Department.  | Rs.     | c. | Against the Department.   | Rs.     | c. |
|---|---------|----|---|---------|----|
| Surplus ..  | 796,487 | 79 | Outstanding due from the Department on account expenditure on September 30, 1919 .. | 830     | 40 |
| Outstanding due from the Department on account of expenditure on October 1, 1918 .. | 1,710   | 14 | Outstanding due to the Department on account of revenue on October 1, 1918 ..       | 5       | 0  |
| Value of stock on September 30, 1919 ..   | 154,824 | 46 | Value of stock on October 1, 1918 ..  | 129,055 | 40 |
|   |         |    | Total ..  | 129,890 | 80 |
| Total ..  | 953,022 | 39 | Nett Surplus ..   | 823,131 | 59 |

90. Expenditure falls into percentages as follows under the usual heads :—

|                       | Rs.     | c. | Percentage. |               | Rs.     | c. | Percentage. |
|-----------------------|---------|----|-------------|---------------|---------|----|-------------|
| (a) Extension ..      | 1,395   | 47 | ·31         | Executive ..  | 81,833  | 66 | 18·58       |
| Constitution ..       | 836     | 82 | ·19         | Protection .. | 40,483  | 15 | 9·19        |
| Improvement ..        | 46,197  | 36 | 10·52       | Total ..      | 440,235 | 81 | 100·00      |
| Exploitation ..       | 81,650  | 7  | 18·54       |               |         |    |             |
| (b) Administration .. | 187,839 | 28 | 42·67       |               |         |    |             |

91. Expenditure on charges yielding no immediate return amounted to Rs. 46,620·44, made up as follows :—

|                                 | Rs.   | c. |                | Rs.    | c. |
|---------------------------------|-------|----|----------------|--------|----|
| Communications and buildings .. | 6,843 | 60 | Plantations .. | 34,660 | 21 |
| Cost of stores ..               | 1,666 | 86 |                |        |    |
| Demarcation and surveys ..      | 1,513 | 35 | Total ..       | 46,620 | 44 |
| Miscellaneous ..                | 1,936 | 42 |                |        |    |

### IV.—ADMINISTRATION.

#### Superior Staff.

92. *Headquarters*.—During the year the Department continued to be in charge of Mr. H. F. Tomalin, M. I. C. E., as Conservator of Forests till May 20, and of Mr. J. D. Sargent, Deputy Conservator of Forests, as Acting Conservator of Forests thereafter till the end of the year. The post of Assistant to the Conservator of Forests in the Head Office was held by Mr. J. D. Sargent, Deputy Conservator of Forests, till May 20, and thereafter remained vacant till the end of the year.

93. *Divisional*.—The office of Assistant Conservator of Forests in the divisions was held by—

|                        |                         |                        |                       |
|------------------------|-------------------------|------------------------|-----------------------|
| Jaffna Division ..     | Mr. J. C. C. Middleton. | Nuwara Eliya Division  | Mr. R. M. White.      |
|                        | Mr. G. D. Templer.      |                        | Mr. J. R. Ainslie.    |
| Anuradhapura Division  | Mr. A. B. Lushington.   | Batticaloa Division .. | Mr. A. B. Fontyn.     |
|                        | Mr. W. W. Fyers.        | Galle Division ..      | Mr. F. J. S. Turner.  |
| Kurunegala Division .. | Mr. W. W. Fyers.        | Uva Division ..        | Mr. J. R. Ainslie.    |
|                        | Mr. R. M. White.        |                        | Mr. A. B. Lushington. |
| Colombo Division ..    | Mr. E. C. Fernando.     |                        |                       |

94. *Leave*.—Mr. H. F. Tomalin, Conservator of Forests, proceeded to England on leave as from May 21, 1919. Mr. A. J. Kilmartin, Deputy Conservator of Forests, continued to be on leave in England till April 30, 1919, and his services continued to be lent to the Board of Agriculture and Fisheries. Mr. G. D. Templer, Assistant Conservator of Forests, continued to be on leave till January 3, 1919.

Mr. O. Jones, Assistant Conservator of Forests, continued on military duty till June 30, 1919. Mr. J. C. C. Middleton, Assistant Conservator of Forests, proceeded to England on leave on May 29, 1919.

95. *Allowances.*—Mr. H. F. Tomalin, Conservator of Forests, was granted an increase of salary in the form of a pensionable personal allowance of £100 per annum from October 1, 1919.

96. *Resignations.*—Mr. A. J. Kilmartin, Deputy Conservator of Forests, and Mr. O. Jones, Assistant Conservator of Forests, resigned their appointments from April 30 and June 30, 1919, respectively.

97. *Promotions.*—Mr. J. D. Sargent, Deputy Conservator of Forests, Grade II., was promoted to be Deputy Conservator of Forests, Grade I., from May 1, 1919, and Mr. R. M. White, Assistant Conservator of Forests, was promoted to be Deputy Conservator of Forests, Grade II., from the same date.

98. *Examinations.*—The following officers were successful in passing the departmental examinations noted against their names :—

|   |    |                           |
|---|----|---------------------------|
| Mr. R. M. White, Assistant Conservator of Forests   | .. | Tamil.                    |
| Mr. J. R. Ainslie, Assistant Conservator of Forests | .. | Tamil.                    |
| Mr. A. B. Fontyn, Assistant Conservator of Forests  | .. | Law, Tamil, and Accounts. |

#### Subordinate Staff.

99. *Re-organization.*—Five new appointments as Forest Rangers, Grade II., were added to the Department.

100. *Appointments.*—Eight appointments were made in the Second Grade of Ranger. Five Forest Rangers, Grade II., on probation were confirmed in their appointments.

101. *Promotions.*—One Forest Ranger, Second Grade, was promoted to the First Grade of Ranger. One technically trained Forest Ranger, First Grade, was promoted to the Second Grade of Foresters. One Forester, Second Grade, was promoted to the First Grade of Foresters.

102. *Examinations.*—Two Forest Rangers passed in Tamil (a), one in Tamil (b), one in Sinhalese (c), and two in Law.

103. *Leave.*—Of sixty-one officers on the Executive Staff, fifty took leave ; of these, forty-one had leave for a week or more.

104. *Technical Training.*—Mr. E. S. Wambeck, Forest Ranger, Grade II., returned to the Island after completing his course of training at the Madras Forest College. He was awarded the Higher Standard Certificate, and was the winner of Indian Forester Gold Medal. Mr. L. E. Juriansz, Forest Ranger, Grade I., and Messrs. J. D. Muttiah and G. Sankarapillai, Forest Rangers, Grade II., continued their course of training at the above College. Messrs. T. L. F. Perera, B. S. F. Lebbai, and D. G. P. Wijeratne, Forest Rangers, Grade II., were deputed in July, 1919, for training during the 1919-21 course, but Mr. Wijeratne died there on August 19, 1919.

105. *Miscellaneous.*—One Forest Ranger, Grade I., was retired for inefficiency, and one died. One Forest Ranger, Grade II., and one Probationary Forest Ranger were allowed to resign their appointments, and one Probationary Forest Ranger, Grade II., was discontinued. During the year six Forest Guards resigned, two died, four were dismissed, and one was discontinued.

#### Clerical Staff.

106. Mr. H. W. Weeraratne continued throughout the year as Chief Clerk of the Department. One officer died. Twenty-six increments, three promotions, two confirmations, four transfers to other Departments, three transfers from other Departments, and sixteen transfers within the Department took place during the year.

107. Of thirty-five clerks in the Department, thirty-four took leave ; of these, thirty had leave for a week or more.

108. Mr. J. H. de Niese, Draughtsman, who was on duty with the Ceylon Sanitary Corps in Mesopotamia, was discharged on December 15, 1919, and resumed duties in the Department.

#### V.—GENERAL.

109. The following works completed during the year were taken on to Public Works Department list of buildings for maintenance :—

|   |  |
|---|--|
| Forest Ranger's quarters, Nikaweratiya.           | Depôt-keeper's quarters, Nuwara Eliya. |
| Office for the Forest Ranger's quarters, Badulla. | Forest Ranger's quarters, Koslanda.    |

110. A vote of Rs. 25,000 was sanctioned in the Supply Bill, 1919-20, for quarters for Foresters, Forest Rangers, and Forest Guards, and the following have been taken in hand by the Public Works Department :—Plantation Overseer's quarters, Pattipola ; Forest Ranger's quarters, Hatton ; Forester's quarters, Anuradhapura, and cart-shed for Forest Ranger's quarters, Nochchiyagama.

111. The construction of quarters for the Assistant Conservator of Forests, Haputale, was completed during the year.

112. A further sum of Rs. 10,000 has been sanctioned for special repairs to Forest Department buildings in 1919-20, and includes the taking over of the Olamadu circuit bungalow in the Mullaitivu Range of the Jaffna Division, once a resthouse, and subsequently transferred to the Public Works Department. It will be used as the headquarters of the Mullaitivu Range as soon as the necessary repairs have been effected. Other works under this head are improvements to the Forest Ranger's quarters, Kurunegala, and an office for range quarters, Valaichenai, in the Batticaloa Division.

113. The fuel supply was again the chief item of the year's work, owing to the continuous urgency of deliveries throughout the period. Profiting from the previous year's experience, the work was under improved organization, and ran smoothly throughout the year, and the wet season found the Department fully prepared to sustain the heavy demand. The supply has, indeed, been maintained considerably in excess of consumption throughout, and the work has been followed, on the whole, by a successful re-forestation programme, particularly in the up-country areas in the Nuwara Eliya Division.

114. The Department commenced the supply of log timber to the Public Works Department during the year, and extracted a very large quantity. Work was unable to proceed, however, according to programme, owing to rice shortage, and considerable supplies were outstanding at the close of the year, when the following year's indent was received. It is expected that timber will always be available for use when required, but time will prove the necessity of arranging for supplies in advance for the

following year if the matter is to be placed on a satisfactory footing. The question of permanent conversion depôts was considered during the year in relation to the divisions likely to contribute the largest share of the indent, but a final decision was not reached.

115. Investigation into the qualities of lunumidella (*Melia dubia*) for aeroplane construction was pursued by the Timber Expert of the Indian Air Board, who spent some time in Ceylon in the earlier part of the year. Mr. Keene was most favourably impressed with this wood, but was recalled before completing his investigation. Later in the year six logs of lunumidella were supplied to the Aircraft Factory at Simla on behalf of the Ceylon Government, but the results of tests had not been communicated at the end of the year. Inquiry was also made for suriyamara (*Albizia odoratissima*), and arrangements put in hand for sending samples.

116. Twenty-eight planks of satinwood, ebony, ubberiya, lunumidella, yakahala, palu, kumbuk, suriyamara, pandara, weera, and panaka were prepared and despatched to London for exhibits at the Timber Exhibition intended to be held in October, 1919. The date of the Exhibition being postponed until July, 1920, the samples were retained for the purpose, and it was decided that the Department was not in a position to contribute further to the Exhibition.

117. Firewood was given free, with the approval of Government, for bonfires at the Peace Celebrations in the Batticaloa, Colombo, and Uva Divisions.

118. The unsatisfactory situation regarding the estate re-forestation scheme in the Nuwara Eliya Division is much to be deplored. The work has not been approached in the spirit intended, and, generally speaking, with little serious attempt at re-forestation. A special report was called for by Government at the end of the year, with the result that securities on agreements were enhanced, and the granting of new blocks ordered by Government for a further year as a final trial. There are now thirty-eight participating estates.

119. Prismatic compass surveys of re-forestation areas in the Nuwara Eliya Division were commenced in the latter part of the year, but the services of the officer engaged upon them were required elsewhere before the work could be completed.

120. Enumeration surveys were commenced in low-country forests in the Nuwara Eliya Division, at Elahera, and measurements of some 7,000 trees recorded. The importance of this work is recognized, and it is hoped that it will be found possible to extend it to other divisions at an early date, when the requisite staff becomes available, in order to establish a definite scheme of exploitation of the remaining untouched areas in the Island.

121. Commencement of the re-forestation of areas near the Railway in the Colombo Division was rendered practicable by the food shortage. Under Government instructions a block of nearly 1,000 acres was taken up for chena re-forestation in July at Mirigama, and nearly 700 acres were cleared before the rains commenced in October and sown with chena crops. Sowing of seeds of forest trees will take place in 1920, and if the energy of the cultivators, now stimulated by the necessity for growing food crops, can be applied to the reproduction and maintenance of forest trees, the difficulties in the way of re-forestation of these areas hitherto precluded by lack of funds will rapidly disappear. In connection with chena re-forestation, an amended form of agreement was submitted to Government, in which remuneration for work satisfactorily carried out for the Department by the cultivators at fixed rates per acre at the end of each year was recommended, as well as the avoidance of recourse to courts of law in cases of default. The form has since received Government approval.

122. The very large supply of 1,454 telegraph posts was undertaken by the Department, owing to the scarcity of imported material. This is no easy undertaking in view of the lengths required, and the liability to rejections for unsound wood in any part of the length. The greater part of the indent was carried out in the Galle Division, and the work was well done.

123. Three students were deputed to Coimbatore for the 1919-21 course of training. Of these, one, a promising Ranger, died of influenza shortly after joining the College. Five studentships are offered for the next three years' course, and four will return on completion of the course in July, 1920.

124. The Clerical Branch of the Department was subjected to severe strain during the year, some divisions being short of permanent staff for long periods, owing to deaths and transfers from the Department. At the end of the year proposals were submitted for the strengthening of this important branch of the Department, which is overworked, and new appointments have been sanctioned, which, it is expected, will considerably improve efficiency. The retention of trained clerks in the Department should be closely guarded on account of the nature of the work and the very limited staff. In spite of dislocation, excellent service was rendered all round, but the continued strain has resulted in the health and capacity of some officers being seriously impaired.

125. The re-organization of the Department in respect of staff and salaries, which was suspended during the war, has now made considerable progress, and received the serious consideration of Government during the year, with the result that it was in a fair way to reaching fulfilment early in 1920. Two resignations, however, and the improbability of return of a third officer, who is incapacitated in England, has seriously weakened the Department, and rendered the making of arrangements for other officers proceeding on leave a matter of the greatest difficulty. Sanction for new appointments from England has been received, but it is not known at present when trained officers will be able to join. In the meantime three new divisions have been sanctioned, at Colombo, Trincomalee, and Kandy, and the arrival of additional staff is eagerly awaited to man the new divisions, of which only one has up to the present been created, namely, Colombo.

126. The need of placing executive and protective officers in uniform, which is one of the recommendations of the re-organization report, is strongly felt, and it is hoped that this will soon receive the general sanction of Government, even if the expenditure cannot be voted immediately.

127. The organization and policy of the Forest Department formed the subject of a departmental memorial submitted during the year, and received the consideration of Government. It was decided, however, that as the Department is already in process of definite re-organization, which is practically complete, that the time had not yet arrived for further and more drastic measures. It is hoped next year to embody in this report the full scheme of re-organization, which has received Government approval, and awaits only the final sanction of the Secretary of State.

Kandy, May 25, 1920.

H. F. TOMALIN,  
Conservator of Forests.

## PART .III.—JUDICIAL.

## JUDICIAL STATISTICS.

## REPORT OF THE ACTING SOLICITOR-GENERAL ON THE STATISTICS RELATING TO THE ADMINISTRATION OF CRIMINAL JUSTICE DURING 1919.

THE returns which I annex relate to the period January 1 to December 31, 1919.

2. It should be remembered that the Statements A to M relate exclusively to serious crime, that is to say, (1) offences which are not summarily triable by Police Courts, except under the provisions of sections 152 (3) and 166 (1) of the Criminal Procedure Code; (2) the offences of voluntarily causing hurt by means of dangerous weapons punishable under section 315 of the Penal Code; and (3) offences against property under Chapter XVII. of the Penal Code, when the loss inflicted or the amount stolen or misappropriated exceeds Rs. 250.

3. The number of prosecutions for serious crime entered in the Police Courts of the Island was 3,458, as against 3,273, the figures for the year 1918. In these prosecutions the individuals charged numbered 5,942, as against 5,553 in 1918. The decrease noticed in the year 1916, which was followed by a further decrease in 1917, has unfortunately not been maintained.

4. The 3,458 cases referred to above were disposed of as follows:—In 866 cases the persons accused were discharged by Police Magistrates under the provisions of section 157 (1) and (3); the records of 1,086 cases were transmitted to the Attorney-General under section 157 (1) (b); 563 cases were summarily dealt with by Magistrates under the special powers created by sections 152 (3) and 166 (1); the balance 943 in number represent cases of hurt with dangerous weapons summarily tried by Police Magistrates. The cases grouped under this head consist for the most part of knife cases.

5. Of the cases (1,086) transmitted to the Attorney-General, the persons accused were discharged in 53 cases, and in the remaining 1,033 they were committed for trial before a higher court. In 740 cases one or more of the accused were convicted, and in 293 all the persons accused were acquitted. The percentage of convictions obtained was 71·6 in the year under review, while those for the preceding two years were 71·4 and 72·1, respectively. These results are very satisfactory, and indicate both careful preparation as well as efficient prosecution.

6. Table B is an analysis of serious crime in relation to the persons accused. There were 366 persons tried by the Supreme Court, of whom 243 were convicted and 123 acquitted. In the case of District Courts 1,538 were tried, of whom 1,054 were convicted and 484 acquitted.

7. Table C is a general classification of offences into certain large groups, and is intended to enable one to see at a glance the classes of offences prevalent in the Island. The Tables D to M are analyses of certain of the groups of offences which appear in Table C. The figures in these tables should not be taken to represent the number of individuals charged with these offences, or the number of prosecutions actually instituted. They only show the number of instances in which the provisions of the Penal Code referred to and included in each group have been infringed.

Table C shows that the number of convictions obtained in relation to Group IX., offences against the human body, was 1,460. This does not mean that 1,460 distinct individuals have been convicted for such offences, nor does it mean that there were 1,460 separate and successful prosecutions for such offences. What it does mean is that the offences which are penalized in the chapter of the Penal Code under the head "Offences against the Human Body" have been committed in 1,460 instances, quite irrespective of the persons involved or the number of prosecutions laid under those sections.

The purpose and object of these returns is set out in the Administration Report for 1909.

8. The following are the principal provisions of the law under which the convictions for serious crime were obtained:—

|  |        |  |        |
|--|--------|--|--------|
| Murder (section 296)                                     | .. 55  | Causing grievous hurt with dangerous weapons (section 317) | .. 248 |
| Culpable homicide not amounting to murder (section 297)  | .. 72  | Theft (sections 367, 368, and 369)                         | .. 874 |
| Voluntarily causing hurt (section 314)                   | .. 175 | Robbery (sections 380, 382, and 383)                       | .. 395 |
| Causing hurt by means of dangerous weapons (section 315) | .. 603 | Dishonestly receiving stolen property (section 394)        | .. 43  |
| Causing grievous hurt (section 316)                      | .. 148 | Mischief (sections 409, 418, and 419)                      | .. 56  |
|  |        | House-breaking (sections 440, 443, and 444)                | .. 621 |

9. *Murder*.—Convictions for murder were obtained in 51 cases. Of these, 18 were from districts in the Midland Circuit, 26 from districts in the Western Circuit, 5 from districts in the Southern Circuit, and 2 from districts in the Northern Circuit.

10. *Perjury*.—The number of persons convicted of giving or fabricating false evidence in a judicial proceeding punishable under section 190 of the Penal Code was only 4. In the preceding year the number was 7.

11. Table T is a return of appeals from judgments of District Courts in criminal cases. In 164 cases the convictions were affirmed, in 32 set aside. The figures in 1918 were 188 and 30 respectively.

M. T. AKBAR,  
Acting Solicitor-General.

June 10, 1920.

9(M)20

## TABULAR STATEMENTS REFERRED TO ABOVE.

## A.—Showing the Number of Prosecutions instituted and how they were disposed of.

|  | No.   |
|--|-------|
| Prosecutions instituted in Police Courts .. .. .   | 3,458 |
| Cases disposed of* by discharge of accused under section 157 (1) (a) and (3) without reference to the Attorney-General .. .. . | 866   |
| Cases in which records were forwarded to the Attorney-General for instructions under section 157 (1) (b) .. .. .               | 1,086 |
| Cases in which all the accused were discharged on orders of the Attorney-General under section 388 .. .. .                     | 9     |
| Cases in which all the accused were discharged on orders of the Attorney-General under section 158 (1) .. .. .                 | 44    |
| Cases in which all the accused were committed for trial .. .. .  | 1,033 |
| Cases which resulted in the conviction of one or more of the accused .. .. .   | 740   |
| Cases which resulted in the acquittal of all the accused .. .. .   | 293   |
| Cases of hurt with dangerous weapons summarily tried by Police Magistrates under sections 315 and 317 .. .. .                  | 943   |
| Cases summarily tried by Police Magistrates under sections 152 (3) and 166 (1) .. .. .   | 563   |
| Cases in which after committal accused were found to be of unsound mind .. .. .  | —     |

\* Sections cited in this and the next table are sections of the Criminal Procedure Code.

## B.—Showing the Number of Persons accused in Table A and how such Persons were dealt with.

|   | No.   |

| Persons acquitted by Supreme Courts .. .. .   | 123   |
| Persons convicted by District Courts .. .. .  | 1,054 |
| Persons acquitted by District Courts .. .. .  | 484   |
| Persons tried summarily by Police Courts for serious crimes (sections 315 and 317) { Convicted 663 } .. .. .          | 1,271 |
| Persons tried by Police Courts under sections 152 (3) and 166 (1) { Acquired 608 } .. .. .                            | 870   |
| Persons convicted by Police Courts .. .. .  | 1,242 |
| Persons acquitted by Police Courts .. .. .  | 899   |
| Persons found insane after committal and acquitted in the Supreme Court .. .. .                                       | —     |

## C.—Showing the Number of Convictions and Acquittals in Trials for Offences\* in each Class of Serious Crime.

| Crimes.†  | No. of Convictions. | No. of Acquittals. |
|---|---------------------|--------------------|
| I.—Offences against the State .. .. .   | No committals.      |                    |
| II.—Offences relating to the Army and Navy .. .. .  | No committals.      |                    |
| III.—Offences against the public tranquillity .. .. .   | 194 ..              | 72                 |
| IV.—Offences by, or relating to, or in contempt of the lawful authority of, public servants .. .. .                       | 19 ..               | 11                 |
| V.—Offences relating to the giving or fabricating of false evidence and offences against public justice generally .. .. . | 32 ..               | 30                 |
| VI.—Offences relating to coin, Government stamps, and the Ceylon paper currency .. .. .                                   | 1 ..                | 1                  |
| VII.—Offences relating to weights and measures .. .. .  | No committals.      |                    |
| VIII.—Offences affecting public health, safety, convenience, decency, and morals .. .. .                                  | No committals.      |                    |
| IX.—Offences against the human body .. .. .   | 1,460 ..            | 987                |
| X.—Offences against property .. .. .  | 2,127 ..            | 865                |
| XI.—Offences relating to documents and property marks .. .. .   | 66 ..               | 16                 |
| XII.—Offences affecting the reputation of persons .. .. .   | 1 ..                | 2                  |
| XIII.—Offences calculated to cause intimidation, insult, or annoyance .. .. .   | No committals.      |                    |
| XIV.—Offences regarding the administration of unlawful oaths .. .. .  | No committals.      |                    |
| XV.—Offences against revenue laws .. .. .   | No committals.      |                    |
| XVI.—Offences under local enactments not falling under the above headings .. .. .   | 10 ..               | 1                  |

\* I.e., "Serious Crimes" as defined in paragraph 2 of this report.

† "Offences" referred to in this column and the connected tables following include abetments of, and attempts to commit, such offences.

**D.—Class III. : Offences against the Public Tranquillity—Results of Trials.**

| Offences.*   | No. of Persons convicted. | No. of Persons acquitted. |
|--|---------------------------|---------------------------|
| Being members of an unlawful assembly (section 140)† ..              | 98                        | 48                        |
| Joining unlawful assembly armed with deadly weapons (section 141) .. | 46                        | —                         |
| Rioting (section 144) ..   | 50                        | 24                        |

\* Except in the case of murder and culpable homicide not amounting to murder, "Offences" in this and the connected tables include abetments of, and attempts to commit, such offences.

† Sections cited in this and Tables C to M are sections of the Ceylon Penal Code.

**E.—Class IV. : Offences by, or relating to, or in contempt of the lawful authority of, Public Servants—Results of Trials.**

| Offences.  | No. of Persons convicted. | No. of Persons acquitted. |
|--|---------------------------|---------------------------|
| Personating a public servant (section 168) ..  | 4                         | —                         |
| Obstructing public servant in the discharge of his public functions (section 183) .. | 13                        | 10                        |

**F.—Class V. : Offences of giving or fabricating False Evidence and Offences against Public Justice generally—Results of Trials.**

| Offences.  | No. of Persons convicted. | No. of Persons acquitted. |
|--|---------------------------|---------------------------|
| Giving or fabricating false evidence in a judicial proceeding (section 190) ..   | 5                         | —                         |
| False statement made in any declaration which is by law recoverable as evidence (section 196) ..                             | —                         | —                         |
| False charge of offence made with intent to injure (section 208) ..  | 9                         | 6                         |
| Resistance or obstruction by a person to his lawful apprehension (section 219) ..  | 14                        | 12                        |
| Resistance or obstruction to the lawful apprehension of another person, or rescuing him from lawful custody (section 220) .. | 4                         | 10                        |

**G.—Class VI. : Offences relating to Coin, Government Stamps, and the Ceylon Paper Currency—Results of Trials.**

| Offences.  | No. of Persons convicted. | No. of Persons acquitted. |
|--|---------------------------|---------------------------|
| Offences under the Paper Currency Ordinance, No. 32 of 1884 .. | No Commitals              |                           |

**H.—Class IX. : Offences affecting the Human Body—Results of Trials.**

| Offences.   | No. of Persons convicted. | No. of Persons acquitted. |
|---|---------------------------|---------------------------|
| Murder (section 296) ..   | 55                        | 48                        |
| Culpable homicide not amounting to murder (section 297) ..                            | 72                        | 1                         |
| Causing death by rash or negligent act (section 298) ..                               | 1                         | —                         |
| Attempt to murder (section 300) ..  | 21                        | 6                         |
| Concealment of birth (section 309) ..   | 15                        | 1                         |
| Voluntarily causing hurt (section 314) ..   | 175                       | 119                       |

X.—A Classified Statement showing the Nature of the Criminal Cases tried before the District Courts of the Island during the Year 1919.

A 12

ails of Punishment inflicted in the Police Courts of the Island during the Year 1911

[illegible]

REPORT OF THE CROWN COUNSEL, WESTERN CIRCUIT,  
FOR THE YEAR 1919.

I HAVE the honour to submit return of cases disposed of in the Western Circuit during the year 1919, and to report as follows :—

Return A shows that there were in all 130 and 647 cases committed for trial before the Supreme and District Courts respectively. The number of cases that came before the Supreme Court show a small rise when compared with the aggregate of the three preceding years.

Return B shows that there were 70 cases of murder involving 92 accused, of whom 59 were convicted of murder and other minor offences.

Return F shows that 343 cases were tried before the District Court of Colombo ; this number does not appear to have been exceeded since the year 1911. It is possible that the hard conditions which prevailed relating to the obtaining of food conduced towards this increase.

The other returns speak for themselves, and do not call for special mention.

Cases of homicide do not show any plausible decrease. It has often struck me that the introduction of boxing into village schools accompanied by well-regulated inter-village or district tournaments may have the effect of minimizing the indiscriminate use of the knife and the club.

A systematic course of boxing would not alone teach reliance on one's fists in place of knives and clubs, but would tend to develop self-control and greater discipline than now exist in village life.

Colombo, May 25, 1920.

S. OBEYSEKERE,  
Crown Counsel.

A.—Return of Cases referred to the Crown Counsel in the Western Circuit from  
1910 to 1919.

**REPORT OF THE CROWN COUNSEL, MIDLAND CIRCUIT, FOR THE YEAR 1919.**

I HAVE the honour to submit return of cases disposed of in the Midland Circuit during the year 1919 and to report as follows :—

1. Table A, a return of cases referred to Crown Counsel, shows a decrease in the total number of cases as compared with the previous year. There is an appreciable decrease in the number of cases committed to the Supreme Court, but an increase in the number committed to the District Court.

2. Table B, a return of cases tried in the Supreme Court, shows that out of a total of 55 persons charged with culpable homicide in 43 cases, 18 were convicted of murder, 8 of culpable homicide not amounting to murder, 2 of causing death by rash or negligent act, 6 of causing grievous hurt under section 317, and 1 of simple hurt. Convictions were obtained in 34 out of the 43 cases.

Table C, dealing with cases of homicide since 1910, shows a slight decrease in the number of cases as compared with the year 1918, but a considerable decrease in the number of persons charged, 55, as against 83 in 1918. Of these, 18 were convicted of murder as against 20 in 1918, and 17 of lesser offences as against 26.

3. Table D, a return of cases disposed of by the Supreme and District Courts, shows an increase in the total number of cases as compared with 1918. It is to be noted, however, that there was a drop in the number of cases of more serious crime; 73 cases being tried in the Supreme Court, as against 103 in the previous year.

4. Table E, giving details of cases tried in the District Courts of the Circuit, shows that the largest number were cases of house-breaking. Out of a total of 625 persons charged in 364 cases, 325 were convicted, and 23 are awaiting trial.

5. Tables F and G, relating to cases tried in the District Courts, show that there has been an increase in the number of cases in every court, with the exception of Nuwara Eliya, as compared with the previous year.

6. Table H, a return of cases of cattle stealing, hurt with knife, and cases tried by consent in the Police Courts, shows that out of a total of 884 persons tried in 575 cases, only 311 were convicted. Of these, 147 were convicted of cattle stealing and 114 of hurt with a knife.

W. E. BARBER,  
Crown Counsel.

Kandy, May 30, 1920.

### REPORT OF THE CROWN COUNSEL, NORTHERN AND SOUTHERN CIRCUITS, FOR THE YEAR 1919.

I HAVE the honour to submit return of cases disposed of in the Northern and Southern Circuits during the year 1919 and to report as follows :—

#### NORTHERN CIRCUIT.

From Tables A, D, and F it would appear that since 1917 the number of cases committed before the District Courts has been on the increase. Supreme Court cases, however, including homicides do not show any similar increase.

Tables E and H show rather a marked disproportion between the number of cases and that of convictions. Whereas with reference to grievous hurt and more serious crimes, the percentage of convictions is well over 50 per cent., the percentage of convictions in cases of unlawful assembly, cattle stealing, and minor hurt falls to practically 33 per cent. and less. Of 33 cases of cattle stealing, 23 wholly failed.

#### SOUTHERN CIRCUIT.

In the Southern Province, too, the number of cases committed to District Courts is markedly in advance of the figure for previous years. The number of Supreme Court cases is fairly uniform. The number of persons charged with homicide in 1919 was 70, the highest figure on record for the past ten years, the next highest for any one year having been 53 in 1917; 38 of these 70 persons were convicted of murder or lesser offences, 7 cases having wholly failed. In cattle stealing cases, as usual more than 50 per cent. appear to have been false or supported by false evidence.

V. GRENIER,  
Crown Counsel.

Galle, June 16, 1920.

#### A.—Return of Cases referred to the Crown Counsel, Northern Circuit, from 1910 to 1919.

| 18. General Character of the Year.             | 46. Government Agents.                          | 69. Library and Recreation.                                     |
| 19. Distribution of Crime.                     | <b>PART V.—COLOMBO.</b>                         | 70. Events of the Year.   |
| 20. Criminal Districts.                        | 47. Crime.                                      | 71. Foodstuffs.   |
| 21. Unlawful Gaming.                           | 48. Municipal and Statutory Laws.               | 72. Metropolitan and English Police Forces.                     |
| 22. Homicides.                                 | 49. Strikes.                                    | 73. Merits of Officers.   |
| 23. Burglary.                                  | 50. Motor Vehicles and Public Carriages.        |   |
| 24. Theft and Robbery.                         | 51. Street Accidents.                           |   |
| 25. Cattle Stealing.                           | 52. Headlights on Motor Cars.                   |   |
| 26. Counterfeit Notes and Coins.               | 53. Street Lighting.                            |   |

### PART I.—THE FORCE.

#### 1. *Changes.*—The principal changes among the officers were:—

During my absence on leave from April 16 to November 30 Mr. J. H. Daniel, Deputy Inspector-General, was appointed to act as Inspector-General.

Mr. H. N. Wood, Assistant Superintendent, relieved Mr. C. E. Wedd, Temporary Assistant Superintendent at Kalutara.

Mr. G. H. Bromley, Assistant Superintendent, Depôt, took charge of the Panadura District, relieving Mr. L. H. Swallow, Temporary Assistant Superintendent, who reverted to the Railway Extensions Department.

Mr. A. Peries, Assistant Superintendent, Colombo Central, relieved Mr. S. H. Titley, Temporary Assistant Superintendent at Ratnapura.

Mr. H. A. Collette, Assistant Superintendent, was transferred from the Western Province to the Depôt.

Mr. G. Manwaring, Assistant Superintendent, who returned from leave, relieved Mr. C. T. Nettelton, Temporary Assistant Superintendent at Nuwara Eliya.

Mr. A. I. Sheringham, Assistant Superintendent, who returned from war service, took charge of the Kalutara District from Mr. H. N. Wood.

Captain E. F. L. Wright, Superintendent, who returned from war service, was appointed Superintendent of the Province of Sabaragamuwa, *vice* Mr. A. Peries, Assistant Superintendent, transferred to Kurunegala. Mr. A. S. Eliyatamby, Acting Assistant Superintendent, Kurunegala, was transferred to the Criminal Investigation Department, Colombo.

Messrs. W. C. C. King, J. D. Aitken, and J. E. Bennett, Assistant Superintendents, who returned from war service, took up duties in Kandy, Colombo North, and Western Province, respectively.

Mr. B. Langran, Assistant Superintendent, Depôt, took up duties as Assistant Superintendent, Headquarters and School, *vice* Mr. G. S. Baker, transferred to Galle. Mr. F. W. Morris, Assistant Superintendent, Galle, was transferred to the Depôt.

Mr. W. C. C. King, Assistant Superintendent, Kandy, took charge of the Kalutara District, relieving Mr. A. I. Sheringham, appointed Acting Superintendent, Colombo, *vice* Mr. W. K. S. Hughes, Temporary Superintendent.

Mr. R. J. Tyler, Superintendent, returned from leave, and was placed in charge of the Northern Province.

Mr. A. P. Williams, Superintendent, who returned from war service, took up duties as Superintendent, Headquarters and School, *vice* Mr. B. Langran, Assistant Superintendent, who relieved Captain T. G. Salmon, Temporary Assistant Superintendent at Kegalla.

Messrs. M. H. Ratton and G. K. Pippett, Temporary Assistant Superintendents, and Messrs. A. Peries and A. Jackson, Acting Assistant Superintendents, were confirmed as Assistant Superintendents.

Mr. G. S. Baker, Probationer, was appointed as Assistant Superintendent.

Chief Inspector D. E. Rodrigo and Inspector J. Deheragoda were appointed to act as Assistant Superintendents.

The following temporary officers appointed during the war were relieved on the return of permanent officers from war service:—Mr. W. K. S. Hughes, Colombo; Captain T. G. Salmon, Kegalla; Mr. H. Lloyd-Jones, Jaffna; Mr. C. T. Nettelton, Nuwara Eliya; Mr. S. H. Titley, Ratnapura; Mr. C. E. Wedd, Kalutara; Mr. R. P. Gaddum, Depôt; Mr. L. H. Swallow, Panadure.

The thanks of Government were conveyed to these officers for the valuable services they had rendered in relieving police officers for active service, and for the high standard of duty and zeal with which they had carried out a difficult task in taking charge of districts. The good services of these officers will always be gratefully remembered by all ranks of the Force.

The following officers and men who were on active service were demobilized during the year:—Mr. R. G. B. Spicer, M.C., Captain E. F. L. Wright, Mr. A. P. Williams, Mr. P. N. Banks, Mr. A. I. Sheringham, Mr. W. C. C. King, Mr. J. D. Aitken, Mr. C. G. Piggford, Mr. J. E. Bennett, Sub-Inspector J. W. Barber, European Sergeant J. H. Ellis, European Sergeant L. Kershaw, European Sergeant H. Fraser, Police Sergeant K. Nambiar, Police Sergeant P. Govinda Nair, and Police Constable S. R. Oumar.

The following Probationers and European Sergeants were selected from officers and men who had served in the Navy and Army during the war and appointed to the Force:—Mr. J. A. G. Roberts, Captain S. G. Notley, M.C., Mr. W. A. Muller, Captain W. T. Brindley, Mr. C. B. Astley Roberts, European Sergeant R. W. Eveleigh, European Sergeant G. E. Kinge, European Sergeant A. H. King, European Sergeant E. W. Titcomb, European Sergeant G. V. Leigh, European Sergeant R. W. Coleman, European Sergeant R. B. Sheridan, European Sergeant A. K. Marriott, European Sergeant T. J. Carnes, European Sergeant H. W. Whitfield, and European Sergeant H. J. Bullock.

Appointments to the rank of Sub-Inspector and Clerk were made from men who were on active service as follows:—Sub-Inspector R. Ondatji, Sub-Inspector W. D. K. Wagiswara, Sub-Inspector H. D. G. Simon, Sub-Inspector S. de la Harpe, and Clerk B. Eriyawe.

Of the officers and men who were on active service, 2 were awarded the Military Cross, 4 mentioned in despatches, 7 were wounded.

Sergeant Neaves, who had joined the Force on June 13, 1914, and brought with him from the 13th Hussars a very good character, died while on active service on March 12, 1919. Sergeant Neaves served for four years and nine months in the Force. By his death the Force has lost a very willing and useful Police Officer.

The experience which officers and men have gained on active service will be of the greatest value, not only to them in their future career, but to the Force, to which they bring the lessons of the war and the good traditions and discipline of the various regiments and units in which they served.

The officers and men who went on active service have brought back with them very good records, and did credit while on active service to themselves and to the Colony. They are heartily welcomed back by all ranks with a sense of great thankfulness on their safe return.

2. *Strength.*—The following additions to the Force were sanctioned during the year:—

Three sergeants and 9 constables for duty at the Railway Cash Deposit Room, at the Norris Road Rice Stores, and for the regulation of traffic in Colombo.

To Western Province: 1 sergeant and 5 constables for the investigation of crime.

To Central Province: 2 sergeants and 2 constables for patrol duty.

To Northern Province: 1 Sub-Inspector for Talaimannar to supervise passengers and deal with passports and health passes.

To Southern Province: 1 constable for patrol duty.

To North-Western Province: 2 sergeants and 4 constables for the investigation of crime.

To Sabaragamuwa: 4 Sub-Inspectors and 12 constables for new stations and for the investigation of crime.

The Punitive Police Force of 1 sergeant and 4 constables stationed at Potuwila, in the Kalutara District, on April 1, withdrawn on October 1.

The following table gives the sanctioned and actual strength of each grade on December 31:—

|  | Sanctioned. | Actual. |                               | Sanctioned. | Actual. |
|--|-------------|---------|-------------------------------|-------------|---------|
| Inspector-General ..                                   | 1 ..        | 1       | Native Constables ..          | 2,315 ..    | 2,299   |
| Deputy Inspectors-General ..                           | 2 ..        | 2       |                               |             |         |
| Superintendents ..                                     | 9 ..        | 10      | <i>European Police Force.</i> |             |         |
| Assistant Superintendents, Probationers, and Temporary |             |         | Inspectors ..                 | 1 ..        | 1       |
| Assistant Superintendents                              | 24 ..       | 23      | Sub-Inspectors ..             | 3 ..        | 2       |
| Inspectors ..  | 45 ..       | 43      | Sergeants ..                  | 32 ..       | 19      |
| Sub-Inspectors ..                                      | 116 ..      | 100     |                               |             |         |
| Native Sergeants ..                                    | 336 ..      | 336     | Total ..                      | 2,884       | 2,836   |

The Force was kept up to strength of native sergeants and constables throughout the year, the actual strength on December 31 being only 16 short of the sanctioned (2,651).

The total strength of the Force was short by 48 on December 31, the shortage being principally among the European Police Force, which was working with the minimum number of men actually necessary for carrying on the most essential duties only during the war. European sergeants are now being selected and enlisted from men who served in the Navy and Army during the war.

3. *Nationalities*.—The Force is composed of men of the following nationalities :—

|                | Europeans. | Burghers. | Malays. | Sinhalese. | Tamils. | Others. |
|----------------|------------|-----------|---------|------------|---------|---------|
| Inspectors     | 1          | 2         | 7       | 27         | 4       | 3       |
| Sub-Inspectors | 2          | 22        | 23      | 46         | 5       | 4       |
| Sergeants      | 19         | 18        | 140     | 87         | 52      | 39      |
| Constables     | —          | 37        | 391     | 1,101      | 463     | 307     |
| Total          | 22         | 79        | 561     | 1,261      | 524     | 353     |

4. *Education*.—Of the sergeants and constables, 29 per cent. can read and write English, 39 per cent. can speak English, and 60 per cent. can read and write a vernacular language only. There are 30 men (1 per cent.) who can read and write no language; such men are encouraged to learn to read and write one language, and an effort is being made to teach them in police stations and schools.

5. *Length of Service*.—There are 425 men (15 per cent. of the Force) with seventeen years' service and over, 582 men (21 per cent.) with ten years' service and under seventeen years' service, 1,081 men (39 per cent.) with three years' service and under ten years, and 712 men (25 per cent.) with one year's service and under three years. 36 per cent. of the Force is composed of men of over ten years' service.

6. *Casualties*.—The following figures show the casualties of the Force in 1919 :—

|                |       |            |    |
|----------------|-------|------------|----|
| Total strength | 2,884 | Resigned   | 41 |
| Died           | 35    | Discharged | 80 |
| Pensioned      | 65    | Dismissed  | 53 |

7. *Enlistments*.—During the year 1,545 men presented themselves for enlistment. Of these, 1,235 (80 per cent.) were rejected as unsuitable and physically and educationally unfit for service in the Force. Enlistments to the number of 310 were made to the following grades :—8 first class constables, 55 second class constables, and 247 third class constables. The small proportion of recruits enlisted to applicants (80 per cent. rejected) indicates the care with which inquiries are made as to the character and general fitness of men who present themselves for enlistment.

The following table shows the number of approved recruits sent from each Province :—

|                          |    |                               |     |
|--------------------------|----|-------------------------------|-----|
| Central Province         | 54 | North-Central Province        | 2   |
| Western Province         | 28 | Recruits enlisted on personal |     |
| Southern Province        | 17 | application at Headquarters   | 177 |
| Province of Sabaragamuwa | 10 |                               |     |
| Province of Uva          | 7  |                               |     |
| Northern Province        | 6  |                               |     |
| Eastern Province         | 3  |                               |     |
|                          |    | Total                         | 310 |

The Central Province has for the last five years headed the list of Provinces sending down recruits.

8. *Training School*.—On January 1 there were 83 recruits in the school, and in the course of the year 305 recruits were admitted. Of these, 249 passed out after examination, 43 were discharged as unsuitable for retention in the Force or for desertion, and 10 resigned. On December 31 there were 86 recruits in the school under training.

Forty-six constables recommended for promotion to the rank of sergeant went through the sergeants' course, and were promoted after examination. Sixteen Sub-Inspectors were enlisted direct, and 8 sergeants were promoted to the rank of Sub-Inspector.

The course of instruction is made as practical as possible, and includes not only law, drill, and physical exercises, but general knowledge, observation, traffic regulation, first aid, self-defence, and care in the handling of court productions.

The Training School is at present temporarily housed in the old Volunteer Headquarters in the Pettah, which merely provides sleeping accommodation and class rooms for the recruits. The officer in charge and the instructors live a long way from the school, there is no room or ground for purposes of recreation, and the locality is not desirable. A good site has been reserved next to the police recreation ground for the new school buildings and for the quarters of the instructors, the officer in charge, and other officers resident in Colombo. The scheme approved will not only provide for the housing of the school on a healthy site, but will bring recruits under the constant influence, both in work and play, of their officers, and should go far to provide for the future efficiency of the Force and the formation of a sound, healthy, moral tone. The proposal was strongly recommended by the Police Commission appointed in 1915. The Commission recommended that the work should be taken in hand as soon as possible. The work has been cut out of successive Estimates since 1916 for lack of funds, but as the need for a Training School is as great to-day as in 1915, I trust that with the end of the war it may be possible for funds to be now provided.

The work of training recruits requires great patience and a high standard of duty, but is, well repaid by the manner in which recruits respond to the interest taken in their welfare.

9. *Training and Instruction*.—Special attention has been given to the training of all men of the Force in the duty of preserving order and in the prevention and investigation of crime, and in general knowledge such as is required of a good policeman. In addition to the weekly issue to all stations of orders relating to new Ordinances, by-laws, and regulations, in which all ranks are instructed and questioned, notes and hints on incidents and cases which have actually occurred are published for general information and guidance. Instruction is not being confined to the legal and technical side of a constable's duties, men are also instructed in matters which affect their district, which a policeman might at any time be reasonably asked about.

The lines on which instruction is now being given are that it is not necessary to limit instruction to the rare occasions when a number of off-duty men can be formed into a class. Instruction can be given at any time: in the middle of a parade when men are standing easy; when guards, sentries, and men for duty are being inspected or visited. The more men are questioned and talked to the better. They get into the way of expecting questions on any subject at any time, and answer them to the best of their ability as they should to the public.

10. *Conduct.*—The statement below shows the number and nature of the punishments awarded during the twelve months as compared with the two previous years :—

|                                | 1917.    | 1918.    | 1919. |
|--------------------------------|----------|----------|-------|
| Dismissed and discharged .. .. | 180 ..   | 146 ..   | 130   |
| Reduced .. ..                  | 178 ..   | 138 ..   | 169   |
| Black-marked .. ..             | 1,455 .. | 1,336 .. | 1,471 |
| Fined .. ..                    | 2,690 .. | 2,328 .. | 2,641 |
| Judicially punished .. ..      | 26 ..    | 30 ..    | 15    |

Of the men dismissed and discharged the Force, 6 were dismissed for extortion, 1 for receiving illegal gratification, 2 dismissed or discharged for unnecessary interference with the public, and 8 dismissed and 40 discharged for absence without leave.

There are 1,065 constables in possession of good conduct badges, 15 are drawing good service allowances, and there are 162 constables in the merit class.

As an example of good conduct may be quoted the cases of Police Constable 1172 A. Ponnasamy, of the Colombo Division, who in the course of twenty-six years' service has had only one default. He was granted the special good service allowance of Rs. 5 per mensem by Government. Police Constable 1496 D. Banda, of Maskeliya Police Station, during his service of thirty-nine years committed no serious offence, had only five defaults in the whole of his service, and for a continuous period of nineteen years had no default of any kind. He was on fifteen occasions rewarded or commended for good work. Police Constable Banda, who has since retired from the Force, was in possession of the sixth good conduct badge.

There has been an unnecessary increase in the number of men fined. I am strongly opposed to a fine being inflicted for any offence other than that of absence from duty without leave (if a man does not work, he should not be paid), or when making good the value of Government property lost. A system of awarding black marks instead of fines was specially introduced to do away with fines in other cases. A black mark involves loss of all privileges, and is a bar to promotion until the black mark is cancelled. A black mark can be cancelled by continuous good conduct for three months. It is a sound system, as it provides for a man redeeming his bad conduct by subsequent good conduct, and it encourages him to do so. A fine, on the other hand (especially at times such as the present, when the cost of living is high), directly affects the pocket of a man who can ill-afford to meet a fine (however much he may have deserved some form of punishment), and the tendency is to drive him to make good the loss of pay by accepting an illegal gratification or extortion. The attention of all officers has been drawn to the matter with a view to bringing about a substantial decrease in the number of fines inflicted.

In the course of the year Rs. 33,615 was paid to men of the Force as rewards for good work, and special acts of bravery were rewarded by special promotion.

Of acts of bravery and prompt action displayed in arresting armed criminals and saving life from drowning the following may be quoted :—

Police Constable 1067 Andy Singho, of Ratnapura, hearing cries from the river, ran to the bank, where he saw a man being carried away by the current in water approximately 13 feet deep towards a dangerous and rocky part of the river. The constable promptly slipped off his clothes, plunged into the river, swam to the drowning man, dived, and brought him to the surface just after he had sunk for the first time.

A man named Adaippan Muttiah stabbed his wife to death as she proved unfaithful to him, and as he, with a knife in his hand, was chasing after the man who had taken his wife from him, Police Constable 2472 N. K. A. Joseph, of Batticaloa, promptly and fearlessly ran after the man and arrested him.

Police Sergeant 2120 Khan, of Anuradhapura, who was sent to inquire into a case of theft of Government property, when attempting, single-handed, to arrest two accused was attacked and seriously assaulted. In spite of injuries received, the sergeant held on to the two accused, and took them unaided 2 miles to the police station.

Police Constable 858 Daulagala, of Pasyala, proceeded to raid a gambling den with Police Constable 2464 Banda and Police Constable 1569 Mudalihamy at about 10 p.m. During the raid one of the gamblers dealt a blow at Constable Banda with an axe, which was intercepted by Police Constable Daulagala. The den keeper dealt a blow with a katty at the head of Constable Mudalihamy, who was holding one of the accused, and felled him to the ground. Police Constable Banda seized the den keeper and took away the katty. Five of the gamblers were arrested.

Police Constable 2052 Jedrick Appu and Police Constable 1864 Cornelis Appu, of Negombo, when on night patrol duty, saw two men, who started to run on seeing the constables. The two constables chased after them and arrested them in a house. On searching the men a jemmy was found in the possession of one who was an habitual criminal, the other man had a club. The two men arrested were undoubtedly out with the intention of committing burglary, and by their prompt action the constables prevented the commission of the crime.

About 12 midnight Police Constables 590 K. J. Perera and 2653 S. Muttiah, of Kalutara South, when on night patrol duty near Koholana junction, saw a man coming from the river. On seeing the constables the man ran, when the two constables chased and arrested him. As the constables got up to the man he threw away something. Search was made immediately and two bangles and a hairpin found. The constables made inquiries till morning as to who the prisoner was; they suspected that he might have broken into a house, and made inquiries, but without success. In the morning they learnt that he was a man from the Panadure side of the river. Leaving the prisoner in charge of Constable Muttiah, Constable Perera came across the river to make inquiries, and learnt that the prisoner had committed a double murder. He was subsequently tried and sentenced to death.

11. *Housing the Force : New Buildings.*—There are a large number of men living out of barracks for want of barrack accommodation, and, from the point of view of discipline as well as of efficient action in a case of emergency, the most urgent need of the Force is the housing of the men. In Colombo alone there are 443 men living out of barracks.

The housing of the recruits and of the Police generally was made the subject of a special recommendation by the Commission appointed to inquire and report on the Police in 1916, but owing to lack of funds in the last four years the works required have not been proceeded with. The Commission reported as follows :—

" We fully concur with the Inspector-General's opinion that the adequate housing of the Police is a matter of the first importance, and has a direct bearing upon the efficiency of the Force. As regards the Colombo Police, we understand that plans and estimates providing for the housing of the Police and the transfer of Headquarters to the old Royal College site have already received the sanction of Government, but that the sum placed on the 1914-15 Estimates on this account was subsequently expunged owing to retrenchment. We recommend that the full amount should be replaced upon the Estimates as soon as the state of the Colony's finances render such a course practicable, and that in the meantime a start should be made at once with quarters for the European Police Sergeants, whose present accommodation at the old Provost Prison is clearly inadequate. We suggest that early steps be taken to provide married quarters for five of the senior sergeants, whose case calls for the more immediate relief. As regards outstation Police, we suggest that steps should be taken, as funds permit, to provide suitable police stations and quarters on the same premises."

Quarters have been built since 1916 for the European Sergeants, but the housing of the men of the Pettah Police on the old Royal College site and the transfer of the Police Headquarters from Maradana to the old Royal College site to make room for men living out of barracks at Maradana has not yet been started.

The scheme of housing the Police generally has suffered during the last four years for lack of funds. With the war ended, it is particularly desirable that every effort should be made to give effect to the Commission's recommendations, which are sound and as necessary to-day as in 1916, and provision made each year so that the works required may be taken up year by year in order of urgency.

The accommodation available at Headquarters is the same to-day as in 1865, when the strength of the Force was 480. The present strength of the Force is 2,884. The most urgent of the new buildings required are :—

(a) Police Training School.

(b) Housing of the Pettah Police and Headquarter Offices on the old Royal College site.

There are now 104 men for whom there are no quarters at Maradana, who will be housed in the building now used as offices ; and at the Pettah Police Station, of a total strength of 119, there is no accommodation for more than 32. The Pettah is the most disorderly, the most criminal, and one of the most important parts of the town, containing as it does much valuable property, the principal markets, and native provision stores. The housing of the Pettah and Maradana Police is one of the most urgent needs.

The most urgent of the other works required are a new police station at Ginigathena, the housing of the Superintendent at Kurunegala, the Assistant Superintendent at Chilaw, the men at Borella, the Inspector at Negombo, and the single men and Superintendent at Galle.

A new Police hospital building is required at Colombo in place of the present hospital, which is too small for the Force, the strength of which is four times greater than when the Police hospital was opened in 1888.

During the year quarters for twelve married European Sergeants on the old Royal College site, the Police at Teldeniya, and the Inspector at Hatton were completed.

12. *Clerical Staff.*—The Clerical Staff of the Department on December 31 consisted of 5 clerks of Class I., Grades I. and II. ; 30 of Class II., Grades I., II., and III. ; 53 clerks of Grade I. and 60 clerks of Grade II. of the Subordinate Clerical Service ; 3 shorthand writers and typists ; total 151, distributed over 28 police offices.

The number of clerks who proved specially proficient in the various branches of police work is shown below :—

|  |    |  |    |
|--|----|--|----|
| Shorthand .. .. .                      | 3  | Crime reports and criminal statistics .. | 16 |
| Typewriting with speed and accuracy .. | 28 | Pay and accounts .. .. .                 | 20 |
| Records .. .. .                        | 6  | Stores .. .. .                           | 4  |
| Strength .. .. .                       | 13 | Correspondence .. .. .                   | 22 |

The good services of the following clerks who have shown eagerness to learn method, accuracy, and interest in the despatch of business are mentioned :—

|                        |                     |                   |                       |
|------------------------|---------------------|-------------------|-----------------------|
| Administrative ..      | Mr. J. M. de Silva  | Pay ..            | Mr. G. M. Chinnatamby |
| Shorthand typist ..    | Mr. O. W. Pereira   |                   | Mr. C. Dias           |
|                        | Mr. P. M. Rodrigo   |                   | Mr. N. Nadaraja       |
| Criminal statistics .. | Mr. H. D. Perera    | Correspondence .. | Mr. H. P. Weerasinghe |
|                        | Mr. E. W. Ekanayake |                   | Mr. C. S. de Silva    |
|                        | Mr. P. B. Polpitiya |                   | Mr. P. W. Jayasinghe  |
| Pay ..                 | Mr. E. B. Fernando  |                   | Mr. J. A. Sappidin    |
|                        | Mr. E. Kathiravelu  | Strength ..       | Mr. A. Musaffer       |
|                        | Mr. R. S. Fernando  |                   | Mr. A. S. Parayeravar |
|                        | Mr. T. Rajanayagam  | Stores ..         | Mr. M. C. Perera      |

Mr. W. A. Fernando, Head Clerk of the Office of the Superintendent of Police, Colombo, who counts thirty-eight years' service, was invested with the titular rank of Muhandiram on the Birthday of His Majesty the King.

The very large proportion of Subordinate Clerical Service Clerks to the total, 76 per cent., is a matter which requires correction. The position should be exactly reversed, for the present small proportion of higher appointments results in stagnation and a block in promotion.

Clerks in the Subordinate Clerical Service start on Rs. 25 per mensem, and, with the exception of a small proportion who are eventually promoted to the Clerical Service proper, the most these clerks can rise to is Rs. 65 per mensem. Before appointment a clerk is expected to be able to typewrite, he is asked if he can take down notes in shorthand (a great advantage in police work if he can do so). He is required

to produce a certificate to show that he has passed a recognized examination, such as the Junior Cambridge Local or London Preceptors, or to hold a School-leaving Certificate. He is required to have a sound general knowledge, and to be a man of some position and education. He is entrusted with duties of importance requiring (especially in police work) a high standard of integrity. The wage offered, Rs. 25 (with temporary increase, Rs. 33·75), is not sufficient to attract and keep the right class of men. The matter has been specially noted to be brought up before the Commission to be appointed to consider the future permanent salaries of Government servants.

A good Clerical Staff is of the greatest value and assistance to the Executive Branch in ensuring the prompt issue of orders and the communication of information, and the two branches must necessarily work and improve together if an efficient Force is aimed at. The Force is fortunate in having a number of both senior and junior clerks, whose interest in the efficiency, advancement, and welfare of the Force is as keen as that of any officer or man, and whose work is notable for zeal and devotion to duty, and the Force is particularly fortunate in having at the head of the Clerical Branch a clerk of outstanding organizing ability and devotion to duty in Mudaliyar J. M. de Silva, whose good services I desire to specially place on record.

All the work in connection with the pay of the Force and the keeping of the various accounts falls on the Headquarter Superintendent, and the Force has in Mr. D. V. Altendorff a most reliable officer, whose knowledge of law and police procedure is as thorough as it is sound.

13. *Cost.*—The cost of the Force for the twelve months was Rs. 2,122,869. The cost of police per man is Rs. 736·09, the cost per head of population is 52 cents.

The rates of salary of all ranks was, with effect from January 1, 1919, temporarily increased by Government, pending the appointment of a Commission of inquiry to revise the permanent salaries. In the meantime figures and facts have been collected to be put before the Commission with the object of providing a permanent rate of salary on which a newly appointed man or officer can maintain himself, and to provide for promotion by a system of regular increments, which should prevent stagnation, and consequently give no cause for re-adjustment or complaint within a period of a few years owing to no provision having been made for the future.

In a small Force, such as the Ceylon Police, the trouble in the past has been, and the trouble in the future, unless specially provided against, will be, the stagnation of a man at the top of his class or grade for lack of vacancies in the grade above.

At present in 18½ years a constable can only be promoted and receive an increase to his salary five times. The result of this system is that though men are reported as thoroughly efficient, their conduct in every way satisfactory, and the men in every way fit for a promotion, they are told they must wait for a vacancy to occur. The man is told by the officer under whom he is working that he has done well, and that he has been recommended for promotion. The man is not promoted and becomes disheartened, and so sinks to the level of men who have not been so recommended.

The proposal is that in future increments should, generally speaking, be annual, provided the work and conduct of a man has been satisfactory, and he has been reported on as fit for, and deserving of, promotion.

In order to prevent a man or officer who has not shown himself fit for higher command rising to superior rank merely by seniority, it is proposed that there should be a series of efficiency bars. On a man or officer reaching an efficiency bar, he will not by seniority and good conduct alone be entitled to further increments or advancement. He will be required to show that he has proved himself in every way fit for higher command. In other words, merit will count more than seniority and good conduct on an efficiency bar being reached.

The Committee which reported on the Police Service of England, Wales, and Scotland in 1919 made a strong point of the necessity of granting regular automatic increments in order to keep men keen and efficient, and the new rates of pay to the Indian Police, which were sanctioned with effect from December 1, 1919, have been based on a system of annual increments with efficiency bars.

14. *Police Stations and Offices.*—There are 149 police stations and 28 police offices in the Island.

#### PART II.—DUTIES RESULTING FROM THE WAR.

15. *Duties of the Police.*—During the year some of the additional duties necessitated by the war and undertaken by the Criminal Investigation Department and Harbour Police were relaxed or abolished, there being no further need to continue certain duties owing to the cessation of hostilities.

The following are some of the most important duties enforced during 1914 to 1918 which were discontinued during 1919 :—

- (1) Searching of neutral vessels for mines, bombs, arms, and ammunition.
- (2) Prevention of persons being afloat in the Colombo harbour without permits.
- (3) Enforcing the regulations regarding the disconnection of all wireless apparatus on ships in the harbour.
- (4) Searching native vessels for contraband goods.
- (5) Cessation of work and correspondence with the Censor, the Censor's Department being abolished.

Other duties necessitated by the war and still enforced are :—

- (1) Searching of all vessels for enemy subjects and suspicious persons, since no late enemy subject can land in Ceylon without special permission from the Government.
- (2) Enforcing regulations prohibiting persons boarding vessels in the harbour without permits.
- (3) Examining and stamping of passports of all persons wishing to disembark from vessels.
- (4) Examining the passports of all persons leaving the Colony by steamer.
- (5) Supervision and registration of all Indians passing through the Colony en route to India.
- (6) Examination and registration of all alien commercial travellers arriving in the Colony.
- (7) Surveillance of all suspicious alien subjects resident in the Colony.
- (8) Corresponding with other Colonies, especially India, regarding anti-British persons, Bolsheviki, and other classes of suspicious persons.

Ordinance No. 19 of 1919, to regulate admission into and expulsion from the Colony of former enemy aliens, was introduced during the year.

16. *Effect of the War.*—The end of the war brought about an immediate increase in the shipping entering the Colombo harbour. The number of steamers which entered the Colombo harbour during the year was 2,786, as against 1,625 in 1918, 1,833 in 1917, 2,463 in 1916, 2,338 in 1915, and 2,780 in 1914. Shipping in 1919 shows an increase of 71 per cent. on 1918, which was the lowest return on record. The return of 1919 shipping is still 9 per cent. below pre-war shipping, 3,056 in 1913.

The gradual decrease in vessels under steam using the port of Galle is most noticeable. In the four years before the war the number dropped from 205 in 1910 to 159 in 1913; during the war from 132 in 1914 to 33 in 1918, and in 1919 only 38 vessels under steam entered Galle harbour. The British India Line have dropped from 42 in 1910 to nil in 1918 and 1919. The Asiatic Line from 48 in 1910 to nil in 1917, 1918, 1919. Beyond the round-the-Island steamers, which call twice a month, the only other caller is the Clan Line (average one a month).

17. *Rice Shortage.*—The high price of rice, cloth, and the general necessities of life were felt more in 1919 than in the previous years, as a result of which a temporary increase to the salaries of all Government servants was granted.

Very early in the year the shortage of rice was apparent, due to insufficient supplies being received from India and Burma, and to the difficulty in obtaining freight for rice to Ceylon.

In June the situation became very critical. It was difficult to obtain rice at any price, and the price of all grades of rice was on the increase, with the result that there was considerable unrest among the native population in the Island, especially in Colombo.

With a view to preventing possible rice riots and looting in Colombo, armed police guards were stationed in the Customs, the Wharf Warehouses, the Chalmers Granaries, and the Manning Market, and carts and lorries transporting rice to railway stations were escorted by armed police. A few cases of thefts of rice from carts in transit to railway stations occurred, but the tendency to loot was speedily checked by increasing the strength of the armed police escorts, and no cases of serious looting occurred.

Depôts throughout Colombo were ultimately opened by the Municipality for the distribution of rice by sale by the measure. To preserve order at the depôts police were detailed for duty, and during June, July, August, and September over 150 police sergeants and constables did duty daily at these depôts.

In the first instance, the crowds collected at the depôts were inclined to be disorderly and impatient to get served early, but as the novelty of this procedure in distributing and selling rice wore off, the crowds became more orderly, and the employment of fewer police at the depôts was found to be feasible.

The procedure of selling rice from depôts throughout Colombo continues and works satisfactorily, but police are still detailed to preserve order at most of the depôts.

### PART III.—CRIME.

18. *General Character of the Year.*—Offences against the Penal Code dealt with during the year number 15,692. Of these, 11,062 were disposed of by the courts as true cases. Analysing the 11,062 true cases which occurred during the year, it is found that 8,577 were cases falling under the fourteen heads of crime reportable by the headmen and registered by the police as "crime" (viz., abduction, arson, attempted homicide, burglary, cattle stealing, exposure of children, grievous hurt, homicide, hurt by knife and dangerous weapons, rape, riot, robbery, theft over Rs. 20, and unnatural offence). 5,227 or 47·3 per cent. resulted in conviction.

There was an increase of crime in 1919 as compared with the years 1917 and 1918, as the following statement shows :—

|   | 1917. | 1918. | 1919. |
|---|-------|-------|-------|
| Homicide .. .. .                            | 163   | 170   | 200   |
| Attempted homicide .. .. .                  | 40    | 46    | 41    |
| Grievous hurt .. .. .                       | 727   | 816   | 747   |
| Hurt with dangerous weapons .. .. .         | 1,012 | 1,007 | 955   |
| Burglary .. .. .                            | 1,892 | 2,301 | 2,317 |
| Theft of cattle and prædial produce .. .. . | 891   | 914   | 1,325 |
| Other offences .. .. .                      | 2,856 | 3,074 | 2,992 |
| Total .. .. .                               | 7,581 | 8,328 | 8,577 |

It will be seen that offences against the person show a decrease, the total number of cases of homicide and attempted homicide, grievous hurt, and hurt with dangerous weapons in 1919 numbering 1,943, as compared with 2,039 in 1918. Burglary cases show little change: 2,301 in 1918 and 2,317 in 1919.

The increase in crime in 1919 appears under the head "Theft of Cattle and Prædial Produce." There is no doubt that the rise in the price of rice and foodstuffs has led to the theft and slaughter of cattle. People have had recourse to steal to supply their daily wants, and the crime of theft has consequently increased.

No serious disorder has arisen from the shortage of food, but there has been a certain amount of unrest owing to the rice shortage. There have been some minor disorders at the rice depôts, but, on the whole, the people have been wonderfully patient, and no serious trouble or riot has arisen.

One case of murder in the Ratnapura District was entirely due to the scarcity of food. The mother of the murdered child admitted throwing the child into the river as she could not afford to feed the child.

19. *Distribution of Crime.*—The following table shows the distribution of crime :—

| Province.     | Homicide. | Attempted Homicide. | Grievous Hurt. | Hurt with Dangerous Weapons. | Burglary. | Theft of Cattle and Prædial Produce. | Other Offences. | Total. |
|---------------|-----------|---------------------|----------------|------------------------------|-----------|--------------------------------------|-----------------|--------|
| Colombo City  | 12        | 2                   | 104            | 36                           | 62        | 8                                    | 368             | 642    |
| North-Western | 38        | 5                   | 54             | 38                           | 314       | 253                                  | 439             | 1,191  |
| Southern      | 33        | 8                   | 117            | 187                          | 492       | 391                                  | 274             | 1,502  |
| Sabaragamuwa  | 32        | 7                   | 73             | 95                           | 351       | 97                                   | 278             | 933    |
| Western       | 56        | 11                  | 284            | 276                          | 496       | 401                                  | 532             | 2,006  |
| Central       | 13        | 5                   | 75             | 112                          | 375       | 66                                   | 469             | 1,115  |
| Uva           | 2         | 1                   | 11             | 27                           | 80        | 74                                   | 164             | 359    |
| Northern      | 3         | —                   | 58             | 56                           | 98        | 22                                   | 302             | 539    |
| Eastern       | 6         | 1                   | 17             | 19                           | 27        | 10                                   | 125             | 205    |
| North-Central | 5         | 1                   | 4              | 9                            | 22        | 3                                    | 41              | 85     |
| Total         | 200       | 41                  | 747            | 955                          | 2,317     | 1,325                                | 2,992           | 8,577  |

Comparing the number of serious offences committed with the population in each Province, it is found that in the—

|                          |   |                        |   |
|--------------------------|---|------------------------|---|
| Colombo City             | there is 1 case of crime to every 338 persons | Central Province       | there is 1 case of crime to every 603 persons |
| North-Western Province   | do. 364 do.                                   | Province of Uva        | do. 604 do.                                   |
| Southern Province        | do. 419 do.                                   | Northern Province      | do. 686 do.                                   |
| Province of Sabaragamuwa | do. 438 do.                                   | Eastern Province       | do. 896 do.                                   |
| Western Province         | do. 443 do.                                   | North-Central Province | do. 1,015 do.                                 |

There was an increase of crime in the Southern, Central, Northern, and North-Central Provinces (Central Province 24 per cent., Northern Province 18 per cent., Southern Province 13 per cent.).

Crime in Colombo city, and in the North-Western, Sabaragamuwa, Uva, and Eastern Provinces showed no variation from the figures for 1918. There was a decrease in the Western Province, 12 per cent.

It will be noted that in each of the Western, Southern, North-Western, and Central Provinces there were 1,000 cases of crime or over in the year. In the Province of Sabaragamuwa there were 933 cases. In the Northern, Uva, Eastern, and North-Central Provinces there were 500 or less cases. There is a strong dividing line between the five Provinces in which serious crime is prevalent and the four last-mentioned Provinces.

20. *Criminal Districts.*—The most criminal districts of the Island are :—

|                          |                        |
|--------------------------|------------------------|
| The Kalutara District.   | The Kegalla District.  |
| The Chilaw District.     | The Panadure District. |
| The Colombo City.        | The Galle District.    |
| The Matara District.     | The Tangalla District. |
| The Kurunegala District. |                        |

In the Kalutara District there is one case of serious crime per annum to every 226 persons, the average for Ceylon is 1 to 479. The state of crime in the Kalutara District in 1919 shows an improved record on the return for 1918: 572 cases in 1919, as against 695 in 1918.

In 1918 the Payyagala Police Station area in the Kalutara District was the most criminal in the Island. A punitive police force was established in the village of Potuwila in the Payyagala Station area for six months from April 1, the strength of the Payyagala Police Station was specially increased, and a specially selected Sub-Inspector placed in charge. By the energetic raiding of gaming places and by constant day and night patrolling crime has been reduced from 155 true cases in 1918 to 89 in 1919, a 45 per cent. reduction in crime. With this reduction in crime there has been a marked improvement in detection. The additional police provided and the special steps taken have had good effect.

The five most criminal outstation police areas in Ceylon are the—

|                             |                                  |               |                                 |
|-----------------------------|----------------------------------|---------------|---------------------------------|
| Kegalla District Station    | 139 true cases of serious crime. | Kuliyaipitiya | 99 true cases of serious crime. |
| Rambukkana                  | 119 do.                          | Dehiowita     | 93 do.                          |
| Kurunegala District Station | 114 do.                          |               |                                 |

It will be noted that three out of the five are in the Kegalla District, and in these three station areas alone there were 351 true cases of crime. Police were put into the Kegalla District in 1917 none too soon.

Special steps are being taken on the lines of the action taken in the case of Payyagala to temporarily add to the strength of any station in which a large number of cases of crime occur, so that additional patrols can be sent out day and night. If it is found that a permanent increase is necessary, application is made for such increase as is found necessary. There are 49 station areas in which over 50 true cases of serious crime were committed in the station area.

21. *Unlawful Gaming.*—When Sub-Inspector Halaldeen was specially placed in charge of the Payyagala Police Station, he raided no less than 25 gaming places in the station area.

In Colombo a notorious gambling den in Wolfendahl was raided. The gaming was carried on under cover of a circumcision ceremony. The high priest of the mosque was cited as a witness to prove that gambling in any form at a *bona fide* circumcision ceremony was prohibited, and all the accused were convicted.

In the Western Province several notorious gaming places were broken up, and the decrease in burglary in the Province is to a considerable extent attributed by the Superintendent to the suppression of unlawful gaming. There is no question but that unlawful gaming and crime go together. Unlawful gaming places attract bad characters, and the fact that the gaming places are not raided has a bad moral effect throughout the district. Further, persons who lose money by gambling attempt to make good their losses by committing theft, house-breaking, cattle stealing, &c. The importance of raiding places where unlawful gaming is carried on and the need for special activity by police being on the move by day and night in station areas where crime is prevalent has been brought to the notice of all stations.

22. *Homicides*.—The following statement shows the number of cases of murder committed in each Province in 1919 as compared with 1918 :—

|                               | 1918. | 1919. |                           | 1918. | 1919. |
|-------------------------------|-------|-------|---------------------------|-------|-------|
| Western Province ..           | 46    | 65    | North-Central Province .. | 6     | 5     |
| North-Western Province ..     | 25    | 38    | Northern Province ..      | 7     | 3     |
| Southern Province ..          | 32    | 33    | Province of Uva ..        | 11    | 2     |
| * Province of Sabaragamuwa .. | 24    | 32    |                           |       |       |
| Central Province ..           | 10    | 13    | Total ..                  | 170   | 200   |
| Colombo City ..               | 7     | 12    |                           |       |       |
| Eastern Province ..           | 2     | 6     |                           |       |       |

In 57 of the 200 cases women were murdered. The proportion of murders to population in Ceylon is still very high : 1 murder to 20,532 persons, or 4·87 per 100,000 population. In England and Wales the proportion is 1 to 250,000, or ·4 per 100,000 population.

The districts in which murders are most prevalent are :—

| District.                              | Murders. | Proportion of Murders to Population. |
|--|----------|--------------------------------------|
| Kurunegala ..                          | 37       | 1 to 8,292 persons                   |
| Panadure ..                            | 17       | 1 to 10,522 do.                      |
| Chilaw ..                              | 11       | 1 to 11,574 do.                      |
| Ratnapura ..                           | 11       | 1 to 15,090 do.                      |
| Kalutara ..                            | 8        | 1 to 16,165 do.                      |
| Colombo District (Western Province) .. | 35       | 1 to 16,610 do.                      |
| Kegalla ..                             | 14       | 1 to 17,323 do.                      |
| Matara ..                              | 13       | 1 to 17,485 do.                      |
| Tangalla ..                            | 6        | 1 to 18,418 do.                      |

Examining the causes of, and means adopted in, committing murder, it is found that—

- In 107 cases the weapon used was a knife.
- In 17 cases the weapon used was a firearm.
- In 3 cases death was caused by strangulation.
- In 1 case death was caused by poison.
- In 24 cases the accused were under the influence of liquor.
- 50 cases were the result of sudden quarrels.
- 40 cases were the result of jealousy over women.
- 19 cases were the result of enmity caused by land disputes.
- 16 cases were the result of desire for plunder.

The cases include a triple and a double murder. At Atuligama, in the Panadure District, a triple murder was committed on October 7, the motive being that the accused was convicted in a Village Tribunal case at Horana on the evidence of the deceased and was fined Rs. 30 on September 29. The accused in revenge attacked the deceased, who were husband, wife, and son. The murderer immediately after the commission of the offence surrendered to the Police. He was tried and sentenced to death.

At St. Martin's estate, Rangalla, in the Kandy District, a double murder was committed on December 11. The accused, who was a cooly on the estate, after taking his day meal, killed, with a pruning knife, his two children aged six years and eight months, respectively, while in a state of insanity. The accused is now detained in the Lunatic Asylum.

23. *Burglary*.—Special attention has been given to the prevention of burglary by frequent night patrolling, and by the activity of the officer in charge of the station.

In the Western Province, where special attention was given to night patrolling, there was a notable decrease in burglary, 496 cases in 1919, against 665 in 1918, in a year in which the high cost of living tended to encourage burglary and theft. A number of burglaries were undoubtedly committed with the sole object of obtaining foodstuffs.

In the Kalutara District there was a 45 per cent. decrease in burglary, 166 true cases in 1919, as against 265 in 1918. The reduction in the number of cases was accompanied by an improvement in detection.— In the Payyagala Station area there were only 28 cases of burglary, as compared with 78 in 1918. In 10 of the 28 cases the offenders were convicted, as compared with 11 out of 78 convictions in 1918. This is a remarkably good record of prevention and detection of crime brought about by the activity of the officer in charge, frequent night patrols by the constables, the raiding of gambling dens, and the supervision of bad characters.

As instances of the good effect of night patrols may be mentioned the detection and arrest of armed burglars by the Padukka Police when on night patrol duty, and the arrest of two men wanted for murder in the Ratnapura District by the Avissawella Police when on night patrol.

Inspector M. D. M. Gunasekera did good work in a Negombo case, in which his good services were highly commended by the District Judge. The Inspector's inquiry and detection revealed that padda boats plying between the Kalutara District and Puttalam are made use of by habitual criminals, who, when the boat touches at places *en route*, such as Negombo, Chilaw, &c., commit a burglary the night before the boat leaves. By the time the burglary is discovered and reported in the early morning the boat and the offenders are away. These boats are being specially watched.

An interesting case illustrating the use of drugs was one from Balangoda, in which a Chetty and his household were drugged. The drugs, though they contained atropin and opium, were fortunately not sufficiently powerful. Seven persons were arrested, two having house-breaking implements on them.

24. *Theft and Robbery*.—The rice shortage and the rise in price of foodstuffs probably accounted for the increase in theft of prædial products, paddy, coconuts, &c.

An interesting case in connection with the food shortage was one at Walasmulla, in the Tangalla district. A man of some notoriety in the district came to Walasmulla with forty men armed with guns and clubs and forcibly removed seven carts containing 66 bags of kurakkan. The Inspector and two

constables intercepted the party as they crossed the boundary, but they resisted the Police and resumed their journey. The Inspector promptly sent back to the station for assistance, and the Police pursued the party and seized the carts with the ringleader and five others, eleven others, who were recognized, being subsequently arrested. The ringleader was fined Rs. 1,000 for removal of kurakkan contrary to the special food control regulations, and seven others were fined smaller amounts. The offenders were also charged with being members of an unlawful assembly, and the case is still pending. Inspector P. D. S. Wickramasinghe of Walasmulla did very well in this case.

The high price of cacao has brought about a considerable increase in cacao thefts.

In Colombo repeated thefts from bungalows were traced to a native of South Africa, who went about disguised as a rickshaw cooly. He was sentenced to two years' imprisonment.

Detection following on prompt work was brought about in a Galle case, in which jewellery and property to the value of Rs. 6,000 had been stolen, no clue being left. Within a few hours of his arrival on the scene, Inspector A. H. Gunasekera had recovered the greater part of the stolen property, and two accused were convicted and sentenced to two years' imprisonment each.

The robbery of carts on the Colombo-Kandy road at the 12th milepost has been stopped by the opening of the Kirillawella Police Station. There was previously no police station on this main road for a stretch of 25 miles, i.e., between Peliyagoda and Pasyala.

25. *Cattle Stealing*.—As previously noted, the rise in the price of rice and foodstuffs has led to the theft and slaughter of cattle. In the majority of cases cattle have been slaughtered, meat divided, and consumed at once, the habit of allowing cattle to stray at will greatly helping the commission of the offence. The fact that an animal is lost is not noted for a considerable time.

In the Western Province there has been a trade in stolen cattle in the district lying between Horana and Kesbewa in the Panadure district and Kotte in the Colombo District, and special action is being taken to check it. The laws relating to the possession and removal of cattle without a voucher, stray cattle, unlawful possession of beef, are being strictly enforced, and in the Colombo District there were 47 successful prosecutions for unlawful possession of beef.

There is in some places a regular trade in the stealing of cattle to extort money from the owner, who on payment is informed where the animal is tied in thick jungle, the actual thief remains in the background. If the owner reports the loss to the Police, the animals are slaughtered. In the Kalutara District there was a marked improvement in the detection of cattle stealers, in 41 out of 92 cases the offenders were convicted, as against 19 out of 112 in 1918.

26. *Counterfeit Notes and Coins*.—With the prohibition on the use of gold and the very small amount of silver in circulation, the counterfeit coiner's trade has gone, and the probability is that he has turned his attention to counterfeiting notes, which were previously counterfeited by men who turned out notes only. The forgery of currency notes is on the increase, especially notes of Rs. 10, Rs. 5, and the two varieties of Rs. 2 notes. To date no forged Re. 1 notes have come to notice, forgers probably find the Re. 1 note difficult to imitate, and the forgery of these less lucrative than notes of a higher value.

A good detection emphasizing the good results of prompt action was made by Sub-Inspector A. E. Wijesuriya in the Kalutara District. The Sub-Inspector received information of the possession of a forged Rs. 5 note by a boutique-keeper of Kalutara South, who through fear did not want to inform the Police. The Sub-Inspector got the note from the boutique-keeper and traced the person who changed it to an estate some 6 miles distant. On arrest another forged note was found in the possession of this individual, and on his house being searched implements for counterfeiting notes and partly finished counterfeit notes were found buried in the ground underneath a bed. The offender was sentenced to seven years' imprisonment in the Supreme Court.

27. *Perseverance in the Investigation of Crime*.—Officers in charge of stations have been encouraged to persevere in cases in which there is "no clue" on the first report of crime. Further investigation often brings to light information of value which may lead to the detection of the offenders and the recovery of the property.

As an instance of the value and effect of perseverance may be quoted a case from Delwita estate in the Kurunegala District, in which the head kangany was murdered and robbed on September 1. The offenders were at first unknown. A clue obtained about four months later was followed up and an accomplice was traced to the Kegalla District, who admitted having joined six others, including the deceased's son-in-law (a kangany) and the estate dispenser, who were the chief conspirators. Six accused are now before the court.

In more than one case the finding and following up of footprints helped. In an Avissawella murder case reported originally as "accused unknown," the Inspector discovered that the footprints found on the scene tallied with the footprint impressions of a kangany, who was subsequently charged and sentenced to death.

In a Negombo case of house-breaking the first accused, who was sentenced to two years' imprisonment, had left an impression of his foot on a wall which he had scaled.

In a case from the Chilaw District a burglar left the impression of a bandaged foot on wet ground, by which he was marked down.

28. *Absconders*.—The number of absconding accused still at large on December 31, 1919, was 671. The following return shows the number of absconders wanted in each Province :—

|                          |    |     |                        |    |     |
|--------------------------|----|-----|------------------------|----|-----|
| Western Province         | .. | 179 | Northern Province      | .. | 22  |
| North-Western Province   | .. | 140 | Eastern Province       | .. | 13  |
| Central Province         | .. | 99  | North-Central Province | .. | 5   |
| Southern Province        | .. | 64  |                        |    |     |
| Colombo City             | .. | 62  |                        |    |     |
| Province of Sabaragamuwa | .. | 62  |                        |    |     |
| Province of Uva          | .. | 25  |                        |    |     |
|                          |    |     | Total                  | .. | 671 |

The number is high. The fact of an absconder being at large has a bad moral effect. A competent court has issued a warrant for the offender to be produced before it, and failure to execute the warrant has a bad effect, and is an encouragement to others to commit crime and chance the risk of being

caught. A special effort is being made to bring about a reduction in the number of absconders, and the number is lower in 1919 than in 1918. A murderer named Hettiaratchige James Appu, who had evaded arrest for ten years, was arrested on June 26, 1919, by Sub-Inspector Gunaratne and Sergeant 599 Rajapakse at Kuruwita. He was traced by his description only. This same accused was also wanted by the Kurunegala Police in another case, which is now pending.

In another case the Aranayaka Police arrested an absconder who was wanted in a case of highway robbery of cooly pay from the clerk of Ingurugalla estate. The absconder is a notorious bad character, who has been involved in cases of this nature before in different parts of the Island, but has always managed to escape. In this case he was sentenced to six years' rigorous imprisonment.

Sub-Inspector J. H. R. Pieries is specially mentioned as having done good work at Kuliapitiya in the Kurunegala District, not only in tracing and arresting absconders wanted for crime in the Kuliapitiya Station area, but absconders from other station areas.

29. *Habitual Criminals.*—There are 6,835 habitual criminals in the Island. During the twelve months 979 first offenders were re-convicted and became habitual criminals. 429 criminals were under police supervision by order of court on December 31, 1919. During the year 87 habituals while under sentence of police supervision were convicted of crime, and 32 for failing to report. 322 criminals were at large on license on December 31, 1919. Of these, 15 were convicted of crime while at large on license and 14 convicted for failing to report. 388 habitual criminals were tried in the Supreme and District Courts for offences committed in the course of the year.

All ranks are encouraged to get to know criminals, not merely by name, but by the class of crime committed, for it is almost invariably the case that a criminal commits one class of crime only, and generally follows a particular individual method. If the method and system by which each criminal commits crime is known, on a case being reported, if any peculiar features are noted, the work of the Police is simplified by the knowledge that the crime has in all probability been committed by one of three or four men and not one of several hundred, as might be the case if habituals were just known by name and appearance.

The necessity of the men of one division not being satisfied with the knowledge of the bad characters of their own division only has been emphasized. Previously on the discharge of an habitual criminal from jail only the Police of the division in which he previously resided were informed of his discharge. By new arrangement the Police of all divisions in Colombo are notified of the release of an habitual criminal, and a note furnished of the method and system by which he previously committed crime.

The system introduced in 1915 of no longer supervising habitual offenders who have been of good conduct for ten years has had good effect, for of 2,401 who have been of good conduct for ten years, and whose supervision was stopped, only 10 have been re-convicted. The work and the records of the Police are reduced by this means, and the habitual is encouraged to keep straight.

30. *Finger Print Bureau.*—During the twelve months ended December 31, 1919, 6,309 finger print documents were added to the collection. 11,740 finger print slips of persons accused of crime were received for identification during the year. Of these, 2,527 were identified as having been previously convicted. That is to say, of every person charged with a crime, one in five has been previously convicted.

31. *The Government Analyst.*—The Government Analyst has rendered valuable assistance in all cases submitted to him, and in lecturing and practically demonstrating to Sub-Inspectors under training the need for care in handling productions owing to the delicacy of the test to which productions are submitted.

In a case of the theft of a large sum of money from an office in Colombo, it was necessary to ascertain who, out of some fourteen clerks, had initialled a paysheet with an ordinary black lead pencil. The lead pencil initials had been heavily scored over with a blue pencil, thus rendering them totally invisible to the naked eye, and also invisible under powerful magnifying glasses and the camera. It was necessary, therefore, to find some method of removing the blue pencil erasure without damaging the lead pencil initials. After a considerable amount of experimenting, the Government Analyst was able to remove the blue pencil erasure, thus revealing, undamaged, the lead pencil writing under the erasure.

In a Ratnapura case opium was discovered in a dry-fish curry introduced for the purpose of drugging those in the house to permit of the house being burgled.

The finding of blood on the cloth worn by the accused in a Panadure murder case and on the tree up which the accused climbed in another case was extremely useful in bringing the charge home, and I desire to place on record how much the Force is indebted to the Government Analyst for the care with which all productions sent to him have been examined and reported on.

32. *Municipal and Statutory Offences.*—The work of the Police is heaviest in Colombo city, followed by the Western Province, Central Province, Southern Province, and Northern Province. Municipal and statutory offences numbered 19,718; in 18,038 the accused were convicted.

The Weights and Measures (Amendment) Ordinance, No. 4 of 1919, which requires all weights and measures, whether they are stamped in England or not, to be locally stamped before they can be used, was introduced during the year.

33. *Action taken to deal with Crime.*—The proportion of serious crime to population is still very high (1 to 479). The proportion of police to population is 1 to 1,613.

The steps taken to deal with crime in the Colony during the year were :—

- (1) Special attention given to the state of crime in the Kalutara and Kegalla Districts.
- (2) The establishment of a new station at Undugoda in the Kegalla District.
- (3) The strength of the Force was increased by 4 Sub-Inspectors, 7 sergeants, and 26 constables for the investigation of crime.
- (4) Funds were provided for connecting up more police stations with the headquarter of each district by telephone.
- (5) Sessions of the Supreme Court were held in districts in which crime is prevalent, such as Kalutara and Negombo.

## PART IV.—THE PROVINCES.

34. *Co-operation of Headmen with Police.*—A good understanding and a sound system of co-operation between headmen and Police is the most important point in police provincial administration. In all Provinces the headmen are reported to have co-operated heartily with the Police, and I gratefully acknowledge all the headmen have done to help the Police. Good work done by the headmen is brought to the notice of the Government Agent, and the good services rendered by them are thoroughly appreciated by all ranks benefiting by their assistance.

In the Western Province the Superintendent reports that all the Mudaliyars and Presidents of Village Tribunals of the Colombo District, the headmen of the Rayigam and Totamune korales, and of the Kalutara North, Matugama, and Payyagala circuits cordially co-operated with the Police.

In the Colombo District a sum of Rs. 4,547·50 was paid in rewards to 476 headmen for good work done. Special rewards of Rs. 25 each were paid to nineteen headmen for good work in the investigation of crime and arrest of absconders. As an example of good work done by headmen the following case is mentioned :—

Police Vidane 834 Don Haramanis, of Bellana, and Police Vidane 839 Don Charles Kulasekera, of Badureliya, were on patrol with a party of villagers on the night of November 13. They met four or five people without a light and stopped them and questioned them as to what they were doing. The replies aroused suspicion, and Police Vidane 834 caught hold of one of the men whom he had identified as a dangerous habitual criminal named Mendis. Mendis called another man (later found to be an habitual criminal named Charles) to his assistance, and he attacked the Police Vidane with a knife. Police Vidane 839 seized and held Charles, while the other three men made off and were not identified. The Police Vidanes on searching the two men arrested found in their possession a jemmy, knives, and other house-breaking implements. The two offenders were later tried, convicted, and sentenced to eighteen months' rigorous imprisonment each and five years' police supervision. Mendis is an habitual criminal with four previous convictions for burglary; Charles had four previous convictions for causing hurt with knife. The case is an instance of the good work done by unpaid headmen.

Inspector M. D. M. Gunasekera, Sub-Inspector M. S. Halaldeen, and Sergeant 887 Gallala are reported to have worked well with the headmen.

In the Central Province the Ratamahatmayas are mentioned as having rendered good service, and in the Southern Province the headmen generally did well in co-operating with the Police.

The Government Agent of the Eastern Province reports that the rural constables of Arappattai and Chenkaladi did particularly well in co-operating with the Police, and that Chief Inspector J. E. Philipiah got good work out of headmen.

In the North-Western Province the Superintendent reports that the headmen have heartily co-operated with the Police.

In the Province of Sabaragamuwa Ratamahatmayas H. W. Boyagoda and Meedeniya and the Korala of Pelmadulla are mentioned as having rendered valuable assistance to the Police in every way. The Mohottala of Elagawa is specially mentioned for good work done in dealing with some of the worst characters in his district, which contains a large number of plumbago pits. Inspector A. W. Dambawinne is specially mentioned as having by the exercise of personality got good work out of headmen.

35. *Means of Communication.*—Of the 147 police stations (excluding Depôt and Mahara Guard) in the Island, 84 are now on the telephone. The Government has sanctioned a scheme whereby the remaining police stations will be gradually connected up, a special vote being provided each year for the purpose.

In the Panadure district every police station is now on the telephone to Panadure headquarters, and the Assistant Superintendent at Panadure is on the trunk line, so that information from any part of the Island can be immediately passed on to every station in the district. In the Kalutara District all stations but one are on the telephone.

The gradual linking up of all stations by telephone is of the greatest value and assistance to the Police, in that it secures the prompt communication of information and orders, and serves as a check on the outlying stations thus brought into direct daily touch with the officer in charge of the district.

The provision of motor cars and motor bicycles has secured increased supervision over police stations and the work of the Police, and has proved of the greatest value in getting the Superintendent or the Assistant Superintendent to the scene of crime in the quickest possible manner. The equipment of the Force includes 237 ordinary bicycles.

As an instance of the value of speedy communication, the following cases may be quoted :—

(a) In Colombo a Sub-Inspector on receiving information by telephone of a hundred-rupee note having been handed over by mistake instead of a ten-rupee note got on his motor bicycle at once, followed up the man, and succeeded in finding him before he had time to change the note, which was recovered.

(b) In the Western Province the Superintendent who was inspecting the Horana Police Station received information by telephone that a fire had broken out in the Ingiriya bazaar, 8 miles away. The Superintendent reached the scene within a few minutes in a motor car with a party of police from the station he was inspecting and so prevented any looting.

(c) In the Panadure district the Assistant Superintendent was the first police officer on the scene of the Deyagama and Medagama murders.

(d) In the Tangalla district the Assistant Superintendent while on cholera duty at Hambantota received information of a murder at Nalagama, 30 miles away, and he was on the scene at once. On another occasion murders were reported at Kirama and Wirawila, 63 miles apart, on successive days. The motor cycle helped him to get from one to the other promptly.

(e) In the Ratnapura District the Superintendent received information at 11 A.M. that two Chetties who were taking money to Kosgala estate had been waylaid and robbed. The Superintendent went out at once with a sergeant on the carrier of the motor cycle and reached the spot at 11.30 A.M. Search parties were turned out, and the three accused were arrested in the jungle 3 miles away by 4 P.M. Rs. 940 was stolen, and Rs. 935 recovered. The three accused were sentenced to ten years' imprisonment each.

36. *Justices of the Peace.*—Justices of the Peace have rendered very good service, not only in being available in times of emergency, but in visiting police stations, attending drills, and in supervising musketry. The fact of a resident of standing being in a position to take charge of any station and direct action in the event of a disturbance, fire, serious accident, or any other calamity is of value, not only to the Police, but to owners of property, shopkeepers, householders, and the public generally. In a large and scattered district it is not possible for the Government Agent, Police Magistrate, or Superintendent of Police to get to the scene in time to prevent trouble in the great majority of cases.

In Colombo Messrs. F. H. Layard and M. J. Cary have taken a keen interest in the work of the Police. Mr. M. J. Cary presented a prize to the best squad in drill in his area (Slave Island).

In the Western Province the good services rendered by Messrs. E. Gordon Brooke, F. B. Carter, N. W. Bentley Buckle, and C. Brereton are specially mentioned. Mr. F. A. E. Price, who is now in the Province of Uva, presented a Musketry Cup to be competed for by stations in the Western Province.

In the Central Province Mr. T. H. Williams was of great assistance to the Police in working up the Alma gang robbery case.

On July 23, 1919, a gang of about 100 coolies left Tunisgala estate. The Superintendent of the estate followed them to Panwila, and on his arrival there he was attacked by some of the coolies. The sergeant at Panwila informed Mr. F. T. Wright, J.P., Panwila, who promptly arrived on the scene and prevented any further disturbance.

In the Southern Province the good services of Messrs. W. Y. Mackintosh, E. D. Bowman, H. Scott, and Chas. Northway are specially mentioned.

In the Province of Sabaragamuwa the good services of Messrs. W. G. Berry, A. J. Mackessack, and D. M. Berry are mentioned. By the death of Mr. P. G. Wood the Kendangamuwa Station and the Force has lost a Justice of the Peace who had the confidence of all classes, and whose influence was always good and sound and of the greatest value to the Force.

I desire to express to all Justices of the Peace the best thanks of the Force for all they have done. Their interest in the Force and the men in their districts is very much appreciated.

37. *Supreme Court Sessions.*—Sessions of the Supreme Court were held in Kalutara and Negombo, in addition to the usual sessions at Colombo, Kandy, and Galle. If sessions of the Supreme Court can be held regularly at Panadure, Matara, Tangalla, Kegalla, Badulla, and Ratnapura, they should have effect in maintaining respect for the law and the preservation of order.

38. *Firearms.*—921 prosecutions were entered under the Firearms Ordinance; these include 3 prosecutions against unlicensed repairers, and 3 against unlicensed manufacturers.

Gun licenses were issued during the year as follows:—

|                                |       |                                  |       |
|--------------------------------|-------|----------------------------------|-------|
| Central Province .. .. .       | 5,956 | Northern Province .. .. .        | 2,261 |
| North-Western Province .. .. . | 5,476 | Province of Sabaragamuwa .. .. . | 2,187 |
| Province of Uva .. .. .        | 5,454 | Southern Province .. .. .        | 1,778 |
| Western Province .. .. .       | 4,564 | Eastern Province .. .. .         | 1,389 |
| North-Central Province .. .. . | 2,721 |                                  |       |

1,274 new guns were purchased during the year.

39. *Stray Cattle and Dogs.*—4,447 head of cattle straying were seized, and 10,899 dogs shot. 82 persons bitten by mad dogs were sent by Police to the Pasteur Institute in Colombo, 47 of whom were from the Central Province.

40. *Regulation of Traffic.*—Special attention is being given to the regulation of traffic in provincial towns. The law requiring carts to carry two lights at night is being well observed.

41. *Public Performances.*—Rules have been passed for the control of all public performances in Colombo, and similar rules are being framed by the Municipalities of Kandy and Galle. Rules on a modified scale for application in rural areas have been brought into force throughout the Island.

42. *Talaimannar Route to India.*—During the year 273,913 persons passed through Talaimannar going to or coming from India, as against 175,239 in 1918, a 56 per cent. increase. Arrivals, 156,467; departures, 117,446. The increase in arrivals is mainly due to the removal of restriction on emigration from India. In 1917 the number of arrivals was 90,105, as against 112,907 departures; in 1918 77,028 arrivals, as against 98,211 departures; whereas in 1917 departures exceeded arrivals by 25 per cent. and by 28 per cent. in 1918, in 1919 arrivals have exceeded departures by 33 per cent.

Twenty-one absconders were arrested, and 46 persons prohibited from landing. The Indian Police, the Mandapam Camp, and the Railway authorities have co-operated heartily with the Police and rendered valuable assistance. There is still a great deal of fever at Talaimannar; on 274 days in the year men were sick, although quinine was regularly issued.

43. *Northern Ports.*—326 vessels called at Kayts, 182 at Kankasanturai, and 383 at Point Pedro.

44. *Floods, Accidents, and Fires.*—There were no serious floods, accidents, or other calamity. A fire broke out in the Ingiriya bazaar, which would have caused much damage but for the prompt arrival of the Police, who with the help of the villagers and coolies quickly extinguished the fire. The Police were commended by His Excellency the Governor for their prompt action.

Floods occurred in the district all over the Kelani river and in the North-Western Province, and considerable damage done in September.

At Nugegoda, in the Western Province, Mr. E. Seneviratne, a Shorthand Clerk in the Office of the Superintendent of Police, Western Province, was drowned in flood water.

45. *Provinces and Districts.*—In the Western Province there was a decrease in crime during the year, which with the increase in cost of living and the increase of crime in the Colony generally does credit to the Superintendent, Mr. T. P. Attygalle, and all men in the Province. Special attention has been given to frequent patrolling by men and the activity of the officer in charge in each station area. The Kalutara District in particular shows an improved record during the year, and the Police have been greatly helped by the Police Magistrate, Mr. C. L. Wickramasinghe, who has dealt with all cases brought before him in a most thorough and efficient manner. All witnesses present are invariably examined by the Magistrate on the first day, and unnecessary postponements are unknown.

Inspectors M. D. M. Gunasekera and E. R. Weerakoon are specially mentioned as having shown perseverance and patience in the investigation of crime, and Sub-Inspector Halaldeen's good record at Payyagala is deserving of special mention.

Quarters for the Inspector at Negombo and for the men at the Kachcheri Station are the greatest needs of the Province.

*In the Southern Province* there was an increase of crime principally under the head Theft of Cattle and Prædial Produce.

The most urgent need of the Province is new barracks for the single men and quarters for the Superintendent.

The Galle District Planters in a most generous manner presented a Challenge Shield for the annual Drill Competition at the Galle Police Sports. Their interest in the Galle Force is very much appreciated.

*The Central Province* showed the heaviest increase in crime during the year, 1,115 cases, as against 902 in 1918, a 24 per cent. increase. The increase appears principally under the head Burglary.

The most urgent need of the Province is the provision of a new station at Ginigathena, in place of the old station condemned as insanitary and past repair and pulled down. The Police are at present temporarily making use of the resthouse with the kind permission of the Government Agent and the Provincial Road Committee.

Mr. C. T. Nettelton, Temporary Assistant Superintendent at Nuwara Eliya, was relieved in June on the return of officers from war service. Mr. Nettelton served for two years and four months in the Force, and was most energetic in personally supervising the work of his men, in investigations, and in proceeding to the scene of crime.

The other temporary officers, Mr. A. R. Aitken at Hatton and Mr. A. M. Carmichael at Kandy, carried on throughout the year, but have since been relieved. Mr. Aitken served for three years at Hatton, and set about his duties in a manner deserving of special mention. Keen and active himself, Mr. Aitken set a high standard of duty to the men under his command, and held the confidence of all classes in his district as a very good, keen, and energetic officer. Mr. Carmichael served for 1½ years, and faced the work in the Kandy District with ability and zeal. The appreciation of His Excellency the Governor and the thanks of Government for the valuable services rendered by these officers were conveyed to them.

Inspector P. P. Wickremasooriya is mentioned as having done well in charge of the Kandy Police Station.

*In the North-Western Province* Mr. W. Ludovici maintained good order, and crime in the Province showed no increase on the previous year; there was a slight decrease in burglary.

Quarters for the Superintendent at Kurunegala and for the Assistant Superintendent at Chilaw are now needed. The men at Kurunegala have all been housed.

*In the Province of Sabaragamuwa* crime showed no variation from the figures for 1918. Crime is particularly prevalent in the Kegalla District.

Captain T. G. Salmon, who served for four years in the Kegalla District as Temporary Assistant Superintendent, was relieved in November. Captain Salmon received the thanks of Government and the appreciation of His Excellency for his good services in the Kegalla District, and the manner in which he opened and maintained the new police stations.

The Royal Humane Society Testimonial on vellum for bravery in saving life was awarded to Mr. L. A. E. de Silva, Police Clerk of the Ratnapura Office, for saving a woman from drowning.

*In the Northern Province* there was an 18 per cent. increase in crime, 539 cases in 1919, as against 457 in 1918, principally under the head Burglary.

Mr. H. Lloyd-Jones, who served for two years and eleven months as a Temporary Assistant Superintendent, was relieved in October. Mr. Lloyd-Jones was a brave and resourceful officer, and he was specially commended by His Excellency the Governor and received the thanks of Government for his good work.

*In the Province of Uva* crime showed no variation from the figures for 1918: 359 cases in 1919, 345 in 1918.

The Force in Uva has been extremely fortunate in having as Government Agent for many years Mr. F. Bartlett, whose interest in the men and their welfare and efficient supervision over them in their work I particularly desire to bring to the notice of His Excellency the Governor.

*In the Eastern and North-Central Provinces* crime shows little variation from 1918: 205 cases in the Eastern, 85 in the North-Central. There is less crime in these Provinces per population than in any of the other Provinces:—

|                   |    |                                      |           |
|-------------------|----|--------------------------------------|-----------|
| Eastern           | .. | 1 case of crime to every 896 persons |           |
| North-Central     | .. | 1 do.                                | 1,015 do. |
| as compared with— |    |                                      |           |
| North-Western     | .. | 1 do.                                | 364 do.   |

The Government Agent of the North-Central Province particularly mentions the good work of Sub-Inspector M. Ismail at Anuradhapura.

46. *Government Agents.*—Without the advice of the Government Agents and the Assistant Government Agents, and their assistance in securing the co-operation of the headmen in reporting crime and patrolling with the Police in criminal areas, police work in the Provinces would not be possible. Government Agents and Assistant Government Agents have visited police stations in the districts, and I am greatly indebted to them for the help at all times readily given.

#### PART V.—COLOMBO.

47. *Crime.*—There was a marked decrease in burglary in Colombo: 64 cases, as against 90 in 1918. The reduction is particularly noticeable in the Pettah Division. Of the 64 cases, in 36 the accused were traced and convicted. At a time when the increased cost of living was affecting the poorer classes, and the general tendency was an increase in burglary and theft, the prevention of burglary in Colombo in 1919 does credit to all ranks. The number of cases in which the offenders were detected is notably good. There were 39 cases of bicycle thefts; 13 of the bicycles stolen were recovered, and in 12 cases the accused were convicted. Prompt action in telephoning the description to all Colombo stations and neighbouring districts proved successful in 3 cases, where the stolen bicycles were recovered in the Kalutara District.

48. *Municipal and Statutory Laws.*—The total number of offences against Municipal and statutory laws reported by the Police amounted to 6,315 cases, of which 5,840 cases resulted in conviction. Of these offences, the most prominent were : drunk and disorderly, 562 ; molesting passengers, 203 ; unlawful gaming, 196 ; driving without lights, 151. There was a considerable increase in the number of gaming places raided : 196 cases, as against 62 in 1918. Unlawful gaming and crime go together, and the raiding of gaming places does a great deal to prevent and keep down crime.

The Criminal Law Amendment Ordinance, No. 21 of 1919, relating to public morals and the protection of women and girls, was introduced during the year. By this new Ordinance boys between the ages of 12 to 21 accosting passengers within the Colombo Municipality can be specially dealt with.

49. *Strikes.*—Two strikes occurred during the year, at Messrs. Hutson & Co.'s workshops at Kotahena and at the Hulftsdorp Mills. In each case the men struck work for higher wages ; they were out for three to six days, and eventually came to terms. There was no disorder.

50. *Motor Vehicles and Public Carriages.*—The statement below gives a record of the number of vehicles on the streets :—

|   | 1911. |    | 1913. |    | 1919. |
|---|-------|----|-------|----|-------|
| Number of motor vehicles on register .. | 745   | .. | 1,491 | .. | 3,980 |
| Number of carriages licensed ..         | 186   | .. | 194   | .. | 87    |
| Number of rickshaws licensed ..         | 3,165 | .. | 3,239 | .. | 3,395 |

The increase in the number of motor vehicles and the decrease in the number of carriages licensed to ply for hire will be noted. The number of licensed rickshaws has changed but little.

There were 535 prosecutions for breach of rules of the road, 36 persons were prosecuted for reckless or careless driving, and 151 for driving without lights. There were 303 prosecutions for loitering in the streets after being warned to move on.

51. *Street Accidents.*—Street accidents number 284, caused as follows :—By motor vehicles 216, of which 5 proved fatal ; by tram cars 19, of which 1 was fatal ; by carts 22, of which 2 proved fatal ; and by other vehicles 27.

There has been a great increase in the number of accidents caused by motor vehicles : 216, as against 121 in 1918. There has, of course, been a very marked increase in the number of motor vehicles on the streets : 3,980 in 1919, as against 1,491 before the war. The Police were heavily handicapped in dealing with this increase in fast-moving traffic by the number of men taken off point and traffic duty to keep order at rice depôts and escort rice consequent on the rice shortage. There were over 150 men on duty at rice depôts, guarding granaries, and escorting rice. The consequent withdrawal of men from point duty undoubtedly contributed to the increase in the number of accidents.

The prevention of accidents so far as possible is one of the most important of police duties in the streets, and the matter is receiving the best attention possible at the present time, but is still hampered by the number of men drawn away to keep order at rice depôts and at times of industrial unrest and trouble.

The remedy, however, does not lie with the Police alone. With the great increase in the number of fast-moving vehicles in the streets, road improvement and regulation of traffic must go together, roads and blind corners, which were of little danger when all traffic moved slowly, become grave sources of danger with an ever-increasing number of fast-moving vehicles on the streets.

On an average 1,300 motor vehicles pass Turret road junction in Colpetty daily, the majority of these pass between 9-11 A.M. and 4-8 P.M. The approach to this junction through the Colpetty bazaar was never intended to take this number of fast-moving vehicles. A programme of street widening to provide a sufficiently broad road to take fast-moving vehicles with a track on either side for carts and a pavement for foot passengers and rounding off blind corners in all public thoroughfares is necessary when funds can be provided. The roads which require widening are : Colpetty road, Lawrie's road, 1st and 2nd Division, Maradana, Malay street, Dean's road, and Bambalapitiya road.

The corners at the junction of Lawrie's road with the Galle road, St. Michael's road with Colpetty road, Alexandra place with Barnes place and with Rosmead place, Union place with Regent street, Dematagoda road with Maradana, St. Lucia's street with Wall street, Nagalagam street with Madampitiya require to be rounded off.

The Director of Education issued translations of the following instructions to all schools for the instruction of children in the rules of the road :—

#### *Rules of the Road.*

In view of the increasing number of motor cars, motor bicycles, and other vehicles on the roads, it is very important that drivers of vehicles and foot passengers should know and observe the rules of the road.

The first and the most important rule is that all vehicles must keep to the left, and foot passengers to the right. The only exception to this rule is when two vehicles go in the same direction, and the driver of the second wishes to pass the first vehicle, he must pass it on the right.

It is incumbent on teachers, however remote their schools may be, to train the children in the habit of keeping to the right side of the road. The mere explanation of the rules is of little value.

Children falling in for drill or assembling for class work can be, as far as possible, made to keep to the right. During the drill period children can be made to march on the right side of a path or road, and the rule can be explained to them at the time. After school, teachers, monitors, and the bigger children should lead the children going home in their direction by the right way. If this is regularly done for some time, children will get used to the right side.

It should be explained to the children that when they happen to be on the road when two vehicles pass each other, or when they suddenly hear a motor horn, they must remain to the right, even by getting into the drain. They must also be told to be careful if they step out into the road from behind a cart or obstacle, and when they cross a junction, to be on the lookout for any motor car or vehicle coming up behind them or towards them.

The issue of these instructions was a very sound idea of the Director's, and the instructions contain exactly what a child should be told. The issue of these instructions should do a lot of good, and, if understood and observed, will be of great help to the Police in regulating traffic.

52. *Headlights on Motor Cars.*—The question as to the best method of dealing with glaring headlights in Colombo has been under consideration. It is clear that the present regulations do not go far enough. The trouble has been that the need for further reducing the light given by headlights

coincided with the economy effected by the Municipality consequent on the increased price of coal in reducing the number of street lamps lit within the Municipality. There are consequently some streets and lanes within the Municipality which it is dangerous for a fast-moving vehicle to proceed on without strong lights. The objection to introducing any further reduction of the light given by a headlight by means of paint or a fixture in the lamp, which can only be removed with some difficulty, is the necessity of using the strongest light possible in streets and lanes which are not lighted and on passing the Municipal boundary. The solution of the difficulty in the case of electric head lamps lies in the general introduction of the dim bulb switch into all electric headlight systems, for it is the electric headlight which gives cause for complaint. The present regulations sufficiently provide for the shading of the acetylene headlight. With this switch provided, all that a driver has to do is to switch off his strong light in streets which are lit by street lamps, and switch on his light on entering a street or lane which is not lit and on passing the Municipal boundary. Similarly, an outstation resident on reaching the Municipal boundary need not stop and paint or fix on any complicated contrivance, he merely switches the dim bulb on and the strong light off. The difficulty in introducing any change on these lines has been the lack of materials necessary to convert the headlights at present fitted on cars in Ceylon, as the great majority are not fitted with the dim bulb contrivance. When materials are available and the alteration can be effected at reasonable cost by owners of cars, a by-law on these lines will be proposed.

53. *Street Lighting.*—The lighting of the streets from a police point of view is still far from satisfactory. When normal conditions return, additional street lamps should be placed in the Cinnamon Gardens, Kotahena, Borella, and Dematagoda Divisions.

54. *European Police.*—The actual strength of the European Police Force on land on December 31 was 14, of whom 3 are on leave. During the greater part of the year there were only 6 men available for duty; the number has gradually increased as men returned from active service and as new sergeants were enlisted.

Mr. A. Jackson, who joined the Force as a European Sergeant in 1909, was promoted Assistant Superintendent in 1919, after an exceptionally good record as a European Sergeant, as a Sub-Inspector, and as an Acting Assistant Superintendent during the war. With the very small number of European Sergeants available, Mr. Jackson and the Police in the Fort had an extraordinarily difficult task during the war in dealing with the large number of troops passing through Colombo, many of whom had no opportunity of getting on shore or getting any relaxation from routine for some considerable time before landing at Colombo. That there was no serious outbreak at any time in Colombo is largely due to the tact with which Mr. Jackson, Sub-Inspector Lloyd, and their men repeatedly handled very difficult situations. Damage was, of course, done to private property in individual cases, and there were individual cases of disorderly conduct, and at times it only needed the slightest provocation to turn individual action into combined outbreak, as, for instance, an occasion when at night a party of troops entered the Fort Police Station and took charge of the arms and sword-bayonets in the Station Charge Room. Mr. Jackson and his men handled every such matter with the greatest tact, and the immunity of Colombo from serious outbreaks, such as occurred in many other cities, is a matter for which Mr. Jackson, Sub-Inspector Lloyd, and the few men at their disposal deserve the greatest credit.

Mr. Jackson and Sub-Inspector Lloyd remained at their posts for 9½ years without leave, in order to permit physically fit men to go on active service, and I desire to bring their good services throughout the war specially to the notice of His Excellency the Governor.

Five European Sergeants were enlisted during the year from men who served in the Navy and Army during the war, and the full strength of 32 sanctioned should now be enlisted.

Married quarters have now been provided for European Sergeants on the old Royal College site, and this very necessary provision will be of the greatest value. The men who join the Force have already served in the Navy or Army or English Police Force before joining the Ceylon Police; they have had all they want of barrack life, and it is the natural desire of the majority to marry and settle down, and every encouragement should be given them to do so. The provision of married quarters by Government is very much appreciated.

55. *Society for the Prevention of Cruelty to Animals.*—The cost of 1 Inspector, 1 European Sergeant (from October), and 1 constable employed in working for the Society was Rs. 3,739·45. The amount of fines paid and remitted to the Society as the result of cases instituted by men on this special duty was Rs. 8,227·50. There were 1,256 prosecutions; in 1,217 cases bulls had been ill-treated, in 33 cases horses, and in 6 cases poultry.

The Prevention of Cruelty to Animals (Amendment) Ordinance, No. 9 of 1919, which makes it an offence to ill-treat an animal in any place, or to keep an animal in pain in any place, whether for sale or not, was introduced during the year.

56. *Vagrants.*—801 vagrants were admitted to the House of Detention during the year; of these, 799 were admitted from Colombo and 2 from Anuradhapura. Of the 801 vagrants dealt with, 541 were Tamils, 225 Sinhalese, 15 Ceylon Moors, 11 Coast-Moors, 6 Malays, 2 Maharatti, and 1 Burgher. Employment was found for 158 vagrants; 385 natives of India who were unfit for work were sent back to India, and 205 were sent to the Home for Vagrants.

There was a very large increase in the number of vagrants admitted to the House of Detention, 801, as against 262 in 1918; this was due to the increased cost of living, which threw a great many persons on to the streets.

Since the House of Detention was opened in 1913, 3,465 vagrants have been dealt with. Although there has been a great increase in the number of vagrants on the streets, the provision of an institution such as the House of Detention has reduced the number of vagrants found dead and uncared for. In 1913 109 vagrants were found dead in the streets and 518 removed to hospital, as against 27 found dead in the streets and 168 removed to hospital in 1919.

57. *Work of the Year.*—Mr. W. K. S. Hughes, Temporary Superintendent of Police, was in charge of Colombo till September. In taking up this responsible post, in order to relieve a physically fit officer for active service, Mr. Hughes faced a difficult task, and carried out the responsible duties in a manner deserving of the highest praise, and proved a most able and tactful officer.

Inspectors H. R. de Silva and V. T. Dickman are specially mentioned as having done particularly good work in the prevention and investigation of crime in their divisions.

## PART VI.—MOTOR VEHICLES.

58. *Central Registering Authority.*—The system of control of all motor vehicles by one registering authority (Inspector-General of Police) has worked smoothly, and the examination of applicants for, and the issue of, licenses to drive motor vehicles has been carried out by the Police.

59. *New By-laws.*—The by-laws introduced in previous years to give effect to this system were added to in the course of the year to provide for the following :—

- (a) Every person who owns a motor car when called upon by the Registrar is required to furnish him with such information as may be required affecting the accuracy of any particulars entered in respect of that motor car in the Register of Motor Cars.
- (b) The expression "motor cycle" to include only motor bicycles, motor tricycles, and motor bicycles with side car attached.

60. *Registration of Motor Vehicles and Drivers.*—The registration of motor vehicles is carried out in the office of the Registrar of Motors (Fort Police Office, Colombo). There are 2,504 registered motor cars and 1,476 motor cycles in the Island. Of these, 95 motor cars are registered for trade purposes and 499 as public conveyances. There are in the Island 56 motor buses for conveying passengers for hire, and 22 taxi-cabs on the streets in Colombo. The number of motor vehicles in the Island has increased from 1,491 in 1913 to 3,980 in 1919. There are 4,735 persons licensed to drive motor vehicles.

61. *Regulation and Control of Motor Traffic.*—There were 448 prosecutions under the motor by-laws; of these, 100 were for exceeding the speed limit, 45 for reckless or careless driving, 49 for driving without carrying the license to drive on the vehicle, 8 for not reporting to the nearest police station accidents involving serious injury, and 7 for unnecessary sounding of the motor horn in a town.

## PART VII.—CRIMINAL INVESTIGATION DEPARTMENT AND HARBOUR.

62. *Criminal Investigation Department.*—The strength of the Criminal Investigation Department is—

| <i>Headquarters.</i>             | <i>Harbour Police in Colombo.</i> | <i>Harbour Police at Talaimannar.</i> |
|----------------------------------|-----------------------------------|---------------------------------------|
| 1 Deputy Inspector-General.      | 1 European Inspector.             | 1 European Sergeant.                  |
| 2 Assistant Superintendents.     | 1 European Sub-Inspector.         |                                       |
| 6 Inspectors and Sub-Inspectors. | 7 European Sergeants.             |                                       |
| 2 European Sergeants.            | 1 Inspector or Sub-Inspector.     |                                       |
| 8 Native Sergeants.              | 11 Native Sergeants.              |                                       |
| 14 Native Constables.            | 88 Native Constables.             |                                       |
| 2 Newspaper Examiners.           |                                   |                                       |
| 1 Shorthand Typist.              |                                   |                                       |
| 2 Clerks.                        |                                   |                                       |

The special work for which this branch of the Force is responsible has been well carried out. There were several difficult and intricate cases investigated resulting in the accused being brought to trial. Bigamy and cheating cases have been more prevalent in 1919 than in previous years.

A great deal of good work has been done by the sergeants and constables of the Criminal Investigation Department in arresting men in the streets on suspicion while carrying parcels in their hands, pockets, or waists, such parcels, in the majority of cases, being found to contain stolen property.

Mr. J. H. Daniel, Deputy Inspector-General, though much in need of rest and relief, remained at his post throughout the war in order that a young police officer might go on active service. Since September, 1915, Mr. Daniel has without relief carried on the responsible duties of Deputy Inspector-General, Criminal Investigation Department, in a manner deserving of special mention. Mr. Daniel's thorough methods and sound work in the Criminal Investigation Department have been of great value to the Colony throughout the war, and he has set a great example to all ranks of the Force in his zeal and devotion to duty. The Force and the Colony are fortunate in having an officer of his high standard of duty.

The good services of Mr. G. H. Ferguson, Assistant Superintendent, Criminal Investigation Department and Harbour, are specially mentioned. During the period Mr. Daniel was acting as Inspector-General, a great deal of extra work and responsibility was thrown on Mr. Ferguson, which was faced with ability and zeal. Mr. Ferguson has held his present appointment for nearly three years, and a great deal of the strain of additional and important duties cast on the Police by the war fell on him. Mr. Ferguson has proved to be a most reliable and capable officer, who should go far. I desire to bring Mr. Ferguson's good services during the war specially to the notice of His Excellency the Governor.

Inspector R. J. Weerasinghe is specially mentioned as having done good work in the investigation of crime.

The Sinhalese and Tamil Newspaper Examiners attached to the Criminal Investigation Department have done good work in the supervision of the vernacular press. Mudaliyar W. F. J. Gunawardhana, who has a great reputation as a translator of proved learning and experience, has rendered particular good service in the examination of articles and newspapers published in the vernacular since he was appointed to the Criminal Investigation Department in 1915. The more healthy and moderate tone of the vernacular press is undoubtedly due to his vigilance. I desire to specially bring his good services to the notice of Government as a translator of exceptional ability and merit.

The good services of European Police Sergeant H. W. Harrison in the Criminal Investigation Department are specially mentioned.

63. *Harbour Police.*—The supervision of all persons arriving in the harbour, enforcing quarantine, and the preservation of order is maintained by the use of two steam launches, two petrol launches, and six rowing boats. There were 366 prosecutions for breach of quarantine regulations and 241 for breach of port rules. 141,146 persons were disinfected under police supervision, as against 99,359 in 1918, the large increase being due to the increase in shipping entering the Colombo harbour.

The action of the Joint Police Magistrate (the Master Attendant) in sitting on holidays and at any time or hour when it is necessary to hear a case in order to avoid delaying ships is worthy of note, and must be of the greatest assistance to shipping firms as it is to the Police.

Special attention has been given to the training of men of the Harbour Police. New arrivals are taken round the Harbour and Customs premises and shown the geography of the harbour area. They are also taken round the Fort and shown the various Shipping Companies' Offices, and are taught the names of all harbour officials. They are taught the flags of the various nations and steamship lines, they are also taught how to clean decks, the proper care of boats, and, if they cannot already do so, to row and swim.

#### PART VIII.—MISCELLANEOUS.

64. *Registration of Servants.*—The Police attend to this duty at Colombo, Kandy, Hatton, and Nuwara Eliya. During the year 1,845 new servants were registered and 4,301 new engagements recorded. Further registration was stopped in the case of 17 servants convicted of crime. A sum of Rs. 1,970·50 was collected in fees.

65. *Epidemics and Outbreak of Disease.*—There was a serious outbreak of cholera in the Southern Province and in the Province of Uva, which caused heavy mortality. The Kataragam Festival had to be stopped owing to cholera in Uva. One of the fatal cases was that of Police Constable 1701 Ramen, who contracted the disease while guarding the Infectious Diseases Hospital at Badulla. Police Constable Ramen was a constable of twenty years' service with a very good record, and by his death the Force lost a very good officer. There were several cases of plague in Colombo. The special force of police detailed for plague duty at Nawalapitiya last year was gradually reduced, and at the end of July all the men on plague duty were withdrawn. Rinderpest broke out in Colombo, in the Central Province, and in the Ratnapura District.

66. *First Aid to the Injured.*—24 Officers, 133 Inspectors and Sub-Inspectors, 11 European police sergeants, and 497 native sergeants and constables hold first-aid certificates. The number of officers and men holding first-aid certificates has risen from 132 in 1912 to 665 in 1919. Every Officer, Inspector, Sub-Inspector, and sergeant is required to hold a first-aid certificate. No constable is promoted to the rank of sergeant until he has obtained a first-aid certificate. A certain number of intelligent constables hold first-aid certificates; the remainder are trained to act under a Sub-Inspector, Inspector, or officer holding a first-aid certificate, of whom there will always be at least one in every police station in the Island. A sergeant or constable on receiving a service badge after three years' efficient service is awarded a special grant of Rs. 10 per annum, which he continues to draw so long as he remains efficient. On being awarded a medal after fifteen years' efficient service, a grant of Rs. 2·50 per mensem has been sanctioned by Government.

A knowledge of first aid is particularly useful to Police in criminal districts, where so many cases of serious injuries from personal violence occur at places far distant from a hospital. In the year 1919 there were 241 cases of homicide and attempted homicide, 747 cases of grievous hurt, and 955 cases of hurt with dangerous weapons committed in the Colony. In cases brought to police stations of assault and accident in which bones are fractured and punctured wounds caused, there can be no question but that the cleaning of the wound, stoppage of bleeding, or application of splints before the long journey of anything up to 15 miles in a cart is undertaken must cause great relief to the patient, and prove of value in the subsequent treatment.

Instruction in first aid is not only of material value to the injured, but of moral value to Police in teaching all ranks to realize their responsibility towards the injured and the suffering.

In 11 cases of hurt caused in the Kurunegala District, 1 case in the Galle District, and 1 in the Badulla District, the Medical Officer expressed his satisfaction at the manner in which first aid had been rendered by the Police. At stations on the sea coast all ranks are specially instructed and kept up to the mark in rendering first aid and artificial respiration to persons rescued from drowning.

The Force has 2 horse ambulances, 13 wheeled ambulances, 150 new pattern stretchers, 58 old pattern stretchers, 155 first-aid boxes, and 138 first-aid hampers. A new pattern stretcher and hamper containing all necessary first-aid materials have been supplied to every police station in the Island.

The Ceylon Police Corps of the St. John Ambulance Brigade was inspected by Dr. P. J. Kelly, Acting Assistant Commissioner of the Ceylon Division of the St. John Ambulance Brigade Overseas, on December 12. The thanks of the Force are due to Dr. E. Langley Hunt, C.M.G., the late Assistant Commissioner of the Ceylon Division of the St. John Ambulance Brigade Overseas, to Dr. P. J. Kelly, Acting Assistant Commissioner, and to those medical officers who have throughout the year arranged for and prepared members of the Force for first-aid certificates and instructed other members qualifying as efficient. The Annual First-Aid Competition, in which twenty teams from different districts and Provinces competed, was won by the Fort Police Station.

67. *Health of the Force.*—In Colombo there is a separate Police hospital (28 beds), to which during the year 1,096 patients were admitted, and 3,283 treated at the outdoor dispensary (7,099 visits).

In 1888 a Police hospital was started, and the same building is still being used. The Force in Colombo in 1888 was a very small one, being less than one-fourth of the present strength, and chiefly centred round Maradana and Slave Island, in close proximity to the Police hospital. A scheme for the rebuilding of the hospital to suit present requirements has been drawn up, and it is hoped that it will be possible to proceed with this work.

With the growth of the Force and the opening of additional stations at a considerable distance from the Police hospital, a further point to be considered is the loss of time involved in men walking a long distance to hospital in order to get a boot cut or some slight injury or complaint attended to. Such an injury should quite rightly be attended to at once, but could be better treated at the man's station.

The Police Surgeon reports that 80 per cent. of the cases that were attended to at the outdoor dispensary of the Police hospital in 1919 were trivial cases, for which a large number of men had to walk 4 to 8 miles (to the Police hospital and back), taking the whole or best part of the morning.

It is of great importance, not only from the point of view of the health of the men, but from the point of view of the Government and the public, that a constable should be encouraged to get proper treatment at an early stage, if he does not, his injury or complaint gets worse, and Government loses a trained man for a considerable time. A great deal of money is now spent in training a policeman, and he is of some value to Government. The fitter he can be kept, the better value Government gets for the money spent in training him. Further, the time wasted each day by men who should and could be doing duty in walking to and from the Police hospital involves a daily shortage of effective men, who should be doing 4 hours beat duty during the time they are walking to and from the Police hospital.

The proposal is that an Assistant Medical Officer should be appointed, who would be granted a motor cycle allowance; the Assistant Medical Officer would visit barracks and stations at which men had reported sick. A small dispensary would be opened in each big station and barracks with simple medicines, such as are required in the majority of cases. A man reporting sick will fall in at his station at a fixed time, and be promptly attended to by the Assistant Medical Officer on his visit. Injuries will be treated, medicine prescribed, and each man will get back to his duty at once, thus doing away with the long walk to hospital and the consequent loss of time. When a man is seriously ill, he will be taken to the hospital as at present. The Assistant Medical Officer will on his visits to stations do all in his power to prevent sickness by holding skin inspections and foot inspections, and, generally speaking, endeavour to prevent men going sick, with the consequent loss of their services to Government for the time being.

The scheme should bring about a decrease in the number of men being off duty on account of trivial complaints and injuries, and result in a man doing 4 hours duty during the time previously occupied in walking to and from the Police hospital. In this way the scheme is not only a sound one from the point of view of the health and comfort of the men, but a sound financial proposition. The pay of the Assistant Medical Officer should be saved many times over by the better health and consequently better work of the men, who will get prompt treatment at an early stage. The scheme has been approved by the Principal Civil Medical Officer, and has been submitted to Government for sanction. The proposal, if approved, will result in a healthier Force and a large number of men available for duty daily.

The Force was extremely fortunate in having had for eighteen months the services of such an able and efficient Medical Officer as Dr. van Langenberg. Dr. van Langenberg took the greatest interest in the welfare of the men, and did his utmost for them at all times. All ranks very much appreciated the benefit of his skilled attention.

There are separate wards for the Police in the hospitals at Kandy, Jaffna, Galle, Matara, Tangalla, Kurunegala, and Chilaw. Separate wards are required at Negombo, Moratuwa, Batticaloa, Trincomalee, Gampola, Matale, Hatton, Nuwara Eliya, Ratnapura, Kegalla, and Puttalam.

The building of quarters at Bandarawela for constables suffering from chest complaints has been sanctioned by Government.

68. *Police Boys' Brigade.*—The Boys' Brigade, composed of sons and relatives of members of the Force, has on its strength 57 senior and 268 junior boys, distributed as follows :—

|                           |    |                                  |    |
|---------------------------|----|----------------------------------|----|
| Depôt and Mahara .. .. .  | 80 | Southern Province .. .. .        | 29 |
| Colombo Station .. .. .   | 67 | Eastern Province .. .. .         | 13 |
| Colombo Harbour .. .. .   | 22 | North-Western Province .. .. .   | 16 |
| Western Province .. .. .  | 21 | North-Central Province .. .. .   | 2  |
| Central Province .. .. .  | 41 | Province of Sabaragamuwa .. .. . | 18 |
| Northern Province .. .. . | 16 |                                  |    |

The object of the Brigade is to provide healthy exercise and recreation for the sons of police officers and pensioners, and to educate and train them to become useful men.

In the first stage, between the ages of 5 and 13, the boy is put into uniform, and not only attends school, but is drilled for one hour daily in squad drill, physical exercises, and boxing. In school the boy is taught reading, writing, and general knowledge, which will fit him for employment. On parade, in boxing and games, he is taught discipline, kept hard and fit, taught to keep his temper, and learn to keep himself and his uniform clean.

The harbour boys are taught flags and signals, splicing ropes and making different knots, the elder boys are taught how to sail a boat, and generally instructed in matters which will be of use to them on enlistment in the Harbour Police.

Between the ages of 14 and 17 the boy continues to attend school and parade for half the day, and in the other half attends a police office as a messenger working under the eye of an officer, for which he is paid Rs. 5 a month at the age of 14 to Rs. 10 a month at the age of 17. At this stage the boy learns regular and punctual attendance for duty, good manners, and activity, and the importance of steady and regular work if he is to get on in the world. At the age of 18 the boy is eligible for enlistment in the Force.

Thirteen boys of the Brigade were enlisted in the Force during the year, and there are now 41 men in the Force who started in the Brigade, one of whom has already been promoted to the rank of sergeant after four years' service as a constable without a single default, which shows that the training and discipline of the Boys' Brigade is of value to the boy on enlistment, and of value to the Force and to the Government in making a well-disciplined and efficient policeman.

His Excellency the Governor presented a cup to the best all-round boy in the Brigade, which was won for the second time by junior boy S. Selladorai, aged 12, of the Depôt. The winner is a son of a police sergeant of twenty-two years' service working in the Depôt.

Police schools for boys are maintained at Kandy, 94 boys; Depôt, 72 boys; Colombo Division, 55 boys; Kurunegala, 6 boys; and Jaffna, 3 boys.

The Kandy and Depôt schools are registered as Government schools. The Depôt school received a grant of Rs. 81 and the Kandy school Rs. 641.50 from Government.

Sports, including a drill and boxing competition, were held at Colombo for boys from all parts of the Island at Christmas. The Depôt boys won the Drill Competition and the Challenge Cup for the best form shown in boxing, as well as the Governor's Cup for the best all-round boy. They did credit to their Instructor, Sergeant 119 Coomaraswamy, who has done particularly well in training the boys since the Brigade started.

His Excellency the Governor and the public generally have taken a great interest in the Boys' Brigade. Their interest in the welfare of the Brigade and the Force is much appreciated.

69. *Library and Recreation.*—A central library is maintained at Headquarters for the use of the members of the Force. There has been for some years a library and recreation room at the Headquarters of each Province, and recreation rooms are now being started at the Headquarters of each district and at as many other stations as possible. There are recreation rooms at each of the Colombo stations, and at Avissawella, Negombo, Henaratgoda, Kotte, Panadure, Moratuwa, Kalutara, Kandy, Galle, Matara, Tangalla, Batticaloa, Trincomalee, Jaffna, Talaimannar, Kurunegala, Chilaw, Puttalam, Anuradhapura, Badulla, Ratnapura, and Kegalla.

Colonel T. Y. Wright's Football Challenge Cup was won by the Galle District.

The annual Police sports for the whole Force could not be held on account of the large number of men drawn away on special duty on account of the rice shortage and at places where cholera had broken out. Sports for the boys of the Harbour Police were held in January. Sports for men and boys were held at Jaffna, Galle, and Kegalla. The Police won the Government Service Cricket Shield.

The Police recreation ground has been well maintained, and is valued by the Force.

The institutions of the Force include a Pensioners' Corps, and the various institutions maintained serve to keep together three generations : pensioners, men, and boys.

70. *Events of the Year.*—Peace Celebrations in honour of the victory of the Allies were held in many parts of the Island. The Police were on duty and maintained order.

His Excellency the Governor was pleased, on the declaration of Peace, to convey an expression of his appreciation of the work done by the Force from 1914-1919 in the following order :—

*Minute by the Governor.*

His Excellency the Governor desires, now that peace has been declared, to express his appreciation of the good work performed by the Ceylon Police Force throughout the Colony during the war. The war undoubtedly threw much additional and arduous work on the Force, more especially on the Colombo and Harbour Police, and it is very gratifying to His Excellency to note that all ranks readily accepted the additional duties allotted to them, and worked in a most willing and cheerful manner in the face of many difficulties. At the outbreak of the war there were numerous applications from all ranks of the Force to be permitted to go to the front on active service. Permission to do so, however, was given to a few officers and men only; but to the majority of the applicants such permission could not be given, as the adequate policing of the Colony during the period of the war was a matter of paramount importance.

The officers and men who had to remain to carry on the essential duties of Police for the safety of the Colony served the British Empire in a no lesser degree than those who actually left the Colony on active service.

To all ranks of the Force, for services ungrudgingly rendered, and to the gentlemen who volunteered for temporary police duty for the duration of the war, to enable physically-fit officers to proceed to the front, His Excellency desires to express his appreciation and thanks.

His Excellency's order and generous appreciation is very much valued by all ranks.

His Majesty the King's request for 2 minutes' silence to be observed at 11 A.M. on November 11, the anniversary of Armistice Day, was observed throughout the Island. Special arrangements made in Kandy proved in every way satisfactory. In Colombo the signal decided upon for the public (the blowing off of all sirens by ships in the harbour) proved to be a failure, and the signal could not be heard even in the Fort, either because (a) all the ships did not comply, or (b) only a very few ships had the necessary steam up, or (c) the north-east monsoon carried the sound out to sea.

It has been suggested for 1920 that the signal be given by (a) all the batteries (Rockhouse, Galle Face, Battenberg) firing simultaneously at 10 hours 59 minutes and 30 seconds; (b) signal being taken up by all ships in harbour, factories, mills, workshops blowing their sirens or whistles, taking their time from the batteries, and continuing to blow from 10 hours 59 minutes 30 seconds to 11 hours; (c) signal to be repeated in the streets by police blowing a long blast on whistle and then stopping all traffic.

71. *Foodstuffs.*—Vegetable seeds are obtained by police stations, free of cost, from the Director of Agriculture, and, wherever possible, vegetables are grown for the use of men, who are encouraged to grow anything they can in the police premises.

72. *Metropolitan and English Police Forces.*—While on leave in England the Metropolitan and other Police Forces and Prison Establishments were extremely courteous and considerate in permitting me to see their work and methods and go round their various institutions. The experience and knowledge gained is of the utmost value, and I desire to record my grateful appreciation of their great courtesy and of the valuable information so readily given.

73. *Merits of Officers.*—In this report the names of officers and men who have done particularly good work are mentioned, and I desire to bring their good services to the notice of Government. I beg to specially bring to the notice of His Excellency the Governor the conspicuous good service rendered by Mr. J. H. Daniel during the year, for seven months of which he was in charge of the Force as Acting Inspector-General, and throughout the period of the war. Though Mr. Daniel had not been on leave since 1909, he remained at his post, though much in need of rest, and faced the additional and arduous work thrown by the war on the Harbour Police and Criminal Investigation Department, for which branches of the Force he was responsible, in a manner deserving of special mention. Mr. Daniel carried on for ten years without relief in a most cheerful and willing manner. The Colony has in Mr. Daniel an officer conspicuous for his zeal and devotion to duty.

Colombo, April 12, 1920.

H. L. DOWBIGGIN,  
Inspector-General of Police.

# PRISONS.

## REPORT OF THE INSPECTOR-GENERAL OF PRISONS FOR 1919.

THE totals of admissions of convicted prisoners to the prisons in Ceylon during the years 1917, 1918, and 1919 have been as follows:—

|      |    |        |  |      |    |        |  |      |    |        |
|------|----|--------|--|------|----|--------|--|------|----|--------|
| 1917 | .. | 10,646 |  | 1918 | .. | 12,613 |  | 1919 | .. | 15,050 |
|------|----|--------|--|------|----|--------|--|------|----|--------|

showing an increase of 2,437 during last year as compared with 1918.

2. The admissions of defaulters under the Road Ordinance for the same periods have been—

|      |    |     |  |      |    |     |  |      |    |     |
|------|----|-----|--|------|----|-----|--|------|----|-----|
| 1917 | .. | 135 |  | 1918 | .. | 173 |  | 1919 | .. | 280 |
|------|----|-----|--|------|----|-----|--|------|----|-----|

3. Of the total admissions of convicted prisoners to prisons, the following figures give those from the superior courts:—

|      |    |       |  |      |    |       |  |      |    |       |
|------|----|-------|--|------|----|-------|--|------|----|-------|
| 1917 | .. | 1,300 |  | 1918 | .. | 1,293 |  | 1919 | .. | 1,451 |
|------|----|-------|--|------|----|-------|--|------|----|-------|

4. The number of convictions for murder and manslaughter are—

|      |    |    |  |      |    |    |  |      |    |     |
|------|----|----|--|------|----|----|--|------|----|-----|
| 1917 | .. | 96 |  | 1918 | .. | 91 |  | 1919 | .. | 105 |
|------|----|----|--|------|----|----|--|------|----|-----|

5. The number of persons sentenced to death and of those whose capital sentences were carried out are as follows:—

|      |    |    |    | Sentenced to Death. |    | Hanged. |
|------|----|----|----|---------------------|----|---------|
| 1917 | .. | .. | .. | 59                  | .. | 38      |
| 1918 | .. | .. | .. | 51                  | .. | 35      |
| 1919 | .. | .. | .. | 55                  | .. | 38      |

Of the 38 hanged, 36 were Sinhalese and 2 Tamils.— Of the number sentenced to death in 1919, 3 were hanged in 1920. Of the number hanged, 2 had been sentenced in 1918. No convicts were deported to the Andamans for life. Of the 38 hanged in 1919, 18 came from the Western Province, 5 from the North-Western Province, 4 from the Southern Province, 3 from the Central Province, 1 from the North-Central Province, 5 from the Province of Sabaragamuwa, and 2 from the Province of Uva.

6. Convictions in the higher courts for aggravated assaults during the past year show an increase, the figures being—

|      |    |     |  |      |    |     |  |      |    |     |
|------|----|-----|--|------|----|-----|--|------|----|-----|
| 1917 | .. | 156 |  | 1918 | .. | 190 |  | 1919 | .. | 210 |
|------|----|-----|--|------|----|-----|--|------|----|-----|

7. The following shows the number of convicted prisoners committed to prison from all courts, and their daily average:—

| <i>Prisoners.</i>   | 1917.  | 1918.  | 1919.  |
|---|--------|--------|--------|
| Total of convicted persons committed to prison from all courts .. | 10,646 | 12,613 | 15,050 |
| Deduct Road Ordinance defaulters ..                               | 135    | 173    | 280    |
|   | 10,511 | 12,440 | 14,770 |
| Daily average of convicted prisoners in prison ..                 | 3,612  | 3,636  | 3,806  |
| Deduct women ..   | 60     | 72     | 65     |
| Deduct Road Ordinance defaulters ..                               | 6      | 9      | 14     |
| Deduct sentenced to simple imprisonment ..                        | 83     | 103    | 72     |
|   | 3,463  | 3,452  | 3,655  |
| Persons hanged ..   | 38     | 35     | 38     |

8. Return showing the total number of Road Ordinance defaulters admitted and discharged during 1917, 1918, and 1919:—

|                                      | 1917. | 1918. | 1919. |
|--------------------------------------|-------|-------|-------|
| Total admissions ..                  | 135   | 173   | 282   |
| Discharged on payment of fine ..     | 36    | 60    | 89    |
| Absolute defaulters ..               | 95    | 111   | 166   |
| Discharged on medical certificate .. | 3     | 2     | —     |
| Discharged on pardon ..              | 1     | —     | 27    |

## 9. The number of escapes from prison and recaptures during 1917, 1918, and 1919 were—

|      |    | Escapes. | Recaptures. |
|------|----|----------|-------------|
| 1917 | .. | 9        | 7           |
| 1918 | .. | 6        | 5           |
| 1919 | .. | 3        | 1           |

Of the 3 escapes in 1919, 1 prisoner escaped from the General Civil Hospital, 1 from the Eye Hospital, and 1 escaped from the custody of jail guards at Panadure railway station whilst returning from Police Court, Panadure.

## 10. The number of committals received from the Supreme Court during the years 1917, 1918, and 1919 has been—

|   | 1917.      | 1918.      | 1919.      |
|---|------------|------------|------------|
| Offences against the person ..                  | 182        | 166        | 211        |
| Offences against property with violence ..      | 24         | 22         | 25         |
| Offences against property without violence ..   | 18         | 23         | 11         |
| Forgery, perjury, and offences against currency | 50         | 44         | 28         |
| Offences not included in above ..               | 5          | 5          | 3          |
|   | <u>279</u> | <u>260</u> | <u>278</u> |

showing an increase for 1919 as compared with 1918 of 18.

## 11. The number of prisoners from District Courts admitted to the jails of Ceylon during the same period is as follows :—

|   | 1917.        | 1918.        | 1919.        |
|---|--------------|--------------|--------------|
| Offences against the person ..                  | 318          | 299          | 268          |
| Offences against property with violence ..      | 160          | 113          | 136          |
| Offences against property without violence ..   | 508          | 526          | 668          |
| Forgery, perjury, and offences against currency | 24           | 36           | 30           |
| Miscellaneous ..                                | 11           | 59           | 71           |
|   | <u>1,021</u> | <u>1,033</u> | <u>1,173</u> |

## 12. The number of prisoners admitted on conviction before the Minor Courts is—

|                             | 1917.        | 1918.         | 1919.         |
|-----------------------------|--------------|---------------|---------------|
| Strictly criminal cases ..  | 3,421        | 4,512         | 6,368         |
| Statutory offences ..       | 4,723        | 3,878         | 4,061         |
| Offences against revenue .. | 1,011        | 295           | 368           |
| Miscellaneous ..            | 191          | 2,635         | 2,802         |
|                             | <u>9,346</u> | <u>11,320</u> | <u>13,599</u> |

## 13. The total increase in the number of convictions during 1919 is made up as follows :—

|                                     |    |              |
|-------------------------------------|----|--------------|
| Increase in Minor Court cases ..    | .. | 2,279        |
| Increase in District Court cases .. | .. | 140          |
| Increase in Supreme Court cases ..  | .. | 18           |
| Total Increase ..                   | .. | <u>2,437</u> |

## 14. The total number of prisoners with previous convictions received direct from all courts for the years 1917, 1918, and 1919 is—

|   | 1917. | 1918. | 1919. |
|---|-------|-------|-------|
| Convicted once before ..                  | 1,280 | 1,524 | 1,713 |
| Convicted twice before ..                 | 349   | 449   | 529   |
| Convicted three times before ..           | 164   | 213   | 211   |
| Convicted more than three times before .. | 241   | 180   | 234   |

(i.) Of those received in 1919 having been convicted once before, 785 became habitual criminals under Ordinance No. 32 of 1914, owing to their second conviction for a crime; and of those convicted twice before, three times before, and more than three times before, 326, 146, and 182, respectively, were habitual criminals.

(ii.) The number of habitual criminals who had become habitual criminals after attaining the age of sixteen years was 1,401.

(iii.) The number of habitual criminals who had two or more convictions for crimes before attaining the age of seventeen years was 38.

(iv.) Of the total number of habitual criminals received during the year, 701 came from towns and 738 from villages.

(v.) The number of habitual criminals who were sentenced by court to preventive detention, in addition to rigorous imprisonment, was 30. At the present time there are 54 persons undergoing terms of preventive detention, all of whom are confined in Welikada jail and being trained as carpenters.

(vi.) The total number of habitual criminals admitted during the year was 1,439, or a percentage of 9.74 of the admissions.

15. The terms of sentences of prisoners received direct from courts into the jails of Ceylon during the years 1917, 1918, and 1919 were—

|  | 1917.  | 1918.  | 1919.   |
|--|--------|--------|---------|
| Two weeks and under ..                 | 3,160  | 4,345  | 6,105   |
| Not over 1 month or under 2 weeks ..   | 2,608  | 3,047  | 3,106   |
| Not over 3 months or under 1 month ..  | 2,215  | 2,207  | 2,490   |
| Not over 6 months or under 3 months .. | 1,144  | 1,427  | 1,472   |
| Not over 1 year or under 6 months ..   | 664    | 733    | 878     |
| Not over 2 years or under 1 year ..    | 381    | 318    | 387     |
| Not over 3 years or under 2 years ..   | 75     | 65     | 76      |
| Not over 4 years or under 3 years ..   | 86     | 119    | 76      |
| Not over 5 years or under 4 years ..   | 26     | 37     | 54      |
| Between 5 years and 10 years ..        | 78     | 60     | 57      |
| Over 10 years ..                       | 16     | 31     | 15      |
| To be hanged ..                        | 58     | 51     | 55      |
| Road Ordinance defaulters ..           | 135    | 173    | 280     |
|  | 10,646 | 12,613 | 15,051* |

\* One man was undergoing imprisonment prior to his being sentenced to death.

16. The daily average of all convicted prisoners within the jails of the Colony during 1917, 1918, and 1919 was—

|                              | 1917.    | 1918.    | 1919.    |
|------------------------------|----------|----------|----------|
| Penal stage ..               | 582.84   | 636.46   | 762.46   |
| Class IV. ..                 | 1,689.30 | 1,887.79 | 1,953.52 |
| Class III. ..                | 699.51   | 352.32   | 396.98   |
| Class II. ..                 | 229.00   | 308.68   | 206.37   |
| Class I. ..                  | 312.03   | 321.16   | 357.13   |
| Road Ordinance defaulters .. | 6.26     | 8.71     | 14.30    |
| Simple imprisonment ..       | 83.46    | 102.98   | 72.05    |
| Preventive detention ..      | 9.23     | 18.12    | 43.30    |
|                              | 3,611.63 | 3,636.22 | 3,806.11 |

Of the total during 1919, 64.77 were females, .46 juveniles, 6.78 light labour, and 263.05 sick.

17. The daily average of unconvicted prisoners for the same period was—

|                         | 1917.  | 1918.  | 1919.  |
|-------------------------|--------|--------|--------|
| Debtors ..              | 27.04  | 31.62  | 24.26  |
| Witnesses ..            | .16    | .44    | .55    |
| Further examination ..  | 186.08 | 188.36 | 271.44 |
| Committed for trial ..  | 81.25  | 92.90  | 109.42 |
| Awaiting sentence ..    | 9.57   | 15.12  | 9.40   |
| Arrested on warrants .. | 4.31   | 4.35   | 4.44   |
| Lunatics ..             | 11.05  | 9.12   | 9.71   |
|                         | 319.46 | 341.91 | 429.22 |

The total number of unconvicted prisoners admitted to prison in 1919 was 8,090, as against 6,766 in 1918.

18. Return of all prisoners treated in the jail hospitals during the years 1917, 1918, and 1919 :—

|   | 1917.    | 1918.    | 1919.    |
|---|----------|----------|----------|
| Remaining from old year ..                          | 176      | 145      | 159      |
| Admitted during the year ..                         | 6,879    | 6,101    | 10,267   |
| Discharged ..                                       | 6,769    | 5,963    | 9,839    |
| Died ..   | 131      | 121      | 315      |
| Percentage of deaths to those treated ..            | 1.85     | 1.90     | 3.02     |
| Daily average sick ..                               | 158.34   | 138.73   | 271.30   |
| Daily average strength of prisoners in all jails .. | 3,931.09 | 3,978.13 | 4,235.33 |

The number in hospital on December 31, 1919, was 272.

Of the total 315 deaths shown in the above table, 119 were from influenza and 46 from pneumonia following influenza. The death-rate per 1,000 of deaths to admissions during the year was 14.08, as against 6.50 in 1918. The health of the jails throughout the Island during the year was satisfactory. The total admissions during the year was 23,149, as against 19,379 in 1918; the daily average strength being 4,235.33, as against 3,978.13 in 1918. It was noticeable throughout the year that the majority of admissions to hospital were from those recently admitted to jail; many of these were in a very poor condition and half-starved, owing to the shortage of rice and high cost of all foodstuffs.

With regard to the prisons in Colombo District—Welikada, Borella Convict Hospital, Hulftsdorp, and Mahara—during the year, there were several outbreaks of influenza varying in their virulence, types, and fatality. There was a severe epidemic of catarrhal and mucopurulent conjunctivitis at Welikada during the latter part of November and in December. Many cases of mumps also occurred at Welikada and Mahara. Barring the above-mentioned diseases, the general health and sanitary conditions were satisfactory. The daily average-sick was 161.11, as compared with 101.68 in 1918. The total number of cases treated in the Borella Convict Hospital was 3,193, with 121 deaths, or a percentage of 3.78 of cases treated; of these, 1,191 were for influenza, with 43 deaths; many of them died of broncho-pneumonia. Had it not been for the periodic waves of influenza, the admissions and deaths would have compared favourably with previous years. The number admitted to the Welikada female jail hospital was 88, with 2 deaths, including those of two infants under 2 years of age. 4,421 cases were treated at Mahara jail hospital, with 113 deaths, or a percentage of 2.56 of case treated. The

total number of cases treated in the three jail hospitals was 7,702, with 236 deaths, or a death-rate of 3·06 per cent.; this percentage compares favourably with previous years, taking into consideration the several waves of influenza and bowel complaints caused by the shortage of rice and substitution of other articles of food, added to the miserable condition of the majority of the prisoners on first admission.

The following table gives a comparative statement of the principal diseases and number of deaths from each during the years 1917, 1918, 1919 of the above-mentioned jails, the daily average strength of which were 2,391·02 :—

Table of Borella Convict Hospital, Welikada Female Hospital, and Mahara.

|                    | Admissions. |       |       | Deaths. |       |       |
|--------------------|-------------|-------|-------|---------|-------|-------|
|                    | 1919.       | 1918. | 1917. | 1919.   | 1918. | 1917. |
| Fevers ..          | 852         | 572   | 708   | 11      | 9     | 4     |
| Diarrhoea ..       | 459         | 510   | 549   | 10      | 2     | 13    |
| Dysentery ..       | 770         | 471   | 624   | 14      | 9     | 8     |
| Diseases of eye .. | 797         | 567   | 1,047 | 1       | —     | 2     |
| Pneumonia ..       | 67          | 82    | 69    | 37      | 33    | 25    |
| Injuries ..        | 130         | 81    | 111   | —       | —     | —     |
| Other diseases ..  | 1,312       | 1,069 | 1,190 | 40      | 13    | 18    |
| Influenza ..       | 3,201       | 346   | —     | 119     | 8     | —     |
| Enteric ..         | 15          | —     | —     | 4       | —     | —     |
| Total ..           | 7,603       | 3,698 | 4,298 | 236     | 74    | 70    |

With regard to the outbreak of influenza at Mahara, the Medical Officer reports : “ The total number of cases of influenza treated during the year under review was 2,000 with 78 deaths, or a mortality of 3·90 per cent., as against 115 cases with 5 deaths in 1918. Out of the 2,000 cases, 1,901 were of respiratory and febrile types and 96 were gastro-intestine, the remaining 3 were nervous. Of the total number of cases, 155 developed pneumonia, of which 143 were broncho-pneumonia, 73 cases ended fatally.”

*Negombo Jail.*—The total number of admissions to hospital in 1919 was 443, against 332 in the previous year. The total number of deaths was 46, or a percentage of 10·24 to those treated, as against 2·69 in 1918. The prevalent diseases were diarrhoea, dysentery, and malarial fevers.

*Kandy Prisons.*—The number of patients treated during the year was 681, as against 564 in 1918. There were 14 deaths, as against 9 in 1918, the prevalent diseases being malarial fevers, dysentery, influenza, conjunctivitis, and diarrhoea. There were 131 cases of malarial fevers, as against 111 cases in 1918, 97 cases of dysentery, and 60 cases of eye affections, and 75 cases respiratory system.

*Jaffna Jail.*—The general health of the jail was satisfactory throughout the year. The number of patients treated in the hospital was 1,096, as against 1,146 in 1918, the daily average sick and the percentage of deaths to total treated being 8·65 and 2·18, respectively. There were 252 cases of malarial fevers, with 8 deaths; dysentery accounted for 126 cases and 8 deaths, as against 62 cases and 6 deaths in 1918. Diarrhoea 135 cases, with 4 deaths. Influenza 21 cases, with no deaths. There were 146 cases of eye affections; of these, half the number of cases were for inflammation of the eyes caused by artificial irritants introduced by the prisoners themselves in order to shirk work. The medical officers at Mahara and Welikada also complained of the number of cases of conjunctivitis brought on by prisoners themselves by the introduction of irritants, such as chunam, olinda, and castor oil seeds, dust, gravel, &c.

*Galle Prison.*—The general state of the health of the jail was good. During the last quarter of the year under review there was a mild outbreak of influenza among the officers and prisoners, but there were no deaths. The other cases treated were chiefly of dysentery, diarrhoea, and malarial fevers. There were no deaths in the jail during the year. The daily average strength was 191·99; daily average sick 1·63.

*Tangalla Jail.*—The total number of cases admitted to the jail hospital during the year was 32, the daily average sick being 1·11, and percentage of sick to strength ·69. Eighteen cases were treated for dysentery. The disease was both bacillary and amoebic, and appeared at a time when the town wells had run dry and drinking water had to be purchased from outside.

*Anuradhapura Prison.*—The daily average strength of the jail was 124·58, as against 115·50 in 1918. The daily average sick was 4·91. Of the 249 cases treated in the jail hospital, 75 were for dysentery, 19 conjunctivitis, 90 malarial fevers, 7 influenza, 6 pneumonia. There were 9 deaths of prisoners in the civil hospital, to which they had been transferred for better treatment, and one death in the jail.

*Badulla Jail.*—The daily average strength of the jail was 99·69; only one patient was admitted to the jail hospital during the year. It was invariably found that the health of most of the prisoners admitted to jail was far from satisfactory. This may be attributed to the scarcity of foodstuffs and dearth of all provisions. There was an epidemic of cholera in Badulla town, and one of the prisoners was affected, removed to the infectious diseases hospital, and died there. There were no other cases in the jail.

*Kegalla Jail.*—The general condition of health throughout the year was very satisfactory; the number of patients treated in hospital was 6, with no deaths. The daily average sick was ·13. The daily average strength of the jail 40·70. The prevalent diseases were dysentery and malarial fevers.

*Batticaloa Jail.*—The total number of prisoners admitted to the jail during the year was 367, of whom 211 were convicted and 156 unconvicted. The total number of patients treated in the jail hospital during the year was 29, of whom 1 died of pneumonia after being sent to the civil hospital for better treatment. The chief diseases were malarial fevers, dysentery, bronchitis, and diarrhoea.

*Chilaw Jail.*—The jail is situated in the healthiest part of the town, and the Medical Officer reports that during the year 1919 it was the healthiest institution in Chilaw. 523 convicted and 395 unconvicted prisoners were admitted to the jail. Only 10 cases were treated in the jail hospital. There were no deaths in the jail, but two prisoners died in the civil hospital, to which they had been transferred.

19. The number of punishments inflicted on officers was 916, the number of individuals punished being 649, as against 883 punishments and 489 individuals in 1918.

20. The number of punishments inflicted during the year on prisoners for prison offences was 2,067, as against 1,795 in 1918 and 1,892 in 1917.

21. There were 35 cases of corporal punishment, as against 28 in 1918 and 26 in 1917.

22. The following table gives a return of expenditure for the financial years 1916-17, 1917-18, and 1918-19 :—

|                              | 1916-17.<br>Rs. | 1917-18.<br>Rs. | 1918-19.<br>Rs. |
|------------------------------|-----------------|-----------------|-----------------|
| Establishment .. ..          | 197,544         | 193,098         | 246,187         |
| Dieting .. ..                | 367,114         | 359,751         | 351,374         |
| Hospital charges .. ..       | 32,736          | 25,866          | 46,735          |
| Clothing, bedding, &c. ..    | 25,460          | 27,937          | 29,186          |

24. The following is the result of the industrial labour for the financial year ended September 30, 1919 :—

|  | Rs.    | a. |
|--|--------|----|
| Total value of stock on hand on October 1, 1918 ..   | 7,060  | 90 |
| Total value of stock on hand on September 30, 1919 ..  | 6,585  | 70 |
| Total value of articles sold on payment ..   | 8,163  | 52 |
| Total value of articles made for Government Departments for which no payment was received .. | 59,603 | 14 |
| Total amount expended on account of materials for manufacture ..                             | 19,055 | 32 |
| Total amount credited to revenue ..  | 8,163  | 52 |

25. The following is a summary of the more important articles turned out during the year :—

|  |        |
|--|--------|
| Various articles of wooden furniture .. ..                               | 2,029  |
| Various pieces of rattan furniture .. ..                                 | 119    |
| Rattan matting, square yards .. ..                                       | 374    |
| Coir brooms .. ..  | 12,577 |
| Coir door mats .. ..   | 521    |
| Coir matting, square yards .. ..   | 1,515  |
| Coir string, cwt. .. ..  | 641½   |
| Coir fibre, cwt. .. ..   | 948½   |
| Coir coal bags .. ..   | 1,000  |
| Coir tea leaf bags .. ..   | 796    |
| Various zinc, tin, and iron utensils, &c. ..                             | 3,094  |
| Coconut oil, gallons .. ..   | 1,665  |
| Coconut poonac, cwt. .. ..   | 106    |
| Articles of clothing and bedding made up for the Colonial Storekeeper .. | 10,232 |
| Cloth for prisoners' clothing, yards .. ..                               | 22,250 |
| Officers' uniforms .. ..   | 1,016  |
| Prisoners' suits .. ..   | 6,597  |
| Boots, shoes, &c., pairs .. ..   | 980    |
| Dog collars .. ..  | 23,000 |
| Mats for prison use .. ..  | 575    |
| Madampe cane baskets .. ..   | 11,300 |
| Various articles not included in any of the above ..                     | 16,923 |

In addition to the above, the steam laundry at Welikada washed 709,608 pieces of soiled linen for the Medical and Railway Departments; while a daily average of 206 prisoners was, as in former years, employed in the Government Printing Office.

For the making up of furniture for Government Departments, the Forest Department supplied 1,816 cubes of various timbers in log. The carpenters' parties were again handicapped for want of steam power and machinery to tackle these logs.

26. Prisoners are, whenever possible, continued to be employed on works of public utility and remunerative industrial labour. Owing to the increasing number of orders from Government Departments for articles of wooden furniture, coir brooms, mats and door rugs, bamboo tats, &c., the industrial parties at Welikada and Bogambra prisons have been largely extended.

27. (1) *Stone and Metal Industries.*—At Mahara a daily average of 200·35 prisoners were employed in the Harbour Works quarry as blacksmiths, carpenters, platelayers, stone dressers, metal breakers, and on excavating and other works connected with the quarry. 733 cubes of hand rubble, 93 cubes of 2-inch metal, 583 pitching stones, and 157 cubes of quarry scrapings were despatched to Colombo Harbour

Works; 1,343 cubes of 2-inch metal, 33,169 stone setts, 120 pitching stones, 2,425 cubes of hand rubble, and 33 cubes of quarry scrapings were stacked in the quarry. For the Public Works Department, a daily average of 394·58 prisoners were employed in the Public Works Department quarry. 3,882 cubes of 2-inch metal, 519 cubes of hand rubble, and 555 stone setts were despatched to Colombo and other parts of the Western Province during the year, the total cost being Rs. 60,272·06.

(2) Notwithstanding the fact that the strength of Mahara prison was increased to a daily average of 1,050 in 1918, it is found that this number is not sufficient to cope with the work in hand and the demands made on it. The question of rebuilding the prison so as to accommodate 1,600 prisoners, provide a proper up-to-date hospital and infectious diseases wards, quarters for the whole of the prisons staff, and an adequate supply of water is now before Government. The cost will be approximately Rs. 500,000—a large sum, but absolutely necessary if we are to make full use of prison labour and improve the general state of health and the sanitary condition of the prison, which at present is most unsatisfactory.

(3) The Public Works Department was also supplied with a total of 2,886 cubes of metal during the year from various jails, namely, Kandy, 657; Galle, 1,092; Anuradhapura, 389½; Badulla, 220½; and Tangalla, 518.

28. *Karaiyur Reclamation.*—With the dredgers, lighters, and rolling stock available at present, the work has made satisfactory progress. During the year some 7½ acres were reclaimed, making a total of 46 acres up to date.

Anuradhapura continues to employ a daily average of from 25 to 30 prisoners on behalf of the Forest Department, clearing jungle and planting out Ceylon teak and margosa trees. The Conservator of Forests has expressed his appreciation of the good work done by prison labour. Chilaw and Badulla continue to employ prison labour on behalf of the Local Board in reclamation work and in diverting the oya, &c.

29. The schools opened at Welikada, Kandy, Mahara, and Jaffna in August, 1917, for the instruction of prisoners, who on admission to jail are twenty-three years of age and under, and who have a sentence of six months and over, make satisfactory progress, the daily average attendance being 174·36.

30. Mr. A. F. G. Walker returned from war service on September 15, 1919, and relieved Mr. J. Elstone at Jaffna, Mr. Elstone reverting to his permanent appointment of First European Jailer, Welikada Prison. Major W. H. Robinson, First Assistant Superintendent, proceeded on leave on July 11, 1919, and is still away.

Prisons Office,  
Colombo, February 18, 1920.

A. DE WILTON, MAJOR,  
Inspector-General of Prisons.

# REGISTRATION OF DEEDS.

## REPORT OF THE REGISTRAR-GENERAL OF LANDS FOR 1919.

THE present report is for the calendar year 1919. After a period of comparative stagnation in the business of the Department owing to depression in trade attendant on war conditions, it is gratifying to be able to record a very considerable rise both in the business and in the revenue. The year under review has been the most prosperous in the history of the Department. The business received shows an advance of as much as 38 per cent. on that of the preceding year, while the revenue, which has swelled to the unprecedented figure of Rs. 854,520, represents an increase of almost 100 per cent. The improvement this year, in registration business as well as revenue, though partly consequential on the larger number of deeds executed—the increase is 25 per cent. on the last year's number—is in a greater measure due to the introduction in July of the Amending Stamp and Registration Ordinances, Nos. 10 and 11 of 1919. The object of this legislation was twofold, namely, to raise the registration charges on deeds, and at the same time to ensure their prompt registration. In both these respects the result has been eminently satisfactory. Notwithstanding the fact that the new Ordinances were in operation during only the second half of the year, the profit realized last year exceeded the estimated annual income by a lakh, while the percentage of deeds registered rose from 66 to 80. There would probably have been better results but for the distress, felt more or less throughout the Island, owing to the shortage of food supplies, not to mention the financial unrest consequent on the exchange situation. When once the country has returned to normal conditions there is every prospect of a further considerable development in the business of the Department.

### BUSINESS, REVENUE, AND EXPENDITURE.

2. Table A gives in detail the business, revenue, and expenditure. Compared with 1918, the year under review shows an increase under almost all the items of regular recurrent work. Of special non-recurrent work, such as consolidation of indexes and re-verification of records, much could not be done this year owing to the pressure of more urgent work which required prior attention. The business done under the recurrent items shows an increase of 34 per cent. over that of 1918, and the revenue an increase of 94·6 per cent.; while the rise in expenditure on account of personal emoluments was only 7·5 per cent., and on account of other charges barely more than 14 per cent. As compared with the average for the three years 1916–1918, the business done in 1919 shows an increase of not less than 27 per cent., and the revenue an increase of 92 per cent.

Table A.—Details of Business, Revenue, and Expenditure for the Calendar Years 1918 and 1919.

| Business :—                                      | 1918.      | 1919.      | Percentage of Increase<br>or Decrease (—). |
|--|------------|------------|--|

| Miscellaneous ..   | —              | 81             | —  |
| <b>Total ..</b>  | <b>439,042</b> | <b>854,520</b> | <b>94·6</b>                                |
| <b>Expenditure :—</b>  |                |                |  |
| Personal emoluments† ..  | 170,217        | 183,030        | 7·5  |
| Other charges ..   | 12,943         | 14,776‡        | 14·2                                       |
| Special expenditure ..   | 8,152          | 5,021          | — 38·4                                     |
| <b>Total ..</b>  | <b>191,312</b> | <b>202,827</b> | <b>6</b>                                   |

\* This includes a sum of Rs. 741·50, being deficiency recovered under the Stamp Validation Ordinance, No. 30 of 1917.

† Exclusive of the salaries of the Registrar-General and the Assistant Registrar-General.

‡ This includes the cost of stationery, &c. (Rs. 4,902·11), and printed forms (Rs. 5,077·50), not included in reports prior to 1917.

#### SUMMARY OF BUSINESS, &c.

3. A summary of the business, revenue, and expenditure, shown separately for each office of the Department, will be found in Table B. The Colombo Land Registry, as usual, heads the list both in business and income, and is followed by Kurunegala and Kandy as in the preceding year. Every office of the Department shows an increase of business and of revenue, except the Trincomalee office, where a very slight decrease (2 per cent.) in business is noticeable ; even here the revenue has increased by over 180 per cent.

[For Table B see page 3.]

#### COMPARATIVE STATEMENT OF BUSINESS, REVENUE, AND EXPENDITURE.

4. The following table (C) is a comparative statement for the years 1917 to 1919 (inclusive) of the work received, the work disposed of, the capacity of the staff, the revenue and the expenditure. It also shows the arrears at the beginning and at the end of the year, and the comparative cost and profit per unit of work :—

Table C.—Comparative Statement of Business, Revenue, and Expenditure from 1917.

|  | 1917.         | 1918.         | 1919.         |
|--|---------------|---------------|---------------|
| 1. Arrears at beginning of year ..                 | 7,822         | 6,188·35      | 11,376·29*    |
| 2. Business received { Regular recurrent work ..   | 347,488·47    | 346,408·8     | 476,808·01    |
| Special non-recurrent work ..                      | 41,436·86     | 36,473·72     | 7,098·69      |
| 3. Increase or decrease (—) in regular business .. | — 34,710·53   | — 1,079·67    | 130,399·21    |
| 4. Total business for the year (1 and 2) ..        | 396,747·33    | 389,070·87    | 495,282·99    |
| 5. Capacity of permanent staff ..                  | 334,892       | 331,094       | 378,188·04    |
| 6. Business in excess of capacity ..               | 61,855·33     | 57,976·87     | 117,094·95    |
| 7. Business done ..                                | 390,558·98    | 377,693·58    | 464,525·31    |
| 8. Arrears at end of year (vide Table D) ..        | 6,188·35      | 11,377·29     | 30,757·68     |
|  | <b>Rs. c.</b> | <b>Rs. c.</b> | <b>Rs. c.</b> |
| 9. Revenue ..                                      | 426,959 0     | 439,042 0     | 854,520 0     |
| 10. Expenditure ..                                 | 188,556 0     | 191,312 0     | 202,827 0     |
| 11. Nett profit ..                                 | 238,403 0     | 247,730 0     | 651,693 0     |
| 12. Cost per unit ..                               | 0 48          | 0 51          | 0 44          |
| 13. Profit per unit ..                             | 0 61          | 0 66          | 1 40          |

\* One deed returned unregistered.

As will be seen from the above, 86,337 units of work (or over 18 per cent. of the total output) have been done in excess of the capacity of the permanent staff. Of these, 72,823 units represent the output of contract or piece clerks and the overtime work done by the permanent staff at a total cost of Rs. 9,803, and the balance 13,514 units, representing Rs. 1,351·40 in value, was contributed by the regular staff without extra cost to Government—no small credit to the staff, seeing that as many as 18,357 units had to be waived during the year chiefly owing to sick leave.

The total revenue for the year was Rs. 854,520, as compared with Rs. 439,042 in 1918, and shows a rise of over 94 per cent. All the offices of the Department contributed towards this increase. In the case of the Colombo and Mullaitivu offices the increase was over 200 per cent., while in Jaffna, Batticaloa, Anuradhapura, Trincomalee, and Mannar it was over 100 per cent.

Table B.—Summary of Business, Revenue, and Expenditure for each Office of the Department for 1919 as compared with 1918.

| Office.      | Business in Units.       |            |   |                              |        |   | Revenue. |       |   | Expenditure. |        |   | Profit or Loss (—). |         |

\* Registration of deeds, searches, copying, examination of deeds, and verification of notarial duplicates, &c.

† Consolidation of indexes, re-verification of records, copying old local indexes, &c.

‡ The Head Office is chiefly supervisory. The business shown here only represents the work of searching, copying, and verification of notarial records of the Colombo District, which for want of accommodation in the Land Registry are in direct charge of the Head Office.

§ This includes the cost of stationery, &c. (Rs. 4,902.11), and printed forms (Rs. 5,077.50) for the whole Department.

The expenditure for the year under review was Rs. 202,827, as against Rs. 191,312 in the previous year, the increase being only 6 per cent. The increase was chiefly under the head of personal emoluments, and was due to the employment of a larger staff to cope with the increased work. The nett profit for the year was Rs. 651,693, as against Rs. 247,730 in the previous year, an increase of as much as Rs. 403,963. As will be seen from Table B, the profit netted in 1919 in the Colombo office alone, namely, Rs. 253,087, exceeds by Rs. 5,357 the nett profit in 1918 of all the offices of the Department taken together, which amounted to Rs. 247,730.

The highest registration-duty paid on a single deed was Rs. 3,009 on a deed of transfer executed in the Colombo District.

#### DETAILS OF ARREARS.

5. Details of arrears appear in Table D below. The arrears at the end of 1919 were 30,757·68 units, as against 11,377·29 at the end of 1918. This increase was mainly due to the large volume of work received during the latter part of the year as a consequence of the introduction in July last of Ordinance No. 10 of 1919. The receipts exceeded all expectation and overwhelmed the staff in most of the Land Registries. To grapple with the work the regular staff, besides being themselves employed overtime, had to be supplemented by a large number of extra hands paid on the contract basis. The annual provision for extra clerical assistance having been consequently exhausted within the first two and a half months of the financial year, overtime work had to be suspended early in December. It was resumed only on the 16th of the month on further funds being provided. Inadequacy of accommodation for the necessary additional staff in most of the Land Registries, particularly in the bigger offices, was another serious difficulty that had to be contended against. The arrears in the examination of duplicates were due to the fact that this work had to be frequently interrupted, a portion of the examining staff being from time to time detached for registration of deeds to reduce the arrears as much as possible :—

Table D.—Statement of Arrears in the Several Land Registries.

| Office.         | Arrears in Units at the end of |           | Maximum Period of Arrears in Registration, Copying, and Searching. (Days.) |       | Maximum Period of Arrears in Examination. (Months.) |       |

| Head Office ..  | 67                             | 107·5     | 6  | 4     | —   | —     |
| Total ..        | 11,377·29                      | 30,757·68 |  |       |   |       |

#### BINDING.

6. The binding of land registers is up to date, but as regards old notarial duplicates (for which there is a special vote provided annually) the work is still considerably in arrear. There were bound during the year only 1,942 volumes (458 less than last year), out of about 17,600 remaining unbound at the end of 1918. The high cost of binding materials accounts for this slow progress.

#### CONSOLIDATION OF INDEXES.

7. The consolidation of old indexes done during the year shows a decrease of about 88 per cent. as compared with last year. In this branch too the work was hindered by the withdrawal from time to time of some of the clerks for registration and other business of a more pressing nature. Six indexes are being consolidated in the branch offices, namely, Chilaw Division B, Jaffna D, Kalutara A, Kandy H, Matara E, and Negombo E. Three complete indexes, Batticaloa Division H, Chilaw D, Kurunegala B, and also a part of Negombo C, were typed during the year. It is desirable that printing of indexes, which was suspended in 1914, should be resumed, the difference in cost being inconsiderable. Printed indexes are not only more handy and durable, but occupy less space than typewritten volumes.

#### NOTARIES AND DEEDS.

8. In Table E below are shown the number of practising notaries, the number and value of deeds executed, and other details. The notaries practising at the end of the year numbered 704, as against 655 in the previous year, an increase of 49, which is mostly due to the addition to the ranks of proctor-notaries which takes place regularly every half-year. Notwithstanding this increase in notaries, the average number of deeds per notary has risen from 290 in 1918 to 340 in 1919, owing to the large increase in the number of deeds that were executed during the year. The average value of a deed executed in 1919 was Rs. 580, as against Rs. 638 in 1918. The total number of deeds executed was 252,907, as against 202,354 in 1918, an increase of 25 per cent. The total value of stamps affixed to these deeds at the

time of execution, that is, duties levied under the Stamp Ordinance, amounted to Rs. 1,628,918. This sum includes the registration charges—which are not recovered separately now—on most of the deeds executed during the second half of the year, i.e., since the introduction of the amending Ordinances referred to in paragraph 1. The amount representing the registration duties on these instruments having been calculated to be about Rs. 470,931, the balance (Rs. 1,157,987) may be taken as the amount of stamp duties payable on the execution of the deeds independently of registration. This is Rs. 147,739 in excess of the amount levied on deeds executed in the previous year under the old stamp schedule :—

Table E.—Number of Notaries Practising and Particulars of Deeds Executed and Registered.

|  | 1918.           | 1919.           |
|--|-----------------|-----------------|

| Percentage written in—                 | Per Cent.       | Per Cent.       |
| English .. ..                          | 17              | 17              |
| Sinhalese .. ..                        | 66              | 69              |
| Tamil .. ..                            | 17              | 14              |

\* This includes Rs. 470,931 being registration charges recovered from July to December, 1919, at the time of execution under Ordinance No. 10 of 1919.

9. The following table (F) shows the nature, number, and value of the transactions affecting immovable and movable property registered in 1918 and 1919 :—

Table F.—Nature, Number, and Value of Transactions affecting Immovable and Movable Property registered in 1918 and 1919.

| Nature of Deeds.                | Number. |         | Consideration. |             |
|---------------------------------|---------|---------|----------------|-------------|
|                                 | 1918.   | 1919.   | 1918.          | 1919.       |
| Immovables :—                   |         |         | Rs.            | Rs.         |
| Transfers by sale, gift, &c. .. | 68,286  | 104,993 | 54,328,413     | 66,589,470  |
| Mortgages .. ..                 | 48,197  | 66,139  | 39,203,369     | 39,917,889  |
| Leases .. ..                    | 4,978   | 14,579  | 3,843,212      | 7,234,802   |
| Other deeds .. ..               | 12,511  | 16,192  | 24,291,072     | 31,987,658  |
| Total .. ..                     | 133,972 | 201,903 | 121,666,066    | 145,729,819 |
| Movables :—                     |         |         |                |             |
| Transfers by sale, gift, &c. .. | 270     | 238     | 422,386        | 400,714     |
| Mortgages .. ..                 | 322     | 351     | 854,857        | 1,004,511   |
| Leases .. ..                    | 8       | 23      | 8,017          | 21,546      |
| Other deeds .. ..               | 95      | 140     | 384,237        | 517,764     |
| Total .. ..                     | 695     | 752     | 1,669,497      | 1,944,535   |

Transfers by sale, gift, &c., show an increase of 36,707 deeds, or over 53 per cent., as compared with 1918; mortgages over 37 per cent.; leases an enormous increase of 193 per cent.

#### PROPORTION OF DEEDS THAT ESCAPE REGISTRATION IN EACH DISTRICT.

10. Table G, which follows, shows the proportion of deeds that escape registration in each district :—

Table G.—Proportion of Deeds Registered to Deeds Executed in each District in the Year 1919.

| District.       | Number of Deeds executed. |                              | Number of Deeds registered. |                              | Percentage unregistered. |             |

| Trincomalee ..  | 1,001                     | 693                          | 285                         | 270                          | 71.5                     | 61          |
| Total ..        | 252,907                   | 244,526                      | 202,655                     | 201,903                      | 19.9                     | 17.4        |

In the Badulla District, where the percentage of deeds registered for the last three years averaged 66, the number registered this year even exceeded the number executed, this excess being due to the fact that a large number of old deeds, the registration of which had been neglected, was tendered in the course of the year. Ratnapura, which for the last three years showed the best percentage of deeds registered, continues to occupy the first place, the unregistered deeds in that district being less than 1 per cent. It is followed by Puttalam, Kegalla, Chilaw, Galle, Kandy, and Kurunegala. The Northern and Eastern Provinces are, as usual, the worst in this respect, although they are better than in the previous year. The improvement is especially noticeable in the Jaffna District, where the number of unregistered deeds has been reduced by about 16 per cent. this year.

For the whole Island the number of unregistered deeds is 20 per cent., which is about 14 per cent. less than in the previous year. This improvement in registration is undoubtedly due to the introduction of the amending Ordinances Nos. 10 and 11 of 1919, which, by providing for the registration charges being recovered at the time of execution in the case of most of the deeds, have practically compelled the parties to seek prompt registration. Had this provision, which was introduced only in July, 1919, been in operation throughout the year, the difference between registered and unregistered deeds would probably be a negligible quantity.

#### NOTARIES.

11. During the year 68 new notaries were admitted, of whom 54 were proctors, to whom notarial warrants were issued as a matter of course. The remaining 14 were appointed to fill vacancies among non-proctor notaries caused by death or retirement. One non-proctor notary resigned owing to old age, and 18 notaries died, of whom 10 were proctors.

Two notaries were invested with honorary rank at the last anniversary of His Majesty the King's Birthday, viz., Notary D. B. K. Goonetilleka, of Kalutara, who, being a Muhandiram, was raised to the rank of Mudaliyar; and D. H. Wijeyetunga, of Kurunegala, who was made a Muhandiram.

#### PROSECUTIONS.

12. Prosecutions were instituted against 11 notaries, including 9 proctor-notaries (7 of Colombo, 1 of Galle and 1 of Batticaloa), for various offences against the Notaries Ordinance. The fines imposed by court in 7 of these cases amounted to Rs. 970. In the remaining 4 cases the proceedings were dropped, and the accused permitted to compound the offences by payment of fines imposed departmentally, which amounted to Rs. 580.

#### INSPECTION OF NOTARIES' OFFICES.

13. Eighty-seven notaries' offices were inspected during the year, and as a result five notaries were punished with fines aggregating Rs. 162.50, and in the case of one there was an order by the Governor, under section 29 (35) (c) of the Notaries Ordinance, that the notary, who had previously been directed to keep the Instruction Book in his own handwriting, should make the protocols also in his own handwriting.

#### DEFICIENCY OF STAMP DUTY, &c.

14. A sum of Rs. 3,392.50 was recovered from notaries as penalties for deficiency of stamp duty on deeds attested by them and for breaches of the Notaries Ordinance. The amount of deficiency of stamp duty recovered was Rs. 2,894. The stamps on notarial warrants amounted to Rs. 4,175.

#### FRAUDULENT DEEDS.

15. During the year 34 deeds were impounded for various irregularities; 25 of these were declared null and void, and in the case of the remaining 9 the executants were convicted of fraud.

#### FINGER IMPRESSIONS.

16. Finger impressions were taken in the case of 11,116 deeds, as compared with 8,440 in 1918.

#### RE-VERIFICATION OF RECORDS.

17. Under this head only about 1,000 units of work were done during the year. A re-verification of records commenced in Chilaw in November, 1918, and in Badulla and Kegalla in June and September, 1919, respectively, is being continued. Satisfactory progress has not been made in this work, owing to the increased registration business requiring the undivided attention of the staff.

#### ADMINISTRATION.

18. The writer assumed duties as Acting Registrar-General on September 15, 1919, relieving Mr. W. L. Kindersley on his appointment to the Government Agency of Uva. Early in the year there was a temporary exchange of duties (from February 10 to March 21) between Mr. Kindersley and the Hon. Mr. C. S. Vaughan, Government Agent of the Central Province.

Mr. Kindersley, who was appointed Registrar-General in September, 1914, presided over the Department for fully five years, a term exceeded by only one of his predecessors. During this period the Department saw a considerable expansion of its business, to meet which there was a large addition to the staff, notwithstanding war retrenchment. Apart from the normal growth of the ordinary business, there were added from time to time new items of work, such as that connected with elections under the Legislative Council Ordinance, No. 13 of 1910, and the registration of business names and companies incorporated abroad, introduced by the Ordinances Nos. 6 and 7 of 1918. As a war measure Mr. Kindersley was temporarily appointed officer for noting marine protests of British vessels calling at Colombo. He was also an Official Member of the Legislative Council from June 1 to September 15, 1919, during which period several Bills relating to the Department were passed.

The appointment in April last of the Registrar-General and his Principal Assistant as Justices of the Peace, on the recommendation of Mr. Kindersley, helped to promote the convenience of the general public, who have frequently to furnish affidavits and statutory declarations in their dealings with this office. As Returning Officer, Mr. Kindersley conducted three elections, two of which were contested. His very frequent visits of inspection to notaries' offices tended to maintain the efficiency of the profession, for whose members he was, moreover, instrumental in obtaining sanction for a higher scale of fees.

Other changes consequent on Mr. Kindersley's transfer were the appointment of the Second Assistant, Mr. F. L. Anthonisz, to act as Assistant Registrar-General, and of the Chief Clerk, Mr. E. R. de Silva, as Second Assistant Registrar-General.

#### TRANSFERS.

19. The changes among the Registrars of Lands during the year were the appointment of Mr. J. W. A. Perera to Ratnapura, Mr. W. C. Perera to Badulla, Mr. A. W. Rosa to Negombo, Mr. Y. M. T. Subasinha Bandara to Anuradhapura, Mr. C. Arumugam to Mullaitivu, and Mr. A. Manikavasagar to Mannar.

Five officers in the Subordinate Clerical Service were transferred to other Departments, while two were lent to the Food Controller for special duty. Another officer, also of the Subordinate Clerical Service, secured employment in German East Africa during the year.

#### RESIGNATIONS.

20. Messrs. V. S. T. Gopal and E. A. Lawrence, both officers in Class II., resigned their appointments, the former to join a seminary in India to prepare for Holy Orders, and the latter to join the Medical College. Mr. D. Swaminathan, an officer in the Subordinate Clerical Service, resigned on the ground of ill-health.

#### RETIREMENTS.

21. One officer in the Subordinate Class, Mr. B. S. Cooray, retired owing to failing health.

#### WAR SERVICE.

22. Mr. W. L. P. Amerasinghe, who went on war service with the Ceylon Sanitary Corps in 1917, having returned from Mesopotamia, resumed duties in this Department on November 29, 1919. Mr. S. E. de Costa, who had been seconded for war work in the local Censor's Office, also reverted to his post in the Department during the year.

#### OBITUARY.

23. The Department lost two promising officers of Class II. by the death of Messrs. D. A. de Silva and N. P. Salman. Another officer who died during the year was Mr. E. Nadarajah of the Subordinate Clerical Service.

#### ADDITIONS TO THE CLERICAL STAFF.

24. Thirty-two additional clerks—10 in Class II. and 22 in the Subordinate Clerical Service—were sanctioned during the year to deal with the increase in business expected as a result of the introduction of the amending Registration and Stamp Ordinances. But this additional staff having proved insufficient to cope with the volume of increased business, which exceeded all expectation, a number of daily-paid clerks had to be employed; and at the end of the year there were as many as 36 such hands, in addition to the regular staff, a good proportion of whom were also working overtime to keep abreast of the work. As a further expedient to avoid delay in registration of deeds and consequent public inconvenience, other work—less urgent, though not less important—such as examination of notarial deeds, consolidation of registration indexes, &c., had to be suspended in many offices.

There were at the close of the year six vacancies in Class II. filled by temporary substitutes for want of passed candidates. The strength of the Land Registration Department was 268 officers, of whom 58 were temporary hands.

#### LEGISLATION.

25. The amending Stamp and Registration Ordinances, Nos. 10 and 11 of 1919, came into force on July 1, 1919, and as a result, registration of deeds is now practically compulsory. Most of the deeds which were charged registration duty under the old schedule to Ordinance No. 14 of 1891 are now omitted from the schedule to the amending Registration Ordinance (No. 11 of 1919), and registration charges on them, on an enhanced scale, are included in the duties provided under the new Stamp Ordinance. The effect of the change is that in the case of a good proportion of deeds (not less than 30 per cent.), the registration of which was either neglected or put off till necessity for it actually arose, registration is now sought freely, as the owners who have no further payment to make for registration have no occasion for postponing it.

The Notaries (Amendment) Ordinance, No. 22 of 1919, which came into operation on October 10, 1919, was the outcome of a Commission appointed by His Excellency the Governor on a motion brought before the Legislative Council by Hon. Mr. K. Balasingham. It was the common practice for notaries and clients to agree upon a fee irrespective of the scale laid down in the Ordinance; but this being opposed to section 34 of the Ordinance, which penalized a notary demanding and accepting a higher fee or refusing to work on the prescribed fee, the practice was legalized by the amending Ordinance, while at the same time the opportunity was taken to provide a higher scale of fees. The Ordinance also improved, to a certain extent, the status of notaries of long standing who held appointment under section 6 of Ordinance No. 1 of 1907.

The Death Duties Ordinance, which was passed during the year, has also thrown additional work on the Department.

#### EXAMINATIONS.

26. Six officers of the Subordinate Clerical Service passed the Government Clerical Examination. For the selection of candidates to fill vacancies in the Subordinate Clerical Service, two departmental examinations were held, at which 300 candidates appeared.

## CLERKS' REWARD FUND.

27. The Clerks' Reward Fund had a balance of Rs. 240.19 at the end of the year, out of which a sum of Rs. 210 was distributed as prizes. These prizes are awarded annually to deserving clerks in the Subordinate Clerical Service, the test of merit being the average output of work during the year, due regard being paid to neatness and accuracy. This practice has been found to promote a healthy competition among the officers. The special departmental prize was won this year by a clerk in the Galle Land Registry, with an output of work 50 per cent. above that of an average clerk.

## RICE SHORTAGE.

28. Members of this Department, in common with others, had to undergo considerable hardship during the year owing to the shortage of rice. When the control of rice was enforced and sales withdrawn from kaddai-keepers, officers who used to obtain their monthly provisions from boutiques on credit found themselves hard pressed, having spent their previous month's salaries in liquidation of liabilities already incurred. The situation was, however, eased by the sympathetic intervention of Mr. Kindersley, who obtained from Government advances on their salaries. He also succeeded in securing from the Food Controller a few bags of rice for distribution among officers at a time when conditions were most acute.

## INFLUENZA EPIDEMIC.

29. The influenza epidemic which prevailed during the greater part of the year seriously hampered the work of the Department, over 50 per cent. of the clerks in some offices being absent at times owing to ill-health. One officer, I regret to record, succumbed to the disease."

## BUILDINGS.

30. The new building for the Negombo Land Registry, commenced in February, 1918, was completed and taken over by the Department in April, 1919. The building, though satisfactory in other respects, still required iron bars for the shutters of the doors and windows for the better security of records. This defect is now being remedied.

In the Colombo Land Registry, which only last year was housed in the quarters vacated by the Land Settlement Department, the need of additional accommodation is being felt. The staff having had to be considerably strengthened to meet the recent expansion of business, every possible make-shift had to be devised to accommodate the additional clerks, with the result that the officers now work under great inconvenience. Better accommodation for this office will have to be provided early.

Another office which suffers from similar congestion is the Kandy Land Registry; but when the branch offices—expected to be opened in the course of this year—at Nuwara Eliya and Matale are established, it is hoped that the situation will be eased.

The Jaffna Land Registry, which was also handicapped by insufficiency of accommodation, has had an extension sanctioned. The work is now in hand.

## PROSECUTIONS.

31. Two criminal prosecutions for attempted fraud were instituted by the Department during the year, both cases resulting in conviction. In one the accused attempted to obtain registration of a deed by affixing to it as duty a stamp extracted from a deed which had been previously registered; the other was an attempt to have a discharge of a mortgage bond registered on the lower scale of duty, which had been in force prior to July 1, 1919, by altering the date of discharge. In the first case the accused was fined Rs. 100; while in the other a fine of Rs. 30 with simple imprisonment for the day was imposed.

## DUTIES OF THE REGISTRAR-GENERAL.

32. For particulars of business done by the Registrar-General in regard to the registration of births, marriages, and deaths, and the compilation of connected statistics, reference is requested to my report on the Vital Statistics of 1919. The registration of Joint Stock Companies, Societies, Business Names, Trade Marks, and Designs is dealt with in separate reports.

Registrar-General's Office,  
Colombo, February 28, 1920.

N. W. MORGAPPAH,  
Acting Registrar-General.

# COMPANIES AND SOCIETIES.

## REPORT OF THE REGISTRAR OF JOINT STOCK COMPANIES ON THE REGISTRATION OF JOINT STOCK COMPANIES AND SOCIETIES FOR 1919.

### I.—COMPANIES.

THE present report is for the thirteenth year in which the work connected with the administration of "The Joint Stock Companies Ordinance, 1861," has been carried out by the Registrar-General.

2. *Legislation.*—A new Ordinance consolidating and amending the Company law in Ceylon on the lines of the English Act now in force is a long-felt want. Such a measure has been in contemplation for some years, and it is hoped that the matter will receive attention in the course of the current year.

3. The penal provision in section 111 (3) of the Ordinance (as amended by Ordinance No. 7 of 1918) as regards failure to file the documents required of companies incorporated outside Ceylon was modified by the Ordinance No. 29 of 1919 (passed in Council on December 3, 1919) by the addition of a proviso authorizing the Registrar-General to accept such sum of money as he might think proper in composition of the offence.

4. *Companies Incorporated outside Ceylon.*—The business of the Companies Branch was greatly increased as a result of the introduction, in November, 1918, by the Ordinance No. 7 of 1918 (section 111), of the provisions of section 274 of the English Companies Act of 1908. As many as 297 companies incorporated outside Ceylon and carrying on business in the Island were registered during the year. The total number of such companies registered up to the end of 1919, i.e., including 15 registered in 1918, is 312, and exceeds by 32 the number of locally incorporated companies carrying on business at the end of the year. The work done in my office in connection with the registration of companies has thus more than doubled itself. Of the 312 companies, 264 are established in Great Britain, 1 in Ireland, 3 in Australia, 2 in New Zealand, 1 in Canada, 15 in British India, 9 in Hong Kong, 1 in Straits Settlements, 6 in America, 5 in Japan, 3 in Holland, 1 in France, and 1 in Switzerland. In regard to 15 other companies the necessary documents were received during the year, but could not be registered before the end of the year owing to certain defects in them.

5. *Supervision of Companies.*—Generally speaking, the requirements of the Ordinance in regard to locally incorporated companies were satisfactorily complied with. There was no occasion for fines for failure to file documents within the prescribed time. As regards documents required under the new provision in section 111, most of them having had to be obtained from abroad, the companies concerned were allowed an extension of time.

6. The Arcadia Coconut Estates, Limited, reduced its nominal capital from Rs. 2,000,000 to Rs. 1,912,340, and the Ekkeralle Tea and Rubber Company, Limited, reduced its issued capital from Rs. 186,615 to Rs. 93,307.50. Both reductions were duly sanctioned by court.

7. The following five companies increased their capital during the year :—

| Name of Company.                              | Capital before<br>the Increase. | Increased<br>Capital. | Date of passing<br>the Resolution. |
|---|---------------------------------|-----------------------|------------------------------------|
|   | Rs.                             | Rs.                   |                                    |
| The Colombo Apothecaries' Company, Limited .. | 800,000 ..                      | 2,000,000 ..          | June 24                            |
| The Etambawela Rubber Company, Limited ..     | 250,000 ..                      | 1,000,000 ..          | September 20                       |
| The Nyanza Tea Company of Ceylon, Limited ..  | 300,000 ..                      | 415,350 ..            | September 26                       |
| The Tannahena Rubber Estates, Limited ..      | 350,000 ..                      | 500,000 ..            | December 11                        |
| The Nahavilla Estates Company, Limited ..     | 1,000,000 ..                    | 1,500,000 ..          | December 12                        |

8. *Progress of Registration.*—Twenty-seven new companies were incorporated with an aggregate capital of Rs. 19,875,000, as against 17 companies with a capital of Rs. 11,615,000 in the previous year. The average amount of nominal capital per company in 1919 was Rs. 73,611.11, and the average value of a share was Rs. 37.59. Of the 27 companies registered, 15 were companies established for the purpose of planting land; 8 for carrying on trade in the Island; 1 each for manufacture of aircraft and aerial transport; 1 for publishing and conducting a newspaper; and the last company registered in the year was for the establishment of a college of music.

9. At the beginning of the year there were 266 locally incorporated companies, including 12 companies then in liquidation. Five of the latter were wound up in the course of the year. The addition of the 27 incorporated during the year brings the total number on the register at the end of the year to 288. Eight of these being in liquidation, the actual number doing business at the end of the year was 280, against 254 at the end of the previous year.

10. Further details in regard to the progress of registration of companies since the work was transferred to this Department are shown in the table below :—

Table I.—Companies : Progress in Registration.

| Number of Companies on Register on January 1. | Year. | Number registered. | Aggregate Capital of new Companies. Rs. | Number wound up. | Number struck off the Register. | Number in Liquidation. at the end of Year. | Total Number actually carrying on Business on December 31. |
|---|-------|--------------------|---|------------------|---------------------------------|--|--|

| 210   | 1913  | 15                 | 9,270,000                               | 3                | 1                               | 6  | 215  |
| 221   | 1914  | 15                 | 5,005,350                               | 6                | 1                               | 7  | 222  |
| 229   | 1915  | 6                  | 1,950,000                               | 4                | —                               | 9  | 222  |
| 231   | 1916  | 21                 | 13,275,000                              | 2                | —                               | 10   | 240  |
| 250   | 1917  | 10                 | 5,550,000                               | 5                | 3                               | 11   | 241  |
| 252   | 1918  | 17                 | 11,615,000                              | 3                | —                               | 12   | 254  |
| 266   | 1919  | 27                 | 19,875,000                              | 5                | —                               | 8  | 280  |

11. Following is a list of the twenty-seven companies registered in 1919 :—

Table II.—Companies registered during the Year 1919.

| Registered No. | Name of Company.  | Date of Registration. | Nominal Capital. Rs. | Value of each Share. Rs. |
|----------------|---|-----------------------|----------------------|--------------------------|
| 415            | The Cullen Estates, Limited                                   | January 10            | 750,000              | 10                       |
| 416            | British Fertilisers, Limited                                  | February 3            | 1,500,000            | 10                       |
| 417            | The Barnbaragalla Rubber Estates, Limited                     | February 13           | 150,000              | 10                       |
| 418            | The Usk Valley (Kalutara) Rubber Company, Limited             | February 13           | 800,000              | 10                       |
| 419            | Southern Investments Corporation, Limited                     | February 13           | 2,000,000            | 10                       |
| 420            | The Logie Tea and Rubber Company, Limited                     | February 13           | 600,000              | 100                      |
| 421            | Gavatenne Estate, Limited                                     | March 3               | 200,000              | 10                       |
| 422            | The Nayanza Tea Company of Ceylon, Limited                    | March 14              | 300,000              | 10                       |
| 423            | The Muppane Valley (Ceylon) Rubber Company, Limited           | March 14              | 500,000              | 10                       |
| 424            | Wilson, Holgate & Company (Ceylon), Limited                   | March 18              | 300,000              | 10                       |
| 425            | The Torrington Tea Estates, Limited                           | April 4               | 2,000,000            | 10                       |
| 426            | Oaklands Tea and Rubber Company, Limited                      | April 29              | 500,000              | 100                      |
| 427            | The Ceylon General Investment and Plantation Company, Limited | May 23                | 600,000              | 120                      |
| 428            | The Rakwana Tea and Rubber Company, Limited                   | May 24                | 750,000              | 10                       |
| 429            | Mackwoods, Limited  | June 28               | 1,600,000            | 50                       |
| 430            | Pembroke Estate, Limited                                      | July 18               | 200,000              | 10                       |
| 431            | The Orient Company (Ceylon), Limited                          | July 18               | 500,000              | 10                       |
| 432            | The Aircraft Manufacturing Company of Ceylon, Limited         | July 18               | 1,500,000            | 100                      |
| 433            | The Aerial Transport Company of Ceylon, Limited               | July 18               | 1,500,000            | 100                      |
| 434            | The Jaffna Agricultural Company, Limited                      | October 13            | 25,000               | 50                       |
| 435            | The Ceylon Exports, Limited                                   | October 25            | 500,000              | 100                      |
| 436            | The Foreign Trades, Limited                                   | October 25            | 2,000,000            | 100                      |
| 437            | The Katiapola Rubber Company, Limited                         | October 25            | 500,000              | 10                       |
| 438            | The People Press, Limited                                     | November 4            | 100,000              | 10                       |
| 439            | The Vykumbra Rubber Company, Limited                          | November 5            | 200,000              | 10                       |
| 440            | The Nawalapitiya Buildings Syndicate, Limited                 | November 26           | 200,000              | 10                       |
| 441            | The College of Music, Limited                                 | December 15           | 100,000              | 25                       |

12. Companies that have closed Business.—Five companies were wound up during the year and one went into liquidation. Particulars of these are shown in Tables III. and IV. below :—

Table III.—Companies wound up during the Year 1919.

| Company No. | Name of Company.                               | Date of Incorporation. | Date of Registration of Final Resolution. | Remarks.   |
|-------------|--|------------------------|---|--|
| 362         | The Anglo-Oriental Furnishing Company, Limited | June 4, 1915           | February 12                               | —  |
| 346         | The Traders' Union Company of Cotta, Limited   | February 2, 1914       | May 5                                     | —  |
| 145         | Jaffna Steam Navigation Company, Limited       | March 26, 1902         | July 15                                   | —  |
| 385         | General Motor Services, Limited                | December 18, 1916      | September 26                              | —  |
| 347         | The Coliseum Theatre Company, Limited          | February 17, 1914      | November 4                                | Dissolved by a District Court Order dated October 23, 1919 |

Table IV.—Companies in Liquidation on December 31, 1919.

| 363 ..      | The Hagama Mining Company, Limited              | .. August 17, 1915     | .. November 20, 1916                               |
| 355 ..      | The Ceylon Saw Mills Company, Limited           | .. August 10, 1914     | .. July 25, 1917                                   |
| 324 ..      | The Ceylonese Union Company, Limited            | .. July 15, 1912       | .. November 3, 1917                                |
| 353 ..      | The Ceylon Sugar Refineries, Limited            | .. June 16, 1914       | .. September 18, 1918                              |
| 138 ..      | The Ceylon Planters' Transport Company, Limited | October 26, 1900       | .. December 30, 1919                               |

13. *Income.*—The total income derived during the year under review amounted to Rs. 15,042, distributed as follows:—

|  | Rs.    | c. |
|--|--------|----|
| Stamp duty on memoranda and articles of association ..   | 1,680  | 0  |
| Penalties for not duly stamping documents (failure to cancel stamps affixed to memoranda and articles of association) .. | 20     | 0  |
| Fees for incorporation, recording, and inspecting documents and issuing copies ..  | 8,347  | 0  |
| Fees for registering documents relating to companies incorporated outside Ceylon (section 111) ..                        | 4,995  | 0  |
| Total ..   | 15,042 | 0  |

14. The total income in 1918 being Rs. 7,555·30, the year 1919 shows an increase of Rs. 7,486·70, which is largely due to registrations affected under the new provision in section 111 of the Ordinance. Table V. below shows income and expenditure during the year:—

Table V.—Statement of Receipts and Expenditure during the Year 1919.

| RECEIPTS.  | Rs.    | c. | EXPENDITURE.           | Rs.    | c. |
|--|--------|----|------------------------|--------|----|
| Fees ..  | 13,342 | 0  | Personal emoluments .. | 2,727  | 39 |
| Penalties ..   | 20     | 0  | Incidental expenses .. | 16     | 8  |
| Stamp duty on memoranda and articles of association .. | 1,680  | 0  | Total Expenditure ..   | 2,743  | 42 |
| Fees under the Societies Ordinance ..                  | 30     | 0  | Surplus ..             | 12,328 | 58 |
| Total ..   | 15,072 | 0  | Total ..               | 15,072 | 0  |

*Note.*—A sum of Rs. 10,458·25, as against Rs. 6,649·50 in 1918, recovered by the Government Printer for publication of memoranda and articles of association in the *Government Gazette*, has not been included in the above statement.

## II.—MUTUAL PROVIDENT SOCIETIES.

15. The under-mentioned three societies—all educational, and specially authorized under sub-section (2) of section 3 of the Ordinance—were registered during the year under the Societies Ordinance, No. 16 of 1891:—

| Name of Society.   | Objects.   | Date of Registration. |
|--|--|-----------------------|
| 1. The Maradana Bauddha Samayabhiwaddhi Society, Limited | Promotion of Buddhist education by means of schools and orphanages, and the encouragement of industrial education  | October 1             |
| 2. The Ceylon Moslem Educational Society, Limited        | Education of Moslem children by means of a college in Colombo and schools in other towns and villages, and by giving free scholarships to poor Moslem children | October 6             |
| 3. The Galle Buddhist Theosophical Society, Limited      | Promotion of Buddhist education by means of schools and orphanages, and the encouragement of industrial education  | November 26           |

16. With the three previously registered, the total number of societies now on the register is six.

17. In July last Mr. P. D. Ratnatunga, Head Clerk of the Companies and Trade Marks Branch of my Head Office, was appointed a Public Auditor and Valuer under section 18 of the Ordinance.

18. Fees amounting to Rs. 30 were recovered during the year for registering three societies.

Registrar-General's Office,  
Colombo, February 26, 1920.

N. W. MORGAPPAH,  
Acting Registrar-General.

## REGISTRATION OF TRADE MARKS AND DESIGNS.

### REPORT OF THE REGISTRAR-GENERAL ON THE REGISTRATION OF TRADE MARKS AND DESIGNS FOR 1919.

#### I.—TRADE MARKS.

*Legislation.*—The registration of trade marks is governed by the Ordinance No. 14 of 1888, which was modelled on the English Trade Marks Act of 1875, now obsolete. The local Ordinance, which has undergone several changes from time to time, is badly in need of further amendment to meet present-day requirements. A draft Ordinance consolidating and amending the law so as to bring it more into line with the Trade Marks law in England was prepared by the Department some years ago, but further action in the matter had to be deferred owing to more pressing legislative work which required prior attention. It was also thought desirable that the proposed Ordinance should stand over, in view of the fact that it might be found necessary to revise the whole law relating to trade marks after the termination of the war. Now that peace has been finally concluded, it is hoped that it will be possible to take up the matter without further delay, and that the present antiquated Ordinance will soon be replaced by an up-to-date statute on the lines of the English Trade Marks law now in force.

2. *Registration.*—250 applications for the registration of as many trade marks in 344 classes were received, as against 133 applications in 151 classes during 1918. This shows an increase of 117 applications on the preceding year and 137 on the annual average for the ten previous years. 112 marks were admitted without question; 14 applications were allowed, after correspondence, to proceed; 37 were admitted after correction of clerical errors; and 19 after amendments in the specification of goods. Eight were allowed to proceed after insertion of disclaimers, and 1 was admitted by consent. Seven applications were withdrawn (1 consequent on opposition), while as many were rejected. Forty-nine applications were pending at the end of the year. There were 4 hearings under section 34 of the Ordinance.

3. Although there has been a considerable increase in the number of applications dealt with during the year, the number of marks actually registered was only 109 covering 139 classes, a decrease of 26 compared with the number registered in 1918. This is accounted for by the fact that over 50 marks admitted to registration during the last quarter, which shows a larger number of applications than any previous quarter of the year, were not ripe for registration until early in 1920. The following statement shows the distribution in the several classes of the marks registered:—

| Class. | Number of Marks. | Class. | Number of Marks. | Class. | Number of Marks. |
|--------|------------------|--------|------------------|--------|------------------|
| 1 ..   | 5                | 18 ..  | 1                | 35 ..  | —                |
| 2 ..   | 1                | 19 ..  | —                | 36 ..  | 1                |
| 3 ..   | 7                | 20 ..  | —                | 37 ..  | 1                |
| 4 ..   | 3                | 21 ..  | —                | 38 ..  | 2                |
| 5 ..   | 3                | 22 ..  | 3                | 39 ..  | 6                |
| 6 ..   | 8                | 23 ..  | —                | 40 ..  | 3                |
| 7 ..   | 1                | 24 ..  | 12               | 41 ..  | 3                |
| 8 ..   | 1                | 25 ..  | 2                | 42 ..  | 11               |
| 9 ..   | 1                | 26 ..  | —                | 43 ..  | 3                |
| 10 ..  | —                | 27 ..  | —                | 44 ..  | 1                |
| 11 ..  | 1                | 28 ..  | —                | 45 ..  | 20               |
| 12 ..  | 1                | 29 ..  | —                | 46 ..  | —                |
| 13 ..  | 5                | 30 ..  | —                | 47 ..  | 8                |
| 14 ..  | 1                | 31 ..  | 4                | 48 ..  | 5                |
| 15 ..  | —                | 32 ..  | —                | 49 ..  | —                |
| 16 ..  | —                | 33 ..  | —                | 50 ..  | 10               |
| 17 ..  | —                | 34 ..  | 5                |        |                  |

4. Of the trade marks registered in the years 1904, 1905, and 1906, registration was renewed for a second period of fourteen years in 56 cases; and of those registered in 1891, for a third period of fourteen years in 5 cases. In the case of 3 marks registered in the name of alien enemies, action in regard to their renewal, which fell due during the year, was suspended under the Trade Marks (Temporary) Rules, 1915. Twenty-one marks were removed from the register for non-payment of the fee for renewal.

5. Five trade marks applications from German subjects, which were received in 1914 shortly before the war commenced, were still in abeyance at the end of the year. The following is a list of these marks:—

| Application No. | Name of Applicant.                        |
|-----------------|---|
| 864 ..          | Daimler—Motoren Gesellschaft              |
| 865 ..          | Do.                                       |
| 921 ..          | Kabelwerk Duisburg Aktien Gesellschaft    |
| 923 ..          | Jacques Schiesser                         |
| 926 ..          | Transatlantic Ex.—& Import Comp. m. b. H. |

6. Further details in regard to the registration of trade marks since the year 1907, when the work was transferred to me, appear in the Table I. below :—

Table I.—Trade Marks: Registration.

| Period.    | Applications.    |                     |                                |                  |                                |  | Oppositions.    |                         |                        |                                | Renewals. | Renewals suspended. | Removals. | Restorations. | Assignments. | Changes of Name or Address. |
|------------|------------------|---------------------|--------------------------------|------------------|--------------------------------|--|-----------------|-------------------------|------------------------|--------------------------------|-----------|---------------------|-----------|---------------|--------------|-----------------------------|
|            | Number received. | Number entertained. | Number withdrawn or abandoned. | Number rejected. | Number pending at end of Year. | Number of Marks entered on the Register. | Number entered. | Applications abandoned. | Oppositions abandoned. | Number pending at end of Year. |           |                     |           |               |              |                             |

| 1917 ..    | 129              | 89                  | 10                             | 11               | 19                             | 83                                       | 3               | 1                       | 1                      | 1                              | 38        | —                   | 33        | 6             | 2            | 1                           |
| 1918 ..    | 133              | 101                 | 8                              | 8                | 16                             | 135                                      | —               | —                       | —                      | —                              | 101       | 11                  | 32        | —             | 11           | —                           |
| 1919 ..    | 250              | 187                 | 7                              | 7                | 49                             | 109                                      | 3               | 1                       | —                      | 2                              | 61        | 3                   | 21        | 3             | 11           | 53                          |

7. The receipts from the various sources on account of trade marks amounted to Rs. 5,081. This represents an increase of Rs. 928·87 on the amount received in 1918. A further sum of Rs. 407 was recovered by the Government Printer for additional space (i.e., space in excess of 2 inches which is allowed free of charge) in the *Government Gazette* in respect of trade marks advertisements. For details of receipts and expenditure see Table II. below :—

Table II.—Statement of Receipts and Expenditure during the Year 1919.

| RECEIPTS.*                         |         | EXPENDITURE.           |          |

\* A sum of Rs. 407, as against Rs. 212 in 1918, recovered by the Government Printer for additional space in the *Government Gazette* in respect of trade marks advertisements, is not included.

II.—DESIGNS.

8. Only 1 application for registration of a design (under Ordinance No. 7 of 1904) was received in 1919. In addition to this, there were registered during the year two applications of 1918. Receipts under this head amounted to Rs. 20, as against Rs. 38·50 in 1918.

Registrar-General's Office,  
Colombo, February 23, 1920.

N. W. MORGAPPAH,  
Acting Registrar-General.

## REGISTRATION OF BUSINESS NAMES.

### REPORT OF THE REGISTRAR-GENERAL ON THE REGISTRATION OF BUSINESS NAMES FOR THE YEAR 1919.

Of the various heads of business conducted in my office during 1919, the work connected with the registration of business names was about the heaviest. Though the Ordinance introducing this new feature came into operation in November, 1918, the work was not in full swing till about the middle of 1919. In 1918 there were only 168 applications for registration. As six months' time from the commencement of the Ordinance was allowed for registration in the case of firms and persons who either were carrying on business before the Ordinance came into force or commenced business within two months thereafter, the bulk of the work came in a rush towards the end of the six months. During the first week of May alone there were as many as 1,524 applications for registration, about a third of which was received on the last day of the week.

2. Apart from the scrutiny and registration of the numerous statements of particulars furnished by the applicants, there was an overwhelming mass of correspondence to be attended to in connection with them. The following is a comparative statement of the correspondence done during the last three years in the Companies and Trade Marks Branch, to which the registration of business names has been assigned. The increase in the year under review is almost entirely due to the registration of business names, and gives an idea of the volume of additional work thrown on the office as a result of the new Ordinance :—

| Number of communications— | 1917. | 1918. | 1919.  |
|---------------------------|-------|-------|--------|
| Received .. ..            | 1,772 | 2,102 | 9,419  |
| Despatched .. ..          | 2,241 | 2,681 | 13,058 |

3. Early in the year a notice printed in English and the vernaculars drawing the attention of business and professional men to the principal requirements of the Ordinance was circulated throughout the Island. This was very helpful to the general public. Owing to a misunderstanding of the requirements of the Ordinance and to the heavy penalties provided under it for default, statements of particulars for registration were furnished by a number of petty traders to whom the Ordinance did not apply. This entailed on my office a very considerable amount of correspondence, extending in a number of cases over several months, for before the applicants could be definitely informed that they did not come within the scope of the Ordinance, it had to be ascertained in each case whether the applicant was carrying on business as a nominee or trustee, or was acting as a general agent for a non-British firm (section 3), or had at any time changed his name (section 2 (c)).

4. Indifference on the part of some local traders, and even of certain professional men of standing, with regard to letters of inquiry caused much inconvenience to the office, and delay in completing registration in many cases. In the case of some Indian firms, chiefly of rice dealers, who furnished defective statements of particulars and had to be communicated with for further information before their business names could be registered, it was several months before it was known that they had left the Island soon after difficulties arose in June in the rice trade.

5. *Prosecutions.*—In the North-Western Province there were 14 cases instituted against traders for failure to exhibit their certificates in some conspicuous position at their principal place of business. In all the cases the offenders were convicted, and the fines imposed amounted to Rs. 82.50.

6. *Legislation.*—The penalties provided under the Ordinance for failure to file the necessary documents within the prescribed time being of a considerable and serious character, and the infringement of the law in this respect being in most cases due to ignorance of the requirements, the inexpediency of prosecuting in every case of default was represented to Government by my predecessor, and on his recommendation an amending Ordinance (No. 27 of 1919) was passed vesting in the Registrars the power to compound for these penalties at their discretion in cases where the default has not been due to deliberate intention.<sup>4</sup> In pursuance of this provision, which came into effect on September 12, 1919, there were nominal penalties recovered amounting to Rs. 41.

7. The table below shows particulars of registration effected and of the income derived during the year in the several Provinces :—

[For Table I. see page G 2.]

It will be observed from the foregoing table that the work of the Western Province, which is attended to in the Head Office, the Registrar-General being the Registrar of that Province, was as much as that done in all the other Provinces put together. This, added to the work involved in the organization of this new business, was a great strain on the head office staff. The work done in this connection by Mr. P. D. Ratnatunga, the Head Clerk of the Branch to which this business is assigned, deserves special mention.

| Russian ..                | 2      | —            | —             | 2      |
| Swiss ..                  | 2      | —            | —             | 2      |
| Chinese ..                | 1      | —            | —             | 1      |
| Dutch ..                  | —      | —            | 1             | 1      |
| British and French ..     | 2      | —            | —             | 2      |
| British and Japanese ..   | 2      | —            | —             | 2      |
| British and Greek ..      | 1      | —            | —             | 1      |
| British and Portuguese .. | 2      | —            | —             | 2      |
| British and Swiss ..      | 1      | —            | —             | 1      |
| British and Danish ..     | —      | —            | 1             | 1      |
| Total ..                  | 2,390  | 2,205        | 12            | 4,607  |

As will be seen from the above list, the foreign businesses are for the most part French. They do not, however, all belong to Frenchmen; the majority of them are owned by French subjects from Pondicherry. The next most numerous foreigners doing business in the Island are the Japanese.

9. Registrations effected show that, apart from the number of foreigners who have actually established places of business in the Island, 75 non-British firms have their agents in Colombo for the general purposes of their business here. Of these, 20 are Japanese, 17 American, 11 Dutch, 9 French, 3 Italian, 3 Danish, 3 Swiss, 2 Russian, 2 Chinese, 2 Spanish, 2 Norwegian, and 1 Swedish.

10. Under section 14 of the Ordinance, 83 business names were removed from the register, the firms to which they belonged having ceased to carry on business.

11. There is still a fairly large number of business men who have not furnished particulars for registration, while of those who have applied for registration, some have yet to furnish further particulars to complete the registration.

12. The income and expenditure during the year are shown in the subjoined statement :—

Statement of Receipts and Expenditure during the Year 1919.

## PART IV.—EDUCATION, SCIENCE, AND ART.

## EDUCATION.

## REPORT OF THE DIRECTOR OF EDUCATION FOR 1919.

CHAPTER I.  
INTRODUCTORY.

THE present report covers the period from January 1 to December 31, 1919. The statistics dealing with numbers of pupils and schools show, as in all recent reports, the position on March 31, the date on which nationality returns are filled up. The financial figures are those for the financial year October 1, 1918, to September 30, 1919. In the case of grant-in-aid schools, the sum given as the total cost to Government is the total of the grants paid to all schools which have received grants during that period.

Twenty-four new grant-in-aid schools were registered during the year, and 10 schools were registered for examination only; these latter schools, if their progress is satisfactory, will receive grants as soon as funds permit, provided they satisfy the requirements of the new Government policy in regard to vernacular schools which is stated in Chapter VI. *infra*.

CHAPTER II.  
GENERAL SUMMARY.

The total number of pupils returned as attending schools in Ceylon is 402,049; of these, 377,949 are attending Government and grant-in-aid schools, and 24,100 are attending unaided schools. In 1918 the total number of those attending schools was 410,307. There is, therefore, a decrease of 8,258, due in great measure to epidemics; the influenza outbreak considerably reduced the attendance, and the shortage of food in the middle of the year, which kept a large number of children away from school. In some districts prosecutions for non-attendance at school were temporarily suspended; the falling off in school attendance was largest in the Northern and Western Provinces.

In 1919 the number of Government schools was 884, with 130,389 pupils. The numbers for 1918 were 864 and 125,779, respectively. There is, therefore, an increase of 20 schools and 4,610 pupils.

The grant-in-aid schools in 1919 numbered 2,098 with 247,560 pupils, as against 2,088 schools and 255,083 pupils in 1918. There has, therefore, been an increase of 10 schools and a decrease of 7,523 pupils. The decrease in attendance at Government and grant-in-aid schools amounted to 2,913 pupils out of a total decrease of 8,258, the decrease is, therefore, accounted for by a falling off in the number of children attending unaided schools and grant-in-aid schools. The number of unaided schools which reported to Government in 1919 was 1,011, with 24,100 pupils. In 1918 there were 1,198 schools, with 29,445 pupils. There is, therefore, a decrease of 187 schools and 5,345 pupils. The return of unaided schools, though compiled as carefully as circumstances allow, can never be regarded as wholly trustworthy. The decrease in the attendance at unaided schools shows that these schools are being closed down, or that they are appealing to smaller numbers, which is not unsatisfactory, as the schools which are not registered for grant by the Department are, with very few exceptions, schools which do not satisfy requirements as regards staff and accommodation. The decrease in numbers at grant-in-aid schools is due to the increase in numbers attending Government schools and the laxity in enforcing attendance, which is too frequently found in the case of aided schools. Allowing, however, for these explanations and for the influence of illness and food shortage, the fact remains that the number of children attending school is less than in the previous year. One remedy is to build more Government vernacular schools and to take over those schools which are not at present being managed efficiently by other agencies. In Chapter VI. the statement of the new Government policy in regard to vernacular education is fully stated, and it will be seen that steps are to be taken which will, it is hoped, lead to improved attendance at efficient schools. It must be remembered, however, that unless deterrent fines are inflicted on parents who fail to send their children to school, attendance cannot be maintained; during the outbreak of illness and scarcity of food parents were frequently discharged in the village courts; when these special grounds for exemption are removed, Presidents of the Village Tribunals and headmen should be insistent on enforcing attendance.

The figures for the different districts show that the proportion of children under instruction to the population has been maintained. In the Western, Southern, North-Western, and Northern Provinces the parents realize the importance of education, and the proportion of children under instruction to the population is 1 to 8 in the Western Province, 1 to 10 in the Southern and 1 to 11 in the North-Western Provinces. In the Northern Province, where compulsory vernacular education was introduced for the first time in 1916, the proportion is 1 to 8. The district with the lowest proportion of children under instruction is the Province of Uva, where it is 1 to 33. The nature of the country, with its steep hills and long distances between villages, accounts largely for this. The proportion for the Island is one child under instruction for every eleven persons, which may be regarded as satisfactory, but can be improved.

In Indian reports the number of children of school-going age is calculated at 15 per cent. of the population; this includes boys and girls. The percentage of girls attending school is probably less than half the percentage of boys. It should also be recognized that it is only within the last three years that attendance in many of the larger towns and in the Jaffna District has been made compulsory.

The decrease in attendance must, therefore, have been spread over all the districts, which is further evidence that, generally speaking, attendance has been maintained, allowing for the exceptional number of exemptions granted by the Village Tribunals owing to the causes stated above.

Shortage of food cannot be accepted without reserve as sufficient excuse for non-attendance. In the Kurunegala District, through the generosity of members of the Low-country Products Association, the children in several schools were given free meals, which was a valuable precautionary measure against child mortality, as children weakened by influenza and lack of food are the first victims to any fresh outbreak of illness. In Colombo the Municipality voted a sum of Rs. 10,000 for free meals for the children in the town schools, and in the Maligakanda, Green street, and Dematagoda schools meals of barley and sago conjee were given from June 24, 1919. There are no better agencies for relief of distress than the schools, which by the provision of free meals to the children ensure that, at any rate, the childhood of the country shall not suffer unduly. 83,487 meals were supplied to children in the town of Colombo, or an average of 683 children a day were fed through these agencies, and the school kitchens were utilized for the feeding of those who could not afford to obtain a meal owing to the high price of rice during most of the year.

The total expenditure of the Department for the period October 1, 1918, to September 30, 1919, was Rs. 2,912,345·86. The nett cost to Government, after deducting sums credited to revenue on account of school fees and the sale of books and stationery, was Rs. 2,841,736·77.

The annual cost to revenue of each pupil in a Government vernacular school was Rs. 4·59 for each boy and Rs. 4·61 for each girl, exclusive of the charges incurred through the District School Committees for construction and maintenance of buildings; including this expenditure, the cost to Government of each child educated in a Government vernacular school was Rs. 6·13, as compared with Rs. 5·34 in 1918. The average grant paid for each pupil in a grant-in-aid English school was Rs. 13·18, as against Rs. 10·57 in 1918, in a grant-in-aid vernacular school it was Rs. 3·97, as compared with Rs. 3·80 in 1918. The increase in the average grant in grant-in-aid English schools was due to increased grants earned by these schools by improved efficiency and employment of more trained teachers; in grant-in-aid vernacular schools by increased bonuses to teachers and all-round improvement. In efficient vernacular grant-in-aid schools a grant of at least Rs. 5 to Rs. 6 should be earned, and the average amount shows that a large proportion of these schools do not maintain a high standard of efficiency.

### CHAPTER III. ADMINISTRATION.

I was on leave from April 7, 1919, to November 25, 1919, during which period Mr. E. Evans, Assistant Director, acted as Director. Mr. A. S. Harrison, Inspector of Schools, acted as Assistant Director from May 21, 1919, to the end of the year, Mr. E. Evans having gone on leave on December 1, 1919.

Mr. C. A. Wicks, Inspector of Mathematics and Science Work in Schools, was on leave from May 21.

Mr. A. R. P. Leetham continued to act as Inspector of Schools throughout the year.

There were no changes amongst the District Inspectors. The number of Sub-Inspectors was 30; the distribution was as follows: 13 in the Western District, 8 in the Central, 4 in the Southern, 3 in the Northern, and 1 in the Eastern Districts. A Senior Sub-Inspector, Mr. S. Candiah, continued to act as Inspector for the Eastern Province. The number of these Sub-Inspectors is quite inadequate.

These officers are directly responsible for the examination of 2,693 vernacular schools and for the vernacular classes in 55 Anglo-vernacular schools, which means on an average 90 schools to each Sub-Inspector. There are 200 days in the year on which the schools are open, and, considering that in many parts of the Island it takes a Sub-Inspector at least a day, and not infrequently two or three days, to get to a school—one-half of his time is probably spent travelling from school to school—it will be seen that the number of schools and the time allowed for their examination only admits of a visit of a day, and in very few cases two days, to each school, and makes surprise and incidental visits practically impossible.

There are 107 vernacular and Anglo-vernacular schools in Ceylon with over 300 children, which should take a Sub-Inspector a week to examine properly. In addition to this work, the Sub-Inspectors examine the vernacular literature in 204 English schools. On the reports of these Sub-Inspectors depends primarily the allocation of Rs. 855,000 in grants, bonuses, &c.

It is hoped to increase the number of Sub-Inspectors from next year.

### CHAPTER IV. HIGHER EDUCATION.

#### (1) THE ROYAL COLLEGE.

Mr. Lewis Walker, Acting Principal of the Royal College, reports:—

The year saw many changes on the staff. In January the Rev. C. F. Angus, M.A., Fellow of Trinity Hall, Cambridge, joined temporarily as Classical Lecturer, and Messrs. J. M. and E. L. Fonseka were added to the staff. In March Mr. O. M. F. Sampayo replaced Mr. B. H. Dunuwille. In May the Principal, Mr. Charles Hartley, M.A., retired after twenty-three years' service, and Mr. Lewis Walker, M.A., was appointed Acting Principal, while Mr. P. Saravanamuttu, B.A., joined as Acting Lecturer in Mathematics. In August the Rev. C. F. Angus returned to England on the return from war service of Mr. L. H. Sampson, B.A., the Lecturer in Classics. Messrs. R. S. V. Poulter, B.A., and P. Saravanamuttu, on being appointed to Civil Service Cadetships, were replaced by Messrs. H. J. Wijesinghe and W. R. Watson, B.A. Messrs. Gulessekaram, M.A., and V. Balasundaram also joined the staff, and Mr. H. P. Anthonisz resigned. In September Mr. O. M. F. Sampayo left the College. At the end of the year Messrs. C. A. de Zylva and W. D. E. Perera left the College staff, and Mr. F. D. Wijesinghe was transferred to the Training College to study for higher qualifications. During the year there was considerable sickness and temporary absence amongst members of the staff, owing chiefly to outbreaks of influenza. The death of Mr. Richard Perera, a member of the staff, is recorded with regret.

In August the position of the junior members and the prospects of the staff were considerably improved by the introduction of a new scheme of salaries, which requires higher qualifications and ensures increased emoluments.

The following table shows the condition of the school during the last two years :—

|                            | 1918. | 1919. |                          | 1918.      | 1919.      |
|----------------------------|-------|-------|--------------------------|------------|------------|
| Average number on register | 479   | 503   | Number of boys admitted  | 57         | 97         |
| Average attendance         | 441   | 450   | Number of boys withdrawn | 76         | 54         |
| Percentage of attendance   | 80    | 89    | School fees              | Rs. 30,911 | Rs. 32,515 |

The attendance was largely influenced by outbreaks of influenza.

The special prizes for 1919 were awarded as follows :—

|                                     |                 |                        |                 |
|-------------------------------------|-----------------|------------------------|-----------------|
| His Excellency the Governor's Prize | N. W. Morgappah | De Soysa Science Prize | M. A. Paul      |
| Turnour Prize                       | M. V. del Tufo  | Rajapakse Prize        | C. B. P. Perera |
| Director's Prize                    | T. A. Ginige    | Shakespeare Prize      | D. R. Rutnam    |
|                                     | R. Sathanandam  | De Heer Memorial Prize | N. W. Morgappah |

In July three candidates were presented for the London University Intermediate Examination in Arts, and four for the same examination in Science. Of these, two passed the latter examination.

The following are the results of the Cambridge Examination of December 1918 and 1919 :—

|              | No. of Candidates. | No. of Passes. |              | No. of Candidates. | No. of Passes. |
|--------------|--------------------|----------------|--------------|--------------------|----------------|
| Senior, 1918 | 33                 | 20             | Senior, 1919 | 30                 | 19             |
| Junior, 1918 | 48                 | 31             | Junior, 1919 | 63                 | 45             |

The College showed a good record in athletics and activities out of school hours. The cricket eleven came out second in the Intercollegiate Cricket Competition, the football eleven had a very good record, and in the athletic sports there was a record number of competitors. The school house competition was again keenly contested between the three houses, Colpetty, Cinnamon Gardens, and Bambalapitiya. The championship was won by Bambalapitiya. A musical society was started in September for the first time in the history of the College, and a successful first concert given in the school hall in December.

The College library has been enriched by many new books and pictures.

The new Royal College buildings were commenced in August, 1919, and a sum of Rs. 8,643·20 was spent during the year. It is improbable, however, that the new buildings will be completed before the middle of 1922, and if a start is to be made with the University College, temporary accommodation must be found for the Arts students. Unfortunately it is very difficult to secure the building required in the neighbourhood of the "Educational Triangle," but I have hopes of obtaining quarters for these students next year.

The science laboratories made good progress, and should be available by September, 1920.

The proposals of the Committee appointed to report on the equipment and materials required were approved by Government, and indents will now be despatched to England. A sum of Rs. 67,000 was included in the Estimates for this purpose.

I was able while in England to take further action to give effect to the recommendations of Lord Chalmers that the Ceylon University College should be affiliated to the University of Oxford. The Hebdomadal Council by a resolution passed in October, 1914, had agreed to appoint a Committee of the Council to advise on the courses, and assist generally in the selection of professors and on any other matters connected with the University College. The University was unable to commit itself to any undertaking to affiliate the University College, but agreed to consider the proposal later. The resolution of the Council was to take effect up to October 1, 1920.

Owing to the difficulties in selecting a site for the University College and determining the future of the Royal College, no further action had been taken in regard to the Oxford Committee, and no Committee had been appointed.

I was able when at Oxford to consult Mr. H. T. Gerrans of Worcester, who has shown much interest in the proposals, and he moved the Hebdomadal Council to appoint a Committee and extend the term of its activities for a further period of five years.

The Committee appointed is composed of Mr. Henry T. Gerrans, M.A., Fellow of Worcester; Sir Ernest J. Trevelyan, D.C.L., Fellow of All Souls; Rev. George B. Cronshaw, M.A., Fellow of Queen's; Mr. Wilfred G. Kendrew, M.A., Non-Collegiate, Junior Proctor; Mr. Percy E. Matheson, M.A., Fellow of New College; Mr. Stephen M. Burrows, M.A., Exeter College; Mr. Charles H. Sampson, M.A., Fellow of Brasenose.

Two meetings of the Committee were held at Oxford, at both of which I was present, and the following important resolutions were passed :—

- (1) As the Committee would probably be requested to conduct the first Intermediate Examination, they were of opinion that it might not be premature for them to recommend Council to propose at an early date, after the issue of the results of that examination, a decree admitting students of the Ceylon University College to the privileges of the Statute on Colonial and Indian Universities (for junior status only), provided that they were satisfied with the standard of the examination.
- (2) That the stipend of a professor should be £800 per annum.
- (3) The Committee would assist in recommending suitable candidates for professorships to the Colonial Office.

The Oxford Committee will be of great assistance to the University College in every branch of its work, and their co-operation and advice, which they are most ready to give, should ensure the University College course of studies being put on a thoroughly sound basis.

I was also able, while in England, to meet Sir Michael E. Sadler, K.C.S.I., Chairman of the Calcutta University Commission, and consult him with regard to the best lines to be followed in the working of the University College in Colombo, and the eventual establishment of a University which will naturally follow. Ceylon has undoubtedly greatly benefited by the attention paid to primary education, and by avoiding the danger of too rapid a development of higher education at the expense of the schools. The school boy in Ceylon is a school boy, and not merely a young student; though examinations are by no means neglected, there is far more school life and school spirit than is usually found in the East. In

Ceylon, however, there is undoubtedly room for development. The Ceylon school boy needs a broader outlook; the love of study, intellectual progress, literary pursuits need encouragement. There is no point in education at which the student can be told to "stand—so far and no further"; but if the student is to reach his goal by the right road, he must advance by steady progress. In Ceylon there has been such progress; there is room for advance.

Higher education in Ceylon is not going to be the work of a day—far better that it should be built up by careful preparation and steady development than that it should be super-imposed upon a fabric unable to support it. The spade work has to be done by the Education as well as by the Public Works Department.

The number of students proceeding from Ceylon to England to complete their education appears to be increasing every year. I was able to meet the Ceylon students in London and Oxford, and a few of those at Cambridge. It is very necessary that students from Ceylon proceeding to England should take steps to ensure their admission to a University or College before they leave. There have been many disappointments in the past owing to the great difficulty now found by all students, both English, Indian, and Colonial, in securing admission to the Universities, whose accommodation has been taxed to an extent never previously known. The attention of the schools was called during the year to the advisability of students calling on the Director of Education before leaving for England and obtaining an introduction to Sir William Mercer, K.C.M.G., one of the Crown Agents for the Colonies, who takes the greatest interest in the youth of Ceylon, and who has been of great assistance to those who have applied to him for help in securing admission to English educational institutions.

It is very advisable that the Ceylon boy going to England should be able to apply for advice and help to some one who has the experience, the knowledge, and the desire to assist him.

In preparation for University courses, lectures were given by Mr. W. T. Stace, C.C.S., on Greek Philosophy, which will be republished in book form by the "Ceylon Morning Leader" Press. Lectures were also given by Mr. Leigh Smith, Principal of the Government Training College, in English Literature; by the Rev. Father Le Goc in Botany and Nature Study.

#### (2) UNIVERSITY SCHOLARSHIPS AND LONDON INTERMEDIATE EXAMINATIONS.

In 1919 the two scholarships were awarded on the results of the Intermediate Examinations of the University of London, one for Arts and the other for Science, to Mr. D. C. R. Goonewardene of St. Joseph's College, and Mr. L. J. de Silva of St. Thomas's College, respectively, as recommended by the University.

For the Arts Examination 43 candidates presented themselves for the entire examination. Seven of these entered both for a pass in the Intermediate Examination in Arts and for the Government Scholarship in Arts; 36 entered for a pass in the Intermediate Examination, but not for the Scholarship; in addition, one candidate entered for the Scholarship only. Seven candidates entered for the examination "excluding English," and four candidates entered for "English only." Of the 43 candidates who entered for the entire examination, three passed; of the seven candidates for the examination "excluding English" two passed; of the four who entered for "English only" two passed.

For the Science Examination 37 candidates presented themselves; of these, 12 entered for both the Intermediate Examination and for the Government Scholarship in Science; 25 entered for the intermediate Examination in Science, but not for the Scholarship; in addition, four entered for the Scholarship only. Of the 37 candidates for the Intermediate Examination in Science, 15 passed.

The results of the Arts Examination are very poor, but those of the Science Examination show an improvement on the previous year.

A third University Scholarship is to be awarded "to encourage the scientific study of agriculture" on the results of the London Intermediate Examination in Science to be held in July, 1920, if a sufficient number of entries are received. In order to qualify for this Scholarship the candidates must pass in (a) the three compulsory subjects, Botany, Zoology, and Chemistry, (b) either Physics or Geology, and (c) English Literature and Essay prescribed for the Intermediate Examination in Arts.

The holder of the Scholarship will be required to enter into a bond agreeing to take an approved course in Agricultural Science in England, and on the completion of the course to return to Ceylon and engage in work in which his agricultural training will be put to use.

#### (3) OTHER LONDON UNIVERSITY EXAMINATIONS.

*Matriculation.*—For the January examination 195 candidates presented themselves, of whom 55 passed. For the June examination 180 candidates presented themselves, and 53 passed (9 in the first division). These results, though not as good as they should be, are a considerable improvement on those of the previous year, both in numbers and percentage of passes.

In the January examination, out of 117 private candidates, 19 passed, in the June examination, out of 97, 16 passed. It is hoped that when the University College is opened more candidates will take the London Matriculation Examination—which or a pass up to matriculation standard in the Senior Cambridge will be accepted as a qualifying test for the admission to the University College—from the schools. The highest percentage of passes obtained by a school entering more than 10 candidates in January was 6 passes out of 10 candidates from St. Thomas's College, and in June 8 passes out of 12 candidates from the Royal College.

Both Sinhalese and Tamil are accepted as optional languages for the London University Examinations.

The University of London passed the following resolution in connection with the Matriculation Examination held at Colonial centres:—"That one special optional language for every 100 normal entries be included in the list of subjects which may be taken without additional fee at a Colonial Matriculation Examination."

As the number of normal entries for the examination at Ceylon centres now exceeds 200, Sinhalese and Tamil will be accepted without additional fee for the examination to be held in June, 1920, and thereafter.

*First Examination for Medical Degrees.*—Sixteen candidates presented themselves; 9 passed.

*Second Examination for Medical Degrees, Part I.*—Six candidates presented themselves, of whom 3 passed.

*Intermediate Examination in Laws.*—Eight candidates presented themselves; 5 passed.

*Bachelor of Laws Examination.*—Two candidates presented themselves, of whom 1 passed.

*Bachelor of Arts Examination.*—Eleven candidates presented themselves, 4 of whom passed.

*Bachelor of Science Examination.*—Four candidates presented themselves, 3 of whom passed.

#### (4) CAMBRIDGE SCHOOL CERTIFICATE EXAMINATIONS.

The results of these examinations for the last three years will be found in Appendix, Part I. (1a), (published separately). The general results of the examinations held in 1919 show that the standard of improvement attained in the previous years continues to be maintained. The percentages of passes in the whole examination for the last three years are 45, 50, and 63, respectively. In 1919 the percentages of passes among Junior boys, Junior girls, and Senior boys have risen to 58, 67, and 65, respectively, while the percentage among Senior girls continues to be 85. It is also gratifying to note that the number of entries and passes in every grade has increased.

For the first time Sinhalese and Tamil were taken in this examination. There were 38 entries in Sinhalese and 68 in Tamil for the Junior Examination, and 106 and 80 respectively for the Senior Examination. There is no evidence that the study of the classics has suffered in consequence of the inclusion of these languages. Opportunity has, however, been afforded to clever boys to enter from schools which have not specialized in the teaching of Latin; more candidates have been able to devote more time to English, and a higher standard of proficiency in their own native languages may be anticipated now these languages are accepted for examination purposes.

When on leave I visited Cambridge and discussed these examinations with the Secretary for Examinations of the Cambridge Syndicate, who was so good as to show me the papers to be set in Sinhalese and Tamil. The local pundits have pronounced favourably upon them, and considered that they required a high standard of knowledge.

Though hygiene was not included in the syllabus or subjects for the Cambridge Examinations in 1919, special arrangements were made for the inclusion of this subject both in the Junior and Senior; it was taken by 25 candidates in the Junior and 6 in the Senior.

In order to encourage the study of agriculture and the teaching of agricultural subjects in schools, the Hon. Dr. H. M. Fernando has offered annually a scholarship or scholarships tenable for one year to the Ceylon candidate who obtains the highest marks in Botany and either Chemistry or agricultural science in the Cambridge School Certificate Examination, provided also that the candidate obtains a pass in the examination. The holder of the scholarship will be required to enter for the University Scholarship in Natural Science referred to above. The first scholarship will be awarded on the results of the Cambridge Senior School Certificate Examination to be held in December, 1919.

The Ceylon Saiva Paripalana Sabha (an Association for the promotion of the Hindu religion and the interests of the Hindus of Ceylon) is offering three scholarships of the annual value of Rs. 120 to Hindu boys and girls in the Northern and Eastern Provinces on a consideration of the detailed results of the last Cambridge Junior Certificate Examination. Preference will be given to candidates who have obtained honours in the examination and in Tamil.

#### (5) ORIENTAL STUDIES.

Considerable progress was made during the year in the encouragement of Oriental Studies. The conversion of the "Committee on Oriental Studies" into "The Society for the Promotion and Encouragement of Oriental Studies" had the immediate effect of extending the interest taken in these subjects and of increasing the applications for membership of the Society, which at present numbers 248 members:—152 Buddhist monks and 96 lay men. Owing to the very large number of applications for admission to the Society, it was decided to limit membership to 250 (150 Buddhist monks and 100 lay men).

Two meetings of the Standing Committee and one meeting of the Society were held during the year. A considerable amount of business was transacted by the circulation of papers amongst the Standing Committee. The inspection of pirivenas by a special Inspector appointed for the purpose (Mr. W. A. Samarasekera) proved very successful in encouraging and reviving the work done in these centres of Oriental learning. Fifty-one pirivenas paid each a fee of Rs. 25 for registration and inspection, and of these, 45 were inspected in the districts of Colombo, Kalutara, Galle, Matara, Negombo, Ratnapura, Kurunegala, Kandy, Nuwara Eliya, and Kegalla, the remaining 6 could not be inspected owing to sickness and food scarcity. The largest number of registered pirivenas are in the Galle (11) and Matara (9) Districts, which have always been centres of Buddhist and Oriental learning.

As the result of these inspections and the reports made on the work of these pirivenas, the following four pirivenas: Pravaahanodaya Pirivena, Kalutara District; Sangaraja Pirivena, Kandy District; Sailantayata Pirivena, Galle District; Gunaratne Mudalinda Pirivena, Matara District, were registered for an annual Government grant of Rs. 400 per annum, and prizes of books were awarded to eight pirivenas who had done good work. It was found that there was a great lack of uniformity in the work of these pirivenas, there is a scarcity of teachers, and history and arithmetic are neglected. In ancient times the system of tuition for beginners was reading and committing to memory a book or books giving in verse vocabularies of words and a list of the roots of verbs to cultivate a retentive memory and a wide vocabulary amongst the students. The system has now been revived in many pirivenas, and the work has been generally re-organized and put on a far more efficient footing. It has been decided to hold a meeting next year of the Principals of registered pirivenas and to invite Indian pundits to attend to draw up a curriculum suitable for all pirivenas. The improvement in the work of the pirivenas was shown in the results of the Oriental Studies Society's Examinations, though the number of candidates—118—was less than in 1918, when it was 134, the results showed a marked progress: in 1918 only 17 candidates passed the Preliminary, 4 the Intermediate, and 2 the Final; in 1919 34 passed the Preliminary, 9 the Intermediate, and 4 the Final Examinations. Nearly all the candidates were students of pirivenas. The Vidyodaya College presented 28 students, of whom 17 passed. The Inspector of Pirivenas is also paying attention to the libraries and collections of olas and manuscripts at the different pirivenas. He reports that the oldest ola manuscript found in the pirivenas is a copy of Wisaddhimagga, an epitome of Buddhism by the Ven. Buddhaghosa, who wrote it to prove his ability to translate Sinhalese commentaries into Pali, which he afterwards undertook, with great success. This manuscript is said to be a thousand years old, and it is now kept at the Sadananda Pirivena in the Negombo District.

It is hoped that a portion of the funds of the Buddhist Temporalities when established on a sound footing may be devoted to the encouragement of these *pirivenas*, and to the erection of better buildings and the provision of larger staffs of teachers.

The prize distribution of the Vidyodaya College was held on October 22, under the presidency of His Excellency the Governor.

The Society regrets the death of Ven. W. Dhammaratana, High Priest, Principal of Ananda Pirivena, who was a learned member of the Society.

Mr. W. A. de Silva, a Member of the Standing Committee, has offered a prize of Rs. 100 for the best prose work in Sinhalese suitable for reading in schools, which will be judged by a Sub-Committee of this Society.

The first journal of the Society was published in December, containing 104 pages of interesting commentaries on the Sinhalese, Pali, and Sanscrit languages and history contributed by the leading scholars in Ceylon.

The Ven. Suriyagoda Sumangala, a Member of the Standing Committee of the Society, was given a scholarship of £300 per annum for two years at Oxford, contributed half by Government and half by Dr. C. A. Hewavitarne. The priest's travelling expenses and outfit were also provided by Government. The Ven. Suriyagoda Sumangala has matriculated at Manchester College, Oxford, and good reports have been received of his progress and devotion to his studies. It is hoped that a two years' course at Oxford will enable him to acquire a further knowledge of Oriental Studies and modern investigations in this field, which will fit him to be a lecturer on the subject at the University College. It is believed that this is the first occasion on which a robed Buddhist priest has entered an English University as a student. This was possible for the Ven. Suriyagoda Sumangala, as he had already acquired a good working knowledge of English.

Further efforts have been made to encourage the study of English by the Buddhist priests. The class at the Vidyodaya College now consists of 54 priests, and is well attended. — An extra grant of Rs. 500 is awarded to the College to assist in the cost of tuition, books, &c.

An appeal was made to leading Buddhists for funds to enable classes in English to be held for Buddhist priests at the Training College, and a sum of Rs. 920 was received, of which Rs. 200 represented annual subscriptions.

The classes at the Training College, which are conducted by trained students with considerable teaching experience, were attended by 66 priests, who were formed into two divisions, for reading, writing, and conversation in English. The reports received speak well of their progress. In the Lower Division eight priests are reported to be fit for the third standard and fourteen for the second standard, and in the Higher Division two priests have passed the fifth standard in English.

It is proposed next year to form a special night class in English at Maligakanda Government School for Buddhist priests. Applications have been received to start English classes for priests in Kandy and Galle.

#### CHAPTER V. ENGLISH SCHOOLS.

In 1919 there were 205 grant-in-aid English schools attended by 34,518 pupils, of whom 26,843 were boys and 7,675 were girls. The number of schools has increased by 5, and the number of pupils by 740. Besides these, returns have been received from 57 unaided English schools attended by 2,539 pupils; the number of pupils shows a decline of 64. The average grant per head has risen from Rs. 10.67 to Rs. 13.18. The increased grant is due to there being more efficient schools and more schools which have qualified to earn grants under the increased rates introduced by the 1918 Code. The increase in grants is, in fact, still greater, for these figures are based only on grants paid on examination results, and do not include additional grants given for buildings and equipment, which have been steadily increasing, the vote for equipment being a new one. In 1919 a sum of Rs. 12,234.78 was expended on providing class furniture for the higher classes in girls' English schools from this equipment vote. The very inadequate and unsatisfactory seating accommodation provided for the elder girls in the girls' English schools was bound to have a prejudicial effect on their physique, and it was accordingly decided to assist all grant-in-aid girls' English schools with grants for the supply of chairs with backs and separate desks for the higher classes up to a maximum of Rs. 1,000 to any one school—the schools were supplied with detailed particulars showing the type of desk and chair required. Microscopes and special apparatus for scientific work are being sent to the schools, and grants have been given to the poorer schools to assist in the equipment of their Boy Scouts.

The building grants were increased from Rs. 37,000 to Rs. 50,000. Grants were made to 19 schools towards the cost of the erection of new buildings, laboratories, &c. Grants of Rs. 3,000 and over were made to St. Benedict's College, Mahinda College, C.M.S. Ladies' College, and Trinity College, Kandy.

Much requires to be done in the larger English schools to improve their boarding accommodation and sanitary and bathing arrangements. It is hoped next year to provide a special vote for this purpose.

The work of classifying schools according to the new rules was gradually dealt with in the course of the year, and the 205 English schools are now classified as follows :—

|  |    |    |    |
|--|----|----|----|
| Fully organized secondary schools  | .. | .. | 21 |
| Elementary schools with secondary department working up to the Senior School Certificate Examination | .. | .. | 19 |
| Elementary schools with secondary department working up to the Junior School Certificate Examination | .. | .. | 11 |
| Efficient elementary schools   | .. | .. | 28 |
| Non-efficient elementary schools   | .. | .. | 89 |
| Primary schools  | .. | .. | 37 |

The classification of English schools is not altogether satisfactory. There are far too many schools appearing under the head of Non-efficient Elementary Schools; many of these should be treated as primary schools only, or be removed from the list.

The demand for English in Ceylon is greater than ever; it is becoming daily the recognized medium for all higher education and for all employment, except the most subordinate.

The poorest parent desires his son to learn English, if only that he may acquire sufficient knowledge to read and write a telegram or an advertisement in English. It is only a question of time for English to be recognized as at least the essential second language to be taught in every school in the Island.

The standard of work in the village schools in Ceylon is remarkably high. Boys remain on and obtain passes in the eighth standard, which demand an advanced knowledge of arithmetic, geography, composition, language, and Literature. The cry in the country is that this advanced education, which parents desire for their boys, shall at least include English. Without a knowledge of English the large reading class now found in Ceylon—owing to compulsory education this class is steadily increasing, and both Sinhalese and Tamils have a great love of reading—is confined to a literature which may be compared with the pre-Renaissance literature in England, many of the best works in Sinhalese being written in a language which is not spoken to-day. Though Tamil literature has to some extent continued to maintain its reputation, and Sinhalese pamphlets and brochures, chiefly dealing with religious questions, the ruins of Ceylon, and the ancient history of the Island, have a large circulation, and are issued in increasing numbers, yet it must be recognized that it can only be through the translator that the vernacular students can get into touch with modern literature.

There is scarcely a subject referred to in a daily newspaper of to-day on which a student could find further information in a work in the vernacular. It must be realized that education is daily turning out intelligent boys and girls who have had an excellent education in the vernacular and who when they leave school have acquired some knowledge of agriculture, sanitation and hygiene, the geography of the world, and the history of their own country, and who, if they wish to pursue the study of these subjects, can only do so through the medium of vernaculars, the literature in which is narrow and limited.

The vernacular press, which is generally ably edited and has a wide circulation, can do much to meet the demands of this large reading class, but it must be remembered that the ablest and best equipped students are naturally being drawn towards the study of English, and that they find the necessity of expression in English as the only medium in which they can both pursue their studies and present them to the world. There is no class whose wage-earning capacity will not be increased by a knowledge of English.

It may be maintained that a knowledge of English may have an unsettling effect on the labour of this country; that the cultivator who knows English will no longer wish to cultivate his field; that the cooly will wish to become a clerk. But though there are, of course, grounds for such apprehensions, those who express them lose sight of the fact that progress cannot be retarded, though it must necessarily mean a considerable amount of change, and that more efficient mental equipment must be of value in any branch of work. It is also not proposed to give the same amount of English education to everybody. In the first place, it would be impossible to do so. It is extremely difficult to get English teachers now for Government and grant-in-aid English schools outside the towns, and it will be very many years before qualified teachers can be obtained. To attempt to teach English in every school would defeat its object; it could only result in the creation of an *unspeakable* English, a "pidgin" language; as it is, even in the towns to-day, we find the English of Shakespeare and Spenser being taught, and boys poring over Scott's novels, who can scarcely express themselves coherently or grammatically in English.

The importance and value of a sound knowledge of *oral* English is too frequently lost sight of. Conversation is not practised in our English schools as it should be, and in all branches of education reading and writing are taken to represent language, and speech is accepted as the gift of God. The Education Tower of Babel is largely built of set books, which destroy coherent speech.

What is required and what is demanded of the very large majority of schools is a sound knowledge of colloquial English, the capacity to be intelligible in and to understand spoken English. In the largest village schools, where alone at first can English be introduced, it is not proposed to extend the teaching above the third standard in English. If the pupil has the means and the capacity, he can continue his studies in the Anglo-vernacular or English school, the most intelligent boys being encouraged to do so by provision of scholarships. The village school boy will have had a sound grounding in English, and the very large majority of such boys should have acquired all the English they will need.

The first difficulty to be encountered is the provision of teachers. At present for the teaching of English the smaller schools rely almost entirely on the passed Cambridge student, on the law student who wants to earn a little money while reading for the bar, and on the examination failure who has taken English for the Cambridge or London Matriculation Examination and has failed in it, but considers himself quite qualified to teach it. There are, of course, many good teachers of the "old school" who, even though uncertificated, have acquired a sound knowledge of English. Excellent work, too, is being done by women teachers, whose pronunciation and command of the language are often better than the men's. Generally speaking, however, it may be said that the smaller English schools—those classed as non-efficient elementary schools and primary schools—the Anglo-vernacular schools, and the English tutorials, which have been springing up all over the country, rely almost entirely for their English staff on youths who cannot immediately find a more lucrative profession, or who as examination failures cannot hope to secure clerical posts. Such teachers are almost certain to be dissatisfied with their work. They are, too frequently town products: town-clothed, town-educated, town-distracted. Village life has no appeals for them, and they regard their position in a village school as unworthy of their abilities. Their aim is to obtain employment elsewhere, and their only object to impress the village school with a sense of their superior accomplishments. It says much for the teaching profession in Ceylon, which is, I believe, distinguished by the number of its devoted and earnest men, that these youths do as well as they do in spheres from which it would seem that their education had deliberately excluded them; they are too frequently themselves the products of that misdirected education, which it is the object of sound elementary English education to correct. Steps are now being taken to recruit for these schools the type of teachers required by—

(1) The establishment of vacation classes in English for village schoolmasters. These classes were started originally in 1918, and are intended to be held for two years, or possibly three, when the progress of the teachers can be judged. There are now 40 teachers attending these classes, which are taken by trained teachers and members of the Training College staff. Instruction in drill and drawing is also given to these classes.

(2) The opening of a boarding school for vernacular school assistant teachers and passed third-year monitors at the Henaratgoda Gardens. The teachers and monitors are paid Rs. 15 a month to cover their board and lodging and all expenses while at Henaratgoda. The course is to be a two-year one in English and agriculture, for which the Henaratgoda Gardens afford an excellent centre. Special practical instruction is given by the Foreman there, and at the end of this course the students will be required to pass an examination and satisfy the examiner in practical teaching that they can take an English class. They will then be eligible for appointment as English assistants in Anglo-vernacular and large vernacular schools, in which the teaching of English is allowed.

It was decided to select 40 teachers and monitors for the schools. Over 300 candidates applied, all of whom, though coming from vernacular schools, had some smattering of English which they had acquired in their spare time. They were examined by the Inspector for the Province, who expressed his great surprise at the standard of English they had already reached by their own unaided efforts. Considerable difficulty was found in making a selection.

Mr. W. D. A. Gooneratne, Muhandiram of Mawatagama, generously gave Rs. 2,000 for the erection of class rooms for these students. The school was started on July 7.

Special attention is paid to conversation, and oral work, phonetics, and recitation. It is found that the students enjoy reading and learning by heart simple verse, and find it much easier than prose. This subject also encourages correct pronunciation and enunciation.

The agricultural work is at present confined to preliminary experimental science, plant life, and field work, and practical gardening in the garden attached to the school.

The school is known as the Henaratgoda Garden School. It has been referred to at some length, as it is the first experiment of the kind. It gives an opening to the village teacher to become a teacher of English, in addition to his own subjects, and to acquire a knowledge of agriculture, which will be useful to him later in developing his school garden, and during the course he has the advantage of a corporate life in a boarding house.

It is hoped to establish more of these schools in Ceylon, and that generous donors will come forward with offers of buildings and land for the purpose. I should like to see each mission and educational society with a garden school of its own for the training in English and agriculture of the most promising of its younger vernacular teachers. It is hoped, too, by this means eventually to staff with men, who have already been trained in the educational department as monitors and assistant teachers, village schools where English can be usefully introduced.

The difficulty of finding teachers for English schools can only be met, however, by improved rates of pay, which will attract the best type of youth in the country to schools in all parts of the country. It is this educated youth we need most in our schools. The Inspector of Schools, Western Province (Mr. E. H. Vanderwall), reports that there has been "a gradual elimination of the incompetent assistant master," "but only to some extent, by the employment of the law student." The Inspector, Central Province (Mr. E. de la Harpe), states "the dearth of male teachers for elementary English schools continues to exist. The difficulties of the managers of such schools are increased by the tendency on the part of these teachers to move from one school to another when an opportunity offers of getting a slightly higher salary. One can hardly blame them; they are poorly paid." The question of pay of teachers in English schools is one of urgent importance, and with the increased cost of living affecting all classes, it is very necessary to improve these teachers' prospects and to afford them immediate relief. A scheme is being put before Government which will, it is hoped, enable increases in grants to be devoted to the pay of the teachers.

The Department was throughout the year very short-handed in Inspectors of English schools.

Mr. Harrison, Inspector of General Elementary Work, was acting as Assistant Director; Mr. Wicks, Inspector of Mathematics and Science Work, went on leave on May 21; Mr. L. McD. Robison, Inspector of English, Geography, History, and Latin, was on leave throughout the year.

Mr. A. R. P. Leatham, who acted for Mr. Robison, reports:—

*Writing.*—More attention has been paid to this matter, and there has been considerable improvement in handwriting. After boys have left the lower forms there is a tendency for masters to neglect writing, and boys, if not checked, develop a slovenly hand. The model aimed at is the Civil Service style, and this should be insisted upon throughout the school. It is of little value to write this style in copy books, when boys are allowed to write an entirely different one in their exercises.

*Recitation.*—This is by no means satisfactory. It is during the periods given to recitation and reading that boys should be taught to articulate and give the correct pronunciation and accent. Greater efforts on the master's part are necessary. The object of these lessons is neither to memorize nor to scramble through a certain number of pages of printed matter. Boys should be taught the organs of speech, and how to use them.

*English.*—There has been an improvement in English during 1919, which, I think, is due to the attention given to grammar. The teaching of grammar, especially to those whose vernacular bears no resemblance to English, is essential. It is only by a good knowledge of grammar that children are able to see why a certain form is correct or incorrect, and it supplies the child with a test he may apply in cases of doubt. The rules should be taught inductively and applied deductively. Reasons for every answer should be given.

*Parsing and Analysis* are a part of the syllabus of the Cambridge Local Examinations for English boys and they are even more necessary for Ceylonese.

*Letter Writing* should form part of the syllabus in every form.

Boys from third form should be shown how to make a *précis* from their reading or history books.

In Forms I. and II. compositions on easy and familiar subjects, rather than reproduction, should be given, for the latter has little value to boys, who generally have good memories.

The conjugation of the English verb, the use of tenses, auxiliaries, and the sequence of tenses should be known in these forms.

*English Texts.*—More time should be given to the study of characters, and the description of incidents in the story, and less attention to details and meaning of uncommon words. The plot should be thoroughly understood, as well as the historical and geographical background. Frequent oral questions on the text are very necessary.

*History.*—It is astonishing that so low a standard had been reached. The text book generally in use, "Britain and Her Neighbours," is an attractive book. The low average of marks obtained in the school and inspection examinations can only indicate that the teachers do not present their subject in an interesting manner. Frequently the lessons have not been prepared. The master should be able to show the origin and sequence and relation of events, by which alone his pupils gain a proper notion of history. In a few schools this has been done; but I found in most schools that the boys' knowledge consisted in a vague appreciation of individual facts.

The making of notes should be encouraged in all the classes. In the lower forms, after the lesson has been examined and discussed, one *written* answer at least should be made to some question connected with the subject.

*Geography.*—This important subject is being dropped in many schools because it “does not pay” in public examinations. The standard of work in the majority of schools was decidedly low. Boys do not learn geography only by drawing maps on temperature, rainfall, and productions. The subject might be made much more interesting by the introduction of more *practical* work. Political geography ought not to be neglected.

The weakness in Geography I attribute to the masters’ methods of teaching, rather than to their pupils’ inability to grasp the subject.\*

*Latin.*—Many teachers do not know the language well enough to take the subject. It is, therefore, taught indifferently in many schools where the English is poor, and I consider that in many cases much valuable time, which should be devoted to English, is wasted. Some schools actually give as much or more time to Latin than to English. A small proportion of boys require this subject for their professional career, yet boys are taking it, many of whom know their Latin grammar better than their English! Too much time is usually spent in the translation of the text books, which are generally memorized from “cribs.” I have found that the teaching by the “direct method” has been a failure. There is weakness in “unseens” and continuous prose in most schools, the latter being generally ignored.

*Greek.*—Only three or four schools teach this language systematically, and a satisfactory standard has been reached, considering the fact that the boys commence its study somewhat late.

The following extracts from the Provincial Inspectors’ Reports on English education in the different Provinces are of interest:—

Mr. Vanderwall, Inspector of Schools, Western Province, reports:—

English is still far too weak a subject in many schools, although they present considerable variety in this respect. The old-fashioned schoolmaster, who confined the energies of his class to the literal and detailed acquisition of one reading book or often only part of one, is fast disappearing.

In many schools several books are now read during the year, with the best possible results. To read half a dozen books and understand their general drift and purpose serves a far better educational purpose than to labour through the details of one, and means better English in the end.

The co-ordination of oral and written English composition in the lower schools has gradually built up secure foundations for the English of the higher classes.

There is some improvement in pronunciation, but old habits die hard, and the efforts being made are disproportionate to the extent of the evil. Boys are close imitators. Nearly always a teacher’s bad pronunciation is reflected in his class.

An excellent guide to correct pronunciation and elementary phonetics is provided by the Oxford Readers, Reformed Series for India (Oxford University Press). The use of these valuable readers, for which teachers’ guides are also provided, is recommended.

The improvement in handwriting in recent years is a gratifying record, and is evidence of the efforts of the trained teachers.

Arithmetic has received a much-needed stimulus by the introduction of oral work into the regular school time table. No oral arithmetic worthy of the name can be done unless teachers work with a properly graded system of notes of lessons.

A good deal of useful work is being done in geography on modern lines. The mapping books, as a rule, are of a high order, but these degenerate sometimes into mere unintelligent draughtmanship.

Boys who have no knowledge of how rainfall is measured, or what the annual rainfall of their own town is, produce excellent rainfall maps of other countries. Others with very uncertain ideas on the subject of monsoons accurately copy maps dealing with winds and currents.

There is the danger in some schools of omitting altogether the political side of geography, which also requires to be known.

The “Britain and Her Neighbours” series and other pictorial texts have done a good deal to help boys to grasp the historical atmosphere and to understand the true relations of history.

Anglo-vernacular schools, which provide a full course in the vernacular and a practical course in English reading, writing, and conversation, fill a very useful place. Some of the most successful men in business and other walks of life have had their entire education in the Anglo-vernacular schools.

The better schools of this type change gradually into separate English and vernacular schools. But the headmaster’s ambition to change the status of his school is more often a matter of prestige than of utility. So long as the vernacular is a separate subject of study, there must be a demand for Anglo-vernacular schools throughout the country. There is a great need for good Anglo-vernacular teachers, both head teachers and assistants. If some of our Anglo-vernacular schools have fallen into disrepute, it is not the syllabus which is at fault, but the teachers who have failed to rise to its requirements.

The fees for English in Anglo-vernacular schools were reduced during the year, and readers are given free in certain standards as a further encouragement to parents to let their boys learn English.

Mr. de la Harpe, Inspector of Schools, Central Province, states:—

The English schools have, on the whole, made satisfactory progress during the year. The value of separate class rooms—even though these are made by using portable wooden screens to partition the classes—is beginning to be realized. What gives one much food for thought is the quality of the English which most of the boys attending these schools acquire. Their language and idiom are poor, and they lack facility in expressing their ideas on the simplest of topics. I attribute this to (i.) insufficient practice in school in conversation (which is generally confined to the special classes worked under the third syllabus), and in the writing of essays in simple conversational English; and (ii.) insufficient reading, which is apparently confined to the set books. As regards the latter, I am pleased to note that some considerable progress is being made in many schools which have adopted my suggestions *re* silent reading. Geography is a subject that requires more intelligent teaching than it receives now; there is too slavish an adherence to the text book, and too little use is made of the atlas and of map drawing by both teachers and pupils. A series of five or six maps following naturally one from the other should be drawn of each region and country that is studied.

Mr. Tillainayakam reports a general improvement in teaching in the Northern Province:—

Subjects are better correlated . . . . . writing shows a slight improvement on the whole . . . . . mental arithmetic is receiving more attention, and considerable advance is being made in the teaching of geography, the importance of proper teaching aids—pictures, models, sand trays, &c.—is more generally, though still insufficiently, recognized.

\* The Training College has suffered from the want of a lecturer who has specialized in Geography. The Assistant Master of Method to be appointed to the Training College will, it is hoped, be specially qualified to train teachers in this subject.—E.B.D.

## THE ELEMENTARY SCHOOL-LEAVING CERTIFICATE EXAMINATION.

The Elementary School-leaving Certificate examination affords an excellent test of the work in the elementary schools and on the elementary side of the secondary schools, and a pass in this examination is yearly increasing in value, as it is recognized that the standard in English required is a searching and thorough one. Special facilities were given to enable teachers in Government Anglo-vernacular and vernacular schools to enter for this examination.

In 1919, 357 candidates presented themselves for the March examination, of whom 104 passed; and 620 candidates presented themselves for the October examination, of whom 265 passed. In all 977 candidates took this examination in 1919, as compared with 896 candidates in 1918. The percentage of passes in the March examination was 29, and that in the October examination was 43; whilst the percentages of passes at the two examinations of 1918 were 36 and 33 respectively.

The only schools which obtained over ten passes in 1919 were St. Benedict's College, Colombo (22), St. Aloysius's College, Galle (18), and Kantherodai Institute, Jaffna (16). Schools which showed fairly good results were Clifton Girls' High School, Maligakanda, with 12 presented and 10 passed; St. Joseph's Preparatory School, with 10 presented and 8 passed; St. Servatius's School, Matara, with 9 presented and 8 passed; Tellippallai School, Jaffna, with 7 presented and passed; Wolfendahl Girls' School, with 5 presented and passed; Ambalangoda Wesleyan School, with 6 presented and 5 passed; Mallakam School, Jaffna, with 7 presented and 5 passed; Galle Wesleyan Girls' School and Alavetty School, Jaffna, each with 6 presented and 4 passed; and Udugampola Government School, with 5 presented and 4 passed. Several of these are small schools, which serves to show that, though the percentage of passes is small, it is possible for a small outstation school to form a good eighth standard class. The success of a village school—Udugampola—is remarkable, and shows a decided advance both in the teaching and in the proficiency of the boys in a Government Anglo-vernacular school, and that it is possible for village boys to attain a standard in the village school which will ensure them admission to all branches of the Clerical Service, for which a pass in this examination is accepted.

A gold medal has been presented by Mr. Kadiramer of Batticaloa to the Eastern Province candidate who does best in English in the Elementary School-leaving Certificate examination.

Extracts from the reports of the examiners on this examination are issued to all schools as affording useful advice and suggestions for the elementary work, and the increased percentage of passes appears to show that these reports are useful.

There was the usual crop of "howlers," which are not confined to the youth of any one country, some of which may be quoted, not as reflecting on the general intelligence of the students in Ceylon, but for any amusement and edification they can afford to those who read administration reports:—

"Lord Shaftesbury's tomb is made of little children's tears."

"He learnt Latin at a midnight school."

"By the industrial revolution, I understand that it is a bad thing to stir against the Government."

"With due defiance and submission he stated his case before the King."

"Britannia needs no bull walks."

"Captain Drake was the ancient Mariner."

"Admiral Beatty sent Jack Cornwall's body home in despatches where it was buried with royal honours."

"Mary went to call the cattle home and she was overset by the landwind and perished her more and more."

## CHAPTER VI.

## VERNACULAR SCHOOLS.

In 1919 there were 862 Government vernacular schools attended by 90,957 boys and 32,428 girls, and 1,855 aided vernacular schools attended by 129,027 boys and 78,649 girls. This gives a total of 2,717 vernacular schools attended by 219,984 boys and 111,077 girls. As compared with the previous year, the number of Government vernacular schools has increased by 19, the number of boys on the list by 2,379, and the number of girls by 1,737. The number of aided schools has increased by 10, the number of boys on the list has decreased by 5,028, and the number of girls by 2,757. There is a decrease of 3,669 in the number of children attending vernacular schools during the twelve months since the last returns were collected.

The average attendance at vernacular schools is 220,245, or a percentage of 66·5. In 1918 the percentage was 68·4. In Government schools the percentage is 72, and in grant-in-aid schools 63·3.

The demand for education is general throughout Ceylon, and the falling off in attendance has been explained above; it is certainly not due to any decreased interest in education. The number of boys and girls in the higher standards has increased everywhere. The Vernacular School-leaving Certificate examination has tended to bring about this desirable result. 243 certificates were issued for passes in Government schools, and 148 for passes in grant-in-aid schools in 1919.

It is difficult, however, to secure the attendance of the bigger children in those districts where they can easily obtain employment, for instance, in the neighbourhood of rubber plantations; at a school in the midst of rubber estates I was informed by the teacher in explanation of the small numbers above, the fourth standard that all the big children had gone "milking," viz., rubber tapping.

One of the most important events of the year in connection with vernacular education was the declaration of Government policy in regard to the recognition and establishment of grant-in-aid and Government schools. It was definitely laid down that Government was not generally prepared to finance new schools opened by bodies which do not represent the predominant religion in the district where the school is to work, and where there is already an existing school. While it is fully realized that excellent work has been and is being done by many mission schools, it is felt that public money should be devoted rather to increased expenditure on Government undenominational schools, or schools in which the children, with few exceptions, belong to the denomination conducting the school, than in assisting in the multiplication of schools conducted by different religious and rival agencies. Where schools have been and are being successfully conducted by mission or private agencies, these will continue to receive grants from Government, but all such agencies are reminded that an increase in such schools and their registration and the payment of grants to them can only be justified by local demands for these schools or the necessity for providing schools for the children belonging to the religious body conducting

the school. It is not proposed to withdraw grants where the payment is justified by the existence of an efficient school satisfying the needs of the neighbourhood, but where the schools do not satisfy these requirements, they cannot expect to be supported by Government assistance, when it may be found that the local needs are better satisfied by the establishment of a Government school, or a school of the same denomination as the large majority of the parents. This declaration of policy was accompanied by increases in grant, which it is estimated will involve an additional expenditure per annum of Rs. 264,175 by Government on grant-in-aid vernacular schools. The additional grant is to be devoted primarily to the payment of teachers' salaries.

The policy aims at preventing unnecessary multiplication of schools, and at securing greater efficiency in teaching staff, accommodation, and equipment in all schools. It will only be applied very gradually. The policy has been generally approved as being in the interests of education; it will probably lead to a diminution in the number of aided schools and to the establishment of a large number of Government schools, and the grant to District School Committees for the erection of new schools was raised in the Estimates for 1919-20 from Rs. 75,000 to Rs. 200,000.

While many mission schools have failed to satisfy the requirements of the Department in regard to buildings and equipment, it should never be forgotten in any account of the progress of vernacular education in Ceylon that it was the missions who originally made compulsory education possible in Ceylon, and that in many of the most remote and backward districts in Ceylon the only school provided for the people was by mission agency. Government has been saved in the past a very considerable expenditure in the establishment of schools, and it has only been of recent years that the liability to provide educational facilities throughout the Island has been recognized by Government. The Government schools now being erected throughout Ceylon win the admiration of all visitors to the Island, and were regarded by the Educational Commissioner to the Government of India on his visit to the Island at the end of 1918 as model vernacular schools.

Amongst the new schools were the new infant schools at Kirindiwela and Udugampola, built at a cost of Rs. 9,850 and Rs. 8,450, respectively, to accommodate 250 and 300 infants drawn from the large boys' and girls' vernacular schools in these villages. It is hoped considerably to increase the number of these infant schools, which ensure for the smaller children individual attention and infant teaching which they never obtained when they were herded together in the large open village school, where their presence merely added to the general din, and where they were left to the mercies of monitors.

The training of infant teachers both for English and vernacular schools is now receiving special attention at the Training College; these village infant schools have been given the same equipment in hand work and kindergarten games as is found in some of the best infant departments in the English schools.

The pay of monitors has been improved, and new regulations have been made with regard to the number of times they can come up for their examinations; they are also permitted to secure employment at other than Government schools while waiting for posts as teachers. At the end of 1919 there were 454 third-year monitors, 321 men and 133 women, waiting for posts in Government schools. The monitor system works very well, and ensures a steady supply of well-educated and efficient teachers for Government schools. Government has sanctioned an increase of 43 head teachers and 60 assistants from October 1.

It is to be hoped that the establishment of more garden schools and English classes will afford further opening for these monitors, who should also prove a most valuable source of supply to the Agricultural Department when vernacular agricultural instructors are employed and trained by that Department.

I annex extracts from the reports of the Provincial Inspectors. Mr. Vanderwall, Inspector of Schools, Western Province, writes on vernacular education:—

To those acquainted with the poor schoolrooms of twenty years ago, the well-designed and well-constructed school buildings of the present day standing on extensive grounds of their own, with teachers' quarters, school gardens, playgrounds, &c., come as a revelation. They are an education to the villager, with their practical illustrations of light, ventilation, cleanliness, and order.

Certainly the village schoolmaster fills an honoured and honourable, if not a lucrative, post, and some of the best men in the community aspire to it and serve long periods of training and waiting to reach it.

In vernacular schools discipline usually offers no difficulties. Rowdiness and resistance to authority are practically unknown. The thirst for knowledge is all-absorbing, and the teacher's task is an easy one.

The hand work, maps, charts, and drawings produced in some of our vernacular schools are not inferior to the best work done in any schools in the Island.

The vernacular schools are moving on with the tide of progress. But it is curious that, in spite of modern text books, old and discarded methods of arithmetic still survive.\* These methods are a pious inheritance passed on from teacher to scholar, who in turn becomes teacher again, and are difficult to eradicate. A knowledge of English is spreading. Many vernacular head teachers can read English. With a more diffused knowledge of English and the capacity to assimilate what is best in English text books progress will undoubtedly follow.

Excellent results have followed from the inspection system, which is replacing the individual examination system in some of our large vernacular schools. The schools have responded splendidly. They are anxious to discover and remedy defects and to adopt improved methods.

I consider the future full of hope.

Four schools in the Western, one in the Central, two in the North-Western, and three in the Southern Province were classified as efficient in virtue of the good work done by them for many years past, and are to be known as Inspectors' schools.

The schools so selected are C/Kirindiwela, C/Mirigama, C/Tihariya, and C/Henegama, in the Western Province; K/Nugawela, in the Central Province; KU/Balalla and KU/Weuda, in the North-Western Province; and G/Weragoda, MR/Narandeniya, and H/Nihiluwa, in the Southern Province.

Mr. de la Harpe, Inspector, Central Province, reports:—

There is a growing demand for English education in the villages other than those in which there are Anglo-vernacular schools. As a temporary expedient, a teacher who has a fair knowledge of English is allowed to teach reading, writing, and conversation in the school bungalow after school hours. I believe that the time is now ripe for re-organizing our Anglo-vernacular schools and opening a fairly large number of them each in the centre of a group of vernacular schools.

\* The arithmetic syllabus for vernacular schools has now been amended.

Mr. Tillainayagam writes of the vernacular schools in the Northern Province :—

I must endorse the opinion of my predecessor that the poverty of the vernacular schools in this district is largely due to over-competition. I agree with him in thinking that the new policy of concentration and model Government schools should go a great way to improve matters.

Mr. Candiah, Acting Inspector of the Eastern Province, reports of the schools in that Province :—

Increased attention is being paid in this Province to improve in every respect the conditions of the schools, both English and vernacular. In the vernacular schools the 60 cents bonus is highly appreciated, with the result that a high percentage of eligible pupils are being presented for examination. The managers are also keen on securing the services of efficient and certificated teachers. In the infant departments attached to some of the large vernacular schools, efforts are made to keep the place more attractive, and to make the work more interesting.

Most of the vernacular schools are provided with fairly good buildings with sufficient accommodation. Some of the buildings recently put up by the Wesleyan Mission in Kalmunai circuit deserve special mention.

Conferences of vernacular teachers were held at Batticaloa, Kalmunai, and Trincomalee. The keen interest taken by the managers and teachers was noticeable by their attendance in large numbers. Demonstration in physical drill was also one of the items in the programme.

The majority of the teachers seem to realize the importance of discipline, which continues to be satisfactory. The physical drill, which finds a place in the time tables of many schools, contributes a great deal towards its maintenance.

Most of the existing Government schools are serving as model schools in many respects, and it will be an advantage to the cause of education if more schools are opened at suitable centres.

Mr. Welayden, Inspector of Schools for the Southern Province, who has an intimate knowledge of vernacular schools, reports :—

There was much activity in the Province in reconstruction of, and extension to, buildings and in providing permanent latrines. There is yet much to be done in this line, especially in way of providing separate bungalows for the increasing number of girls in mixed schools and for infants in large and crowded schools.

Schools of such size and importance as Hikkaduwa, Induruwa, Kosgoda, Ihlagoda, and Kataluwa, in the Galle District; Mirissa, Godauda, Tihagoda, Narandeniya, and Aparekka, in the Matara District; and Nakulugamuwa, Nihiliwa, and Beligalla, in the Hambantota District, ought to have separate bungalows for infants, and wherever practicable the small boys and girls should be brought under one roof and put in charge of female teachers.

The circular on cleanliness in schools has, in general, had a good effect. Both teachers and pupils are now more clean and tidy in person and dress than they used to be in the past, and the schoolrooms and teachers' quarters are kept in a much better condition. It is a common thing to see in a morning children with bunches of cultivated or wild flowers in their hands wending their way to school. In some schools there has, in this matter of taking flowers for the adornment of the school, arisen a healthy rivalry between children of different villages attending the same school, and the children are having for this purpose flower gardens of their own.

The leaflet on rules of the road, &c., has been of great help to teachers for imparting useful and valuable instruction to pupils in regard to road and railway travelling and postal matters. In many schools the children know and practice the rules of the road, and are able to give intelligent answers to questions on postal matters and railway travelling.

The leaflet referred to by the Inspector was one issued during the year to all vernacular schools, giving instruction as to the rules of the road—there is always likelihood of an accident to children playing on the high road outside the school—railway travelling, *e.g.*, taking tickets, waiting for the train, &c., and postal matters. These leaflets are to be bound in the readers of different standards—and to be treated for examination purposes as part of the reader in which the children are to be examined.

Attempts have been made to improve the class readers. An excellent collection of action songs by the well-known Sinhalese dramatist Mr. Proctor John de Silva has been recommended for use in schools, and it is proposed to hold competitions between schools in the same district in the singing of songs from this book and the "Balabodhayana."

Translations have been issued of "Great Englishmen," by Miss Synge, Part I. for fourth standard; "The British Empire," by S. H. Roberts for seventh and eighth standards.

"The Ruined Cities of Ceylon," by H. W. Cave, has been translated, and will, it is hoped, shortly be issued by Messrs. H. W. Cave & Co.

Lay's "Pupil's Class Book of Geography"—"Asia" (MacMillan)—is in the press. This will be the first attempt at translating a modern geography into the vernacular. The geography books in the vernacular are not satisfactory.

"Facts and Figures about Ceylon," being extracts from "Ceylon at the Census of 1911," and "How Man conquered Nature," by M. C. Reynolds, are now ready for the press, and the second part of "Great Englishmen" is under revision.

It must be with the help of translations of modern educational works that educational progress can be effected in the vernacular schools. Boys and girls above the fifth standard are well able to understand and appreciate good modern text books if translated into simple and intelligible Sinhalese.

There are now four Government town schools in Colombo. The school at Dematagoda was completed during the year, and the fourth, adjoining the Technical Schools, will be opened as the Maradana Town School next year.

Grant-in-aid managers are being offered special encouragement to open more and extend existing schools in the town of Colombo.

The amount subscribed and promised for scholarships for boys from the vernacular schools amounted at the end of the year to Rs. 83,583, which should cover the endowment of 69 scholarships. The first examination was held on April 11, 1918; there were 357 candidates, of whom 20 were selected. These boys entered the Practising School as a special class under Mr. J. E. V. Peiris in May, 1918, and during the two years they have been at the school have done remarkably well, and are now reported to be up to the sixth standard. A second examination was held on December 5, 1918, and the second lot of 20 scholars was admitted in January, 1919. A third examination was held on December 5, at which there were 330 candidates, being 64 more than in 1918. The successful candidates came from the following districts :—Colombo (4), Kalutara (3), Galle (2), Chilaw (2), Negombo (2), Kandy (2), and one apiece from the Ratnapura, Kegalla, Matara, Matale, Jaffna, and Batticaloa Districts. One boy is the son of an elephant catcher from a remote school in the Ratnapura District, another the son of the widow of a poor fisherman in the Matara District, and the majority were sons of village cultivators;

several occupations were represented by the parents of these boys. The third batch will be admitted early next year. Forty boys are housed in "Scholarship House," and the 20 selected in 1919 will live in a new house rented for them. It is hoped that in time a separate boarding house may be built for them adjoining the Training College grounds. I consider that if this scheme is to prove the full success it should be, and it has, I believe, the warm support of all communities in the Island, steps should be taken early to provide a properly equipped boarding house for these boys. They should number 100 in January, 1922, and the advantages of their being boarded together are obvious. The experiment is one of peculiar interest, as, I believe, it is the first attempt in the East to form a special class of village boys, all under eleven years, who know no English, to give them individual attention, to board them together, and to teach them English by the direct method. It is hoped that at the end of five years they will be up to the scholarship form of boys of sixteen at the Royal College, in spite of the fact that they have only commenced learning English at eleven years of age, as they are the picked boys of the vernacular schools. This Scholarship Class should afford most valuable information in the future as to the possibilities for boys who have had their early training in village schools, and who have only taken up English after they have acquired a knowledge of their own mother tongue and learnt their mathematics and other subjects up to the fifth and sixth standard in Sinhalese and Tamil.

It will also be of interest to see how boys from the north and the south, from the east and the west, compare, and the subjects in which the Sinhalese and Tamil boys respectively do best. There are two scholarships reserved for Muhammadan boys, but no candidates of the required standard have yet been secured for these scholarships.

Continued interest has been shown throughout the year in vernacular education, and there have been generous donations of buildings and land for the erection of schools.

The Chairman, District School Committee, Kegalla, reports the offer of free buildings and sites for five girls' schools in that district; the Chairman, District School Committee, Ratnapura, also reports that a new girls' school was built by the villagers and given over to his Committee, and that the villagers have agreed to put up buildings for three more girls' schools in this district:—Two to be built with round timber and a tiled roof; while Haramanis Appu Mudalali, of Teppanawa, has offered to put up a substantial and permanent building with sawn timber and a tiled roof for the third school.

The Government Agent, Province of Uva, states that the villagers undertook the construction of a school in 1918, and that it is now nearing completion. In the Matara District a site was given by five villagers for a Government school. In the Puttalam District the villagers contributed labour free towards the repairs to the schools in the Demala hatpattu. In the Kalutara District two new schools—one for boys and one for girls—were put up by the villagers and gifted to the District School Committee; while the Moors in a village in this district contributed the cost of the erection of a Muhammadan school. Offers of free sites for three schools in the Kandy District were accepted by the Chairman. In the Colombo District Muhammadan school buildings were provided at the expense of the villagers in four villages.

#### CHAPTER VII.

#### TRAINING SCHOOL AND TEACHERS' EXAMINATIONS.

Mr. Leigh Smith, Principal of the Government Training College, reports on the year's working of the College:—

We began the year with 169 students in all, of whom 89 were on the English side and 80 on the vernacular. Of those who were taking the English course, 5 were graduates, 11 were second-year men students, 8 were Anglo-vernacular men students, and 24 were first-year men students; one of whom was an Anglo-vernacular. Seventeen were second-year women students, and 24 were first-year women students, of the women students, 9 were second-year kindergarten students, and 12 were first-year kindergarten students. Of the vernacular students, 20 were second-year men students, 20 were first-year men students, 20 were second-year women students, and 20 were first-year women students. At the end of the year 72 students left the College, of whom 32 were English students, 15 men and 17 women students. Of these men, 4 were graduates; of the women students, 8 had been trained for work in girls' schools, and 9 for work in kindergarten schools; of the 40 vernacular students who left the College, 20 were men and 20 were women students.

*Staff.*—The following changes occurred amongst the staff during the year:—Miss Daly, the Mistress of Method, went on leave in March, and while on leave resigned her post. The Training College Women's Department was much indebted to her for the four years' effective work which she put in at the College, and the two kindergarten schools, the one preparatory to the Royal College and the other attached to the Practising school, both owe much to Miss Daly. Her place was taken for a term by Mrs. Alderson, and for a further term by Miss Beattie, a secondary school teacher from England on vacation leave in Ceylon. We are much indebted to both for valuable assistance rendered. During the year we suffered two other losses—Mr. A. J. R. Vethavanam received well-merited promotion by becoming Headmaster of the Garden School at Henaratgoda. His work with the Anglo-vernacular class and in the Practising School was taken by Mr. A. Gnanapragasam, an old Training College student. Mr. E. W. Kannangara, tutor in mathematics and Latin, passed by competitive examination into the Civil Service. His place was taken by Mr. J. M. Obeyasekere, late of St. Thomas's College, where he passed his Intermediate Examination. Mr. T. D. H. Abeygunewardene, a trained student of the year 1918, was appointed to the Training College at the beginning of the year. His work lies with the second-year Scholarship Class, and also with the students whose drill and hygiene work has been put under his charge. Mr. Abeygunewardene is also in charge of the drill and games of the Practising School, while he also controls the activities of the Wolf Cubs. Miss Tirimane was appointed Form Mistress of the third standard in the Practising School. I take this opportunity of thanking Mr. Harding and the other members of the staff for their services to the College during the year.

*Students (English Course, Men).*—I am glad to be able to report that the health of the students was much better than in the previous year. Influenza again attacked the students during the first term, but to nothing like the same extent as it had done in the previous terms, though, unfortunately, two students died during the year; G. D. P. Liveris, a promising Anglo-vernacular student, and Hewapathirane, who had only been in the College a few days. One student, P. T. Arumaswami, left the College on health reasons, after being here only a short time. On the whole, however, and despite a serious shortage of rice, which resulted in the whole College being put on half rations during two days in July, the health of the students was good. The work done throughout the year was done willingly and well, though it suffered to some extent from absences, and the discipline and the conduct of the men were satisfactory.

*Students (English Course, Women).*—The health of the English women students was uniformly good. The new double storey buildings of the women students were completed by the end of July, and the transference of the Sinhalese women students to their own quarters enabled us to house 14 English women students, and

before long, with few exceptions, all women students will be resident. There is at present accommodation for 33 English-speaking students and 40 vernaculars. This will have important results on their efficiency, as work can be done under much better conditions, and with less distractions, by resident students. The discipline and conduct of the women students have been quite satisfactory throughout the year, and for this I am much indebted to Miss Moreira.

#### VERNAACULAR DEPARTMENT.

The number of students at the beginning of the year was as follows :—

|                            |     |
|----------------------------|-----|
| First-year men students    | 20* |
| Second-year men students   | 20† |
| First-year women students  | 20* |
| Second-year women students | 20* |
| Total                      | 80  |

\* All from Government Schools. † 19 from Government Schools, and 1 from Mission School.

Of these students, 32 men were low-country and 8 men up-country, 33 women low-country and 7 women up-country.

*Health of the Students.*—After a very unfortunate start in the first term 1919, when much time was lost through influenza, the health of the students improved considerably, though, unhappily, one of the first-year students, P. H. C. de Silva, a very promising student, contracted enteric, and died at the General Hospital on July 24, 1919. This is the first occasion on which a vernacular student has died during his College course.

*Changes in the Staff.*—At the beginning of the year Messrs. M. D. Pragnaratna and M. L. P. Manthiraratna were appointed to take the places of Messrs. V. D. C. de Silva and D. H. Dharmawardene. The lectures on Sinhalese literature and grammar, which were formerly given by Pundit W. D. C. Wagiswara, have this year been given by visiting lecturers, whose lectures were of value to the students. The lectures were given by Mudaliyar W. F. Gunawardene, Mudaliyar A. M. Gunasekara, Mr. W. A. Samarasekara, and Mr. N. H. Jinadasa.

*Examination Results.*—The 1918 results were received in the College during 1919, and proved satisfactory, all candidates, 22 men students and 20 women students, gaining second class certificates. The out-going students of 1919 all worked well, and should all of them obtain a first or second class certificate.

*Other Activities.*—The Students' Debating Society held weekly Meetings. The Vernacular Magazine was produced term by term, and has now become an established feature of the College life, while it is useful also in keeping the former vernacular students in touch with the College. Sports were actively pursued, volley ball was played by all the vernacular students, whose team had the satisfaction of defeating the English students' team. At the annual athletic sports of the College certain events were set aside for the vernacular students, who performed very creditably, one of them winning the Victor Ludorum Cup presented by the Principal.

*Garden Work.*—The garden activities of the vernacular students were up to their usual standard. The shield offered by Mr. C. T. Symons for the most consistent garden work done by a vernacular student was won by H. G. Jayasena for the second time. The Ceylon Agricultural Society's medals were won by H. G. Jayasena and K. L. Ferera.

This year an additional garden activity has been the growing of paddy. A portion of the vegetable garden has been set aside for this, and an excellent crop has resulted. The students have been initiated into the work of transplanting paddy, and the general work in this line has been so satisfactory that it is now intended to put more land under paddy cultivation.

The library, lantern lectures, &c., have all continued to flourish. Drill throughout the year has been in the charge of Mr. Amarakoon, and all the vernacular students have received a thorough training in this important branch of work.

The women vernacular students have had a successful year, and have continued to keep up a Literary Society, and are also actively interested in the Vernacular Magazine. The Girls' Vernacular School still continues, though the numbers are low. There are 19 at present on the register, with an average attendance of 11.

I wish to express my thanks to Mr. C. Abeyssekara and his staff and to Miss Moreira and her staff for the whole-hearted and energetic work done by them in connection with the work of training the vernacular students, men and women, respectively.

#### THE KINDERGARTEN SCHOOL.

In addition to the kindergarten school attached to the Practising School, the Training College also controls the kindergarten school, consisting of 5 forms, from which boys pass into the Royal College. In 1919 the number of new admissions was 79. The number of boys on the register was 170, with an average attendance of 148. Forty-five boys passed into the Royal College at the end of the year. An important part of this school was the nursery class opened for children of three and four years of age. In this school the kindergarten students of the College find opportunities for practice under the supervision of the Mistress of Method and the teachers of the permanent staff. Useful reports are issued by the latter on the work of the different students, and I am much indebted to them for the work done in the school, and for the ready way in which they co-operate in the training of students.

The Director on his return from England brought a letter and photograph from Madame Maria Montessori for the kindergarten children, which were much appreciated, and are now framed and hung in one of the kindergarten class rooms.

#### THE PRACTISING SCHOOL.

The number of boys on the list at the beginning of 1919 was 384, with an average attendance of 324. The numbers in 1918 were 264 on the list, with an average attendance of 204. These numbers include scholarship boys and kindergarten. One boy passed the Elementary School-leaving Examination during the year. For this examination a class of some 16 boys has been formed, of whom it is hoped that most will pass in the March Examination, 1920. Considering that it is only in the last three years or so that an Elementary School-leaving class has been formed, satisfactory progress has been made, and the result on the school of having a school-leaving class has been very satisfactory. Previously boys left the school about the sixth standard, with a view to going to a school where they could take a final examination. Now they remain at the Practising School. In addition, a small class was formed at the beginning of 1919 of boys who were not regarded as strong enough to take the School-leaving Examination. They were put under the charge of a first-year student, M. D. Costa, and given practice in typewriting, shorthand, and commercial subjects generally. In addition, two of these boys, through the kindness of Mr. E. E. Davidson, were allowed to attend his lectures on commercial geography at the Technical Schools. The results achieved by this class have been good, several boys having secured employment through its medium, two with Mr. Lund of the Railway Telegraph Department, and others in the Fort. In time it is hoped that this class will become, instead of a refuge for the weaker boys of the eighth standard, a class to which those who have passed the Elementary School-leaving Examination will naturally proceed.

The literary club of the Practising School has held regular meetings during the year, and boys of standards V. to VIII. have taken part. The members of the club are responsible for the programme, and their meetings are presided over by the Vice-Principal or one of the members of the staff. The sports have maintained a good standard during the year; football, cricket, and boxing have been well supported. We were much indebted to the Principal of the Royal College for permission to use two pitches on the Royal College grounds. The school competed for the second time in the Public School Boxing Competition. One of the boys was successful in winning the cup given to the winner of the light weight competition. Events were arranged for the Practising School at the annual athletic sports, the entries for which were good, and the competition excellent. At the physical drill competition the Practising School competed in the class open to schools with less than 400 boys on the roll, and did very well, coming second with 79 points, being beaten only by the boys of the Police Brigade, who secured 87 points.

The Boy Scouts have flourished under the supervision of Messrs. Wijesinghe and Joseph. Four patrols were formed; and weekly practice went on. These boys did useful work throughout the year. Last year also saw the formation of a Wolf Cub Troop under Mr. Abeygunawardene, who was assisted by some of the students, especially by Mr. T. U. D. Silva. This troop was composed mainly of boys in the second-year scholarship class, but there were also a few from the Practising School. The magazine run by the boys continues to flourish, and appears monthly. It is edited by two boys under the supervision of Mr. Seneviratne.

The second of the scholarship classes, under the Director's scheme, entered the College this year, and did good work under Mr. J. E. V. Pieris. There were 19 Sinhalese boys and 1 Tamil. They had the advantage of the whole three terms of the year, whereas their predecessors only had two terms. Mr. Abeygunawardene was in charge of the second-year scholarship class, which continued to progress well. Garden work and manual training were added to their work, and the boys were also encouraged to take part in boxing, with the result that one of the class represented the Practising School in the bantam weights at the Public School Boxing Competition. The staff of the Practising School has done good work this year under Mr. Jayatilleke, and the kindergarten portion of the Practising School, with its Nursery School under Miss Cooke, has increased in numbers to over 100. The year's work in the Practising School was brought to a close by the third annual prize giving and concert. At this concert the boys presented a play, Sheridan's "Pizarro." This was quite creditably done, and I am pleased to say that much of the credit for its success is due to students of the College who coached the boys throughout the last term.

*Foreign Practice (English Course, Men).*—Mr. Harding, Vice-Principal and Master of Method, reports that, as in former years, facilities for the school practice of the students was greatly increased through the kindness of the Rector of St. Joseph's College, the Director of St. Benedict's College, and the Principal of Ananda College.

*(English Course, Women).*—The women students again enjoyed the opportunity of having teaching practice at Bishops' College, St. Bridget's College, C. M. S. Ladies' College, and Methodist College, Colpetty, and we are much obliged to the Principals of these Colleges for their kindness in allowing them these opportunities.

*(Vernacular Course, Men).*—During the year the second-year students were taken to Green street, Maligakanda, and Dematagoda, the three schools recently opened by the Education Department. We are much indebted to the Director for permission to use these schools for the purpose of foreign school practice.

*Visiting Lecturers.*—The Rev. Fr. M. J. Le Goc, of St. Joseph's College, again gave the second-year men a course of lectures in nature study, which was of great value to them. It is hoped that in future years these students who have attended Fr. Le Goc's lectures will themselves become teachers of nature study in the schools to which they may be appointed. Lectures in hygiene and physiology were given by Dr. Lucian de Silva, and on the eye by Dr. Nell, to the second-year men students, while a similar course was given by Dr. C. E. Anderson to the second-year women students. These lectures are of great value to the students. To Mrs. Harding we are again indebted for services, given gratuitously, to the students, both men and women, in promoting concerts, and encouraging the College music.

*The Library.*—Mr. Harding reports that the library has been well used. It is put in charge of the second-year students, one of whom looks after the books, and another after the periodicals and magazines. We are now getting somewhat cramped for accommodation in our library quarters, but when the new buildings for the men students, which have already been planned, are put up, the new common room for men students will to some extent meet the difficulty of want of accommodation, and of a quiet place for reading and study.

*Visits.*—Mr. Harding was able to arrange the usual visits to places of interest, e.g., the Observatory, the Government Printing Works, the Survey Office, and the "Morning Leader Printing Works." We owe a debt of gratitude to the authorities of the above-named places for the trouble they took to make these visits of educational value and interest to the students.

*Varied Activities.*—The Training College Literary and Debating Society did very good work throughout the year, and we are grateful to the many lecturers from outside who contributed to make the programme of the year so successful and so interesting. For the greater part of the programme, however, the students of the College are responsible, and the consequent practice in speaking that most of them thus get is of great use in the training of students. The annual athletic sports were held in the second term of the year and were a great success. All departments of the College took part in them, including the women students, for whom races were arranged. I should like to thank the past students (English course) of the Training College, who very kindly presented a cup to be held by the Victor Ludorum among the English-speaking students. The Acting Colonial Secretary, Mr. A. S. Pagden, attended the sports, and Mrs. Pagden gave away the prizes. The women students' sporting activities were catered for by tennis throughout the year. The second-year students did good work during the year in giving lantern lectures to the boys of the Practising School, one student giving the lecture and another working the lantern. Some seventeen of the students underwent a course of "Rover" instruction with a view to qualifying themselves as leaders of scout troops. These students were under the charge of Mr. Abeygunawardene, and, with him, went to a camp at Henaratgoda, where they received an intensive course of training of great value to them. Half the expenses of this course were borne by the Boy Scouts Association, to whom we are indebted for this assistance. In addition, Dr. R. de Silva gave the "Rover" Scouts a course in first aid, which was very much appreciated by them. The drill of the men students was under the charge of Mr. Abeygunawardene. They were all examined by Mr. Samarasinghe, Drill Inspector, with satisfactory results. I am glad to say that it was possible during the last terms of the year to arrange a drill course for the women students. This had to be given up sometime ago owing to the resignation of the Drill Inspector. It has now been possible to arrange with Mrs. Knott, wife of the Army Schoolmaster, to take the drill of the women students of the second year once a week.

Dramatic performances were given during the year. The women students gave "Quality Street," and the success of the production was due to Mrs. Anderson and Miss Carter, Inspectress of Schools, who very kindly gave much of their time to the coaching of the performers. The men students presented scenes from Shakespeare in the second term, and a play called "The Conspiracy" in their third term. The success of both these performances was largely due to the careful and indefatigable coaching given by Mr. Gratian. These performances are of very great value to the students from the point of view of elocution and voice production, and to some extent make up for the fact that we have not as yet in the College a regular course of voice production.

*Girl Guides.*—The women students had a flourishing company under the auspices of this organization, and had much encouragement during the year from helpers such as Mrs. Fleming and Miss Hornby. It is hoped that the movement will take firm hold in the College.

#### ANCHYLOSTOMIASIS TREATMENT.

During the year we had visits from Dr. Perrin Norris and Dr. Gunasekera. Dr. Norris gave some exceedingly interesting and useful lantern lectures to the vernacular students, men and women, and to the English students. In consequence of the lectures many of the students took the treatment. This was carried out by Dr. Gunasekera. The College has now at various terms been fortunate enough to have lectures from Dr. Howard, the first to take up anchylostomiasis work in Ceylon, Dr. Jacocks, and Dr. Perrin Norris.

#### PEACE DAY.

The Peace Day was celebrated by all the students of the College, English-speaking and vernacular. Special arrangements were made to give the vernacular women students full opportunities of partaking in the celebrations. A sum of Rs. 100 was allowed by Government for the expenses of entertaining them, the illuminations were witnessed on Peace night, and the students were taken the next day in gharries through the Fort to see the decorations, and, in addition, a sports meeting was arranged, at which prizes were competed for. In connection with the entertainments to the vernacular women students, I should like to thank Mr. and Mrs. B. W. Leefe for their great kindness in entertaining these students to a cinematograph show and afterwards to tea. The students greatly enjoyed the outing.

#### TRAINING COLLEGE UNION.

The Old Students Union had a very successful year under Mr. Holsinger, and wound up with a very well organized and well-carried out Educational Conference. This was opened by the Director of Education, and was addressed by representatives from all parts of Ceylon. The Union Journal, "The Ceylon Educational Review," also continued its excellent work under the editorship of Mr. Sivagurunathan.

#### VISITORS TO THE COLLEGE.

We were favoured with a visit from the Educational Commission that has been touring Japan and the Philippines, and is now in India. At the head of the Commission was the Rev. A. G. Fraser, well known in the Training College. He very kindly addressed the students on work in the Philippines and in Japan. Other members of the Commission were Miss Allan, Principal of Homerton College, Cambridge, and Professor D. J. Fleming of America. Mr. Wodeman, Assistant Government Agent of the Western Province, attended some of our literary club meetings and spoke at some of them. He also presented a prize for reading to the best reader of an unprepared passage. Mr. F. Lewis gave a lantern lecture on "The Empire," under the auspices of the Girls' Friendly Society. Miss Strout gave the men and women students a series of lectures on temperance and on smoking, which were much appreciated. The Hon. Mr. P. Ramanathan also visited the College and was shown over every department. In conclusion I have to thank the Director for the great interest taken in the Training College, and for the many ways in which his help and advice have always been at my disposal.

The principal needs of the Training College are :—

- (1) New quarters for the Principal.
- (2) New boarding establishment for the men students.
- (3) A well-equipped dispensary where first-aid lessons can be given.
- (4) A library and common room.
- (5) New art class rooms ; plans for these have been prepared.
- (6) Improved accommodation for the Practising School.
- (7) Practising girls' schools for the women students—English and Vernacular.
- (8) The early appointment of—
  - (a) A Mistress of Method to fill Miss Daly's place ;
  - (b) An Assistant Master of Method, who will be able to give special instruction in the teaching of geography.
- (9) A boarding house for the scholarship boys.
- (10) The publication of lectures given to the vernacular students in book form, and the translation of English school books for use by these students.

The situation of the Training College is in many respects excellent, the beautiful grounds of the College and the propinquity of the University College and Royal College are great advantages, but there are disadvantages for the vernacular students in the distance from vernacular schools and the quarters of the town where vernacular pupils can be obtained, the vernacular women especially suffer from lack of a practising school. It will probably be found in the near future that a move—possibly to Henaratgoda—will afford better facilities for the training of vernacular teachers. The increased accommodation which will be available will all be required for the English students.

*Other Training Colleges and Schools.*—The Training Colony at Peradeniya continued to do excellent work, largely due to the influence and enthusiasm of Mr. and Mrs. Gibson. There were 90 students on the roll. Of the 11 women students who entered for the second class certificate examination, 9 passed, the other 2 receiving third class certificates. Of the 15 men who entered, 13 passed, the other 2 failed in one subject each, and will be given third class certificates.

Seven women students entered for the first-year examination, 6 passed. 14 men students entered for the same examination, and 12 passed. 16 women students prepared for the Government Entrance, all passed. In all there were 56 passes out of 63 students presented. Entrance classes for men and women have now been recognized, and grants are paid on admissions. 17 new men students were admitted in January, 1920. Special attention is paid to agricultural work, and a start has been made with industrial work, for which a special grant of Rs. 1,000 has been offered by the Department.

The Joint Training School at Copay obtained the following results :—11 passes in the admission class, 15 in the first year, and 11 in the second year, out of 22, 29, and 19 candidates entered. Improvements have been effected in the Practising School, but the supervision and hostel arrangements cannot be regarded as satisfactory.

The Buddhist Training School at Nittambuwa started in January, 1918, is showing progress. Five candidates passed the Admission examination and six the second year out of 12 candidates entered.

Mrs. Musæus Higgins' Training School for Sinhalese girls continued to do excellent work and obtained the following results :—17 passes in the Admission class, 12 in the first year, and 12 in the second year out of 18, 13, and 18 candidates entered.

**Vernacular Training Schools (Aided) and Teachers' Certificate Examination.**—For the Grant-in-aid Training School Entrance Examination there were 69 male and 85 female candidates; 40 males and 68 females passed the examination. For the first-year examination 83 males and 43 females presented themselves, of whom 57 males and 30 females passed. For the second-year examination the candidates were 65 males and 53 females, and 45 males and 34 females succeeded in passing the examination. For the teachers' examination for the third class certificate there were 104 males and 87 females, of whom only 19 males and 11 females obtained the certificate. For the second class certificate there were 313 males and 45 females; of these, 72 males and 3 females succeeded in gaining the certificate. Although these results show some improvement on those of last year, the work of the untrained candidates who took these examinations continues to be poor.

**Government Pupil Teachers' Examination.**—Third class certificates were awarded to 110 male pupil teachers and 43 female pupil teachers on the results of the Third-year Pupil Teachers' Examination. Grant-in-aid pupil teachers were examined at centres in January, instead of at their respective schools. Twenty male pupil teachers and 31 female pupil teachers gained third class certificates.

## CHAPTER VIII.

## TECHNICAL, COMMERCIAL, AND INDUSTRIAL EDUCATION.

The Technical Schools have passed through a series of changes, which have retarded their progress.

From the retirement of Mr. T. Cockerill in August, 1918, Mr. W. N. Rae, who was also acting as Professor of Chemistry and Lecturer in Physics, acted as Chief Instructor. It was not until a year after Mr. Cockerill's retirement that his successor, Mr. Kennard, assumed duties.

Mr. Kennard reports :—

I assumed duties on August 19, 1919, relieving Mr. W. N. Rae, who was acting as Chief Instructor since the retirement of Mr. T. Cockerill, in addition to his own duties.

The vacancy caused by the retirement of Mr. W. Gunaratne has been filled by Mr. E. J. Jayaweera. A successor to Mr. E. J. Jayaweera has not yet been appointed.

Mr. M. R. Peiris, Instructor in Mathematics, has been seconded for service in the Census Department from January, 1920, and Mr. A. Kandiah is appointed to succeed him temporarily.

Mr. P. L. A. Perera has been appointed as Temporary Assistant Instructor in Telegraphy since May, 1919, and is assisting in teaching telegraphy to the Railway clerks.

**Building.**—A fire occurred at the Telegraph School in March, 1919. Considerable damage was done to the buildings, furniture, fittings, &c., and great difficulty was experienced in providing accommodation for the evening classes. This school is now being re-constructed, and will be available for use in a short time.

**Day Classes : Inspectors.**—There were thirteen students in the Telegraph and Telephone Inspectors' Training Class. Twelve of these students sat for the examination of the City and Guilds of London Institute.

The results were as follows :—

|                  | Candidates. | First Class. | Second Class. |
|------------------|-------------|--------------|---------------|
| Telegraphy .. .. | 12 ..       | 5 ..         | 7 ..          |
| Telephony .. ..  | 8 ..        | 3 ..         | 4 ..          |

Mr. P. de S. Samararatne was third in order of merit in the world in both subjects, thus qualifying for two bronze medals.

One student was discontinued.

A class in signalling for twenty-four Railway clerks was held from July onwards and carried on during holidays. These men completed their training in December.

The number who attended the *art classes* during the three terms are as shown :—

| Classes. | First Term. | Second Term. | Third Term. |
|----------|-------------|--------------|-------------|
| A .. ..  | 14 ..       | 15 ..        | 20 ..       |
| B .. ..  | 1 ..        | 2 ..         | 1 ..        |
| C .. ..  | 14 ..       | 13 ..        | 12 ..       |
| D .. ..  | 9 ..        | 9 ..         | 10 ..       |

*Evening Classes* have been held in the following subjects :—

|   | Instructors.               |
|---|----------------------------|
| Building Construction .. ..   | Mr. A. Woodeson (on leave) |
| Mechanical Engineering .. ..  | Mr. A. D. Parham (acting)  |
| Machine Construction and Drawing .. ..                              | Mr. W. T. A. Browne        |
| Sanitary Engineering and Plumbing .. ..                             | Mr. T. Hall (on leave)     |
| Electric Wiring .. ..   | Mr. J. S. Spiers (acting)  |
| Motor Engineering .. ..   | Mr. J. D. Mair             |
| Drawing Class for Carpenters, Cabinet Makers, &c. (Sinhalese) .. .. | Mr. S. Mack                |
|   | Mr. E. F. van Dort         |
|   | Mr. D. J. Perera           |

The number who attended these classes are as shown :—

| Classes.                                | First Term. | Second Term. | Third Term. |
|---|-------------|--------------|-------------|
| Building Construction .. ..             | 57 ..       | 60 ..        | 63 ..       |
| Mechanical Engineering .. ..            | 50 ..       | 45 ..        | 38 ..       |
| Machine Construction and Drawing .. ..  | 27 ..       | 28 ..        | 21 ..       |
| Sanitary Engineering and Plumbing .. .. | 23 ..       | 18 ..        | 28 ..       |
| Motor Engineering .. ..                 | 19 ..       | 25 ..        | 11 ..       |
| Electric Wiring .. ..                   | 20 ..       | 10 ..        | 27 ..       |
| Drawing Class for Carpenters .. ..      | 20 ..       | 15 ..        | 21 ..       |

Examinations were held in Building Construction, Plumbing, and Sanitary Engineering, Machine Construction, Carpenters' Drawing Class, Mechanical Engineering, and Electric Wiring, and certificates were awarded to the successful students, and the results are as shown :—

|  | Number of Candidates. | First Class. | Second Class. |
|--|-----------------------|--------------|---------------|
| Building Construction (three sections) .. .. | 62 ..                 | 45* ..       | 46*           |
| Plumbing and Sanitary Engineering .. ..      | 18 ..                 | 6 ..         | 8 ..          |
| Machine Construction .. ..                   | 17 ..                 | 4 ..         | 3 ..          |
| Carpenters' Drawing Class .. ..              | 16 ..                 | 2 ..         | 4 ..          |
| Mechanical Engineering .. ..                 | 24 ..                 | 10 ..        | 7 ..          |
| Electric Wiring .. ..                        | 16 ..                 | 6 passes.    |               |

\* These numbers refer to the total number of passes in each section.

*Commercial Classes:—*

| Subjects.                       | Instructors.         |
|---------------------------------|----------------------|
| English .. .. .                 | Mr. E. E. Davidson   |
| Arithmetic .. .. .              | Mr. A. R. P. Leetham |
| Commercial Geography .. .. .    | Mr. J. Bleakley      |
| Modern Business Routine .. .. . | Mr. E. E. Davidson   |
| Bookkeeping .. .. .             | Mr. S. P. Kandiah    |
| Shorthand .. .. .               | Mr. J. E. David      |
| Typewriting .. .. .             | Mr. D. O. Wijesinghe |
|                                 | Mr. J. C. Rodrigo    |
|                                 | Mr. J. R. Toussaint  |
|                                 | Mr. J. C. Rodrigo    |

Number attending these classes are shown below:—

| Subjects.                       | First Term. | Second Term. | Third Term. |
|---------------------------------|-------------|--------------|-------------|
| English .. .. .                 | 195         | 97           | 54          |
| Arithmetic .. .. .              | 60          | 29           | 21          |
| Commercial Geography* .. .. .   | —           | —            | 10          |
| Modern Business Routine .. .. . | 35          | 11           | 15          |
| Bookkeeping .. .. .             | 65          | 60           | 53          |
| Shorthand .. .. .               | 119         | 59           | 42          |
| Typewriting .. .. .             | 64          | 42           | 37          |

\* The class in Commercial Geography was started in September, 1919.

The students of these classes are mostly clerks in Government Service and mercantile firms, who appear to be very keen on their work with a view to better their prospects.

**Mr. Rae reports on the science work at the Technical School Laboratories:—**

Dr. A. F. Joseph, Professor of Chemistry at the Ceylon Medical College, was appointed Government Chemist to the Soudan Government in June. His post has not yet been filled.

I was appointed Assistant Government Analyst in October, 1919. My post has not yet been filled, and I have continued to act as Analyst and Lecturer in Physics at the Ceylon Medical College.

There have been no changes in the course of instruction during the year.

Four students in training completed the two years' course in July.

Father John Bastianpillai and Mr. K. S. Arulnandhy obtained first class certificates, and Miss F. van der Gert and Mr. B. E. W. Jehorathnam second classes. In December Miss B. Jansen completed the course and obtained a second class. Five new science students in training were admitted in October, including one woman; the number of science students now in training is ten.

In October four candidates presented themselves for the B.Sc. Examination of London University, of whom three passed; they were all students at this laboratory. At the previous examination five out of six passed.

The cost of materials and apparatus continues to rise; it is now between 200 and 300 per cent. of the pre-war costs.

The new buildings should be ready for occupation by the end of the year, and should make a very great deal of difference to the efficiency of the work, which has long suffered for lack of space.

No time has been available for research work during the year, and no papers have been published.

The number of students in the various classes are:—

|                      | First Term. | Second Term. | Third Term. |
|----------------------|-------------|--------------|-------------|
| <i>Chemistry.</i>    |             |              |             |
| Elementary .. .. .   | 46          | 30           | 45          |
| Intermediate .. .. . | 83          | 59           | 65          |
| Advanced .. .. .     | 5           | 6            | 7           |
| Others .. .. .       | 4           | 6            | 1           |
| Total .. .. .        | 138         | 101          | 118         |
| <i>Physics.</i>      |             |              |             |
| Elementary .. .. .   | 75          | 54           | 70          |
| Intermediate .. .. . | 37          | 34           | 3           |
| Advanced .. .. .     | 3           | 3            | 0           |
| Total .. .. .        | 115         | 91           | 73          |

One of the greatest educational needs of Ceylon is improved technical education. The appointment of local men to higher posts in the Public Works Department, Irrigation, Survey, Agricultural, Forest, and other Departments must largely depend upon their being given every facility to obtain a sound preliminary training in engineering and in technical subjects, which should be supplemented by a liberal endowment of scholarships to enable promising students to pursue their studies in England, America, and possibly India. The success of and the demand for the night classes clearly show that men are forthcoming, but these classes must be merely supplementary to, or in preparation for, day classes, which can only be established when the Technical Schools can be put to their legitimate use, and the science work removed to the new laboratories to be completed next year in connection with the University College.

The work of the schools should then be re-organized, and the staff of instructors brought up to the strength required. It must be recognized that in any engineering course workshop experience is essential, and the co-operation of the technical departments must be secured.

The *Commercial Classes* made a good start; in fact, the numbers were more than could be efficiently dealt with, and they naturally fell off, as many of those who attended were only anxious to obtain further suggestions in connection with their work or extra coaching before taking up examinations. A special point has been made of the English teaching, as it is realized that success in every branch of commercial work depends primarily on a sound knowledge of English being first acquired.

There is great demand in this Colony for good shorthand typists, and special efforts are being made to train such at the Technical Schools. It is hoped to establish classes in these subjects for Boy Scouts.

\* Commercial classes have now been established in several of the large English schools, and grants have been given to assist in the erection of class rooms, the purchase of typewriters, and other special equipment, and for the employment of commercial instructors.

The Ceylon Chamber of Commerce Examination syllabus has been revised with the assistance of a Committee of the Chamber of Commerce, who have been most helpful and encouraging.

The results of the examination in 1919 were :—

|                                      | Entered. | Passed. |
|--------------------------------------|----------|---------|
| Mercantile Clerks' Certificate .. .. | 47       | 6       |
| Shorthand Typists' Certificate .. .. | 35       | 1       |

These results cannot be regarded as satisfactory. They show, however, that the examination now attracts a large number of candidates—the number of entries in 1918 was 62—and the great need for a sound commercial education.

A special syllabus for Standards V. to VIII. has been drawn up leading up to the Ceylon Chamber of Commerce Examination, and attendance grant will be paid on such classes, provided there is a minimum of ten boys in the class, at Cambridge Senior rates, and a bonus of Rs. 30 will be paid for each pass in the Ceylon Chamber of Commerce Examination.

The Ceylon Chamber of Commerce will award two silver medals, one to each of the best candidates in the two sections of this examination, which has been divided into two parts, one for the Shorthand Typists' Certificate, the other for the Mercantile Clerks' Certificate, and also a bonus of Rs. 100 to the most successful teacher who presents not less than eight candidates. When in England I saw the London Chamber of Commerce authorities, who are responsible for their examinations, and arranged for these examinations to be held in Ceylon, and for English being accepted as the second language. Previously the requirement that a second modern language must be taken had prevented many from entering for this examination.

Thirty-seven students have entered their names for the examination of the London Chamber of Commerce, which will be held in May, 1920.

Commercial education will only be a success in Ceylon if it can be shown that it leads to remunerative and responsible positions. The encouragement given to it by the Ceylon Chamber of Commerce will, it is hoped, be followed by further opportunities being afforded to successful candidates, who must, of course, prove themselves to be fit for higher posts. It rests with the elementary schools and commercial classes to show that they can train the men required. Special arrangements will be made next year for classes for mobilized men of the Ceylon Light Infantry, who will thus be given the opportunity of studying subjects which will be useful to them in civil life during their spare time.

*Industrial Education* in the schools has received further encouragement. I annex a report by Mr. E. F. van Dort, who was acting as Inspector of Industrial Work :—

The following are the industries carried on in schools :—Carpentry, cloth weaving, printing, bookbinding, tailoring, shoemaking, smithy work, cane or rattan work, school chalk making, ekel basket making in boys' schools. Kalutara basket making, mat weaving, and ekel basket making in girls' schools, also a few girls are being taught cloth weaving in the Somawathie Weaving School near Negombo.

*Carpentry.*—Twenty-three schools are engaged on this industry, and 17 more are either being equipped or are awaiting sanction to start work. This is one of the industries which the pupils find useful after leaving school, and which trade many follow. There is always a demand for carpenters, but unless trained teachers are appointed to teach this industry, the qualification of those turned out will be poor, as it has been hitherto.

*Cloth Weaving.*—Five schools are engaged at this industry, and 12 more are either being equipped or awaiting equipment. The cost of equipment is high, as are the working expenses, although the material turned out can be sold at a profit.

*Printing.*—Four schools are engaged on this industry. This is an old established industry, and there is an ever-increasing demand for good workers.

*Bookbinding.*—This is a simple industry, and should go together with printing. Four schools are engaged in this work.

*Tailoring.*—Two schools have this industry. The influx of trained tailors from India prevents the larger employment of local tailors.

*Shoemaking.*—Two schools are engaged in teaching this industry. I have not been able to learn of a single pupil who has followed this trade after leaving school.

*Smithy Work.*—Two schools are engaged in teaching this industry. There is always a ready demand for good blacksmiths.

*Cane and Rattan Work.*—Three schools are engaged in teaching this industry ; though mostly a home or village industry, if worked with trained teachers there is much scope for improvement. The articles made of this material being strong and lasting are readily marketable.

*" Battalee " Work.*—This is a sister industry to the above. Two schools are working with this material, but owing to caste prejudice the village children do not readily take to it. The articles can always find a ready sale.

*School Chalks.*—Two schools are engaged in this work, being fully equipped for it. There has been an improvement in its manufacture, but the boys are not working very willingly, as they find the lime used is affecting the skin of their hands. If this industry is carried out by trained teachers, on a proper working system, much could be produced. There is a good market.

*Ekel Work.*—This class of work is not widely known. Two schools are engaged at it, and the work turned out is fair. The articles made of this material are strong, and the material lends itself to elegant shaping. The material (coconut ekel) is obtainable almost throughout the Island. The baskets are made quickly, as the condition of the material (tender ekel) does not allow of prolonging the work ; it must be used on the day it is gathered. Both boys and girls could work at it. I am confident this industry could be enlarged, like the Kalutara basket making, and will be as popular.

*Lacquer Work.*—One school is already equipped with material and instructor, and can begin work at once. Two are to be equipped. This industry is dying out, and will require an effort to revive it.

*Kalutara Basket Making.*—This industry has now been definitely established, and is being taught at 22 schools, teachers being appointed to supervise the work, working between two schools.

*Mat Weaving.*—Five schools are engaged in this work.

*Pottery.*—One school is being equipped to start on this industry, and when a fair start is made, it will open a new field of work for all adjoining villages.

*Coir Work.*—One school has all the material close at hand, but a suitable teacher has not been found yet to take charge of this work. An equipment of looms and machinery are required.

I found all through my work last year that no satisfactory improvement could be made in the various industries unless the teachers are trained in the different trades at some central school ; the present teachers, although they are practical men and women at these various trades, follow simple and old established rule-of-thumb methods.

*Drawing* if taught as a compulsory subject with every industry will be of great benefit to those learning any of the trades.

*Central Industrial Bureau.*—A Central Industrial Bureau, for the sale of articles, for supplying schools with material, and where the best work turned out could be viewed, will be of the greatest service to all.

The Inspector of Schools, Central Province, reports:—

Industrial work in Government vernacular schools continues to make satisfactory progress so far as mat and basket weaving, lacquer work, and cloth weaving are concerned. I am, however, not satisfied that sufficient progress is being made as regards carpentry. This can scarcely be remedied until provision is made for a class for carpenters, who will be put through a course of elementary drawing suited to their requirements, and of a carefully considered scheme of work to make them, not merely good carpenters, but also good carpentry instructors.\*

An exhibition of school and village industrial work will be held at the Training College in January 1920, and, judging by the number of articles already sent in for exhibition, it should prove a success, and draw attention to the variety of articles which can be made in the schools.

There is no question that industrial classes appeal to the parents and children, and that time for them can be found in the village school curriculum on Saturday, which is a whole holiday, and on at least two afternoons a week, the school work being over by midday in most schools. What is needed, however, is inspection by qualified inspectors, who can suggest improved methods, and who can actually demonstrate them. Arrangements are being made with the Salvation Army for the employment of a weaving instructor from South India. It has been found very difficult, however, to secure the type of man required to supervise village industries. A central depot in Colombo is also needed, but there should be no difficulty in arranging for fairs at the Training College and sales at the Government Town Schools. Care must also be taken to see that the children get the proceeds of their industry.

There are at present in Ceylon 39 industrial schools, including the Maggona Reformatory, for youthful offenders. Fourteen of these schools are for boys only, 22 are for girls, and 3 are mixed schools. All these schools are conducted by Missions: Roman Catholic, Church of England, Church Missionary Society, Wesleyan, and American. They receive grants from Government, which amounted in 1918-19 to Rs. 27,346. Three schools receive lump-sum grants; the rest are paid grants on examination results and capitation grants.

The trades taught and the number presented for examination by the industrial schools in each trade are lace-making (871), carpentry (282), embroidery (217), bookbinding (136), tailoring (106), gardening (56), printing (49), smithy work (34), dressmaking (33), cooking (22), and shoemaking (11).

The number of boys on the list at the *Maggona Industrial School* on December 31, 1919, was 292, being 40 more than at the same date in 1918. The admissions during the year were 127, the number discharged 54. The number discharged by order of His Excellency the Governor or the courts was 32, and there was 1 death. There was no successful escape during the year, and 1 boy who escaped in 1918 was arrested in 1919.

The principal trades taught and the number engaged in them are gardening (142), carpentry (44), tailoring (43), bookbinding (30), smithy work (15), printing (13), and kitchen work (5).

The Tamil and Sinhalese schools maintained high percentages of passes, 95 and 86 per cent., respectively.

The Manager reports:—

Although the general state of health cannot be said to have been wholly satisfactory, it shows a decided improvement on that of the previous year. The boy whose death is recorded succumbed to chronic diarrhoea contracted in 1918. There were 26 cases of dysentery, all of which occurred between January 1 and May 31; and most of these were relapses from diseases contracted during the previous year. From May 31 to the end of the year the general state of health was quite good, notwithstanding the shortage of rice then prevailing and the inconvenience of overcrowding.

The practice hitherto followed of recommending only sickly boys for discharge does not appear to have given good results. A first departure from the old method was made in 1918, when 12 boys were discharged for good conduct, by order of His Excellency the Governor, on the signing of the armistice. This year the experiment was repeated on the occasion of the signature of Peace, when a list, including the names of 29 juvenile offenders of good character, was submitted to His Excellency, who was pleased to order their discharge. We find now that this new step had a most beneficial influence on the conduct and even on the health of those who were left behind; the eldest amongst them especially making visible efforts to give satisfaction.

Most of the boys discharged during the year were unable to find employment according to the trade they had learned here, owing, I believe, to the unsettled conditions of industry, consequent on the war. The vast majority of them seem to be now employed in agricultural work.

The health of the boys has been further improved by the drill which is now regularly taken and by a better diet. This school does excellent work, and the devotion of the Reverend Fathers and the Brothers to their work commands admiration.

New buildings are urgently required. There is at present considerable overcrowding.

*School Gardens.*—The following report has been furnished by the Superintendent of School Gardens:—

Mr. C. Driberg, the Superintendent, was on leave for two weeks from February 1, and again for 2½ months from November 22, preparatory to retirement from the Public Service. Mr. Alex. Perera, Senior Inspector of School Gardens, was appointed to act for the Superintendent, in addition to his own duties, with effect from that date.

The total number of registered Government School Gardens at the end of the year stood at 389, showing an increase of 13 over the previous year, whilst the total number of gardens attached to grant-in-aid schools was 95, an increase of 20. Besides the 33 schools gardens registered during the year, 150 others await registration, which cannot be given at present owing to lack of funds to meet cost of equipment and inspection, and the need for more inspecting officers. Financial help, however, will be given by the District School Committees. It will, therefore, be possible to equip an additional number of new school gardens. Several registered school gardens have been supplied with additional implements; yet a considerable number remain to be provided, which, it is hoped, to do this year. In some schools, owing to the want of good fencing, crops were destroyed by cattle, and thefts of garden produce were not infrequent. Notwithstanding these difficulties

\* Such a class is now held at the Technical Schools, and it is hoped to arrange for others at outstations.

the teachers have worked hard to keep their gardens in good condition. It is gratifying to report that they have also done all they could to increase the food supply of the Colony, while they did not lose sight of the main objects of the school garden. Rs. 1,500 was distributed among 111 schools, the highest awards in prizes of Rs. 20 were obtained by NG/Hunnumulla, C/Kiriwattuduwa, KL/Alutgama, B/Horadugoda, MR/Narandeniya, H/Nihiluwa, KU/Madagalla, KU/Itanawatta, KU/Kankaniyamulla, KU/Makandura, KU/Boyagane, A/Tammuttegama, K/Gunnepana, K/Gunnepana Girls, K/Idamegama, K/Nugawela, BB/Tennapanguwa, KB/Bosella, KB/Beddewela, R/Pallekanda, R/Puwakgahawela, R/Balangoda Girls', and K/Mahamedagama.

The highest award in 1918 to any single school was Rs. 25, but owing to the increase in the number of good gardens attached to registered schools, it was found necessary to reduce the amount of the awards, as the allocation for making such awards has not been proportionately increased.

A donation of Rs. 25 kindly offered by Gate Mudaliyar A. E. Rajapakse of Negombo for the best school garden in the Negombo District was divided between the school gardens at Hunnumulla and Alutepola, the former getting Rs. 15 and the latter Rs. 10.

Mr. M. B. Mapitigama, Ratemahatmaya, Paranakuru korale, offered a gold medal for the best kept school garden in his division, and Bosella Boys Vernacular School was recommended for the prize.

Two prizes were also offered by the Committee of the Ibbagamuwa Agricultural Show for the best and second best school gardens in Hiriyala hatpattu. Madagalla and Ibbagamuwa gardens were recommended for the first and second prizes respectively.

A classified list of school gardens, prepared by Mr. L. de Z. Jayatilleke, Inspector of School Gardens, and approved by the Director of Agriculture, is now in the hands of the Government Printer.

*Central School Gardens.*—Lectures and demonstrations on nature study were conducted at schools selected for the purpose. Teachers and pupils from neighbouring schools, and in some cases villagers as well, attended these lectures. On the whole, this scheme is working satisfactorily.

*Home Gardens.*—The number of home gardens was larger than in 1918. A sum of Rs. 700 voted by the Director of Agriculture was distributed among 103 pupils of 68 schools.

Mr. A. H. Senaratne, of Badalagama Estate, Wariyapola, kindly offered prizes for the best two home gardens in the Dewameddi hatpattu. Mr. Senaratne has renewed his offer and increased the prizes to five, the first two consisting of cups, value Rs. 25 and Rs. 15, respectively, for competition among Dewameddi and Katugampola hatpattu home gardens.

*Government Stock Garden.*—Additional nurseries of economic plants and food crops were opened up to meet the demand of the increasing number of registered school gardens. With the limited vote for their upkeep, I am glad to report that the work of the stock garden was maintained in as good a condition as could be expected. Surplus seeds, &c., received from 40 schools, were distributed among other schools. 24,350 packets of vegetable seeds were provided for home gardens. 603 packets of flower and 2,825 packets of vegetable seeds, and 32,851 ornamental and economic plants were distributed among school gardens during the year.

*Apiculture.*—On the suggestion of Mudaliyar Ilankoon, made at a meeting of the Ceylon Bee-keepers' Association re the encouragement of bee-keeping in schools, the various District School Committees were applied to for assistance. I am glad to be able to report that the response to the request for funds to provide standard hives and other bee-appliances has been very encouraging.

*Poultry Scheme.*—The scheme for the improvement of village poultry, initiated with the help of the Hon. Dr. H. M. Fernando in 1918, received considerable attention during the year under review. Two new schools were supplied with pens of poultry in June last, i.e., the C. M. S. schools at Padukka and Kesbewa, and fresh supplies of fowls, provided by Mr. Reginald Fernando, were given to Roman Catholic School, Wahakotte, and the C. M. S. School, Teldeniya, where work is being carried on in a satisfactory manner.

#### The Inspector of Schools, Central Province, reports:—

\* It is much to be regretted that the scheme for the cultivation of home gardens by the boys who attend Government vernacular schools has not proved as successful as it might have been, owing to the inability of the Sub-Inspectors to find the time to visit such gardens for the awarding of prizes. The scheme is one that deserves fostering.

Government has now approved the appointment of two special Inspectors of Home Gardens; difficulty was experienced, however, in securing suitable men for the post. The scheme is one which has proved a marked success and deserves every encouragement, more especially at the present juncture, when it can be so helpful in increasing food production.

#### The Inspector of Schools, Southern Province, reports:—

To almost every Government school in the Province, where there is suitable land, is attached a garden and most of the gardens are registered for supply of implements and seeds, and for instruction and inspection by officers of the Agricultural Department.

The Agricultural Inspector attached to the Province held, in addition to his periodical inspections, four demonstrations at G/Nagoda, MR/Narandeniya, MR/Kotapola, and H/Mandaduwa. The demonstrations were popular and well attended, and the one held at Mandaduwa was a great success.

The shortage of rice proved an incentive to the extending of the economical side of the garden, and many teachers added their scanty patches of yams, peas, beans, bandakkas, tomatoes, and Indian corn to garden produce.

The tomato, which was scarcely to be seen in the interior of the Province a few years ago, is widely cultivated and largely used by the rich and poor alike. The tomatoes grown at H/Ranna school were of an abnormal size for the district, and compared favourably with those grown up-country under better conditions of climate and soil.

The home gardens that won prizes and certificates were for the most part those attached to the best school gardens, and to which teachers had paid some attention. There is no better way of spreading the usefulness of the school garden among the cultivators than by means of the home gardens. To work the scheme successfully special instructors and supervisors are necessary.

The agricultural class for vernacular schoolmasters at Peradeniya did excellent work and all the students completed their course satisfactorily. There were twelve schoolmasters in this class throughout the year, and gold and silver medals were awarded to the two who did the best work. It is hoped that in course of time, with the assistance of these classes and the garden schools, that there will be teachers who have had an agricultural training at all the big schools with gardens. The Agricultural Department has applied for the assistance of village schoolmasters as agricultural instructors attached to the local Food Production Committee. Four assistant teachers were seconded for service as temporary agricultural instructors in the Kegalla District. There is excellent material available for the training of agricultural instructors and sub-inspectors, and the number of passed monitors in excess of school requirements may well be utilized for this purpose.

Mention should be made of an interesting experiment by Mr. H. L. de Mel, C.B.E., in the establishment of a farm school at Medamulla for workers and sons of workers on his estates. Those admitted in the first instance will be over 14 years of age. The course includes, besides continuation classes in English and Sinhalese, instructions in practical farm work, carpentry, and care of animals, while provision is also made for visiting the sick in the neighbourhood and for instruction in simple rules of hygiene and sanitation.

The school was opened in November with 16 resident students and a plot of 31 acres for their practical work.

It is hoped that similar schools may be established elsewhere by large landowners to encourage the better educated boys from the villages to continue their studies, and at the same time to take up agriculture as a profession.

## CHAPTER IX.

### WOMEN'S EDUCATION.

The number of girls attending Government schools in 1919 was 32,570, the number attending grant-in-aid schools was 89,019. This gives a total of 121,589, and a decrease as compared with 1918 of 818. The number of Government girls' schools was 192 and of Government mixed schools 108. The number of grant-in-aid girls schools was 361 and of grant-in-aid mixed schools 1,378. The large number of grant-in-aid mixed schools is due to the fact that many of them are really boys' schools, in which a few small girls are taught; in all these schools female teachers are employed, and needlework is compulsory for the girls. The number of girls attending unaided schools is 9,378. This gives a total of 130,967 girls under instruction, about 42·5 per cent. of the girls of school-going age.

*Higher Education in English Schools.*—The number of girls attending registered English schools was 7,675, or a little more than 22 per cent. of the total number of pupils attending these schools. In the previous year the number was 7,524. In the Senior Cambridge Examination of 1918 there were 27 girl candidates, of whom 23 passed; and in the Junior 122 girls, of whom 66 passed. Two obtained honours in the Senior and one in the Junior.

In the Cambridge Examination in 1919 there were 128 girls entered for the Junior and 67 girls for the Senior, of whom 82 and 54, respectively, passed. Four obtained honours in the Senior and nine in the Junior—very creditable results.

There are now in Ceylon ten girls' schools with their own laboratories and science equipment, the pupils of one school share a laboratory with the adjacent boys' school, and four other schools possess a certain amount of equipment, but without special accommodation for this subject.

The high standard at present reached in the girls' schools in Ceylon is one of the most hopeful signs of educational progress in this country. If the women thoroughly realize the importance of education, there need be no anxiety for the future generations. The men of to-day require well-educated wives, and a pass in a public examination goes a long way towards recognition as a dowry.

The girls' schools, too, are generally superior to the boys' schools in the correct pronunciation of English, the use of class libraries, the neatness of the work, and legibility of the hand writing.

There is, however, still much to be done to improve the girls' schools in Ceylon. The accommodation in many of the boarding schools is far from satisfactory, especially in regard to bathing and sanitary requirements, the equipment is poor, and too little attention is paid to the physique of the girls.

The courses, too, are made to depend far too much on examination subjects, with consequent cramming for passes, and the too frequent attendant evil of special tuition outside class hours. Womanly accomplishments are too commonly neglected. More time should be given in the girls' schools to arts and crafts. Music is generally taught, and judging from the entries in the public musical examinations—in 1919 there were 291 entries in Theory and 283 in Practice in the Trinity College of Music Examination, of whom 256 and 252 respectively passed, for the examination of the Consolidated Board of the Royal Academy and the Royal College of Music the entries were 75 in Theory and 580 in Practice, of whom 72 and 546 respectively passed—the subject is a very popular one.

Singing is popular in most girls' schools, and the annual singing competition was held on July 23 and 24, and excited the usual enthusiasm and interest. Seven schools competed. The Senior Shield was won by St. Margaret's school; the Junior Shield by St. Clare's, Wellawatta. A shield kindly offered for the boys' schools by Mrs. Meaden was won by Wesley College.

Through the kindness of Mr. A. C. G. Wijeyekoon of Kandy, who has offered a shield for singing, a competition open to the English schools in the Central Province will be held at Kandy next year.

Miss Milne, the Inspectress of Drawing, reports on the drawing done both in boys' and girls' schools:—

Since drawing has been inspected as a separate school subject, particular interest has been aroused on the part of both teacher and scholar, and there has been improvement in the standard and style of the work.

In many schools a year ago random tests of all kinds, including copy work from incorrect drawings on the board and pictures in catalogues, were chosen. The books were coverless and torn, and it was often difficult through the dirt to discern the attempts at drawing. The reason given for this lamentable condition of the books was that an inspection had not been anticipated.

Where the work was more proficient, it appeared that the aim was to produce a number of "effective" or "pretty" pieces of work. The value of drawing as teaching method in education or even as a basis for future artistic work was seldom understood.

Throughout the year the conditions with regard to the management of lessons have improved. In many cases the desks have been so arranged that the children no longer face a strong light. Collections of objects have been gathered together to form a nucleus for a drawing museum. Books are kept in an almirah at school, and thus prevented from becoming dirty as when taken home daily. The work itself is tidier, more finished, and more correct, and there is a definite scheme in the tests set during the session.

Except in a very few schools, where it is evident that the drawing for the past few years has been taught with efficiency, the general standard of work, however, is still decidedly below what should reasonably be expected.

The work annually exhibited at the Arts Society Exhibition, with the exception of the studies in design, which show clearly that there is talent and appreciation if it can only be developed, is lamentably poor, and quite unworthy of the high standard of intelligence reached in other branches in the girls' schools. The efforts of a Government Inspector or Inspectress of the drawing of the schools can never be sufficient, and must necessarily be largely confined to inspecting and advising on completed work. I believe that if one of the big girls' schools in Ceylon or a combination of several of them would get out a first class art master or mistress from England to improve the art work in the school and give classes in Colombo and elsewhere, they would be largely attended, and would do much to improve the standard in this subject.

An art studio under first class management is the greatest need to improve the study of art in Ceylon; an Art Gallery will only be fully appreciated later.

Needlework is a subject which has reached a very high pitch of excellence in Ceylon. In many of the bigger English schools I consider that the syllabus may well be modified. In fact, a wide measure of liberty should be given to girls' schools to work on syllabuses of their own, provided, of course, that such syllabuses are submitted to and approved by the Education Department, the object being rather to encourage these schools to strike out on lines of their own and such as they consider best suited to the class of girls in their schools than to restrict them to set subjects and examination results.

The vast majority of girls are not being educated for any profession, and those who are will naturally take the prescribed courses; for the rest what is needed is to quicken their intelligence, to interest them in education as the interpretation of the life around them, and to give them a training which will make them not only better fitted to be good wives and mothers, but will also encourage them to take their part in all the social welfare and social service movements of the time.

The recommendation of the special committee appointed in 1918 that a Supervisor of Domestic Science should be appointed from England was approved by Government, and Miss E. C. H. Barrow was appointed, and is expected to arrive in Ceylon early next year. Two class rooms, which formed the old kindergarten block in the old Training College, have been fitted up as a lecture room and a model kitchen; designs and equipment lists which were kindly supplied to me by the Bingley Training College have been followed. A house will be required later, in which the teachers, who are to go through a course of training, can reside, and which they can "run" on Domestic Science lines. Encouragement will be given to girls' schools to introduce this subject by special grants for equipment, for the employment of teachers trained in the subject and passes in it. Examination will be held and certificates awarded. Classes will be early started for the instruction of local teachers.

Miss N. C. Carter, the Inspectress of Girls' Schools, reports on the work of the girls' schools:—

The number of girls' schools visited for inspection for grant during the year was 58, out of which 33 are in the Western Province, 4 in the Southern, 7 in the Northern, 8 in the Central, 2 each in the Eastern and Uva Provinces, and 1 each in the North-Western and Saharagamuwa Provinces. Three new schools were registered: One in Kalutara and 2 in Colombo. Forty-six of these schools have organized kindergartens, 26 of which have three or more divisions, while the remaining 20 have two. This shows that parents are beginning, not only to realize the importance of culture for women of Ceylon, but also the need for sending the children (boys and girls, for both are found in our kindergartens) to school at a suitably early age. The gain by so doing is three-fold:—

- (1) The school affords facilities for training in habits and occupation that are lacking in many homes.
- (2) The children learn English at an early age, and consequently with greater ease than if the study were begun later.
- (3) The pupils pass through the school to the Elementary School-leaving Certificate and Cambridge Examinations at an earlier age than formerly, a distinct gain in a country where girls tend to leave school young.

The average age in each class is becoming younger, and, though anything in the way of forcing the children on the part of either parent or teacher cannot be too strongly deprecated, it will be a great day when the child of 10, 11, or 12 in Standards II. and III., so often now a trial to the teacher, a giant among her companions, and labouring herself under a sense of being stupid, will be a *rara avis*.

The work of the trained teacher has been more apparent in the kindergarten than anywhere else. Even during her first year of teaching she frequently finds herself in charge of the organization of the kindergarten department, and in some cases an excellent response has been made. The simultaneous development of order, spontaneity, discipline, and imagination is the task that lies before her, and it is no easy one. It demands care and thought, and it reflects credit on many of our trained kindergarten teachers that the scholars do "play while they play, and work while they work."

The weakest point in kindergarten work at the moment is the hand work. There are few schools where this is really artistic or useful, or so planned as to develop mind, hand, or thought. It cannot too often be reiterated that the purposes of hand work are manifold, and it should serve as a means of expression, a basis for conversation and teaching, and an aid to manual dexterity. A class that can make or tear out paper furniture but cannot talk about it or arrange it has not achieved the desired end. On the other hand, I can call to mind two classes, of which one had made note books—scrap books, which really called for artistic arrangement and neat fingers, and gave pleasure to the eye; while the other had so furnished a doll's house that every child had a real knowledge of simple house architecture and decoration. Handwork is not an end in itself, but a means to an end, and our kindergarten teachers should consider this.

In the lower and upper schools progress has been steadily made, and in some cases a higher standard has been reached. The older girls have responded to the effort made to prescribe suitable books for them in literature instead of having to study boys' books. A keen interest has been taken in the subject, and the girls' powers of appreciation and understanding have correspondingly increased. Poetry still has too little claim upon the interest both of teacher and taught. The pupils have little innate taste or appreciation of poetry, and the pieces chosen by the teachers are frequently ill-suited to develop these qualities. Books such as *Laureata*, the *Lotus Pool*, the *Treasury of Verse*, the *Golden Staircase*, *Golden Treasury*, and the *Child's Garden of Verse* afford an excellent selection. Too much time is spent on line-by-line analysis of the poem, instead of an attempt being made to understand the idea and the spirit.

No attention is paid to the authors and his or her life, and poetry is still regarded as too much of a task, and a question of memorizing rather than as literature. Several schools have added hygiene to their curriculum during the year, in all cases with satisfactory results. The girls display an aptitude for this subject, and the work done has been good.

It is unfortunate that in so many of the girls' schools the vernacular work is so weak. The vernacular should be regarded as a second language, much as French and German are regarded in girls' schools in England. It should be a matter of course that Sinhalese or Tamil be taken as the language in the Cambridge examination.

The English in the schools is good, and a high standard is reached both in oral and written work. In history and geography there is too much tendency to use the text book as a reader instead of as a basis for teaching. The arithmetic is almost uniformly weak. This is due to lack of clear teaching and to over-pressure being put upon the scholars. Few of them really grasp the work.

The number of pupil teachers is still small. This is unfortunate, as the course is admirably suited to the schools, and is profitable for those who have passed the Elementary School-leaving Certificate or the Junior. A systematic course of study at the age is of good value to many of those who either do nothing or drift as uncertificated teachers. The recent introduction of bursaries should prove a help to both school and scholar, and I trust that there will be an increase in the number of pupil teachers in the girls' schools.

The health of the children in the schools is good; and teachers are beginning to pay more attention to this very important point. On the other hand, the effects of the food crisis can be clearly traced in an increasing general debility and lack of energy. This will seriously affect the work in the schools unless relief is forthcoming.

The number of women candidates for admission to the Training College is well maintained. There were 50 candidates for 21 vacancies for English students and 143 candidates for 20 vacancies for vernacular students; all these candidates had excellent literary qualifications. In the Sinhalese Female Monitors' Examination there were 156 candidates in the first year, 104 in the second year, and 114 in the third year, of whom 75, 54, and 42 respectively passed.

The high standard of needlework in the vernacular schools was well maintained, and will always be connected with the unsparing energy and interest shown by the Inspectress, Mrs. Evans. I hope that it may be possible to find more markets for the sale of the needlework done in the villages, which has only to be known to be appreciated. A stage has now been reached where the bigger girls on leaving school should be encouraged by the establishment of dressmaking and needlework centres, by the supply of material, and by the establishment of a dépôt in Colombo to earn a living by their proficiency with their fingers.

The number of girls attending Government and grant-in-aid vernacular schools was 111,138, showing a decrease of 957, as compared with 1918, due to the causes already stated.

The Inspector of Schools, Southern Province, reports:—

It is gratifying to note that the people in backward districts in the Province are beginning to realize the importance of female education. In several schools, particularly in Giruwa pattuwa west and Morawak korale, a corner had to be found for girls in many boys' schools. Remote boys' schools like H/Katuwana and H/Bowala applying to be made mixed schools is a cheerful omen.

#### CHAPTER X.

#### EDUCATION OF SPECIAL CLASSES.

*Estate Schools.*—The number of children attending school on estates was 10,308, as compared with 11,251 in 1918, of whom 9,061 were boys and 1,247 were girls. The Education Ordinance has never been enforced with regard to girls on estates, and it is scarcely surprising that only about one-eighth of them attend school. The number of registered estate schools in the list of grant-in-aid schools was 256, a decrease of one school. The number of estate schools examined for grant during the financial year was 213, as compared with 219 in the previous year. The Sub-Inspectors employed during the year in inspecting the arrangements for teaching on estates which have no registered school visited and reported on 93 schools during the year.

A satisfactory feature in the education of estate children has been the attempt by a few estates to combine it with the feeding of the smaller children and infants, and it is hoped that more may be done in this direction. It is proposed to hold a conference of estate teachers at Peradeniya next year and to draw up a revised syllabus for estate schools. The new Education Ordinance deals with the hours in estate schools, and imposes liabilities on parents to send their children to school. The education in these schools should be of the simplest, combined with drill and action songs.

*Muhammadan Schools.*—There are still four Government Muhammadan schools in which the Koran teachers are paid by Government. In all schools recently established by Government for Muhammadans the work of the Government teacher is confined to the Code subjects in Tamil; but facilities are given for Koran teaching, if a teacher is provided by the Muhammadan community. The number of Muhammadans in Government schools was 4,928, as compared with 4,163 in 1918; and in grant-in-aid schools 6,556, as compared with 6,418 in 1918, which show an improvement in a year in which it was very difficult to secure regular attendance.

The attendance of Muhammadan children is not, however, what it should be, and the community does not take the interest in education that it should. Several attempts have been made to encourage the efforts of individuals to open Muhammadan schools, and I am glad to note that there are signs that Muhammadans in Ceylon are recognizing that if they are to hold their own with other communities in Ceylon, it is essential that their children should be educated. A society has been formed and a fund raised by voluntary contributions, which should enable a considerable sum to be devoted to providing and maintaining schools for Muhammadans. The enforcement of compulsory education in the town of Colombo should have the effect of making Muhammadans realize that if they wish to have separate schools for their children, they must themselves contribute to this end, as has been done by the other races in Ceylon.

*Prison Schools.*—The schools at the Welikada, Mahara, Kandy, and Jaffna prisons are working, on the whole, satisfactorily. The number on the list at Welikada in March was 150, an increase of 60; there are six standards and an alphabet class. At present only Sinhalese is taught; there is need of a Tamil School. At Mahara there were 71 on the list in March, 49 in the Sinhalese and 22 in the Tamil Departments. The Sinhalese branch works up to the eighth standard and the Tamil to the fifth. At Kandy there were 68 on the list, and at Jaffna 44. The Inspectors report that the results are satisfactory.

*The School for the Deaf, Dumb, and Blind* continued to do excellent work, and deserves the support of all classes in Ceylon. There were 45 boys and girls in the Deaf and Dumb department, and 35 blind children.

Industrial work is done; weaving is being taught by a trained instructor. One of the deaf and dumb boys has learnt tailoring, and is instructing a class of boys, with success. Rattaning chairs, fancy needlework, and lace work are also taught.

More accommodation is urgently needed. Provision is needed for the accommodation of 250 deaf and blind children between the ages of 3 and 16 and of 25 teachers and students.

## CHAPTER XI.

## PHYSICAL EDUCATION AND HYGIENE.

The interest taken in drill and games in all schools in Ceylon is noteworthy, and, quite apart from their value to the youth of the country, the improvement effected in the health of the teachers is noticeable.

The reports of the Inspectors afford evidence of the general interest taken in outdoor exercises.

Mr. Samarasinghe, Inspector of Physical Drill and Games in English schools, reports :—

Considerable progress has been made in physical activities in English schools during the year, chiefly owing to the enthusiasm shown by managers, principals, and teachers.

There are already 153 "Cammack"\* certificated teachers in English schools. Some of the bigger schools conduct their own competitions amongst the various classes every term for a shield, which is offered by the manager or principal. This acts as a stimulus to the existing keenness among the boys. Considerable attention is being paid to games in schools. Old Sinhalese and Tamil games are being introduced, with great advantage, into English schools.

During the year three classes for the training of teachers were held at Galle and Weligama. There was great competition for admission to these classes. The course was completed by the end of the year, and the teachers will shortly be examined in the practical work before being awarded certificates.

The following are the numbers of each class :—

|                               | Applicants. | Admitted. | Number of Schools Represented. |
|-------------------------------|-------------|-----------|--------------------------------|
| English Class, Galle ..       | 51          | 45        | 16                             |
| Vernacular Class, Galle ..    | 85          | 64        | 46                             |
| Vernacular Class, Weligama .. | 128         | 88        | 51                             |

The annual Physical Drill Competition for English schools was held at the Havelock Racecourse on July 18. Eighteen schools and nearly 1,500 boys competed for the two challenge cups presented by Mr. E. L. F. de Soysa and Colonel T. G. Jayawardene. Two cups were also kindly presented by Mr. C. E. A. Dias to the winners of the two Sections A (bigger schools) and B (smaller schools). The two successful schools were St. John's College, Panadura, and the Police Depot school, Maradana. His Excellency the Governor kindly distributed the prizes. Arrangements are being made to hold similar competitions in important towns.

Mr. Amarakoon, the Sub-Inspector in these subjects for the vernacular schools, reports :—

Physical drill has now been introduced in most of the vernacular schools in the different Provinces of Ceylon. At first the village boys found it difficult to understand the new drill and appreciate its usefulness; but this year has seen a remarkable progress and enthusiasm for drill. A drill competition between schools in two divisions of the Colombo District was held at Padukka, at which about 700 boys from 8 schools entered. The drill was excellent, and it was found difficult to select the best team. The shield presented by the Director was won by the Rukmale Anglo-vernacular Buddhist School. Planters and other leading residents in the neighbourhood generously contributed prizes and provided free meals for the competitors. The following statement shows the results of drill examinations held by me at Government and grant-in-aid schools during the year :—

| Province.        | No. of Government Schools Inspected. | No. of Grant-in-aid Schools Inspected. | No. of Teachers who were examined in Drill for Certificates. | No. of Passes. | No. of Failures. | No. awaiting Examination at end of Year. |
|------------------|--------------------------------------|--|--|----------------|------------------|--|
| Western ..       | 123                                  | 57                                     | 236  | 200            | 36               | 7  |
| Central ..       | 9                                    | 1                                      | 9  | 9              | —                | 29                                       |
| Sabaragamuwa ..  | 13                                   | —                                      | 14   | 14             | —                | —  |
| Southern ..      | 17                                   | 19                                     | 36   | 30             | 6                | 5  |
| North-Western .. | 7                                    | 2                                      | 10   | 9              | 1                | —  |
| North-Central .. | 2                                    | —                                      | 2  | 2              | —                | —  |

The drill competitions referred to by the Inspectors undoubtedly afford considerable encouragement to teachers to maintain their drill classes at a high standard of efficiency. The general turnout is remarkably smart, boys coming in from remote village schools in banians with coloured facings and khaki shorts. In the village school display inter-school competitions in volley ball and Sinhalese games are included, and there is great rivalry amongst the schools. I have noticed when driving round the country in the evenings games of volley ball being played at village schools in which the village headman and registrar frequently take part and watched by numbers of the villagers who take a keen interest in the merits and demerits of the performers.

All the District Inspectors refer to the interest taken in drill and games in their reports. Mr. Van der Wall (Inspector, Western Province) writes :—

A healthy sign of the times is the vigour and zest with which vernacular schools take to games. The Cammack system of drill and games has revived the somewhat apathetic village youth. The schoolmaster lays aside his traditional dignity and clad in vest and shorts goes through the physical exercises with his boys. The old relations between schoolmaster and schoolboy have changed for the better and provided a better understanding.

Mr. de la Harpe (Inspector, Central Province) reports :—

The teachers and assistants and third-year monitors of the Government vernacular schools, and some of those from grant-in-aid ones, assemble on the first Saturday of each month at Kandy, Kurunegala, and Anuradhapura, and form classes for practice in Cammack drill and games. It is expected to start a similar class in Matale next year. The number who attend at each of these centres is as large as can be, and the enthusiasm and interest taken are great; teachers walk many miles and spend a comparatively considerable sum of money to attend these classes. Following upon the drill and games, a conference of a little over an

\* The Government certificate to teach drill is known as the "Cammack" certificate as the first instructor of these classes was Mr. R. W. Cammack of the Y. M. C. A.

hour's duration takes place, during which school topics are discussed. The Sub-Inspector of the district is present at the practice in drill, &c., and presides at the conference. The drill and games learnt so far have already been introduced into the schools, and are much appreciated by the children.

Mr. Welayden (Inspector, Southern Province) also reports on the drill and games in the Southern Province :—

The new system of physical drill having spread into a few schools in the Province, there was a demand from many parts for drill classes for teachers, and the issue of the Sinhalese translation of Dr. Gray's Physical Drill Book was a further incentive to the demand.

Mr. Samarasinghe, the Inspector of Physical Drill and Games in English Schools, held three classes, two at Galle on Fridays and Saturdays respectively for teachers from English and vernacular schools, and one at Weligama on Saturdays for teachers of vernacular schools. Teachers, both of aided schools and of Government schools, came in large numbers, showing great eagerness to join the classes. The Inspector had to disappoint many in order to put the classes on a workable basis. The English class at Galle had 45, and the vernacular 64. The class at Weligama could not have been reduced to less than 88, and had to be taken in two sections. The teachers worked with zest and enthusiasm, and almost all kept up to the end of the twelve weeks' course. It is proposed to have two more classes in 1920, one at Matara for the teachers of the district who were unable to join the class held at Weligama, and the other at Tangalla for the teachers of the Hambantota District.

Considerable attention is now given to games. The boys in many schools are getting familiar with volley ball, dodge ball, club hustle, relay races, &c., and are freely indulging in them, as well as in the old native games of *Halmelay*, *Surang*, *Eluvancheeray*, and *Kondan*, though in most cases not under conditions conducive to health and discipline.

Games played on dusty roads or on uneven bare gravel ground cannot bring the desired effect on the body and mind of children. What is wanted for many a school is not a large and expensive playing field, but a large compound with an even surface or some open space close by. Unfortunately the bigger schools in crowded localities are the worst off in this respect.

Efforts are being made to secure drill grounds for the older schools, and in the case of all new school buildings the provision of a large compound for drill and games will be required.

Mr. H. R. Gunaratne, a teacher at the Museum Training School, brought out a Sinhalese book entitled "Games on Modern Physical Education Lines," which may be useful in the vernacular schools, though most of these schools have already been supplied with a book giving particulars of Sinhalese games compiled by the Sub-Inspector. I hope, however, to see the Boy Scout Movement introduced in these schools and scout games played. Many village schools have now "scouts." The troops require organization, and it is hoped next year that a Sub-Inspector with a considerable knowledge of scout work will be able to take up this branch of work.

*Hygiene and Sanitation.*—Lectures on sanitation for vernacular teachers were held at the Medical College from August 1 to 26, and were well attended. The teachers were also taken round several institutions in Colombo.

The *Medical Inspection of Schools* was started by the appointment of Dr. H. E. Ekanayake from March 18. This marks an important advance, and I hope in time it may be possible largely to increase the number of school medical officers, to appoint school nurses, and to secure the "following up" of the cases reported from the school by the appointment of Children's Care Committees.

The co-operation of the schools in school medical work is most necessary. "The teachers are both the sentries and the advance guard of the school medical service." It is proposed to issue circulars to the schools embodying the results of the Medical Officer's inspection, and giving practical information as to remedial steps to be taken.

The classes in first aid and medical treatment of children for men and women teachers from vernacular schools were successfully continued at Mrs. J. P. Obeyesekere's hospital at Watupitiwala. 67 teachers passed the oral and practical examination, being required to obtain 33 per cent. on each section and 40 per cent. in aggregate. Of these, 11 are women teachers and 56 men. The first two places were taken by women, who obtained 91 and 90 per cent. respectively. One teacher who attended the classes sent in a list of over 50 cases of simple hurt, cuts, abrasions, &c., which he had been able to treat since attending these classes. The first 50 successful teachers are to be each awarded a first-aid outfit for use in their schools.

*Cadet Corps.*—Lieutenant E. Fulcher, Assistant Adjutant, Cadet Battalion, furnishes the following report on the Cadet Corps :—

The College Cadet Companies showed steady improvement. A camp of instruction was held at Diyatalawa from April 22 to May 1. The Cadets were inspected by His Excellency the Governor on April 28, who congratulated the Battalion on the steadiness of all ranks on parade and the soldier-like way in which they performed movements. The death of Private Jayatilake from influenza was much regretted by all ranks of the Battalion.

The strength in camp was as follows :—Major Evans, Commanding Ceylon Cadet Battalion; Captain J. A. Thompson, Royal Sussex Regiment, Adjutant, Ceylon Defence Force; Lieutenant E. Fulcher, Assistant Adjutant, Ceylon Cadet Battalion; 11 Officers; and 370 Cadets.

The progress made by the Cadets during 1919 was good; especially in the new departure "signalling." Another feature of the 1919 training was the entry by the Ceylon Cadet Battalion (for the first time in their history) of two teams for His Excellency the Governor's Cup. The Kandy team composed of 1 Officer and 10 Cadets drawn from Kingswood, St. Anthony, and Trinity Colleges, did the march of 6 miles in one hour and 10 minutes in full marching order, immediately came into action at 500 yards, advanced to 200 yards at the double, obtaining the highest number of hits with bayonets fixed amongst all teams competing.

Nine junior teams competed for the Empire Shooting Competition, their performance, on the whole, was good, but could be better if training had been started earlier in the year. In this case more 22 rifles are wanted, which the Director of Education has kindly indented for from England. It is hoped yet to see a Ceylon team head the list.

The real test of the training of Cadets can best be observed during the annual sports and drill competition. The Battalion now really needs its own instructional staff. Captain H. P. Mackay, Adjutant, Ceylon Light Infantry; Lieutenant E. Fulcher; and Instructors of the Ceylon Defence Force have primarily their own offices to fulfil. They devote as much of their time as is possible to Cadet training, but if one bears in mind that there are 686 Seniors and 1,857 Juniors in the Battalion, and that all stores and inventories, to say nothing of a great amount of correspondence, have to be kept and carried on in the same manner as in other Ceylon Defence Force units—the main idea being that the Cadet Battalion is the best training ground for future Volunteers—it is obvious that the officers above mentioned cannot do full justice to their task.

The strength of the Battalion on December 31, 1919, was as follows:—

| College.       | Seniors. | Juniors. | College.             | Seniors. | Juniors. |
|----------------|----------|----------|----------------------|----------|----------|
| Royal          | 66       | 155      | Prince of Wales      | 56       | 100      |
| St. Thomas's   | 69       | 145      | St. John's           | 72       | 131      |
| Wesley         | 41       | 90       | Holy Cross           | —        | 80*      |
| St. Joseph's   | 48       | 148      | St. Thomas's, Matara | —        | 57*      |
| St. Benedict's | 71       | 221      | All Saints, Galle    | —        | 62*      |
| Trinity        | 67       | 167      | Ananda, Colombo      | —        | 55*      |
| Kingswood      | 49       | 132      |                      |          |          |
| St. Anthony's  | 53       | 95       |                      | 686      | 1,857    |
| Richmond       | 47       | 106      |                      |          |          |
| St. Aloysius   | 47       | 113      |                      |          |          |

\* New schools admitted during 1919.

**Boy Scouts.**—The Boy Scout movement has made satisfactory progress during the year. Mr. Vernon Grenier acted as Colonial Commissioner, and Mr. J. H. de Saram of the Education Department as Assistant Colonial Commissioner. Miss N. C. Carter, Inspectress of Schools, undertook the duties of Commissioner for Wolf Cubs. There are 61 registered troops, 14 cub packs, and 2,285 scouts and cubs. The number of troops has increased by 17, and number of scouts by 451. 67 have qualified as King's Scouts, 80 as First Class Scouts, and 407 as Second Class Scouts. In addition to these 1,347 badges have been earned during the year. The tests are conducted by independent and skilled examiners approved by the local associations.

The King's Flag for the Colonies (excluding Australia, Canada, and South Africa) was won for the third time in succession by Dharmaraja College, Kandy. His Excellency the Governor presented the trophy to the winners in Colombo on August 1, 1919, before a large gathering.

A Rover Troop of senior scouts was formed among the student teachers of the Government Training College. Twenty-three students received regular instruction in scoutcraft and troop management, and 13 of these left the College in December, and have already established new troops or strengthened old ones. The First Trincomalee Troop was established in January by one of these students.

Scoutmasters' classes were also conducted in Colombo and Henaratgoda. The Kandy Local Association has established two troops among the poor children of the town, and all instruction is being imparted in the vernacular. Sea scout patrols have been formed.

I visited the Imperial Headquarters while in England and discussed with the Chief Scout and the Overseas Commissioners the present position of the movement in Ceylon and its further development. The Chief Scout sent an encouraging message to the Ceylon Scouts.

There is considerable scope, as has been pointed out above, for carrying the movement into the vernacular schools. Its value to the boyhood of Ceylon is very great, and the scout spirit is now a recognized asset in school life. There should be more school troops.

## CHAPTER XII. CONFERENCES.

A Teachers' Conference was held at the Training College under the auspices of the Training College Union on December 18, 19, and 20. Lectures were given by Dr. H. E. Ekanayaka on "Medical Inspection of Schools"; by Miss N. C. Carter, on "School Management"; by Mr. H. L. Van Buuren, on "The Teaching of Elementary Agriculture in Schools"; by Miss E. F. Mason, on "Art Teaching in School"; by Rev. P. T. Cash, on "Ceylon Spiders"; by Mr. F. H. V. Gulasekeram, on "The Teaching of Mathematics"; and discussions followed, and were also held on "Commercial Education" and "The Teaching of Geography."

A useful Conference of Inspectors and Sub-Inspectors was held at the Government Training College on January 31 and February 1, at which the following subjects were discussed, chiefly in reference to the work of the vernacular schools:—(1) Action Songs; (2) Lessons on the Pictures hung in the Schools; (3) Rules of the Road to be issued to Schools; (4) Syllabus of the Government Monitors' Examination; (5) Syllabus of the Grant-in-aid Pupil Teachers' Examination; (6) Reduction in Official Correspondence; (7) Training of Monitors in Government Schools; (8) Measures to be taken to increase the Numbers in the higher Standards of Vernacular Schools; (9) Salaries and Allowances of Sub-Inspectors; (10) The Entry of Circulars in Log Books; (11) The Attendance at Vernacular Schools; (12) Introduction of the Efficient School System of Examination in Vernacular Schools; (13) The Vernacular School-leaving Certificate Examination; (14) The Equipment of Government Schools; (15) Proposals for holding a Conference of Sinhalese Teachers; (16) Measures to be taken to popularize School Games and secure Playgrounds for Schools; (17) The Encouragement of Inter-school Competitions in Drill, Singing, &c., (18) The Vernacular School Scholarship Examination; (19) The Report on Examination in Vernacular Schools; (20) Improvement in the Present System of issuing Leaving Certificates; (21) Text Book Committee Report; (22) The Sinhalese Paper in the Elementary School-leaving Certificate Examination. Action has now been taken on all the resolutions passed at the Conference.

A Tamil Teachers' Conference was held at Jaffna on June 2, which was successfully organized by Mr. Tillainayakam, Inspector of Schools, Northern Province. There were competitions in model and criticism lessons between teachers from different schools. There was also a drill display and an exhibition of school games. I am glad to note that many of the Sub-Inspectors have arranged for conferences of teachers in their divisions over which they preside, and at which methods of teaching, &c., are discussed, and model and criticism lessons are given.

## CHAPTER XIII. LEGISLATION.

The new Education Ordinance was drafted during the year and introduced into Council on September 26. It was passed on February 4, 1920. The Bill re-organizes the Department of Education: Part I. of the Bill contains the provisions which deal with the statutory establishment of the Department, at the head of which is placed the Director of Education. The officers of the Department are enumerated in section 4 of the Bill, and in section 5 the principal duties of the Director are laid down.

Part II. of the Bill deals with the constitution and work of the Board of Education. It is to be composed of not less than sixteen and not more than twenty members nominated by the Governor, of whom the Director and Assistant Director of Education and two Unofficial Members of the Legislative Council are to be four (section 6). The Director is to be Chairman (section 8), and the duties of the Board are not administrative or executive, but the Governor or Director may refer any matter for their advice. But the most important function of the Board is the making of the code of regulations, which are to govern the education system of the Colony, both secondary and elementary.

Part III. deals with religion in Schools on the existing lines.

In addition to establishing a central controlling authority, the Bill in Part IV. thereof provides for Local Committees, which are to assist the central authority in working the educational system. Every Municipal town, and every District Council as defined in the Local Government Bill which has been published with a view to introduction into the Legislature, is to be an education district; and for each district an Education District Committee is to be created. This Committee is to consist of not less than six or more than nine members, of whom not less than two are to be nominated by the Municipal or District Council within whose administrative limits the particular education district is contained, and the rest by the Governor (sections 17 and 18). The Chairman is to be annually elected by the members of the Committee from amongst their own members (sections 19 and 20). These Education Committees are to meet once at least in every two months.

Part V. deals with estate schools. In section 33 a prohibition appears against the employment of children between six and ten years of age on estate work; and by section 34 the duty is thrown upon a parent of causing every one of his children between the ages above mentioned to attend school.

Part VI. of the Bill consists largely of machinery. By section 38 all persons who desire to open a school or classes must, one month before doing so, give notice to the Director; and by section 39 provision is made for the inspection of all schools.

Part VII. embodies the financial provisions.

The existing educational system of the Colony is financed as follows:—

- (i.) By grants expended through the Director.
- (ii.) By the allocation of a proportion of the amount received from the labour tax.
- (iii.) By the amount received in respect of fines imposed for breaches of the Education Ordinances and by by-laws made thereunder.

It is considered that the time has come when all public expenditure on education should be wholly paid out of general revenue.

The procedure adopted in the Bill is that all public moneys spent on education should come out of the public chest, and that the amount thereof should be placed on the Estimates of the Legislative Council.

#### CHAPTER XIV. FINANCIAL SUMMARY.

The Expenditure of the Department for the financial year 1918-19 amounted to Rs. 2,919,992·56, showing an increase of Rs. 230,861·33 over that of the previous year. The nett cost to Government was 2,841,306·97, as shown below:—

| RECEIPTS.                                 |         | Rs.       | c. |
|---|---------|-----------|----|
| School fees, Royal College                | .. .. . | 31,643    | 0  |
| School fees, Government Technical Schools | .. .. . | 7,658     | 17 |
| School fees, Government Training College. | .. .. . | 7,572     | 50 |
| School fees, Nanu-oya English School      | .. .. . | 284       | 0  |
| School fees, Primary English School       | .. .. . | 14,022    | 40 |
| Boarding fees, Training College           | .. .. . | 8,076     | 50 |
| Fees recovered for examinations           | .. .. . | 6,545     | 50 |
| Sale of stationery, registers, &c.        | .. .. . | 2,883     | 52 |
|   |         | <hr/>     |    |
|   |         | 78,685    | 59 |
| Nett Cost                                 | .. .. . | 2,841,306 | 97 |
|   |         | <hr/>     |    |
| Total                                     | .. .. . | 2,919,992 | 56 |

The expenditure of the Department may be classified as follows:—

| EXPENDITURE.   |         | Rs.       | c. | Rs.       | c.      | Rs.          |
|--|---------|-----------|----|-----------|---------|--------------|
| <i>Administration.</i>                               |         | Rs.       | c. |           |         |              |
| Cost of direction                                    | .. .. . | 106,708   | 8  |           |         |              |
| Cost of inspection                                   | .. .. . | 131,957   | 96 |           |         |              |
|  |         | <hr/>     |    | 238,666   | 4       |              |
| <i>General Instruction.</i>                          |         |           |    |           |         |              |
| Government schools                                   | .. .. . | 732,463   | 15 |           |         |              |
| District School Committees                           | .. .. . | 195,259   | 23 |           |         |              |
| Grant-in-aid schools                                 | .. .. . | 1,370,049 | 76 |           |         |              |
| Tamankaduwa schools                                  | .. .. . | 1,500     | 0  |           |         |              |
| Oriental Colleges                                    | .. .. . | 1,800     | 0  |           |         |              |
| Scholarships and prizes                              | .. .. . | 62,696    | 90 |           |         |              |
|  |         | <hr/>     |    | 2,363,769 | 4       |              |
| <i>Special Instruction.</i>                          |         |           |    |           |         |              |
| Government Training College                          | .. .. . | 84,471    | 2  |           |         |              |
| Government Technical schools                         | .. .. . | 36,082    | 57 |           |         |              |
| Grant-in-aid to Training Schools                     | .. .. . | 11,350    | 0  |           |         |              |
| Grant-in-aid to Industrial schools                   | .. .. . | 35,182    | 36 |           |         |              |
|  |         | <hr/>     |    |           |         |              |
|  |         |           |    |           |         | 217,533 22   |

E. B. DENHAM,  
Director of Education.

# MEDICAL.

## REPORT OF THE PRINCIPAL CIVIL MEDICAL OFFICER AND INSPECTOR-GENERAL OF HOSPITALS FOR THE YEAR 1919.

I HAVE the honour to submit the following report on the health and sanitation in Ceylon and on the administration of institutions of the Ceylon Civil Medical Department for the year ended December 31, 1919.

### SECTION I.—POPULATION.

2. The estimated population of Ceylon on December 31, 1919, inclusive of immigrant coolies (but exclusive of military and shipping), was 4,757,596 (of these, 7,349 were Europeans). This total is an increase of 71,233 on the previous year's estimate of population.

### SECTION II.—PUBLIC HEALTH.

3. *Vital Statistics.*—161,403 births were registered, which is equivalent to 33·8 per 1,000 of the population per annum, as compared with 183,384 in the previous year, showing a decrease of 21,981. The deaths registered in 1919 totalled 168,323 as compared with 149,407 (an increase of 18,916 over the previous year), which is equivalent to 35·3 per 1,000. The total number of persons treated in the hospitals in 1919 was 133,195, of whom 12,637 died. The numbers for 1918 were 105,450 patients, with a mortality of 9,827. At dispensaries 1,499,891 persons were treated, who paid 2,254,162 visits in 1919, as against 1,203,063 persons, who paid 1,833,462 visits in 1918.

4. With regard to the causation of deaths, the following table shows the same, registered under the several classes of disease, for the year under review :—

|   |        |  |        |
|---|--------|--|--------|
| <b>I.—General diseases—</b>   |        | <b>VI.—Non-venereal diseases of genito-urinary system and annexa</b> |        |
| (a) Epidemic diseases   | 29,515 |  | 1,060  |
| (b) Septic diseases   | 127    | VII.—The puerperal state   | 3,664  |
| (c) Tuberculosis diseases   | 3,819  | VIII.—Diseases of the skin and cellular tissues                      | 10,950 |
| (d) Venereal diseases   | 215    | IX.—Diseases of bones and organs of locomotion                       | 13     |
| (e) Cancer or malignant diseases                                      | 494    | X.—Malformations   | 11     |
| (f) Other general diseases  | 13,610 | XI.—Diseases of early infancy  | 7,261  |
| <b>II.—Diseases of the nervous system and organs of special sense</b> | 16,983 | XII.—Old age   | 5,085  |
| <b>III.—Diseases of the circulatory system</b>                        | 935    | XIII.—Affections produced by external causes                         | 2,537  |
| <b>IV.—Diseases of the respiratory system</b>                         | 16,312 | XIV.—Ill-defined diseases  | 29,356 |
| <b>V.—Diseases of the digestive system</b>                            | 26,376 |  |        |

5. The more notable causes of death were the following diseases :—

|                          |        |  |        |
|--------------------------|--------|--|--------|
| 1. Diarrhoea             | 15,402 | 10. Anchylostomiasis and its sequelae              | 2,608  |
| 2. Infantile convulsions | 14,797 | 11. Puerperal septicæmia                           | 1,685  |
| 3. Pneumonia             | 10,752 | 12. Malaria  | 1,124  |
| 4. Rickets               | 6,807  | 13. Enteric fever                                  | 658    |
| 5. Anæmia                | 4,868  | 14. Tetanus  | 298    |
| 6. Intestinal parasites  | 4,329  | 15. Rabies   | 57     |
| 7. Dysentery             | 3,785  | 16. Deaths attributed to pyrexia of unknown origin | 22,872 |
| 8. Phthisis              | 3,529  |  |        |
| 9. Dropepy               | 3,421  |  |        |

6. Deaths due to preventable diseases, i.e., to diseases due to faulty sanitary conditions, overcrowding, soil infection, defective or infected water supplies, &c., amounted to 11,705. This figure does not include infantile diarrhoea or infantile convulsions, though it is probable that a large number of deaths from infantile convulsions are due to malarial infection, and a large number of cases from infantile diarrhoea to improper dieting, defective sanitary surroundings, and neglect.

7. *Infantile Mortality.*—The infantile mortality in the 33 principal towns during the year was at the rate of 259 per 1,000, as compared with 252 per 1,000 in the previous year and 233 per 1,000 in the penultimate year. 14,797 deaths from infantile convulsions were registered during the year. During 1919 55 midwives were trained at the De Soysa Lying-in Home, Colombo. The number so trained since September 1, 1909, has been 260. The large number trained during the year is due to the increased accommodation made available at this institution. Midwives have been appointed to Government hospitals in large centres to try and decrease the infant mortality.

8. *Vital Statistics on Estates.*—The mean birth-rate on estates was 43·0 per 1,000, and the death-rate 58·5. The mean birth-rate during 1918 was 52·8 per 1,000, and the mean death-rate 75·2. The principal causes of death were :—

|           |       |                       |       |
|-----------|-------|-----------------------|-------|
| Pneumonia | 5,657 | Anchylostomiasis      | 1,752 |
| Debility  | 3,906 | Infantile convulsions | 1,537 |
| Diarrhoea | 1,994 | Phthisis              | 293   |
| Dysentery | 1,807 | Dropepy               | 239   |

9. *Influenza* continued to prevail throughout the greater part of the Island in 1919, though the incidence of the disease was not so widespread, and the type of the disease was fortunately much less dangerous. As regards the hospital returns, the admissions were almost as numerous as in 1918, but the death-rate was less than one-third of that year. There were two periods of greatest prevalence in most parts of the Island, viz., May–June and November–December. The following table gives a comparison of the admissions and deaths as regards the several Provinces during the two years :—

| Province.                   | 1919.  |         | 1918.  |         |
|-----------------------------|--------|---------|--------|---------|
|                             | Cases. | Deaths. | Cases. | Deaths. |
| Western Province .. ..      | 4,637  | 214     | 2,922  | 587     |
| Central Province .. ..      | 1,485  | 62      | 1,528  | 405     |
| Northern Province .. ..     | 46     | 1       | 564    | 67      |
| Southern Province .. ..     | 247    | 8       | 401    | 52      |
| Eastern Province .. ..      | 106    | 11      | 92     | 14      |
| North-Western Province ..   | 336    | 64      | 642    | 68      |
| North-Central Province ..   | 46     | 5       | 175    | 14      |
| Province of Sabaragamuwa .. | 625    | 41      | 449    | 193     |
| Province of Uva .. ..       | 258    | 14      | 621    | 74      |
| Total .. ..                 | 7,786  | 420     | 7,394  | 1,474   |

It will be noted that there was a great rise of admissions in the Western Province, and a marked fall in the Northern, North-Central, and Uva Provinces; in fact, all Provinces, except the Western, Eastern, and Sabaragamuwa, show a fall in hospital admissions. Public and private benevolence in the way of the supply of food and medical comforts and personal aid to the sick did much to mitigate the sufferings of the poorer classes in the larger towns.

10. *Malaria* was more prevalent in 1919, and was the cause of much sickness, and directly and indirectly to considerable mortality. The number under treatment in Government hospitals was 13,816, as compared with 8,154 in 1918 and 6,190 in 1917; and the deaths amongst such cases were 255, as compared with 130 in 1918 and 107 in 1917. As regards Government dispensaries, treatment was given to 602,356, as compared with 359,700 in 1918. The mortality amongst these dispensary cases is not available. In addition to the cases of malarial fever as given above, there were some 2,885 cases of malarial cachexia (chronic illness due to previous attacks of malaria) admitted to Government hospitals in 1919, as compared with 1,904 such cases in 1918. The following table shows the comparative prevalence of the disease in the different Provinces as far as can be judged from hospital admissions in the past three years :—

| Province.                    | 1919.  |         | 1918.  |         | 1917.  |         |
|------------------------------|--------|---------|--------|---------|--------|---------|
|                              | Cases. | Deaths. | Cases. | Deaths. | Cases. | Deaths. |
| General Hospital, Colombo .. | 849    | 18      | 2,023  | 43      | 2,429  | 27      |
| Western Province .. ..       | 2,377  | 48      | 1,257  | 26      | 748    | 12      |
| Province of Uva .. ..        | 1,513  | 26      | 1,030  | 16      | 414    | 11      |
| North-Western Province ..    | 2,127  | 55      | 1,024  | 11      | 1,065  | 13      |
| Northern Province .. ..      | 1,602  | 12      | 885    | 8       | 773    | 13      |
| Central Province .. ..       | 1,635  | 25      | 858    | 6       | 860    | 17      |
| Province of Sabaragamuwa ..  | 1,280  | 23      | 454    | 10      | 167    | 4       |
| North-Central Province ..    | 1,336  | 32      | 409    | 8       | 370    | 8       |
| Southern Province .. ..      | 731    | 11      | 214    | 2       | 134    | 2       |
| Eastern Province .. ..       | 366    | 3       |        |         |        |         |
|                              | 13,816 | 253     | 8,154  | 130     | 6,960  | 107     |

The increase in the number of admissions was especially noticeable in the North-Western, North Central, and Southern Provinces. Apart from Government hospitals and dispensaries, a large number of cases are treated in estate hospitals and dispensaries. The widespread prevalence of this disease seems to call for more determined efforts of control. The extension and re-organization of the Sanitary Department and the proposed establishment of a Research Institute will, it is hoped, lead to the adoption on a greater scale of the measures which in other parts of the world have been proved to be capable of materially lessening the incidence of the disease. The probable extension in the near future of paddy cultivation in districts notorious for malaria will call for measures of protection to those engaged on that work. The problem of malaria control is a complicated one, and requires much consideration to get the best results from the expenditure necessarily entailed. Quinine to the value of Rs. 307,008-28 was distributed free for preventive and curative purposes.

11. *Plague*.—The total number of cases reported was 89, with 83 deaths. Of these, 82 cases arose in Colombo, 6 were detected on ships arriving at the port, and 1 was a case in the Northern Province of a passenger arriving from India. The cases in Colombo were practically confined to the infected area near the harbour, where the disease has been endemic for some years past. Fortunately no centre of infection established itself outside Colombo this year. The six cases found on board ships were suitably dealt with.

12. *Cholera*.—After some years of comparative freedom from cholera, unfortunately an outbreak of this disease occurred in two areas, the Hambantota District and the Badulla District. The outbreak first occurred in July in the town of Hambantota, and continued to prevail until September, and during that period it spread to Tangalla, Tissamaharama, Matara, and Weligama. A second localized outbreak occurred at Yokanda, near Tissamaharama, in November, where there were 26 cases, with 6 deaths. The number of cases in Hambantota and the neighbouring villages was 447, with 338 deaths. In October an outbreak occurred in the Province of Uva, the first recognized cases occurring in the Civil Hospital, Badulla, and it was not until nearly the end of the year that it was stamped out. The most serious outbreak was in the village of Meegahakiula, some 15 miles from Badulla, where some 52 cases occurred. In the whole of Province of Uva there were some 170 cases, with 120 deaths. One fatal case

occurred on an estate in the Province of Sabaragamuwa in a newly arrived cooly from India. Ten cases were treated at the Infectious Diseases Hospital, Colombo, all being ship-imported cases, except one. The first outbreak at Hambantota was possibly due to the importation of the disease from India by some member of a travelling circus. The outbreak in the Province of Uva was probably due to infection conveyed there from the Southern Province, and the localized outbreak at Yokanda was traced to a cultivator who had passed through Buttala, then an infected area. When an outbreak occurs in a district, control is very difficult owing to the tendency of the inhabitants of infected villages to bolt to neighbouring villages. Moreover, adequate treatment in out-of-the-way places, some very difficult of access, is not readily carried out, and the mortality is necessarily high. With the exception of the explosive outbreak at Meegahakiula, which was due to the public water supply becoming infected, the other cases were due to contact infection. The disease in the various centres was effectively controlled by the Medical Officers and Inspectors of the Sanitary Department under Dr. G. S. van Rooyen, Acting Senior Sanitary Officer.

13. *Smallpox*.—Only some 35 cases in all were treated in 1919, and of these, 9 were ship-imported cases. Twenty-two cases were treated in the Infectious Diseases Hospital, Colombo, with 6 deaths; 4 cases occurred in the Northern Province, with 1 death; 5 in the Province of Uva, with 2 deaths; and two each in the Province of Sabaragamuwa and the Southern Province, all of whom recovered. Apart from the ship-imported cases, all the others were due to infection from recent arrivals from India. Effective measures of control were taken in each centre, and there was little or no spread of the disease.

14. *Vaccination*.—The vaccination staff of the Colony consisted of 140 trained vaccinators under the supervision of the Provincial Surgeons, and nine Inspectors of Vaccination, who are under the administrative control of the Provincial Surgeons. The total number of primary vaccinations performed was 128,795. Of these, 119,050 were successful, 2,188 not successful, and the results not determined in 7,557. The percentage of successful primary vaccinations was 98.36.

15. *Government Vaccine Establishment*.—The officer in charge reports that 418 calves were received on hire from the contractor. The number used was 411, and 398 were returned to the contractor. Seed lymph for vaccinating the calves was obtained from the Lister Institute of Preventive Medicine, London, and also from the King's Institute, Madras. A certain amount was also locally prepared. The total number of tubes of lymph issued was 139,447, as against 102,132 in 1918. Of this number, 780 were issued to the Colombo Municipality and 2,748 were sold, realizing the sum of Rs. 1,750.50. A large quantity of lymph was stored in bulk as a reserve.

16. *Enteric Fever*.—Judging from hospital returns, this disease was more prevalent and more fatal in 1919, there being 770 cases with 206 deaths, as against 614 with 131 deaths in 1918 and 518 cases with 93 deaths in 1917. The real prevalence of this disease in the Island cannot be judged from these figures, as many cases are neither recognized nor reported as such. The incidence of the disease was apparently much more marked in the latter half of the year, especially in the Western Province. The following table gives some evidence of the incidence of the disease in different Provinces as judged from hospital returns:—

| Province.                    | 1919.  |         | 1918.  |         |
|------------------------------|--------|---------|--------|---------|
|                              | Cases. | Deaths. | Cases. | Deaths. |
| General Hospital, Colombo .. | 338    | 126     | 168    | 53      |
| Western Province ..          | 177    | 42      | 107    | 37      |
| Central Province ..          | 160    | 17      | 85     | 9       |
| Northern Province ..         | 53     | 3       | 21     | 6       |
| Eastern Province ..          | 5      | 1       | —      | —       |
| Southern Province ..         | 45     | 7       | 59     | 13      |
| North-Western Province ..    | 12     | 3       | 14     | 4       |
| North-Central Province ..    | 5      | 2       | —      | —       |
| Province of Uva ..           | 20     | 2       | 8      | 4       |
| Province of Sabaragamuwa ..  | 12     | 2       | 18     | 5       |

The great increase in the number admitted to the General Hospital, Colombo, is evidence of a severe outbreak in Colombo and its neighbourhood.

17. *Dysentery*.—A considerable increase is shown as regards hospital admissions in 1919. The number of such admissions was 4,462 with 905 deaths, as compared with 2,481 cases with 428 deaths in 1918 and 2,883 cases with 620 deaths in 1917. The increased prevalence of this disease was probably associated with the excessive rainfall this year, leading to pollution of wells and other sources of water supply.

18. *Leprosy*.—The statistics of the Leper Asylum at Hendala give the following particulars as regards 1919:—

|                                   | Males. | Females. | Total. |
|-----------------------------------|--------|----------|--------|
| Remaining on December 31, 1918 .. | 297    | 78       | 375    |
| Admitted ..                       | 92     | 25       | 117    |
| Died ..                           | 37     | 20       | 57     |
| Remained on December 31, 1919 ..  | 331    | 81       | 412    |

Of the 117 admissions, 95 were new cases, and they were classified as under as regards the type of the disease:—

|               |    |
|---------------|----|
| Tubercular .. | 11 |
| Anæsthetic .. | 44 |
| Mixed ..      | 40 |

The new admissions were from the following Provinces:—Western, 63; Southern, 12; Uva, 8; Central, 7; Northern, 3; Sabaragamuwa, 2. The other admissions were re-admissions of absconders.

*Discharges*.—Twenty-three were returned as “discharged”; of these, 18 absconded, 1 was discharged as not suffering from leprosy, 3 Malabars were repatriated, and 1 was on leave. Of the 18 absconders, 5 were arrested and brought back, 8 returned of their own accord, and 5, including the 1 on leave, are still at large.

In addition to the asylum at Hendala, 63 lepers were treated at the Kalmunai Asylum, in the Eastern Province. Fifteen new cases were admitted, and there were 4 deaths. Eleven cases were waiting for admission.

A new asylum on Mantivu Island, near Batticaloa, is nearing completion.

19. *Anchylostomiasis*.—The following table gives the hospital admissions as regards the different Provinces :—

| Province.                    | Cases. | 1919.<br>Deaths. | Cases. | 1918.<br>Deaths. | Cases. | 1917.<br>Deaths. |
|------------------------------|--------|------------------|--------|------------------|--------|------------------|
| Western Province ..          | 1,776  | 317              | 6,925  | 184              | 1,311  | 187              |
| Central Province ..          | 3,381  | 644              | 5,837  | 413              | 3,237  | 569              |
| Southern Province ..         | 1,086  | 126              | 1,786  | 85               | 666    | 98               |
| Province of Sabaragamuwa ..  | 1,362  | 192              | 1,685  | 180              | 1,175  | 232              |
| North-Western Province ..    | 414    | 72               | 1,340  | 58               | 320    | 46               |
| Province of Uva ..           | 743    | 132              | 1,153  | 144              | 1,123  | 217              |

The figures given above refer to cases admitted and treated for hookworm disease, but there were amongst cases admitted for other diseases a large number suffering from anchylostomiasis as well.

*The Anchylostomiasis Campaign.*—During 1919 anchylostomiasis campaigns were conducted in the Uva and Central Provinces, and were concluded in the Avissawella-Hanwella section. These operations covered an approximate area of 297 square miles, and embraced 228 estates, and about 30 bazaars, villages, and towns. The personnel necessary for this work consisted of 3 Field Directors, 5 Assistant Directors, 9 clerks, 13 microscopists, and 31 dispensers. During the year 88,602 persons were treated, and 69,032 of those treated were cured. Although very serious local difficulties arose, which hindered the steady progress of the campaigns, still it will be noted that there was an appreciable increase in the amount of work done as compared with previous years, as seen in the following figures :—

|                                | Number treated. | Number cured. |
|--------------------------------|-----------------|---------------|
| Through 1917 ..                | 42,427          | 35,013        |
| In 1918 ..                     | 50,374          | 44,812        |
| In 1919 ..                     | 88,602          | 69,032        |
| Total up to the end of 1919 .. | 181,403         | 148,857       |

The work in the Province of Uva was under the direction of Dr. Fitzroy Keyt. The area in question included the estates, villages, and towns in and around Badulla, Passara, and Namunakula, and joined up with the districts of Haputale and Koslanda, which had been already completed in 1918. At the end of 1919 all estates in the Province of Uva which could be conveniently reached by campaign methods had had regular campaigns. A few outlying estates could not be included, because their distance from the field office was too great, and because office and living accommodation could not be secured in the neighbourhood.

Two areas were included in the Central Province: one having Gampola as a centre, and the other including the entire Dimbula section. The work in the Gampola-Pussellawa section embraced 70 estates, and 13 bazaars, villages, and towns. The greater part of the area included estates and villages on both sides of the Pussellawa road as far as Ramboda, although the territory extended to within 2 miles of Nawalapitiya in one direction, and to the 9th milestone on the Peradeniya road in another. This work was directed by Dr. S. T. Gunasekera. The Dimbula district included all estates and bazaars in the Kotagala, Talawakele, Nanu-oya, and Agrapatana sections. Work was not entirely completed in the last-named district at the end of the year. Dr. S. A. Winsor directed this work. It will thus be noted that the planting districts in the Province of Uva and in a large part of the Central Province have now been reached by regular campaigns.

The 1919 figures by areas are as follows :—

|            | Number treated. | Number cured. | Number<br>Treatments given. |
|------------|-----------------|---------------|-----------------------------|
| Badulla .. | 32,100          | 28,294        | 77,714                      |
| Dimbula .. | 34,194          | 30,408        | 78,515                      |
| Gampola .. | 22,308          | 10,330        | 54,400                      |
| Total ..   | 88,602          | 69,032        | 210,629                     |

It does not seem possible or feasible to include very remote estates in the regular campaign programme. Distances are great, and supervision not practicable. A probable solution of this difficulty would be for those estates to employ dispensers, have them trained in campaign methods, and arrange for them to conduct the campaigns. This plan has already been followed successfully on several estates, and about 100 dispensers have been trained in the work by the Field Directors.

Two important factors contributed towards delaying the work during the year. The first was the influenza epidemic, which persisted off and on throughout the year, but which reached its climax in July, making it necessary to suspend work entirely in the Dimbula area for that month, and causing the work in all areas to be carried on at a reduced rate for long periods of time. During the latter part of the year, however, large numbers of labourers were made available for treatment, and this, together with closely grouped estates, efficient drugs, and an experienced staff, accounts for the marked increase

in the amount of work which was done. The second difficulty was the food scarcity, due to the shortage of rice and the consequent increase in price of all other food commodities. Additional supplies of rice were made available by Government for estates where campaigns were in progress, thus making it possible to proceed with the regular estate campaigns. In villages, however, where the individual had to purchase his own rice, it was not possible to carry on the work systematically as before. As a result two treatments only were given to each person in villages in the latter part of the year, and in a large majority of instances specimens were not returned for re-examination, so that the number of reported cures is very small. The difficulty in the rice situation continued throughout the year. Floods during July and September greatly hindered the work in the Gampola area.

*Changes in Campaign Methods.*—In view of the fact that campaign methods have been considerably modified since the work was inaugurated in Ceylon, it may be proper to mention here the changes which have occurred. No general preliminary microscopic examination is now made of estate labourers, as experiments have shown that approximately 100 per cent. of them are infected. The treatment is not so drastic as formerly; the preliminary purge has been omitted altogether, as has also the preliminary fasting; the vermifuge dose is smaller, but equally efficient; the duration of work on each estate is shorter, and the disturbance of the estate routine has been reduced to a minimum; the staff is more experienced, and much larger number can be treated daily. Not more than four series of treatments are given on estates, as it has been shown experimentally that the first two treatments should remove about 95 per cent. of the worms from each individual, and that it requires from two to six additional treatments to remove the remaining 5 per cent. Since a small percentage of infected persons are not treated for various medical reasons, it is thought that these lightly infected uncured cases will not increase the amount of re-infection. In fact, it is presumed that the latrines, if properly used, will take care of these cases.

Much educational work was done during the year in the field campaigns and in outside districts by giving lantern talks and by distributing literature. Special efforts to reach the permanent population of the Island were made by visiting and lecturing to the C. M. S. Training Colony at Peradeniya and the Government Training College, Colombo. At both these institutions lantern lectures were given in English and in the vernacular, followed by microscopic demonstrations of intestinal parasites. The entire personnel of both these schools were later examined, and those infected were treated. Even among this selected class of people the infection percentage was slightly above eighty-five.

*Post-Campaign Work.*—During the year post-campaign measures were conducted in the Matale District. Thirty-eight estates were reached, and 3,686 labourers were treated. In addition, 563 villagers came voluntarily for treatment. The re-infection percentage remains high, however, varying between 40 per cent. and 91 per cent. Soil pollution is still in evidence on many estates in this district, and this accounts in part for the higher infection rate. The nature of the crops grown, the elevation, and climate are also factors to be considered. It might be advisable to state here that in the villages embraced in the Matale area 3,741 latrines were constructed during the year. It is significant of increasing interest to learn that in two of the districts where regular campaigns were conducted in 1919 post-campaign work has been asked for.

*Sanitation.*—Before undertaking a campaign, arrangements were made by Government for one of its Inspecting Medical Officers to visit the estates in the district and advise superintendents how to prepare for the campaigns, so that the greatest benefit could be derived therefrom. Unfortunately the number of officers available for this important work was very limited, and not all estates were visited.

It is the concensus of opinion among the Field Directors who visit the estates daily during the year that progress in the improvement of sanitary conditions of lines and latrines on estates has been made, especially in comparison with the situation when anti-anchylostomiasis operations began in 1916. All agree that upon the whole the latrine provision is adequate, but, on the other hand, say that many of the latrines are unused or improperly used, and in some instances have deteriorated to such an extent that they are not usable. It appears, therefore, that much additional work can be done advantageously in this respect. It is a noticeable fact that on estates where the superintendents are keen on sanitation, the paths and line surroundings are not polluted, and that the latrines are properly used. It has to be noted also that coolies on well-sanitated estates are healthier, that they are cured of anchylostomiasis more quickly, that the re-infection percentage is lower, and that the mortality from prevailing epidemics was very much less.

In villages where anchylostomiasis work was undertaken, an increased number of latrines was built and sanitary conditions generally improved. Prior to beginning work an Inspector was furnished by Government, who lectured to the people, and visited them and instructed them in the building, maintenance, and use of latrines. In this connection it might be well to note the present situation in Porto Rico, where treatments for anchylostomiasis were given about fifteen years ago by Government officers especially delegated for the work. A staff member of the International Health Board, who has just returned from a visit to Porto Rico, writes: "The experience in Porto Rico again makes concrete proof that our policy is sound in not encouraging hookworm measures, unless soil sanitation has been carried out at least six months in advance, and unless arrangements have been made by Government for maintenance and inspection to see that latrines are properly used. Although Porto Rico has a population of approximately one million, and has already spent \$347,000 on hookworm control, we found an infection rate of over 90 per cent. in 2,000 examinations at various test points among the rural population. Fully 80 per cent. of the houses have no latrines. The trouble is that all the money was spent on relief measures, and very little effective sanitation was accomplished."

It is undoubtedly true that a long stride in the right direction was taken in sanitary matters in Ceylon by the erection of latrines on estates and in villages. If the ground gained thereby is not to be lost, it is necessary that these latrines, which were built at a considerable cost, should be used in a proper manner. It is probable that an increased number of competent inspectors, who will act in an advisory capacity and enforce regulations, might furnish a means for meeting the situation.

20. *Diphtheria.*—Only 4 cases were treated in Government hospitals, and of these, 3 died.

21. *Parangi (Frambæsia, or Yaws)*. — As in 1918 and 1917, over 5,000 cases were treated in Government hospitals and dispensaries. Of the 5,270 cases treated in 1919, some 23 died. The distribution of the disease judged from hospital returns is shown in the table annexed :—

|                                   | 1919. | 1918. | 1917. |
|-----------------------------------|-------|-------|-------|
| Western Province .. .. .          | 439   | 318   | 241   |
| Central Province .. .. .          | 673   | 926   | 1,337 |
| Northern Province .. .. .         | 168   | 141   | 123   |
| Southern Province .. .. .         | 725   | 377   | 240   |
| Eastern Province .. .. .          | 470   | 502   | 517   |
| North-Western Province .. .. .    | 712   | 1,002 | 948   |
| North-Central Province .. .. .    | 455   | 455   | 512   |
| Province of Sabaragamuwa .. .. .  | 748   | 669   | 695   |
| Province of Uva .. .. .           | 760   | 704   | 616   |
| General Hospital, Colombo .. .. . | 120   | 117   | 130   |
| Total .. .. .                     | 5,270 | 5,211 | 5,359 |

Apart from the hospital admissions, large numbers were treated at various dispensaries in the different Provinces. Special arrangements for intravenous medication in the way of treatment of this disease were made at various hospitals in the Provinces where the disease was rife.

22. *Cancer and Sarcoma*.—The number of cases of malignant tumours treated in the various hospitals was 401, of which 71 died. More than half of these cases were treated in the General Hospital.

23. *Tubercular Disease of the Lungs (Pulmonary Phthisis)*.—The number of these cases under treatment in the various Government hospitals during 1919 was 2,656 with 801 deaths, as compared with 2,781 cases and 615 deaths in 1918 and 1,862 cases with 569 deaths in 1917. The provincial distribution was as under :—

|                                | Cases. | Deaths. |                                   | Cases. | Deaths. |
|--------------------------------|--------|---------|-----------------------------------|--------|---------|
| Western Province .. .. .       | 1,175  | 224     | North-Central Province .. .. .    | 21     | 5       |
| Central Province .. .. .       | 192    | 58      | Province of Uva .. .. .           | 136    | 44      |
| Northern Province .. .. .      | 60     | 8       | Province of Sabaragamuwa .. .. .  | 100    | 28      |
| Eastern Province .. .. .       | 72     | 11      | General Hospital, Colombo .. .. . | 576    | 282     |
| Southern Province .. .. .      | 164    | 47      | Lunatic Asylum, Colombo .. .. .   | 63     | 57      |
| North-Western Province .. .. . | 97     | 37      |                                   |        |         |

Incidentally it may be mentioned that tubercular disease of joints, bones, and glands, which is so prevalent amongst children in temperate climates, is comparatively rare in Ceylon, as in other tropical and sub-tropical countries. This lends strong support to the view that this form of the disease is largely due to infection from the milk of tubercular cows, for this disease (tuberculosis) is very rare in cattle in tropical countries.

Apart from the treatment of cases of phthisis in various general hospitals, three separate institutions are specially provided for dealing with this scourge, viz., the Anti-Tuberculosis Institute in Colombo, a sanatorium for early cases at Kandana some 7 miles out of town, and a hospital for chronic cases at Ragama some 11 miles away. At the dispensary in Colombo the cases are recognized, and suitable early cases sent to Kandana and chronic cases sent to Ragama. Apart from this, treatment and advice are given and domiciliary visits are carried out by the dispensary staff.

At the Institute there were 3,321 attendances in 1919, of which 1,588 were first visits. The number of cases of phthisis amongst these registered 930, the other 558 being sufferers from various chest troubles, of which asthma was the chief. The number of Colombo cases registered as phthisis was 593. No fewer than 278 deaths occurred from phthisis in Colombo not certified as such by a qualified medical man. They must have been a fruitful source of infection to others. Over 1,000 cases of deaths from phthisis occurred in Ceylon in 1919, and the number of people suffering from this disease in the Island must be over 10,000. Further efforts are, therefore, necessary to give skilled medical aid to numbers apparently not provided with such.

From the Institute in Colombo 653 cases of chronic phthisis were sent to Ragama hospital and 162 were sent to Kandana sanatorium. Some 329 domiciliary first visits to patients in their homes were made by the dispensary staff. At Ragama there were 900 cases under treatment in 1919, and of these, 155 died; the daily average sick was 152·32. Further accommodation to the extent of another 100 beds is urgently required at that hospital for this class of cases, many of which have to be kept in the General Hospital, Colombo, for want of room at Ragama.

To the sanatorium at Kandana, which was opened in the early part of the year, 161 cases were admitted; of these, 120 were discharged, 41 remained at the end of the year, and none died. Further accommodation there is also needed for suitable cases affording good hopes of recovery.

24. *Port Health Precautions, Colombo*.—In 1919 a total of 2,791 British and foreign steamers and 316 native sailing craft called at this port and were duly inspected, as against 1,661 steamers and 406 sailing vessels in 1918. Of these, 31 were placed in strict quarantine, as against 5 in 1918 and 8 in 1917. Eighteen were dealt with on account of smallpox, 6 on account of plague, and 4 on account of cholera, and 1 on account of cerebral spinal meningitis. Minor infectious diseases, such as measles, mumps, and chickenpox, were also dealt with by the Port Surgeon and his staff.

*Disinfection and Vaccination*.—The following numbers were dealt with at the disinfecting station on the Breakwater :—

(a) Disinfection : Passengers, 45,971 ; cargo coolies, 47,946 ; coal coolies, 43,802 ; and tally clerks, 2,999.

(b) Vaccination : 25 persons.

Fumigation : Cargo lighters were regularly fumigated, and rat destruction systematically carried out. Several ships were disinfected before being docked.

The tanks of water boats were periodically cleaned and disinfected.

There were 361 prosecutions for breach of quarantine regulations.

## SECTION III.—METEOROLOGICAL CONDITIONS.

25. *Rainfall*.—For the Island generally the rainfall for the year was above the average, being especially so south-west of the hills and in the Northern Province. It was in deficit, however, at most places on the east side of the Island to a somewhat less extent in the south and in the Matale District. The largest fall recorded for the year was in the Nawalapitiya District. Here, at Strathellie estate, altitude 2,500 feet, rain falling on 251 days, totalled 239·43 inches. The least rainfall was experienced in the east at Naula, near Arugam Bay, which had a total for the year of 24·56 inches in 60 days. The longest drought occurred at Elephant Pass and lasted for 117 days, May 15 to September 8. Thunderstorms were, on the whole, more numerous, being possibly due to the greater heat of the early months of the year; but the consequent precipitation was less than is usually experienced.

*Temperature*.—During January and February the mean shade temperature was decidedly higher than usual, and being immediately followed by months in which the temperature is normally high in the more populous parts of the Island, this had the effect of prolonging the hot season, and thereby making it more trying. For the remainder of the year the temperature was about normal, which resulted in the mean for the year being, on the whole, but slightly above the average.

*Wind*.—To the extreme north and south the wind strength was above the average, but was mostly below for the remainder of the Island. In direction there was no great variation from normal.

*Air Pressure*.—For the year the air pressure was above normal, being especially high in March and August and high in the remaining months, except November and December, when it was about normal.

## SECTION IV.—THE SANITARY BRANCH OF THE MEDICAL DEPARTMENT.

26. *Staff of the Sanitary Branch*.—Senior Sanitary Officer, Acting Junior Sanitary Officer, 3 Assistant Sanitary Officers, Sanitary Engineer, Sanitary Superintendent, 71 Sanitary Inspectors, 8 disinfecting orderlies, 4 surveying coolies, and 4 rat-catching coolies. Of the 2 Sanitary Inspectors who joined the Mesopotamia Sanitary Corps, one returned to the Island and resumed duties in the Department, and the other has secured a temporary post in Mesopotamia on extension of leave. A substitute has been appointed to act for him. Two Sanitary Inspectors resigned. The Senior Sanitary Officer who was on leave from December 26, 1918, returned to the Island on October 30, 1919, and relieved Dr. G. S. van Rooyen, who was acting for him.

*Transfers*.—Dr. K. R. Perera, Acting Assistant Sanitary Officer, Western Province, to Matale, relieved Dr. M. de Costa, Matale, to Colombo.

27. *Summary of Work*.—120,847 premises were inspected during the year, of which 19,312 were found insanitary. 4,087 actual mosquito breeding places were discovered and dealt with. There were 2,173 prosecutions with 1,818 convictions in respect of breaches of sanitary rules and regulations, the fines amounting to Rs. 6,536·75. 6,813 notices were served for remedying sanitary defects, out of which 4,995 were voluntarily complied with.

28. *New or Re-constructed Buildings*.—2,173 applications were dealt with, and 1,062 new buildings have been constructed in the Sanitary Board towns of Western and Central Provinces during the year.

29. *Infectious Diseases*.—The following infectious diseases were reported and prophylaxis carried out :—

|               |    |     |          |    |    |
|---------------|----|-----|----------|----|----|
| Enteric fever | .. | 245 | Measles  | .. | 34 |
| Dysentery     | .. | 234 | Smallpox | .. | 1  |
| Chickenpox    | .. | 381 |          |    |    |

*Cholera*.—Only one case of cholera occurred in Colombo District in the person of a Tamil employed at the Kolonnawa Oil Installation Works. Three epidemic outbreaks occurred during the year, i.e., (a) Hambantota and the neighbouring villages, (b) Province of Uva, and (c) Tissamaharama.

*Cholera Epidemic at Hambantota*.—This occurred in July at Hambantota and neighbouring villages. The origin of the outbreak was traced to one of the employees of a travelling circus which had recently come from India. The Acting Senior Sanitary Officer, Acting Junior Sanitary Officer, Assistant Sanitary Officer, Central Province, and fourteen Sanitary Inspectors were in charge of this epidemic, which was finally got under control and the area declared free from cholera in August, 1919. The total number of cases 447; deaths 348.

*Epidemic at Province of Uva*.—This epidemic, which occurred during October, continued till the beginning of January, 1920. Origin of the epidemic could not be traced. Dr. G. S. van Rooyen, the Assistant Sanitary Officer, Central Province, and twelve Sanitary Inspectors were in charge of this epidemic. 170 cases occurred, with 120 deaths.

*Epidemic at Tissamaharama*.—A third outbreak occurred at Tissamaharama during November, the origin of which was traced to a Moorish cultivator from Batticaloa, who passed through Buttala, then a cholera-infected area, on his way to Tissamaharama. The Senior Sanitary Officer, Acting Junior Sanitary Officer, and Dr. Arulpragasam, with four Sanitary Inspectors, were in charge of this epidemic, and the area was declared free from cholera at the end of December, 1919. Total number of cases 26, with 20 deaths.

With the exception of a sharp outbreak at Migahakiula during the Uva epidemic, which pointed to a water infection, all the other cases could be attributed to contact infection.

Sporadic cases of influenza prevailed throughout the Island, and prophylactic measures in the shape of advice, distribution of disinfectants, food, and pecuniary help were rendered by the Sanitary Inspectors in co-operation with the local police headmen.

30. *Sanitary Conveniences*.—Three public latrines of an approved type were constructed at Government expense in the Sanitary Board towns of Peliyagoda, Nugegoda, and Beruwala. The following are the figures for private latrines installed in other areas :—

|                   |    |        |                  |    |        |
|-------------------|----|--------|------------------|----|--------|
| Western Province  | .. | 10,185 | Central Province | .. | 13,223 |
| Southern Province | .. | 23,515 | Matale District  | .. | 3,741  |

31. *Hookworm Disease*.—A communal treatment was commenced by Dr. M. de Costa at Weligama during May, and he treated 100 cases. The work was handed over to Dr. W. S. Fernando of the Anchylostomiasis Campaign and continued for a month, but had to be given up owing to the rice crisis. The following are the results of treatment in other areas :—

Post-hookworm Campaign, Matale : 3,686 coolies were treated, with 2,117 cures.

Hookworm Dispensaries at—

Kalutara : 1,850 patients were treated, with 1,295 cures.

Moratuwa : 762 patients were treated, with 161 cures.

At the request of the Medical Officer of Health, Colombo, 1,284 specimens of excrement from the pupils of the various colleges and the residents within Municipal limits were microscopically examined for hookworm infection, of which 575 were found positive.

In view of the extension of the hookworm campaign into Kandy District, 16 lantern lectures on elementary sanitation and hookworm disease were delivered in Udunuwara, Yatinuwara, Tumpane, and Harispattu during November and December, 1919.

32. *Domestic Water Supplies*.—15,919 wells were inspected during the current year, of which 8,964 were found protected from pollution ; 577 were improved ; 83 new wells were sunk. Three public wells were provided at Government expense at Peliyagoda, Nugegoda, and Matugama. Five samples of water were examined chemically and bacteriologically, of which three were found satisfactory, and two unfit for human consumption.

33. *Scavenging*.—Scavenging of public and domestic refuse is being carried out in all the Board towns of the Island, with the exception of few that have not yet accumulated sufficient funds for the employment of coolies.

34. *Licensed Trades*.—These are gradually being made to conform to the rules and regulations effecting them.

35. *Milk Supply*.—108 samples of milk were examined chemically by the Government Analyst at our request, of which 81 were found adulterated, 4 skimmed, 2 fat removed, and 21 genuine.

36. *Town Planning*.—Surveys and improvement schemes are being carried out at Wellampitiya, Mitotamulla, Kirillapone, Kalubowila, Katukurunda, Gorakapola, Homagama, Radawana, Hanwella, Kesbewa, Negombo, Kelaniya, and Kandana. Type plans of estate cooly lines, bakeries, and boutiques were drawn up during the year.

#### SECTION V.—GENERAL.

37. *Hospitals, Asylums, and Dispensaries*.—Besides the Lunatic Asylum, Colombo, the Leper Asylum, Hendala, which have accommodation for 520 and 419 patients, respectively, there existed in 1919 87 Government hospitals, with accommodation varying from 12 beds in smaller outstations to 687 beds in the General Hospital, Colombo. At 58 hospitals, besides a medical officer or officers, a matron and nurses are also provided.

The following new buildings were completed during the year :—

- (1) Hospital in the Agrapatana.
- (2) Quarters for the visiting apothecary, Dolosbage hospital.
- (3) Quarters for Medical Officer and operating room, Nawalapitiya.
- (4) Dispensary and Medical Officer's quarters, Kattankudi.
- (5) Tanamalwila dispensary.
- (6) New stables and coach house to quarters to District Medical Officer and District Medical Assistant, Balangoda hospital, and also latrines for attendants and servants.
- (7) Additional accommodation, Galle hospital.
- (8) Smallpox hospital, Mandapam.
- (9) Quarters for visiting apothecary, second apothecary, and steward, Karawanella hospital.

38. The following is a summary of the chief features of the report of the Medical Superintendent of the General Hospital, Colombo :—

On December 31, 1918, there were 580 patients left in hospital, 51 in the paying section and 529 in the non-paying section. During 1919 the total number of admissions was 14,291 ; of these, 975 were admitted to the paying wards, and 13,316 to the non-paying wards. Of the 1,026 under treatment in the paying wards, 912 were discharged, 69 died, and 45 remained on December 31, 1919. Of the 13,845 under treatment in the non-paying wards, 11,520 were discharged, 1,732 died, and 593 remained on December 31, 1919. The average daily sick in hospital was 51·15 in the paying wards and 717·15 in the non-paying wards, most of which were overcrowded during the greater part of the year.

The maximum and minimum numbers on any one day are shown as under :—

| <i>Non-Paying Section.</i> |                          | <i>Paying Section.</i> |                          |
|----------------------------|--------------------------|------------------------|--------------------------|
| Maximum :                  | 813 on December 4, 1919. | Maximum :              | 61 on July 11, 1919.     |
| Minimum :                  | 596 on July 8, 1919.     | Minimum :              | 37 on December 26, 1919. |

Of the 13,316 cases admitted to the non-paying wards, 5,690 were surgical cases and 7,626 were medical cases. The admissions to these wards were over 3,000 more than in 1918.

The number of surgical operations performed in 1919 was 2,312 (exclusive of minor operations performed in the Out-patient Department), as compared with 1,829 in 1918. Of the 2,312 operations, 272 were done in the paying section theatre. The following table gives a comparison with the past five years as regards the number of cases under treatment, daily average sick, and percentage mortality in the paying and non-paying sections, respectively :—

| PAYING SECTION.        |         |                       |                     |  | NON-PAYING SECTION.    |          |                       |                     |  |
|------------------------|---------|-----------------------|---------------------|--|------------------------|----------|-----------------------|---------------------|--|
| Cases under Treatment. | Deaths. | Percentage Mortality. | Daily Average Sick. |  | Cases under Treatment. | Deaths.  | Percentage Mortality. | Daily Average Sick. |  |
| 1915 .. 907 ..         | 65 ..   | 5·3 ..                | 40·94 ..            |  | 10,703 ..              | 1,138 .. | 10·63 ..              | 538·71              |  |
| 1916 .. 909 ..         | 63 ..   | 6·9 ..                | 41·18 ..            |  | 12,310 ..              | 1,415 .. | 11·49 ..              | 622·27              |  |
| 1917 .. 814 ..         | 35 ..   | 4·2 ..                | 41·30 ..            |  | 12,136 ..              | 1,256 .. | 10·34 ..              | 670·49              |  |
| 1918 .. 913 ..         | 60 ..   | 6·5 ..                | 43·18 ..            |  | 10,698 ..              | 1,432 .. | 13·4 ..               | 610·45              |  |
| 1919 .. 1,026 ..       | 69 ..   | 6·7 ..                | 51·15 ..            |  | 13,845 ..              | 1,732 .. | 12·5 ..               | 717·45              |  |

As regards particular diseases, the following table shows their comparative prevalence and fatality as indicated by hospital returns:—

|                            | 1915.    |         | 1916.  |         | 1917.  |         | 1918.    |         | 1919.  |         |

\* Includes influenzal pneumonia.

The new paying section of the hospital has been overcrowded during the greater part of the year. It is hoped that relief in the near future will be arranged for by additions to the Chronic Hospital for Tuberculosis cases at Ragama and additions to the Home for Incurables. There are some 150 cases of these classes in the General Hospital who ought to be dealt with elsewhere. A new ward of 24 beds for females is being erected, and will be most useful as the accommodation for females is inadequate.

The paying section, too, has been taxed to its utmost during the past year, and especially has a shortage of accommodation been felt in that provided for merchant seamen. Fortunately, as part of the great war memorial, it has been decided to provide more beds for this class of patient. The cost of this scheme is to be met out of a generous grant of £7,500 from the Red Cross Society and of Rs. 50,000 from public funds.

*Expenditure and Receipts.*—Paying Section: Receipts, Rs. 84,513; expenditure, Rs. 53,410; Non-Paying Section: Receipts, Rs. 4,682; expenditure, Rs. 104,536. The expenditure in both sections covers the cost of diets, fuel and light, and equipment, and the salaries of attendants and servants, but does not include the salaries of the medical and nursing staff, nor the cost of drugs and dressings.

*Staff.*—The senior members of the staff continued to carry out their duties in the same efficient fashion. The Medical Superintendent, Dr. G. Thornton, who had been in charge for the past eleven years, was called upon to act as Principal Civil Medical Officer in September, and Dr. P. J. Kelly, Registrar of the Medical College, acted as Superintendent of the Hospital the rest of the year.

39. *The Colombo Lunatic Asylum.*—As usual, there has been a serious shortage of accommodation with consequent overcrowding. The new asylum at Angoda is under construction, and it is hoped that the wards for females may be ready there by the end of 1921. As a measure of temporary relief, arrangements have been made to treat 150 male cases in the abandoned jail at Matara. The following table gives the figures regarding the numbers dealt with in 1919 as regards the Asylum in Colombo:—

|                                   | Males. | Females. | Total. |
|-----------------------------------|--------|----------|--------|
| Remaining on December 31, 1918 .. | 690 .. | 376 ..   | 1,066  |
| Admitted ..                       | 229 .. | 131 ..   | 460    |
| Total treated ..                  | 919 .. | 507 ..   | 1,426  |
| Discharged ..                     | 138 .. | 53 ..    | 191    |
| Deaths ..                         | 105 .. | 61 ..    | 166    |
| Remaining on December 31, 1919 .. | 676 .. | 393 ..   | 1,069  |

The daily average number resident in the Asylum was 690·46 males and 381·26 females, as compared with 682·53 males and 363·67 females in 1918. The largest number present on any one day was 1,118, of which 716 were males and 402 females. Useful work was done for various Government Departments by both male and female inmates.

40. *The House of Observation.*—Twenty-six males and 12 females were under observation on January 1, 1919, as compared with 15 males and 6 females on January 1, 1918. During 1919 the number of males dealt with was 267 and the number of females 111, as compared with 267 males and 11 females in 1918. Of the 275 males 123 and of the 119 females 67 were transferred to the Asylum, 132 males and 40 females were discharged, and 12 males and 9 females remained on December 31, 1919.

41. *The Infectious Diseases Hospital, Colombo.*—Cases were admitted from Colombo and environs and from ships arriving at the harbour. On December 31, 1918, there were 15 cases left in hospital; during 1919 there were 437 cases admitted; of the 452 under treatment, 404 were discharged, 30 died, and 18 remained on December 31, 1919. The daily average sick was 20·40. The cases dealt with are shown in the table given below:—

| Disease.           | 1919.   |         | 1918.   |         | 1917.   |         |
|--------------------|---------|---------|---------|---------|---------|---------|
|                    | Number. | Deaths. | Number. | Deaths. | Number. | Deaths. |
| Smallpox ..        | 28 ..   | 6 ..    | 46 ..   | 10 ..   | 5 ..    | 2       |
| Cholera ..         | 10 ..   | — ..    | 1 ..    | — ..    | — ..    | —       |
| Plague ..          | 24 ..   | 17 ..   | 10 ..   | 9 ..    | 77 ..   | 58      |

| Mumps ..           | 38 ..   | 1 ..    | 15 ..   | — ..    | 22 ..   | —       |
| Pneumonia ..       | — ..    | — ..    | 3 ..    | 1 ..    | 5 ..    | 2       |
| Acute diarrhoea .. | 3 ..    | 1 ..    | 2 ..    | — ..    | 5 ..    | —       |
| Other diseases:—   |         |         |         |         |         |         |
| Whooping cough ..  | 4 ..    | — ..    | — ..    | — ..    | — ..    | —       |
| Influenza ..       | 11 ..   | 2 ..    | — ..    | — ..    | — ..    | —       |
| Malaria ..         | 2 ..    | — ..    | 61 ..   | 1 ..    | 58 ..   | —       |
| Enteric ..         | 1 ..    | — ..    | — ..    | — ..    | — ..    | —       |
| Total ..           | 484 ..  | 29 ..   | 511 ..  | 25 ..   | 841 ..  | 66      |

No start has yet been made on the construction of a new and up-to-date infectious diseases hospital, which is really required, but it is hoped to do so next year.

42. *The Victoria Memorial Eye Hospital.*—909 patients were admitted during the year, and the average daily sick was 68·89. The number of operations performed was 562, of which 198 were for cataract and 40 for glaucoma. At the Out-patient Department 9,774 eye cases and 1,753 ear, nose, and throat cases were attended to, and in both classes some 1,126 minor operations performed.

43. *The Convict Hospitals* consists of the Borella Convict Hospital, Colombo, Welikada Hospital for females, and the Mahara Jail Hospital, and there are hospitals attached to the jails at the other sixteen jails. The total number of admissions to all the jail hospitals was 10,267, as against 6,101 in 1918 and 6,879 in 1917; and the number of deaths was 315, as against 121 in 1918 and 131 in 1917. The majority of the cases were under treatment at Borella and Mahara, as 3,193 were admitted to Borella hospital and 4,421 to Mahara hospital. At Borella 1,191 cases and at Mahara 2,000 cases were admitted for influenza, the disease being much more prevalent amongst prisoners than was the case in 1918. Owing to food shortage and high prices many prisoners were in poor health on admission, and more cases required hospital treatment than usual.

44. *The Police Hospital, Borella.*—The number of in-patients was 1,111, and the daily average sick 17·49 and 8 died.

45. *The De Soysa Lying-in Home.*—The total number treated in 1919 was 1,950, as compared with 1,749 in 1918 and 1,739 in 1917. Of these, 1,803 were discharged, 82 died, and 47 remained on December 31, 1919, and 18 were transferred to the general or some special hospital. The percentage of deaths was 4·20, as against 4·97 in 1910. Of the 82 deaths, 37 were due to the accidents of childbirth, and 9 were due to puerperal causes and 36 to non-puerperal, such as anchylostomiasis, pneumonia, &c. During the period under review 1,554 children were born, and there were 35 cases of twins and one of triplets. There were 149 stillbirths. Of the children born alive, 90 died. The number of paying patients was 58, a decrease in numbers due to rebuilding operations. The front one-storied block was pulled down and a two-storey block erected on the site, which will be opened very shortly, and provide much-needed additional accommodation. The hospital serves as a training school both for medical students and midwives. The number of pupil midwives received for training during the year was 62, and of these, 55 successfully passed their examination and received certificates. In July Dr. M. Sinnetamby, who had been in charge of the hospital since 1899, retired after thirty-seven years of highly meritorious service. 176 obstetric operations were performed.

46. *Lady Havelock Hospital for Women.*—The number of cases treated was 831, as compared with 849 in 1918 and 868 in 1917; the daily average sick was 26·37. The number of operations performed by Miss (Dr.) Anderson, the Surgeon in Charge, was 322 (226 major and 56 minor). They were mostly gynæcological operations. The hospital trained pupil nurses, of whom 33 were admitted during the year.

47. *Lady Ridgeway Block for Children.*—The number of young children treated in 1919 was 415, as compared with 920 in 1918 and 757 in 1917, and the daily average sick was 50·03. The mortality was heavy, 26·2 per cent., but many cases unfortunately are admitted in a moribund condition. Miss Anderson comments on the universal infection of the children admitted with worms, and records cases of actual obstruction and perforation of the bowels from this cause, round worms being found freely in the peritoneal cavity. This emphasizes the necessity for periodical treatment of all children in the East for worms.

48. *Victoria Home for Incurables.*—Seventy-four patients remained in the institution on December 31, 1918, and 30 were admitted during 1919, making a total of 104 cases, of whom 9 died and 8 were discharged, leaving 87 at the Home at the end of the year. It is hoped that a start will be made before Christmas, 1920, in enlarging this Home with a view of providing accommodation for another 100 patients, thus relieving the pressure on the hospitals to that extent.

49. *Bacteriological Institute.*—The Director, Dr. L. Nicholls, reports that 5,928 bacteriological examinations were made, as compared with 4,525 in 1918. The fees received for private cases amount to Rs. 1,423.

50. At the Pasteur Institute 522 cases were under treatment; of these, 2 died. The fees received from paying and estate patients was Rs. 3,267. The brains of 160 dogs were received for examination, and of these, 90 gave a positive result.

51. *The Ceylon Medical College.*—The following are the statistics of the Medical College :—

|   |     |  |   |
|---|-----|--|---|
| (1) Number of Medical Students on December 31, 1918   | 187 | (4) Number of Medical Students who left in 1919                        | 3 |
| Number of Apothecary Students on December 31, 1918    | 78  | Number of Apothecary Students who left in 1919                         | 1 |
| (2) Number of Medical Students admitted in 1919       | 42  | (5) Revenue from October 1, 1918, to July 1, 1919, Rs. 41,469·50.      |   |
| Number of Apothecary Students admitted in 1919        | 31  | (6) Expenditure from October 1, 1918, to July 31, 1919, Rs. 76,628·74. |   |
| (3) Number of Medical Students who passed out in 1919 | 21  |  |   |
| Number of Apothecary Students who passed out in 1919  | 26  |  |   |

52. *Civil Medical Stores, Colombo.*—Considerable difficulty was experienced in getting out supplies of drugs and instruments from England, and prices continued very high. The cost of articles obtained in 1919 amounted to Rs. 750,408, and the cost of transport of supplies to civil and estate institutions amounted to Rs. 4,166; incidental expenditure, including stationery, printed forms, binding, &c., amounted to Rs. 15,139. The total expenditure, apart from the purchase of quinine, therefore, was Rs. 769,713. The sum of Rs. 3,250 was realized by the sale of drugs to estates, the sale of unserviceable articles, and the value recovered for loss or damage of articles issued to hospitals. The supply of quinine received during the year was 102,500 ounces, costing Rs. 288,292, and the issues amounted to 109,156 ounces, of value Rs. 307,008. Drugs to the value of Rs. 30,249 were supplied free to Government Departments other than medical. Opium to the value of Rs. 262,903 was purchased.

#### SECTION VI.—MEDICAL AID TO IMMIGRANT COOLIES.

53. During the year under review the Mandapam Emigration Dépôt was under the superintendence of Dr. Donald Schokman up to August, 1919, and after that Colonel van Langenberg took charge. In 1919 165,555 persons passed through the camp, as compared with 85,441 in the previous year. Of these, 112,195 were estate labourers, as compared with 44,010 in 1918. The rest were miscellaneous passengers. The enormous increase over the figures of the previous year is due partly to the withdrawal of the restriction on recruiting by the Madras Government, and partly to the dearth of foodstuffs in

India. The total number who returned from Ceylon was 108,362. Various additions and improvements have been effected to the camp since 1918, such as construction of quarters for Public Works Department clerks and menials, a cholera hospital, the erection of three temporary cooly wards, and six sheds as segregation wards to meet the large number passing through the camp during May, June, and July. Further additions and improvements await the sanction of Government. The water supply to the camp runs short of requirements during the hot season from April to July, and proposals are before the Government for its improvement. The sanitary arrangements of the camp, although satisfactory and favourably commented upon, are still open to improvement. The staff consists of two overseers with maistries, latrine coolies, and sweepers. The services of a Supervisory Sanitary Inspector are thought necessary, and the appointment of one has been recommended by the Superintendent.

No cases of plague occurred in the camp during the year. There was an outbreak of cholera in May, which continued during June and July, there being 31 cases, with 29 deaths; 27 cases occurred among estate coolies, 1 was a passenger, and 3 were members of the camp staff. There were 26 cases of smallpox with 1 death, 25 among estate coolies and 1 among miscellaneous passengers. There were 108 cases of influenza uncomplicated and 110 cases complicated with pneumonia admitted into hospital; among these there were 64 deaths, all due to pneumonia. At the outdoor department 685 cases were treated, the grand total being 795. There were also 26 cases of chickenpox, 15 cases of measles, and 6 cases of mumps, all of which recovered under treatment. The total number treated as outdoor patients was 13,189. The death-rate during the year was low, as there were only 119 deaths. There were 26 births in the camp.

54. *Government District Hospitals in Planting Areas.*—There are 51 such hospitals, with accommodation for 4,087 patients. These hospitals are staffed with fully qualified medical officers, nurses, and attendants, and are up to date in equipment. In addition to the out-patients' departments attached to these hospitals, there are 74 outdoor dispensaries unconnected with hospitals.

55. *Estate (Rebate) Hospitals.*—Fifty-one hospitals built, staffed, and equipped by estates exist in the planting districts. These hospitals have earned the sum of Rs. 61,660 in rebate of taxation in respect of the financial year 1918–19, each in proportion to the efficiency of the provisions for the medical care of their labour force. It is satisfactory to report that most of the hospitals show advance in the nature of building and equipment. It is regrettable, however, that the professional attainments of the average estate dispenser are not commensurate with the aims and objects of these useful institutions. This matter is receiving consideration with a view to improvement. The class of men seeking service or in service as estate dispensers is in many cases not satisfactory, and it is not easy to see what can be done under existing limitations. The position may be summed up in the sentence "there is no short road to medical knowledge," and the position can only really be satisfactorily dealt with by a large increase in the number of medical officers doing estate work.

56. *Free Grants of Drugs* to 460 dispensaries were made during the year October 1, 1918, to September 30, 1919, at a cost of Rs. 143,914·57.

57. *Latrines on Estates.*—Practically all estates have made provision in the way of latrine accommodation for their labour force. It would appear, however, that in numerous instances the state of repair of these conveniences has been overlooked. Soil pollution, though less than it was, continues to occur, and nothing short of continuous and systematic vigilance on the part of the estate management will effect an improvement in this matter. The gravity of neglect is not yet fully appreciated.

58. Two special officers are engaged in the duties of sanitary inspection of estates, the present sphere of their activities being (a) the Western Province, comprising the Kalutara, Panadura, Padukka, Avissawella, and Negombo districts; (b) the Southern Province, comprising the Elpitiya, Udugama, and Deniyaya districts; (c) the Central Province, comprising the Nuwara Eliya, Dikoya, Dimbula, Kandy, Matale, and Hewaheta districts, &c. 176 estates have been visited and reported upon during the year. Sanitary shortcomings and requirements were brought to the attention of the estate management, and a report forwarded to this office. Progressive improvement, I am pleased to note, is evident on a good many estates with regard to the matter of cooly health, sanitation, and welfare, but on the other estates, hampered perhaps by adverse financial considerations or by the apathetic attitude of those responsible for supervision, conditions were still far from satisfactory. It is to be hoped that the greater responsibilities to be thrown upon superintendents under the new labour legislation will have the effect of directing more attention to details of sanitation on estates. Many estates have constructed useful and serviceable "crèches" for the tending and dieting of infants and young children. The "crèche" is an entirely voluntary and philanthropic effort on the part of the estates, and is to be recommended as worthy of more general adoption, in view of the fact that the estate utilizes the services of both parents for several hours daily to the detriment of the children to a greater or less extent common to all industries where female labour is employed. Some of the "crèches" have shown excellent results in the better health and physical condition of the children.

#### SECTION VII.—REVENUE AND EXPENDITURE, 1918–19.

59. The following statement shows the expenditure and receipts of the Department, inclusive of Medical Aid, Estates Branch, for the financial year 1918–19 :—

| <i>Expenditure.</i>        |    | <i>Rs. c.</i> |    | <i>Revenue.</i>   |    | <i>Rs. c.</i> |    |
|----------------------------|----|---------------|----|---|----|---------------|----|
| Personal emoluments        | .. | 1,700,670     | 58 | Hospital and dispensary receipts  | .. | 157,723       | 3  |
| Other charges              | .. | 1,506,995     | 93 | Sale of drugs, &c.  | .. | 2,937         | 34 |
| Hospitals and dispensaries | .. | 1,235,325     | 27 | Sale of drugs under Medical Wants   | .. |               |    |
|                            |    |               |    | Ordinance   | .. | 7,733         | 16 |
|                            |    |               |    | Medical aid dues, maintenance, and visits   | .. | 166,756       | 52 |
|                            |    |               |    | Rent of buildings, sale of unserviceable and superfluous articles, and rent of trees and garden produce.. | .. | 20,954        | 24 |
| Total                      | .. | 2,742,321     | 20 |   |    |               |    |
| Grand Total                | .. | 4,442,991     | 78 |   |    | 356,104       | 29 |

60. *Strength of the Medical Department.*—The following was the strength of the Medical Department during the period : 1 Principal Civil Medical Officer ; 1 Assistant Principal Civil Medical Officer ; 1 Accountant ; 2 Inspecting Medical Officers ; 4 Medical Superintendents at the General Hospital, Colombo, Lunatic Asylum, Leper Asylum, and the De Soysa Lying-in Home ; 9 Provincial Surgeons ; 1 Medical Officer, Anti-Tuberculosis Institute ; 179 Medical Officers, including the Medical Superintendent, De Soysa Lying-in Home ; 2 Anaesthetists ; 1 Female Medical Practitioner ; 324 Apothecaries ; 9 Inspectors of Vaccination ; 140 Vaccinators, including 7 Female Vaccinators ; 1 Hospital Assistant ; 37 Hospital Stewards ; 1 Director, Bacteriological Institute ; 1 Bacteriologist and 1 Assistant (a Medical Officer) ; 1 Superintendent, Civil Medical Stores ; 1 Assistant Superintendent ; 1 Senior Sanitary Officer ; 1 Junior Sanitary Officer ; 5 Assistant Sanitary Officers ; 1 Sanitary Engineer ; 1 Sanitary Superintendent ; 73 Sanitary Inspectors ; 32 European Matrons and Trained Nurses ; 64 European Religious Sisters ; 232 Ceylonese Matrons, Nurses, and Pupil Nurses ; 2 Pay Agents ; 1 Opium Storekeeper ; 40 Opium Clerks and Sellers.

61. *Officers on Leave.*—I proceeded on leave in May, and Dr. E. Langley Hunt, C.M.G., Assistant Principal Civil Medical Officer, acted as Principal Civil Medical Officer and Inspector-General of Hospitals till he left on leave in September on being appointed Superintending Medical Officer of Jamaica, Dr. G. Thornton, M.D., Medical Superintendent, General Hospital, Colombo, acted as Principal Civil Medical Officer and Inspector-General of Hospitals from September till my return in December. Dr. J. Lunn, Inspecting Medical Officer, on his return from war service, was appointed to act as Assistant Principal Civil Medical Officer, but shortly afterwards proceeded to Mauritius as Director of the Medical Services in that Colony. On my return from leave, Dr. Thornton was appointed as Acting Assistant Principal Civil Medical Officer and Inspector-General of Hospitals.

62. *Changes in the Department.*—Two vacancies occurred in the Provincial Surgeon Grade, owing to the promotion of Dr. H. Bawa as an Inspecting Medical Officer and the retirement of Dr. W. W. Margenout. Drs. A. Rajasingham and F. V. Foenander of Grade I., who were acting as Provincial Surgeons, were confirmed to fill the vacancies. Dr. M. Sinnetamby, Medical Superintendent, De Soysa Lying-in Home, retired after thirty-seven years' service. Dr. V. van Langenberg of Grade I. was appointed Superintendent of the Mandapam Camp.

Drs. G. W. van Twest and C. J. Tillekeratna died. The following officers were promoted to Grade I. during the year : Drs. C. H. K. Scharenguivel, A. M. de Silva, R. L. Spittel, H. de Silva, C. L. A. de Silva, S. T. Gunasekara, and C. Sivasithamparam.

Drs. O. D. Gunasekera and V. R. S. Schokman of Grade II. left the service. The following were promoted to Grade II. : Drs. P. K. K. Naidu, T. S. Nair, H. E. Schokman, A. J. Fernando, S. F. Wickramasinghe, H. Amarasinghe, J. M. Somasundram, S. Chelliah, and K. Ponniah.

The following new officers were admitted to the Department : Dr. R. R. Tamber, St. J. Puvirajasingham, P. R. C. Peterson, J. L. Fernando, N. B. P. Goonetilleke, C. H. O. Senanayaka, J. Dadabhoy, J. R. Blazé, A. H. D. R. de Silva, V. Doraisamy, J. D. L. Perera, A. B. Mendis, N. Attygala, A. H. D. A. de Silva, S. R. Gunawardena, and A. C. Fernando. Eight officers of the Department and four passed L.M.S. left for India for war service on July 31, 1919.

G. J. RUTHERFORD,  
Principal Civil Medical Officer and  
Inspector-General of Hospitals.

Colombo, July 12, 1920.

## APPENDIX.

### OPIMUM.

SINCE the previous report there have been no amendments to, or alterations of, the Ordinance.

2. The selling price of opium remains the same as last year, viz., eating opium 1½ cents per grain and smoking opium 2 cents per grain.

3. The number of opium depôts in the Island, too, remains the same as last year, viz., 54.

4. During the year 71 new opium consumers were registered, as against 43 during the previous year.

5. A statement of opium sold and the amount realized during each quarter of the year is appended. It will be noticed that the total quantity of opium sold for the year is less than that of the previous year, which is inserted for comparison :—

Statement of Opium sold and Amounts realized during each Quarter from January 1, 1919, to December 31, 1919.

| During the Quarter ended | Eating Opium.             |                            | Smoking Opium.            |                            | Total realized. |  |
|--------------------------|---------------------------|----------------------------|---------------------------|----------------------------|-----------------|--|
|                          | Quantity sold.<br>Grains. | Amount realized.<br>Rs. c. | Quantity sold.<br>Grains. | Amount realized.<br>Rs. c. |                 |  |
| March 31, 1919 ..        | 11,446,841                | 172,425 33                 | 1,215,475                 | 24,309 50                  | 196,734 83      |  |
| June 30, 1919 ..         | 11,252,115                | 169,262 93                 | 1,222,250                 | 24,445 0                   | 193,707 93      |  |
| September 30, 1919 ..    | 11,339,704                | 169,362 79                 | 1,190,375                 | 23,807 50                  | 193,170 29      |  |
| December 31, 1919 ..     | 10,882,756                | 163,443 79                 | 1,169,175                 | 23,385 50                  | 186,827 29      |  |
| Total for 1919 ..        | 44,921,416                | 674,494 84                 | 4,707,275                 | 95,945 50                  | 770,440 34      |  |
| Total for 1918 ..        | 50,702,681                | 565,726 18                 | 4,136,160                 | 82,723 0                   | 625,723 30      |  |

6. The amount realized out of the sale of opium/ preparations during the year was Rs. 8,149·29.

7. During the year 1919 sixty chests of opium were purchased from India for Rs. 248,211·47, as against sixty chests during the previous year for Rs. 207,677·54.

G. J. RUTHERFORD,  
Principal Civil Medical Officer and  
Inspector-General of Hospitals.

Colombo, July 12, 1920.

# DEPARTMENT OF AGRICULTURE.

## REPORT OF THE ACTING DIRECTOR OF AGRICULTURE FOR 1919.

THE Director of Agriculture proceeded on leave on November 10, 1919, and the Botanist and Mycologist assumed duties as Acting Director of Agriculture from that date.

Steps were taken during the year to bring into operation some of the extensions of the work of the Department proposed by the Director in 1918 in his scheme for the re-organization of the agricultural services of the Colony. The proposal to establish a farm school, &c., at Jaffna has been accepted, and the site has been selected. The staff of the Entomological Division was completed by the appointment of an Assistant Entomologist in June. Two Plant Pests Inspectors were appointed: one for the Central Division in July, and one for the Southern Division in December, and the training of Assistant Inspectors is in progress. An Economic Botanist was appointed in December.

In response to the memorandum of the Secretary of State for the Colonies on the subject of the development of the economic resources of the Colony, the Director of Agriculture drew up proposals for the furtherance of agricultural and botanical research in the Colony, which were submitted to the Committee appointed by Government to consider the question.

Owing to the absence of members of the staff on military service, and the shortage of staff in general, the work of the Department during the year has, on the whole, been necessarily limited to the continuance of permanent experiments, the routine advisory and administrative duties, and inquiries into problems of immediate importance.

### RUBBER.

The rubber experiments instituted by the late Dr. Lock have now for the most part been brought to a conclusion and the results published. The question of further tapping experiments requires consideration; the area previously utilized at Gangaruwa cannot be taken into tapping again for several years, as future experiments on the same area are liable to be inconclusive owing to the effect of the previous differential tapping. Experiments on "change over" tapping, instituted in 1914 and 1915 respectively, were concluded in 1919, and an experiment on the relative yields obtained by a V and a single oblique cut begun in 1914 was closed at the end of the year. Another experiment on two- and three-day tapping was begun in January, 1919. The manurial experiments on rubber have been continued.

Rubber research under the joint Ceylon Rubber Research Scheme has been in abeyance, pending the formulation of proposals for further research by the different bodies interested. The accounts of the investigations carried out by Mr. L. E. Campbell, formerly Rubber Research Chemist, have been issued in book form.

Insect pests of rubber continue to be of minor importance. Some cases of trees killed by the stem borer, *Batocera rubus*, were recorded during the year.

Root diseases of rubber still give trouble, though their prevalence at the present time may be attributed in part to the incomplete methods adopted in the earlier period of thinning out. The chief interest in rubber diseases during the year centred in brown bast, which is now found to be prevalent throughout all the rubber districts. A census of trees affected by brown bast was taken by means of a schedule of queries circulated to estates through the various Planters' Associations. The returns indicate that the number of trees attacked is not as great as in some other rubber-producing countries, but it has not yet been possible to analyse them completely. It is now held that brown bast is a physiological result of tapping, and is more common in daily tapping than in alternate day tapping. It is scarcely possible to test that theory in Ceylon, as, except in rare cases, the trees are tapped on alternate days. One important discovery during the year was the existence in Ceylon of the South Indian fruit disease and leaf fall, which has a more serious effect on the tree than the ordinary Ceylon disease of the same nature.

Rubber tapping in Ceylon may be said to have settled down, for the time, to alternate day tapping with a single oblique cut, either on one-half or on one-third circumference. Two cuts on a quarter, tapped on alternate days, is in vogue on some estates. Three-day tapping continues to give satisfaction to the estates which adopted it some years ago, but this method has not spread.

### TEA.

General manuring of tea, which had been curtailed during the war owing to financial difficulties and the impossibility of obtaining certain manures, is now being resumed. It is generally considered that the bushes have not suffered by reason of this enforced reduction. In some districts, however, red rust was prevalent towards the end of the year, and as this is held to be primarily a disease which attacks weak bushes, it is possible that the effect of the omission of certain ingredients of the usual manure mixture may have been manifested in that way.

The tea manurial experiments at Peradeniya have been carried on under the revised programme approved by the Committee of Agricultural Experiments. The area under tea has been extended by the addition of two and a half acres formerly in old coconuts below the tea plots.

Several new root diseases of tea have been recorded during the year, the chief of these being another species of *Rosellinia*. The most important addition to the known diseases of tea is a leaf disease, which also attacks *Acacia decurrens*; at present this is not widespread, but it may be sufficiently serious to influence the practice of planting *Acacias* through tea.

Investigations on Shot-hole Borer (*Xyleborus fornicatus*) have been carried on by the Assistant Entomologist, in succession to Mr. E. R. Speyer, who resigned his appointment in February. Experiments with "paint" mixtures have been continued, and trap-crop experiments with castor are being instituted. The Plant Pests Inspectorate of the Central Division has been engaged chiefly on the inspection of estates and gardens for shot-hole borer in connection with the regulations governing the removal of tea stumps. From January 1, 1920, tea stumps cannot be removed from any infected estate.

Tea tortrix investigations were transferred to Maskeliya, where experiments were undertaken with control measures. This investigation was brought to a conclusion in June, and the results have been published in three bulletins. The chief recommendation for the control of this pest is the establishment of belts of trees as "flight breaks."

#### COCONUTS.

The manurial experiments on the Chilaw trial ground have been continued. At Anuradhapura coconuts on unirrigable land have made satisfactory progress.

The nut fall and leaf break diseases are still prevalent during the wet seasons in the Kurunegala District.

The black-headed coconut caterpillar was reported from the North-Western Province, where, however, it was found to be kept in control to some extent by a parasitic insect. In the Batticaloa District this caterpillar continues to be a serious pest.

#### OIL PALMS.

The West African oil palm is well established on the Experiment Station, Anuradhapura, where it is now fruiting freely. It has been proved that the locally grown seed germinates. Analyses of the fruits have been made by the Government Chemist.

#### CASTOR.

As noted in the report for 1918, castor was grown on forest clearings to the extent of 105 acres by the Forest Department in order to furnish a supply of oil for the Railway. Ten acres were also grown at the Experiment Station, Anuradhapura. Owing to difficulties in the matter of husking the seed, exact weights of the crop cannot be given, but up to date 2 tons 7 cwt. of oil have been obtained. The experiment is being continued this season at Iranaimadu and Vavuniya.

#### FIBRES.

Twenty-four acres of Sisal hemp and 5 acres of Mauritius hemp have been established at the Experiment Station, Anuradhapura.

#### FOOD PRODUCTS.

Experiments to determine the best time for planting paddy were begun at Anuradhapura, and varietal tests were continued at Peradeniya. The area under paddy at the Experiment Station, Peradeniya, has been extended. A large number of varieties of local paddy were collected and planted at both Experiment Stations to afford material for the Economic Botanist, who is devoting his attention to the improvement of paddy.

As in the last two years, an extensive distribution of seeds and cuttings of food plants has been made to meet the demands entailed by the food shortage. Four acres of el-wi were grown at Anuradhapura, and 6 acres at Peradeniya. Dhall, maize, sorghum, manioc, and sweet potatoes were grown to the extent of 16 acres at Peradeniya, where the area intended for the Economic Section is now cropped with foodstuffs, and smaller plots were cultivated at Anuradhapura. About 400 bushels of seed paddy have been distributed, and large numbers of cuttings of sweet potatoes and cassava. The Division of School Gardens provided 24,350 packets of vegetable seeds for home gardens, and 2,825 packets for school gardens, in addition to plants or cuttings of various kinds. 2,000 packets were distributed to members of Co-operative Credit Societies.

#### TOBACCO.

Tobacco experiments were continued at Jaffna and Teldeniya. The detailed report on the Jaffna crop is not yet to hand, but preliminary advices indicate that there is more prospect of a successful result with White Burley than with Turkish Tobacco. The Teldeniya crop is now being got ready for shipment. The Tobacco Adviser resigned his appointment at the expiration of one year, and the work is now being carried on by Mr. G. Harbord at Teldeniya and by Mr. W. P. A. Cooke at Jaffna. At the latter station the object for the current season is to obtain White Burley in sufficient quantity for a commercial trial, and with that in view seeds and plants have been distributed to local cultivators.

#### PLANT PESTS AND DISEASES INSPECTORATE.

A beginning with this new branch of the Department was made in July, when Mr. N. K. Jardine was appointed Inspector for the Central Division, with three Sub-Inspectors. Work in connection with the Shot-hole Borer regulations has been undertaken, and this has consisted chiefly of the examination of the numerous small tea gardens which exist in the Central Division, in order to determine whether the pest in question occurs in them. At present the work is confined to the entomological side, as, owing to the increased work of the Mycological Division and the lack of mycologists, it has not been possible to train the staff in the identification and treatment of diseases. Towards the end of the year Mr. C. H. Gadd arrived to take charge of the Southern Division.

#### BOTANIC GARDENS.

With the return of Mr. T. H. Parsons, Curator, Royal Botanic Gardens, Peradeniya, from military service in June, the Division of Botanic Gardens was able to work with a full staff. Special attention has been given to the nurseries, which have been extended and re-arranged, and lists of the plants available for sale have been published. Much work has been done in the arboretum, where many additions to the collections have been planted out during the year. The wood oil trees (*Aleurites* spp.) have been established and distributed to the Experiment Stations. Improvements have been made in the Economic Museum.

At Hakgala a number of plants have been added to the collections and many planted out. New plots of cinchona have been established. One of the camphor trees flowered during the year, and specimens have been forwarded to Kew for comparison with "camphor" trees of other countries which do not yield solid camphor. Experiments on the control of cutworm have been carried out.

At Henaratgoda experiments on the vegetative propagation of *Hevea* have been begun. Food crops were grown in the new rubber clearing. A school has now been opened in the Gardens by the Education Department, and a portion of the grounds has been set apart for demonstration gardens in connection with it.

The maintenance of the gardens attached to the residences of His Excellency the Governor and of the Colonial Secretary has been carried on as usual.

#### SCHOOL GARDENS.

The total number of registered school gardens is now 484, an increase of 33 over the previous year. Many more are awaiting registration, but cannot be taken in hand owing to want of funds to meet the cost of equipment and the lack of inspecting officers. The District School Committees have this year given substantial financial assistance towards the purchase of tools, &c. But owing to the enforced economy during the war, it has not been possible to maintain the equipment of school gardens in a satisfactory condition, and considerable expenditure is now necessary to put them on a proper footing.

Gate Mudaliyar A. E. Rajapakse kindly presented prizes to the best school gardens in the Negombo District, and Mr. M. B. Mapitigama, Ratemahatmaya, Paranakuru korale, a gold medal for the best school garden in his division.

Mr. C. Driberg, who has been associated with the School Garden Scheme since its inception, went on leave prior to retirement in November.

#### SCHOOL OF TROPICAL AGRICULTURE.

The Irene House property at Peradeniya has been purchased by Government, and plans are being prepared for the erection of the necessary school buildings there. The completion of these will abolish the makeshift arrangements to which the school has hitherto been subjected.

Twenty-six students, of thirty admitted to the two years' course in May, 1917, qualified for the school certificate in March, 1919; three of these have accepted Government scholarships for further training in India. Of the twenty students admitted in May, 1918, one withdrew in that year, and three in 1919, leaving a class of sixteen. Twenty-one were admitted in May, 1919, one of whom has been withdrawn. Twelve Sinhalese teachers were admitted to the vernacular course in January, 1919, and fourteen village headmen to the short course for headmen in May.

Three of the school staff have been transferred to posts in the Department of Agriculture. Sixteen passed students have been appointed as Agricultural Instructors, four are being trained as Sub-Inspectors of Plant Pests and Diseases, and one has been sent to India for special training in Entomology.

The school continues to do good work, and the majority of its passed students have proved satisfactory in their subsequent employment. With the greater facilities now in train, its usefulness may be expected to be still further increased.

#### CO-OPERATIVE CREDIT SOCIETIES.

Thirty new societies were registered during the year, bringing the total to 127. The movement has found its greatest support in the Western Province, where there are now 42 societies. The total membership of the societies is 15,160, and the paid-up capital Rs. 86,721.46. Government loans have been granted to the amount of Rs. 13,935.

The supply of manure through the societies is steadily increasing. In 1919 328 tons 16 cwt. of bone manure were supplied at a cost of Rs. 37,074.53. The absence of an adequate supply of bone manure and the high prices now ruling are tending to retard the expansion of this phase of the Societies' activities.

A conference of Co-operative Credit Societies was held in July, at which numerous subjects affecting the work were discussed.

#### EXPENDITURE.

The following is a statement of expenditure for the financial year 1918-19 :—

|   | Rs.     | c. |  | Rs.     | c. |
|---|---------|----|--|---------|----|
| Salaries ..                                   | 135,896 | 14 | Agricultural Education :—                  |         |    |
| Travelling ..                                 | 11,550  | 67 | Salaries ..                                | 8,544   | 20 |
| Gardens—labour and upkeep :—                  |         |    | Travelling ..                              | 785     | 15 |
| Peradeniya Gardens ..                         | 14,379  | 56 | Lecturing fees ..                          | 1,209   | 0  |
| Hakgala ..                                    | 3,993   | 88 | Incidental expenses ..                     | 784     | 82 |
| Henaratgoda ..                                | 1,991   | 2  | Catering for students ..                   | 799     | 99 |
| Nuwara Eliya ..                               | 1,576   | 34 | Rent for quarters ..                       | 1,990   | 0  |
| Queen's House Garden ..                       | 1,369   | 82 | Stationery ..                              | 112     | 71 |
| King's Pavilion ..                            | 2,981   | 26 | Laboratory expenses for School of          |         |    |

#### RECEIPTS.

The following receipts were collected during the year:—

|  | Rs.           | c.       |
|--|---------------|----------|
| 1. Head Office (Publications) ..           | 484           | 26       |
| 2. Royal Botanic Gardens, Peradeniya ..    | 1,858         | 22       |
| 3. Botanic Gardens, Hakgala ..             | 350           | 0        |
| 4. Botanic Gardens, Henaratgoda ..         | 1,034         | 41       |
| 5. Botanic Gardens, Nuwara Eliya ..        | 46            | 55       |
| 6. Experiment Station, Peradeniya ..       | 17,521        | 32       |
| 7. Experiment Station, Anuradhapura ..     | 974           | 84       |
| 8. Tobacco Trial Ground, Jaffna ..         | 1,766         | 45       |
| 9. School of Tropical Agriculture ..       | 3,022         | 50       |
| 10. Government Stock Garden, Peradeniya .. | 47            | 46       |
| <b>Total ..</b>                            | <b>27,106</b> | <b>1</b> |

To this must be added the value of seeds and plants issued gratis to Government institutions from the following:—

|  | Rs.          | c.        |
|--|--------------|-----------|
| Peradeniya Gardens ..                  | 866          | 19        |
| Hakgala Gardens ..                     | 474          | 80        |
| Henaratgoda Gardens ..                 | 24           | 15        |
| Nuwara Eliya Gardens ..                | 30           | 0         |
| Experiment Station, Peradeniya ..      | 131          | 11        |
| Experiment Station, Anuradhapura ..    | 30           | 0         |
| Government Stock Garden, Peradeniya .. | 3,186        | 30        |
| <b>Total ..</b>                        | <b>4,742</b> | <b>55</b> |

#### COMMUNIQUE.

The following *communiqué* was made to the press on matters of agricultural importance and interest during the year:—Rubber Acreage Statistics, 1918–1919.

#### PUBLICATIONS.

The following publications were issued during the year:—

Annals of the Royal Botanic Gardens, Peradeniya, Vol. VII., Part I., July, 1919. Revisions of Ceylon Fungi, &c. By T. Petch.

Bulletins of the Department of Agriculture:—

No. 42.—The Effect of Time Intervals in Rubber Tapping, by T. Petch.

No. 43.—Shot-hole Borer (*Xyleborus fornicatus* Eich.) Treatment of Prunings on Infected Estates, by E. R. Speyer.

No. 44.—Shot-hole Borer (*Xyleborus fornicatus* Eich.): A Control Pruning Scheme and its Practical Modification by E. R. Speyer.

No. 45.—Tortrix Flight Breaks, by N. K. Jardine.

No. 46.—Field Experiments with Anti-Tortrix Fluids, by N. K. Jardine.

Leaflets:—

No. 12.—Brown Bast, by T. Petch.

No. 13.—Recommendations for the Control of Shot-hole Borer Beetle of Tea, by E. R. Speyer.

No. 14.—Cultivation of Foodstuffs.

#### STAFF CHANGES.

The following staff changes were made during the year:—

(1) Mr. F. A. Stockdale, Director of Agriculture, was on leave in England from November 10 to the end of the year.

(2) Mr. T. Petch, Botanist and Mycologist, acted as Acting Director of Agriculture during his absence.

(3) Mr. P. B. Herat assumed duties as Office Assistant to the Director of Agriculture on March 1.

(4) Mr. C. Driberg, Superintendent, Low-country Products and School Gardens, was on leave from November 22 to the end of the year preparatory to retirement.

(5) Mr. G. Bryce returned from war service on November 10 and resumed duties as Assistant Botanist and Mycologist.

(6) Mr. M. K. Bamber, Government Chemist, returned from leave in England and resumed duties on December 16.

(7) Mr. J. C. Hutson assumed duties as Entomologist on January 7.

- (8) Mr. F. P. Jepson assumed duties as Assistant Entomologist on June 20.  
 (9) Mr. G. Harbord returned from war service and resumed duties as Manager, Experiment Station, Peradeniya, on July 26.  
 (10) Mr. W. B. Wilson, Tobacco Adviser, resigned his appointment on November 1, 1919.  
 (11) Mr. N. K. Jardine assumed duties as Inspector of Plant Pests and Diseases (Central Division) on August 1.  
 (12) Mr. C. H. Gadd assumed duties as Inspector for Plant Pests and Diseases (Southern Division) on December 16.  
 (13) Mr. E. R. Speyer, Entomologist for investigation of Shot-hole Borer, resigned his appointment on February 25.  
 (14) Mr. T. H. Parsons, Curator, Royal Botanic Gardens, Peradeniya, returned from war service and resumed duties on June 26.  
 (15) Mr. H. A. Deutrom, Acting Manager, Experiment Station, Peradeniya, assumed duties as Manager, Dry Zone Experiment Station, Anuradhapura, on August 1.

The following appointments were made in the Clerical and Garden staffs of the Department :—  
 Mr. C. Duff Tytler, Clerk, Head Office, with effect from February 1, *vice* Mr. J. Richardson, resigned.  
 Mr. A. L. de Z. Jayatileke, Agricultural Instructor, Ceylon Agricultural Society, as Inspector of School Gardens, with effect from March 1. Mr. M. B. W. Palipana, Clerk, Head Office, with effect from June 9, *vice* Mr. U. B. Unambuwe, Clerk, School Gardens, transferred to Kandy Kachcheri. Mr. P. B. Kapuwatte, Clerk, Head Office, as Clerk, School Gardens, with effect from June 9. Mr. P. B. Keppitipola, Assistant Foreman, Stock Gardens, with effect from June 12. Mr. G. E. J. Hulugalle, Lecturer, School of Tropical Agriculture, as Acting Assistant Manager, Experiment Station, Peradeniya, with effect from September 1. Mr. C. H. Jayasinghe, Passed Student of the School of Tropical Agriculture, for training as Sub-Inspector, Plant Pests, with effect from September 9. Messrs. H. M. Rasnayaka and Z. M. Sally, Clerks, Head Office, with effect from October 1. Mr. D. A. W. Ranasinghe, Assistant Foreman, Royal Botanic Gardens, as Foreman, Government Gardens, Colombo, with effect from October 1. Mr. W. P. A. Cooke, Lecturer, School of Tropical Agriculture, as Acting Farm School Officer, Jaffna, with effect from October 1. Messrs. C. Kanagaratnam and C. Ragunathan, Lecturers, School of Tropical Agriculture (temporarily), with effect from October 13 and 14, respectively. Messrs. L. J. de S. Mihiripenne and K. M. Fernando, Clerks, Head Office, with effect from November 1.

T. PETCH,  
 Acting Director of Agriculture, and Registrar,  
 Co-operative Credit Societies.

Peradeniya, March 24, 1920.

#### Annexures.

#### I.—REPORT ON THE WORK OF THE BOTANICAL AND MYCOLOGICAL DIVISION.

##### MYCOLOGY.

THE total number of in and out letters during the year was 3,236. Consignments of diseased plants for examination and report numbered 425, of which 202 were Hevea, 73 tea, and 15 coconut, the remainder including acacia, albizzia, amherstia, avocado, balsam, beans, brinjal, Brussel sprouts, cabbage, cacao, carrot, castor, casuarina, chillies, citrus, coffee, croton, cucurbits, dadap, dhall, dioscorea, eucalyptus, ficus, gliricidia, guava, hibiscus, hydrangea, ixora, jak, Madras thorn, mahogany, maize, mango, panax, paddy, pea, peach, pepper, plantain, plumeria, prosopis, rose, salvia, sapodilla, sorghum, sunflower, tephrosia, tobacco, tomato, violet, and miscellaneous garden plants.

Visits have been made to low-country estates during the year, chiefly to the Kelani Valley and Ratnapura Districts. The total number of miles travelled was 3,178, occupying 53 days. A lecture on brown bast was given to the Planters' Association.

The Botanist and Mycologist assumed duties as Acting Director of Agriculture in November on the departure of the Director of Agriculture on leave. Mr. G. Bryce, Assistant Botanist and Mycologist, returned from military service at the same time and assumed duties as Acting Botanist and Mycologist.

##### FUNGUS DISEASES.

##### *Rubber.*

Brown bast has been the chief disease of interest to the rubber planter during the last year. It is now held that this is a physiological effect, probably due to tapping. An account of the latest theories, together with observations on trees whose tapping history had been accurately recorded, was given in a lecture to the Planters' Association, and was published in the local press. A schedule of queries was issued, and replies were furnished from nearly all rubber estates, but it has not yet been possible to summarize these.

The root disease caused by *Fomes lignosus* continues to be prevalent, and fresh instances of extensive attacks are periodically reported. In some cases these are undoubtedly due to the thinning out, especially where the trees were cut off at ground level. Another frequent reason is failure to treat the first tree which died. It has now been found that stumps of the smooth dadap (*Erythrina lithosperma*) will serve as a starting point for this fungus, as well as the thorny dadap or "Bois immortelle" (*Erythrina umbrosa*) previously recorded.

All cases of root disease which present features differing from the typical appearances of the known root diseases are critically examined, and the cause determined when possible. In this way it has been found that *Fomes lignosus* in the drier zones, e.g., Kurunegala, may have quite a different appearance from that usual in the wetter districts. In these cases there is practically no external mycelium; the root when wet appears black, and, when the bark is removed, short white lines of mycelium are found embedded in the wood. Further cases of a root disease, probably due to a *Xylaria*, have been under observation. The fructification of brown root disease (*Fomes lamaoensis*) has been fairly common during this year.

Owing to the continuous rains from July onwards, "bark rot" was prevalent during the latter half of the year. Fruit disease and leaf fall were bad in some districts, but, on the whole, this disease was not as serious as in 1916. This is to be attributed to the fact that the rains began late, and, where the fruits were sufficiently advanced, the disease did not make rapid headway. The common *Phytophthora* on *Hevea* in Ceylon is *Phytophthora Faberi*, while in South India the only species known on *Hevea* is *Phytophthora Meadii*. During the last year *Phytophthora Meadii* has been found in one district in Ceylon, so that this country has two species of *Phytophthora* on *Hevea*. As far as observations have gone, the difference in the effect of the two species is very marked: during the leaf fall and pod disease caused by *Phytophthora Faberi* the flow of latex is not notably affected; but in attacks of *Phytophthora Meadii* the latex flow diminishes to such an extent that it is scarcely worth while to tap.

Three "decays of the renewing bark" may now be distinguished in Ceylon. These are (1) uniform patches caused by *Phytophthora Faberi*, often starting from the actual tapping cut and continuous with a typical claret-coloured patch in the untapped bark; these patches may develop a white covering of mycelium, and may then be mistaken for the "mouldy rot" of the Federated Malay States; (2) a decay which may originate as a spot and develop into black lines, or (?) may develop as a series of black lines from the beginning; this is the black thread of South India, caused by *Phytophthora Meadii*, usually a worse form than the other two; (3) a decay which begins as a series of parallel black lines shortly above the tapping cut, and spreads laterally to form a continuous band; this is the common Ceylon form of "black thread," and its cause is not yet decided. It is the third form which yields most readily to treatment with Brunolinum and stoppage of tapping. As far as is known at present, the distribution of *Phytophthora Meadii* in Ceylon is limited; curiously enough the locality known at present borders on a cacao district, where the prevalent *Phytophthora* should be *Phytophthora Faberi*. It would be of service in determining the distribution of *Phytophthora Meadii* if superintendents would report outbreaks of fruit disease on estates where "black thread" or "decay of renewing bark" is unusually serious and takes an irregular form.

Several cases were reported during the year in which a tree suddenly dried up, with all its leaves attached, as though killed by a root disease, though the trees were too large to be affected by a root disease in that manner. The leaves were usually curled up, and remained a peculiar pale green for a long time, instead of turning brown. On examination it was found that on a length of the main stem above the tapping surface, from a height of about 4 feet to 7 or 10 feet, the bark was dead, though outwardly it appeared quite sound and unbroken. Large beetle grubs were found beneath the decayed bark, in shallow cavities, about the size of a man's hand, eaten out of the outer layers of the wood, and from these cavities galleries had been bored into the stem. The death of the trees appeared to be due to the attacks of the grubs, which when hatched out by the Government Entomologist proved to be those of *Batocera rubus*, the stem and root borer of *Hevea* recorded by Green in 1912. The pest is consequently not a new one, but this effect on the trees has not been noted before.

Observations have been made on leaf diseases of *Hevea*. In the Dutch East Indies *Hevea* has been attacked by a true mildew (*Oidium*). On receipt of that information attempts were made to determine whether the mildews found on common Ceylon weeds which belong to the same order as *Hevea* would attack the rubber tree. Experiments were made with the mildew on *Euphorbia hirta* (*Bu-dadakiriya*) and *Phyllanthus Niruri* (*Pitawakka*), without any success; there is a mildew on the common hedge plant, *Jatropha Curcas* (*Rata-endaru*), which should also be tried, but this appears to be rare, and fresh specimens were not available at the time.

Some cases of "dieback," differing in some respects from the normal type, have come under notice during the year. In these the blackening and decay proceeds down the stem, not only along the cambium, but also in the outer layers of the bark, so that, in the early stages the bark is decayed on both surfaces, but does not show any evident signs of decay in the middle. Small oval patches of white mycelium, which turn gray when exposed and kept for a few days, are found on the surface of the wood, and these occur almost down to the advancing edge of the decay. It has been determined that the mycelium belongs to *Kretzschmaria micropus*, a fungus which has been known for some years to be saprophytic on dead *Hevea*, but infection experiments with this fungus have not yet been undertaken.

A peculiar form of scar on the main stem which has occurred for some years past on certain estates has been found, consequent on researches in Java, to be caused by lightning. It is also considered in Java that "top canker" is a lightning effect, but in any case injuries of the latter type should be treated to prevent the entry of fungi.

White stem blight, previously recorded as attacking tea, is now known to attack *Hevea*. It causes large white patches on the stem, which sometimes extend for a length of 6 feet, but it has not been determined that it causes damage to the stem. On tea and on teak it travels from the stem to the leaves, and on the latter forms white threads radiating from the base; on both plants the leaf is killed in a typical manner, the part covered by the fungus becoming pale yellow-brown, and contrasting strongly with the outer part of the leaf. It has not yet been found to attack the leaves of *Hevea*.

#### TEA.

Red rust was prevalent during the latter half of the year in the Ratnapura District and the Southern Province. As this disease is attributed to weakness of the bushes, it is open to consideration whether the shortage of manures is not beginning to show its effects in this way. In one case, however, where young tea was affected, the deciding factor was probably lack of drainage.

A *Rosellinia* root disease, which presented features differing from the disease caused by the usual species *Rosellinia arcuata*, was found to be due to *Rosellinia bunodes*. This fungus had previously been known to attack tea in India and *Hibiscus* in Ceylon. It differs from the usual *Rosellinia* in killing off the bush branch by branch, a single branch which arises low down on the stem dying, while the rest of the bush appears healthy. Typical *Rosellinia* mycelium is found at the base of the dead branch and on the main stem or root below it, and it would appear that in general an affected bush will ultimately die. Observations tend to show that the disease originates on dead leaves blown into the base of the bush, and that, in consequence, bushes which consist of branches arising from ground level are the more likely to be attacked. It has been found at elevations from 3,000 to 5,000 feet.

Further cases of root disease caused by *Poria hypobrunnea*, the rubber root *Poria*, have been recorded.

The principal new tea disease of the year is a leaf disease caused by *Cercospora theae*. This fungus was first recorded in 1909, when it occurred in an up-country nursery on tea plants about 6 inches high. It was not met with again until 1919, when it occurred under different conditions, and with more serious results. It is now known to attack both tea and *Acacia decurrens*, and recent attacks have occurred on tea interplanted with acacia. The disease appears during the rains. The acacias lose their leaves, and sometimes die back, though they may recover if dry weather sets in. The disease is communicated to the neighbouring tea by spores from the acacias, or by the infected leaflets of the acacias, which fall, or are blown, on to tea leaves, and, owing to their small size and flat surface, readily adhere when moist to the latter. In severe cases, or if the rains continue, the tea may be partly defoliated, and subsequently put out buds which do not develop far; in milder cases, or when the rains diminish, a large irregular spot, somewhat resembling gray blight, results; while in less serious attacks circular spots, resembling the bird's eye spot, but rather larger, are produced. Whether this is serious enough to affect the policy of planting acacias through tea has not yet been decided; it will depend largely on the individual case.

#### COCONUTS.

The *Phytophthora* nut fall of coconuts showed little or no improvement during the year. Advice from the Philippines indicate that this *Phytophthora* may be identical with the rubber and cacao *Phytophthora*, *Phytophthora Faberi*.

Further field observations were made on the leaf break, but it has not been possible to carry out detailed laboratory investigations.

Towards the end of the year a disease of coconuts characterized by a "tapering of the crown" was reported. This is considered to be due to a root disease, but it has not yet been determined whether it is the root disease of coconuts already known (*Fomes lucidus*), or a new one.

#### GREEN MANURES.

An investigation of the fungi which occur on dadaps was begun. The occurrence of *Fomes lignosus* on dadap stumps has been referred to above. *Poria hypobrunnea* was found on dying dadaps grown through tea on one estate. The occurrence of *Cercospora theae* on *Acacia decurrens* may modify the practice of planting acacias through tea.

#### FOOD CROPS.

Beans (*Phaseolus* sp.) have been attacked in some cases by *Colletotrichum Lindenuthianum* Bri. & Cav., *Cercospora cruenta* Sacc., and *Pseudomonas Phaseoli* Sm. *Rhizoctonia* sp. was found on Lima beans as a root or collar disease; it is said to be common in one district.

*Cerebella Sorghi* Tracy & Earle was recorded on sorghum.

A sclerotial disease, differing in some respects from the one previously known to occur in Ceylon was found on paddy.

Brussel sprouts, knol-kohl, and cabbage were attacked by *Pseudomonas campestris* Sm.

#### MISCELLANEOUS.

Pink disease (*Corticium salmonicolor* B. & Br.) was found on *Amherstia nobilis* Wall., *Gliricidia maculata* HBK., Loquat (*Photinia japonica* Lindl.), Madras thorn (*Pithecolobium dulce* Benth.), and *Randia macrantha* DC.

The "damping off" of tobacco seedlings was found to be caused by *Phytophthora Nicotianae* Rac.

*Botryodiplodia Theobromae* Pat. was found to cause a root disease of *Grevillea robusta* Cunn. and *Fomes applanatus* Pers., a root disease of *Cola acuminata* R.Br.

Dry rot in a mud and wattle wall in a low-country bungalow was determined to be due to *Merulius similis* B. & Br. The dry rot of similar structures in up-country bungalows is caused by *Merulius polychromus* Petch.

*Corticium (Hypochnus)* sp., apparently identical with that which causes black rot of tea, was found to attack Madras thorn (*Pithecolobium dulce* Benth.).

Other new diseases recorded during the year include *Bacillus Solanacearum* Sm. on chillies; *Rhizoctonia* sp. on barleria; *Gloeosporium* sp. on balsam; *Oidium* sp. on *Peucedanum graveolens* Benth.; *Oidium* sp. on *Sechium edule* Sw. (chooho); *Pestalozzia Mangiferae* P.Henn. on mango; *Asterostomella Aberiae* n. sp., on *Aberia Gardneri* Clos (Ceylon gooseberry); *Cercospora Musae* Zimm. on plantain.

#### BOTANY.

430 specimens of flowering plants, &c., have been received for identification. A feature of this work during the year has been the number of specimens of timbers, seeds, and plants of possible economic value which have been submitted for identification by Colombo firms. Mr. F. Lewis contributed to the Herbarium over 200 specimens collected at Delgoda, an almost inaccessible district in the south-west.

Investigations were begun into the identity of the species grown as turmeric in Ceylon. The common Ceylon kaha is *Curcuma domestica* Val., but there appear to be other species also grown under the same native name.

Mr. H. L. van Buuren, investigating the species known as atiudayan in Ceylon, has found that in the Kandy District that name is applied to a *Cryptocoryne*. Atiudayan is one of the Ceylon medicinal plants.

#### WEEDS.

No new weeds have been recorded during the year. *Alavankai pullu* has been identified as *Erigeron sumatrensis* Retz.

The water hyacinth continues to re-appear in old localities, no doubt from seed, the dormant period of the seeds being a prolonged one. It occurs, as a rule, in small quantities in the Kandy, Rambukkana, and Polgahawela districts, and these are cleared up without much difficulty. In the Tangalla district, however, it is present on a large scale, and special attention will have to be given to that area.

*Mikania scandens* is now prominent in most parts of the Island up to an elevation of 4,000 feet. At Peradeniya it is attacked by dodder (*Cuscuta chinensis*).

#### PUBLICATIONS.

One number of the annals of the Royal Botanic Gardens was published during the year, containing the following papers :—

Revisions of Ceylon Fungi, Part VI : a re-description of fifty-eight species of Ceylon Fungi.

A new variety of *Exacum zeylanicum* : a description of a variety collected by Mr. F. Lewis.

*Oxalis* in Ceylon : a history of the weeds hitherto known as *Oxalis violacea*.

*Alocasia indica* : a discussion of the reputed occurrence of this plant in Ceylon.

*Gasteromycetæ zeylanicæ* : a descriptive list of the puff balls, &c., of Ceylon.

A Bulletin was published on "The Effect of Time Intervals in Rubber Tapping," and a leaflet on "Brown Bast."

Peradeniya, March, 1920.

T. PETCH,  
Botanist and Mycologist.

## II.—REPORT ON THE WORK OF THE ENTOMOLOGICAL DIVISION.

### REPORT OF THE ENTOMOLOGIST.

THE Entomologist assumed duties on January 7, 1919, taking over from Mr. E. R. Speyer, who had been Acting Entomologist, in addition to his special duties as Entomologist for shot-hole borer. After Mr. Speyer's resignation on February 25, the shot-hole borer investigation was carried on by the writer until the arrival of Mr. F. P. Jepson as Assistant Entomologist towards the end of June. Mr. G. M. Henry, who had been acting as Assistant Entomologist, returned to the Colombo Museum.

During the year special attention has been paid to the insect collection, which has been thoroughly overhauled. The whole collection of pinned insects, including both the general collection and the numbered economic specimens, is now housed in air-tight boxes, and most of this work was carried out by the Acting Assistant Entomologist and the Laboratory Assistant under the supervision of the Entomologist. No general collecting on a large scale can be attempted at present owing to the lack of storage facilities, but the numbered economic collection is being increased by the accession of past specimens. The alcoholic material, consisting mainly of the immature stages of various insects, is also being added to, and requires constant attention.

The collection of slide-mounts of various minute insects has hardly been increased during the year owing to the lack of apparatus for this work, but it is hoped that this deficiency will be remedied to some extent during the coming year, so that this important branch of an insect collection may be suitably maintained.

The card index notes of economic insects are now being kept on standard size paper slips and cards, and the back files have been "standardized." Cross reference files are being prepared to facilitate future references.

A modern binocular microscope is an indispensable part of the equipment of an up-to-date entomological laboratory, and one of these instruments is expected at an early date. Correspondence and routine laboratory work take up a large portion of the Entomologist's time, and during the period under review 856 in and out letters have been dealt with. Consignments of specimens totalled 125 during the year, and included insect pests from tea, rubber, cacao, coconuts, rice, cotton, citrus, and vegetable crops, in addition to insects of minor importance.

Visits have been paid to estates in the following districts :—Kadugannawa (three times), Nuwara Eliya (three times), Halgranoia (twice), Kelani Valley (twice), Nilambe (twice), Uda Pussellawa, Maskellia, Dimbula, Walapane Lower, Negombo, Marawila, and Kalutara once each. Hakgala Gardens has been visited three times, chiefly in connection with outworm experiments.

The Entomologist has attended all the meetings of the Committee of Agricultural Experiments at Peradeniya during 1919.

I desire to express my thanks to Dr. Guy A. K. Marshall, Director, Imperial Bureau of Entomology, for kind assistance in the identification of specimens, and to the Director, Colombo Museum, for the generous loan of a binocular microscope over a period of several months.

### FUMIGATORIUM.

During the year 598 cases of tea seed, 88 cases of citrus fruits, and 471 packages of plants have been treated at the fumigatorium. Certain alterations and additions are shortly to be made to the fumigatorium, by which it is expected that the speed and efficiency of the work will be increased. The Entomologist paid five visits to the fumigatorium during 1919.

A small fumigation chamber has been erected in the Royal Botanic Gardens at Peradeniya.

### MAJOR PESTS.

Shot-hole borer (*Xyleborus fornicatus* Eich.) is now widely distributed throughout the greater portion of the area under tea, and has been a bad pest in some districts. The register of infested areas is being added to daily by the recently established Plant Pests Inspectorate. Mr. E. R. Speyer, before his departure in March, formulated a Soap-rosin-fish-oil "paint" mixture, and directions for the manufacture and application of this insecticide were given by him in Leaflet No. 13 published by the Department. Until the arrival of the Assistant Entomologist in June the shot-hole borer investigation was carried on by the Entomologist, and estates were visited or suggestions were given in connection with the trial of the mixture. The report of the Assistant Entomologist, who has charge of the shot-hole borer investigation, is given below.

Tea tortrix (*Homona coffearia*) continues to be prevalent in some districts, and an outbreak occurred towards the end of the year in one of the up-country districts on an estate from which it had not previously been reported. The special tea tortrix investigation conducted by Mr. N. K. Jardine was concluded in June.

Fluted Scale (*Icerya purchasi*).—The pest was reported to be prevalent on species of acacia on a few up-country estates during the dry weather of the first three months of the year. This scale is usually controlled during the wet season by fungi, chiefly *Cephalosporium* and *Melanospora*. Four consignments of Vedalia beetles (*Novius cardinalis*) were received from South Africa during 1919, but in no instance did any of the insects arrive in a living condition. Further shipments of this beetle are expected shortly, and given living material, an attempt will be made to breed the beetles at this elevation (1,600 feet) before sending them up to the higher elevations (3,000–5,000 feet). One colony of another predacious beetle (*Rodolia iceryæ*) was also received, but all the insects were dead. Since the above was written, a consignment of living Vedalia material has been received.

Cutworms (*Agrotis* spp.) are pests of vegetable crops in some up-country districts, and control experiments against these insects have been carried on during several months of the year. A small Andres-Maire bait trap for the moths has been kept going at Hakgala for the last six months, but has not been a success so far.

Trials with poisoned bait against the caterpillars have also been made, but the long spell of wet weather has interfered with these experiments, and a large percentage of the young plants suffered from "damping off." These experiments will be continued in 1920.

Outbreaks of the swarming paddy cutworm (*Spodoptera mauritia*) occurred towards the end of the year in several localities of the Kalutara District, and in all several hundred acres of paddy were more or less damaged. Control methods include clean cultivation in and around the fields to prevent egg-laying there, flooding the fields and collecting the caterpillars by means of winnows, keeping the embankments well plastered with mud to prevent caterpillars from pupating there, and to hinder the emergence of moths.

Flooding and kerosining was tried with a certain amount of success, but the cost is prohibitive for small growers. It was noticed that several species of birds, especially crows, were eagerly devouring the caterpillars on the embankments, and these are an important factor in the control of the pest. Towards the end of the outbreaks the cocoons of a small Braconid parasite were much in evidence.

Termites (probably *Calotermes militaris*) have been prevalent during the year on several tea estates at different elevations. They attack small flushing tea bushes as well as the larger seed bearers, working mainly in the less vital portions of a bush.

An infested bush may continue to grow vigorously for some time, even though the frame is riddled, and the main stem may be a mere shell. In the case of seed bearers, the termites apparently enter the bush fairly high up, usually where a branch has been broken off, or at some other point of injury, and then work downwards into the main stem, and sometimes even into the roots. Badly infested seed bearers often die back at the top. Remedial measures include the pruning of all dead wood, the trimming of all broken ends, and the tarring of all cut ends. Field experiments are being made with injections of carbon bisulphide, with promising results; but further trials are needed along this line before any definite information can be given about this treatment.

The snail (*Achatina fulica*) has been a serious pest in some districts during the wet months of the year. Its rapid increase in localities hitherto free from this pest and its partiality for many crops of economic importance are causing apprehension in several districts. Experiments have been made on a small scale with contact sprays, and solutions of alum and of copper sulphate in water have given promising results, but the cost is prohibitive for use on a large scale. The continuous and systematic collection and destruction of the snails during the wet season and the clearing up of all rank vegetation in and around vegetable gardens are measures that will help to reduce the numbers of this pest.

The coconut caterpillar (*Nephantis serinopa*) continues to be prevalent in the Eastern Province, while periodic outbreaks occur in the North-Western Province. One of these attacks was reported in August, and was investigated on two estates by the Entomologist. A species of small hymenopterous parasite is an important factor in the control of this pest in the latter district. Where quite young trees are attacked, the outbreak can be checked in its early stages by collecting and destroying the caterpillars on the leaves. The burning of tar and sulphur "smudge" fires is employed with good effect in the Eastern Province, and trap-lights to catch the egg-laying females have also been tried, with some success, in that district. In the case of a bad attack on old trees, the removal and burning of the infested leaves will destroy all eggs, caterpillars, and cocoons present at the time. This should be done carefully, as the red weevil is always ready to take advantage of any injury to the trees. A system of good cultivation and manuring is recommended to keep the trees in vigorous health.

#### SOME MINOR PESTS.

##### Tea.

*Zeuzera coffeæ* (red borer) was reported from some half a dozen estates both in up-country and low-country districts.

*Nettle Grub*.—An outbreak of *Spatulifimbria castaneiceps* occurred on an up-country estate. This is one of the less common species.

*Saissetia hemisphærica* ("brown bug") was reported on two occasions, one outbreak damaging about 10 acres of young tea.

Specimens of *Oscinis theæ* (leaf miner) were received from three estates. A sudden outbreak of *Gracillaria theivora* (leaf roller) occurred on an up-country estate, but was soon controlled by plucking and by the heavy rains.

Nematode or "eel worm" (*Heterodera radicola*) was reported on old tea bushes on an up-country estate. Investigations showed a heavy infestation within a well-defined area, which has been isolated by trenches; all the dead and dying bushes have been removed, while the infested area has been heavily limed.

The following insects have also been reported or observed to be injuring tea:—*Coccus viridis*, *Helopeltis antonii*, *Ricania fenestrata*, *Ricanoptera opaca*, *Orygia postica*, *Heterusia cingala*, *Lepidiota pinguis*.

The grubs of *Lepidiota* feed on the roots.

*Rubber.*

Several large Cerambycid grubs were received in a Hevea log, and were allowed to develop into beetles, which proved to be *Batocera rubus*, or very near it.

Specimens of *Saissetia nigra* were received on leaves of Para rubber.

The leaves of *Funtumia elastica* at Peradeniya were badly attacked by the caterpillars of *Caprinia conchylalis*.

*Cacao.*

Very few reports have been received of any pests of cacao during 1919. The brown bark borer (*Arbela quadrinotata*) has been observed, and helopeltis has been a pest on one or two estates.

The aphid, *Toxoptera aurantiae*, was common at Peradeniya on young leaves and pods during the early months of the year. It is preyed upon by Chrysopid and Syrphid larvæ.

*Coconut.*

In addition to the coconut caterpillar, the red weevil (*Rhynchophorus ferrugineus*) has been reported or observed on the western coast. This pest and the rhinoceros beetle (*Oryctes rhinoceros*) probably occur in most of the coconut districts.

The scale insects *Aspidiotus destructor* and *Ischnaspis longirostris* have also been observed.

*Rice.*

Several reports of rice caterpillars have been received during the year, and specimens of the following have been sent in:—Stem borer (*Schoneobius bipunctifer*); leaf-folding caterpillars of *Cnaphalocrocis medinalis* and *Marasmia bilinealis*; the case-bearer *Nymphula depunctalis*. The paddy fly (*Leptocorisa acuta*) was also reported to be prevalent in one locality.

*Cotton.*

The leaf folder (*Sylepta mutilinealis*) was reported from one estate, and was also observed at Peradeniya.

Specimens of red bugs (*Dysdercus cingulatus*) were received from one estate.

*Leguminous Plants.*

*Dadap* (*Erythrina lithosperma*).—Specimens of the tussock moth caterpillar (*Orgyia postica*) have been sent in from three different estates as attacking this green manure plant. An outbreak of large caterpillars was reported from another estate, and specimens bred out proved to be the Lasiocampid, *Taragama dorsalis*. The stem borer (*Terastia meticulosalis*) has been received on two occasions. The large Coreid bug (*Anoplocnemis phasiana*) is usually to be found on dadap in small numbers, but sudden outbreaks of this insect were reported from two up-country estates during the year.

*Acacia* spp.—In addition to the fluted scale (*Icerya purchasi*), which attacks several species of acacia, the following insects have been reported or observed to be feeding on the leaves:—The beetles *Mylocerus curvicornis*, *Astycus immunis*, *Popillia complanata*, *Lepidiota pinguis*, and the Tortrix (*Homona coffearia*).

*Tephrosia candida*.—The small beetle (*Aræcerus fasciculatus*) has been reported as damaging the pods of this plant. The eggs are inserted into the pods, and the grubs bore into the seeds and later pupate within the pod. Usually the older pods are attacked, and infested pods should be picked and burnt. The grubs of this beetle have also been found at Peradeniya infesting other species of *Tephrosia* and species of *Crotalaria*, *Indigofera*, *Bauhinia*, and *Cajanus indicus*. Other insects observed attacking this plant at Peradeniya include the following:—*Euproctis scintillans*, whose caterpillars eat the flowers and damage the developing pods; *Maruca testulalis*, whose caterpillars bore into the pods and eat the young seeds (this pest also attacks *Cajanus indicus* and various species of beans); and the Coreid bugs *Riptortus pedestris* and *R. fuscus*, which breed on this plant, among others.

*Cajanus indicus*, when in bearing, seems to be the favourite host plant for a varied collection of insects. In addition to the two mentioned above, the following have been observed attacking this crop at Peradeniya:—The Membracids *Leptocentrus* sp. and *Gargara* sp., the Pentatomids *Nezara viridula*, *Cyclopelta siccifolia* (clustering on the stems), *Brachyplatys cingalensis*, *Coptosoma cribrarium*, *C. siamicum*, all of which are also found on beans; the caterpillars of the Lycænid, *Lampides bochus*, which bore into the flower buds and later feed on the pods; an *Agromyza* sp., the larvæ of which bore into the seeds and pupate inside the pods; and the Meloid beetle (*Mylabris pustulatus*), which devours the blossoms.

*Indigofera arrecta*, besides being attacked by most of the bugs mentioned above, is sometimes visited by the Pentatomids *Halyomorpha picus*, *Piezodorus rubrofasciatus*, *Eusarcocoris guttiger*, and *Tolumnia immaculata*.

*Sweet Potato.*

The following insects were reported or observed to be attacking *Ipomoea batatas* during the year:—The weevil (*Cylas formicarius*) was prevalent during the early months of the year. Four different species of tortoise beetles (Cassidæ) were found eating the leaves in both the larval and adult stages, among these were *Aspidomorpha miliaris* and *A. micans*. The Pyralid (*Tabidia aculealis*) is usually to be found folding and eating a portion of the leaves.

*Miscellaneous Pests.*

A large number of insects have been reported or observed to be feeding on various plants during the year, but it is only possible to mention a few of those which damage plants of economic importance.

*Brassica oleracea* vars.—Cabbage and Brussels sprouts were attacked by the caterpillars of *Plutella maculipennis*, Chinese cabbage by the caterpillars of *Crociodolomia binotalis*, and knol-khol by the Pentatomid bug *Bagrada picta*. The leaves of *Bactrocera* (*Dacus*) *cucurbitæ* were found attacking cho-cho (*Sechium edule*). Specimens of *Dorylus orientalis* were received from two up-country estates as damaging potato (*Solanum tuberosum*). This ant perforates the tubers and renders them unfit for use. A jak tree (*Artocarpus integrifolia*) at Peradeniya was attacked by the larvæ of a large Cerambycid beetle, which could not be distinguished from *Batocera rubus*.

J. C. HUTSON,  
Entomologist.

**THE TEA SHOT-HOLE BORER INVESTIGATION.**

THIS investigation has been taken over by the Assistant Entomologist, who assumed duty on June 23. Attention has been chiefly directed to inquiries regarding the merits of the special "paint mixture" advocated for use against this pest by Mr. E. R. Speyer, who formerly conducted this investigation.

*Itinerary.*—Twenty-one visits to estates have been made in the following districts:—Badulla, Dimbula, Hantane, Haputale, Kadugannawa, Kelani Valley, Nilambe, and Walapane Lower.

*Paint Mixture.*—The application of the soap-rosin-fish-oil emulsion to bushes immediately after pruning has now been made over an experimental area of 161½ acres on eight separate estates. The average cost of treatment per acre, calculated from figures so far received from five of these estates, is Rs. 30.51. Apart from the excessively high cost of treatment, it appears, from observations recently made, that the treatment is not as efficacious as originally anticipated. Further trials are being carried out, from which definite information will be available.

*Castor as a Trap Tree.*—An area of 24 acres of tea has been interplanted with castor at distances apart varying from 12 feet by 9 feet to 36 feet by 36 feet, the object being to ascertain whether the tea in this area is provided with any degree of immunity by the attraction of the borer to the adjacent and more attractive castor.

*Control Pruning.*—An attempt to control the reproduction of the borer by means of the periodical removal of infested branches has been commenced over the entire area of one estate, and this method of control offers considerable promise of success if systematically and thoroughly carried out.

*Laboratory Work.*—Laboratory work has been confined to the examinations of the samples of branches treated with the "paint mixture" referred to above, dieback branches, and specimens of beetles received for identification. A few experiments in connection with the life-history and habits of this pest have also been undertaken.

*Shot-hole Borer Register.*—Examinations of prunings and specimens conducted in this office have resulted in twenty-two additional estates being declared infested and added to the Shot-hole Borer Register.

*Correspondence and Inquiries.*—During the six months under review 348 letters have been dealt with by the Assistant Entomologist, chiefly in direct connection with this investigation. Of this number, 164 were received and 184 despatched. Samples received for examination number 27, and other inquiries were received from nine sources.

March, 1920.

F. P. JEPSON,  
Assistant Entomologist.

**TORTRIX INVESTIGATION.**

In December, 1918, the tortrix investigation moved to Maskeliya, in order to conduct field experiments with anti-tortrix fluids. These experiments were successfully completed in June of the following year, and their details published in a bulletin of the Department (No. 46) in November.

A previous bulletin (No. 45), treating with the subject of flight breaks, was published in September of the same year.

Bulletin 40, published in November, 1918, gives all biological details of the insect and its natural enemies, and recommends certain remedial measures.

Bulletin 45 emphasizes the necessity of every estate possessing a series of flight breaks, whereby the area open to attack by the pest is reduced to the minimum, and artificial remedial measures become practicable and economical; it also points out that only by a system of these breaks does an estate gain protection from subsequent attacks.

Bulletin 46 completes the investigation by supplying to planters details of fluids that may be used freely on attacked tea to kill the insect.

On the satisfactory termination of the experiments with anti-tortrix fluids the tortrix investigation was closed, and all details of the work handed over to the Government Entomologist in July.

The Investigator was appointed Plant Pests and Diseases Inspector for the Central Division.

January 17, 1920.

NIGEL K. JARDINE,  
Entomologist for Tea Tortrix.

**PLANT PESTS AND DISEASES INSPECTORATE (CENTRAL).**

THE Plant Pests and Diseases Inspectorate commenced its functions in August with one Inspector and three Sub-Inspectors. Its first duties have been—

- (1) To make a preliminary survey of tea gardens to ascertain if shot-hole borer (*Xyleborus formicatus* Eich.) be present, and, if so, to gazette the gardens as infested areas.
- (2) While performing these duties, to get into touch with the Ratamahatmayas of the districts, the Korals, and the Arachchis, and explain to them the objects of the Inspectorate, with a view to the future education of growers in the pests and diseases affecting their crops.
- (3) To inspect estates.
- (4) To ascertain that no plants were being sold without permits.

Since August, 1919, 31 estates and 336 gardens have been inspected, 67 permits for sale of plants have been issued by the Department, comprising a total of 711,050 plants. Twenty estates and 237 gardens have been gazetted as infested areas for shot-hole borer, and two estates removed from the Shot-hole Borer and Fluted Scale Registers.

One prosecution for selling plants without a permit has been taken in hand.

January 17, 1920.

NIGEL K. JARDINE,  
Inspector for Plant Pests and Diseases, Central.

## III.—REPORT ON THE WORK OF THE CHEMICAL DIVISION.

DURING my absence from Ceylon on leave from April 7 to December 16 Mr. A. Bruce acted as Government Chemist.

In connection with the inquiry into fish canning and fish guano manufacture by the Fisheries Sub-Committee, I visited the Board of Agriculture and Fisheries in London to obtain particulars as to the possible use of trammel and drift nets in Ceylon Fisheries. I also visited the Marine Biological Laboratory at Plymouth for the same purpose. From fishermen I obtained full information *re* the methods of using such nets, also as to their manufacture, and general treatment. Samples of netting, cards, weights, and floats were brought out for the use of local net makers.

Inquiries were also made into the manufacture of caffeine from tea fluff as a possible local industry. It was stated that ample raw material was easily obtainable in England for the production of this drug, also that Japan had now taken up the manufacture on a large scale, so that it would be difficult to compete unless costs were very low.

In Devonshire I visited the Bicton Arboretum to inspect the growth of various types of coniferous and other trees which might be suitable for planting in the higher districts of Ceylon for future tea box wood, &c. Seeds and cuttings are being sent out. They include *Abies nobilis*, *A. pindrow*, *Picea excelsa*, *P. morinda*, *Thuja gigantea*, *Cupressus macrocarpa*, *Pinus sylvestris*, *P. strobus*, *P. insignis*, *P. excelsa*, *Pseudotsuga douglasii*, *Fagus sylvatica*, *Castanea vesca*, *Fraxinus excelsa*, *Platanus orientalis*, *Acer pseudoplatanus*, *Carya porcina*, and *C. amara*, also cuttings of *Populus serotina* and *Thujiopsis dolabrata*.

The coniferous trees chosen were vigorous and rapid in growth with straight stems, the wood in each case being suitable for box making.

Seeds from Japan of trees also suitable for growing at high elevations for future tea box woods were also obtained, including *Pinus thunbergii*, *Zelkova keak*, *Cryptomeria japonica*, *Chamaecyparis obtusa*, *Abies marcesii*, *Acer trifolium*, *Abies trachyphylla*, and *Prunus serrulata*, the latter for ornamental purposes. These have been sown in nurseries in Nuwara Eliya.

The chemical work included analyses of rubber seed husks, meal, and oil. The husks are of little manurial value, containing only 1 per cent. of nitrogen. The meal contains 2.5 per cent. of nitrogen, and is only half the value of castor cake as manure. It has a nutritive ratio for feeding purposes of 1 : 4.5. The kernels contain 45 to 48 per cent. of a brown oil, similar in character to linseed oil. It dries to a hard clear transparent film in twelve days, and can be used as a substitute for linseed oil.

The palm nuts from the young palms grown at Anuradhapura Experiment Station weighed 567.5 grams per 1,000, and the ratio of husks, kernel, and shell was 1 : 1.5 : 4.5. The dry kernels contained 59.8 per cent. of oil.

An inquiry was made as to the value of palmyra palm kernels for oil extraction. Analyses showed that the fresh kernels contained only 1.4 per cent. of a resinous oil, and were of no value for this purpose. The nuts are not edible in themselves, but are germinated in heaps, the long fleshy roots produced being used as a food in Jaffna and elsewhere. Nine to ten nuts produce about one pound of edible matter consisting largely of starch and containing 95 food units.

The food values of several fodders were determined, including Senegal rice fodder, Mauritius grass, Couch grass, Guinea grass, Belatana, Dhoo grass, Undupiyali, Eltana, and Indian guinea grass. The Senegal rice grass has a spreading habit and robust growth. It contained 54.7 food units, and had a nutritive ratio of 1 : 8.9 compared with Guinea grass with 68.32 food units and a nutritive ratio of 1 : 5.9, and Mauritius grass with 82.36 food units and a ratio of 1 : 10.8.

Two distillations of camphor from Hakgala were made from "pink twig" and "green twig" varieties. The latter in Mauritius yielded no solid camphor, but an oil with a different analysis from ordinary camphor oil. 5 lb. of each were distilled, and both yielded solid camphor and some oil, the pink twig variety 1.29 per cent. of camphor and the green twig 1.24 per cent. These figures are very similar to those obtained some years previously from Hakgala trees.

Analyses of maize for moisture content gave 12 per cent., and Hickory King variety 15.3 per cent. As maize with 12 to 14 per cent. moisture will not keep, being liable to insect attack, it is essential to reduce the moisture content by some drying or other means before storing.

Samples of eight varieties of sweet potatoes grown on the Experiment Station were analysed for food values, and especially as to the starch and sugar content. They included Red Jersey, Sealy's, Joe's Sweet Potato, Pumpkin Yam, Pierson, Black Spanish, Shangi, and Jersey. The sugar content varied from 2.50 per cent. in Pierson to 4.11 per cent. in Pumpkin Yam, the starch content from 19.1 per cent. in Red Jersey to 24.48 in Joe's Sweet Potato. There is no marked variation in other respects, and the suitability of any of the above varieties for different districts would determine their selection for cropping purposes. The average sugar content is 3.58 per cent. and starch 22.21 per cent., or a total average of 25.79 per cent., which could be converted to alcohol for fuel purposes should the necessity arise.

Analyses of castor seed and poonac or cake produced locally showed the latter still contained 18.0 per cent. of oil and only 4.06 per cent. nitrogen. The question as to the advisability of treating imported and local castor poonac with volatile, non-inflammable solvents to recover this oil is worth further consideration. The extracted oil would be equally valuable for lubricating purposes, and the residual cake more valuable for manurial purposes.

Analyses were made of nine varieties of sugar cane grown on the Experiment Station, Gangarowa. These showed that the juices contained from 6.8 to 13.6 per cent. of dextrose and from 1.4 to 3 per cent. of invert sugar as dextrose. No. 1,237 was richest, and only contained 1.1 per cent. of invert sugar. Invert sugar was high in all the others, except "Sin Nombre," amounting to about one-fifth of the whole, which would have considerable effect on crystallization.

The results of the analyses of tea after spraying with lead compounds for tortrix showed only minute traces to be present, not sufficient to affect the health of consumers.

The result of the tea and rubber manuring experiments for the season are given in separate reports.

Samples of Dutch beans, which are grown in Holland in enormous quantities for winter food, were procured and distributed to several estates at different elevations for trial. The dried seeds only are used; they are soaked for twelve hours and boiled one and a half hours before being eaten.

February 22, 1920.

M. KELWAY BAMBER,  
Government Agricultural Chemist.

## IV.—REPORT ON THE WORK OF SCHOOL GARDENS.

*Changes.*—Mr. C. Driberg, the Superintendent, was on leave for two weeks from February 1, and again for 2½ months from November 22 preparatory to retirement from the Public Service. Mr. Alex. Perera, Senior Inspector of School Gardens, was appointed to act for the Superintendent, in addition to his own duties, with effect from that date. Mr. A. D. L. de Z. Jayatilleke was appointed an Additional Inspector of School Gardens, with effect from March 1. Mr. U. B. Unamboowe, Head Clerk, was transferred to the Kandy Kachcheri, with effect from June 9, and the vacancy thus caused was filled by Mr. L. B. Kapuwatte from the Head Office, Mr. E. P. Rupesinghe being considered as the Senior Clerk. Mr. C. P. Crispeyn, Assistant Foreman, Government Stock Garden, was seconded for service as Agricultural Instructor under the Ceylon Agricultural Society for a further period of one year, with effect from March 1. Mr. P. B. Keppitipola was appointed Acting Assistant Foreman, with effect from June 12, *vice* Mr. S. P. Fernando, resigned.

*School Gardens.*—The total number of registered Government school gardens at the end of the year stood at 389, showing an increase of 13 over the previous year; whilst the total number of gardens attached to grant-in-aid schools was 95, an increase of 20 over the previous year. Besides the 33 school gardens registered during the year, 150 others await registration for lack of funds to meet cost of equipment and inspection, and owing to the want of more inspecting officers. Financial help, however, was sought for from District School Committees, and it is very gratifying to state that substantial assistance is promised from this year. It would, therefore, be possible to equip an additional number of new school gardens. Several registered school gardens have been supplied with additional implements, yet a considerable number remain to be provided, which it is hoped to do this year. In some schools, owing to the want of good fencing, crops were destroyed by cattle, and thefts of garden produce were not infrequent. Notwithstanding these difficulties, the teachers have worked hard to keep their gardens in good condition. It is gratifying to report that they have also done all they could to increase the food supply of the Colony, while they did not lose sight of the main objects of the school garden. The following is a list of awards for the year under review, and it will be seen that Rs. 1,500 was distributed among 111 schools:—

*Rupees Twenty Awards.*—Hunumulla, Kiriwattuduwa, Alutgama, Horadugoda, Narandeniya, Nihiluwa, Madagalla, Itanawatta, Kankaniyamulla, Makandura, Boyagane, Tammuttegama, Gunne-Pana, Gunnepana Girls', Idamegama, Nugawela, Tennepanguwa, Bosella, Beddewela, Pallekanda, Puwakgahawela, Balangoda Girls', and Mahamedagama.

*Rupees Fifteen Awards.*—Alutepola, Maligakanda, Urapola, Kesbawa, Handapangoda, Uduwara, Borawewa, Giriya, Atamune, Wadakada, Pilessa, Weuda, Watareka, Ambanpola, Ibbagamuwa, Balalla, Humupola, Alawatugoda, Alawatugoda Girls', Mediawaka, Hindagala, Baduluwela, Opanake, Kottapola, Getiyamulla, Galkiriyagama, Ralapanawa, Galediyulwewa, Topawewa, Nagoda, Bopagoda, Talpawila, and Tissamaharama.

*Rupees Ten Awards.*—Danowita, Bope, Mallehewa, Kirindiwela, Green Street, Uduwa, Gowinna, Kirimetiya, Yatagala, Hungantota, Rotumba, Urubokka, Bamunugama, Dampella, MR/Kotapola, Owitigamuwa, Puhulwella, Beralapanatara, Ranna, Middeniya, Walasmulla, Warapitiya, Wariyapola, Awulegama, Monnekulama, Kuliyapitiya, Medamulla, Dahanekegedara, Udawela, Poramadala, Bandara-koswatta, Nakkawatta, Gokarella, Kelegama, Kirigollewa, Horawupotana, Mahamankadawala, Butawatta Girls', Pallobowala, Paranagama, Paranagama Girls', K/Hanwella, Doragamuwa, Pussella, Bibilegama, Puttukulam, Malwala, Balangoda, Niwitigala, Pallekanda Girls', Beddawela Girls', Kottapola Girls', Ambepussa, and Buttala.

*Rupees Five Award.*—Pannala.

Certificates of merit were awarded to 80 other school gardens.

The highest award in 1918 to any single school was Rs. 25, but owing to the increase in the number of good gardens attached to registered schools, it was found necessary to reduce the amount of the awards, as the allocation for making such awards has not been proportionately increased.

A donation of Rs. 25 kindly offered by Gate Mudaliyar A. E. Rajapakse, of Negombo, for the best school garden in the Negombo District, was divided between the school gardens at Hunumulla and Alutepola, the former getting Rs. 15 and the latter Rs. 10.

Mr. M. B. Mapitigama, Ratemahatmaya, Paranakuru korale, offered a gold medal for the best kept school garden in his division, and Bosella Boys' Vernacular School was recommended for the prize.

Two prizes were also offered by the Committee of the Ibbagamuwa Agricultural Show for the best and second best school gardens in Hiriya hatpattu. Madagalla and Ibbagamuwa gardens were recommended for the first and second prizes, respectively.

A classified list of school gardens prepared by Mr. L. de Z. Jayatilleke, Inspector of School Gardens, and approved by the Director of Agriculture, is now in the hands of the Government Printer.

*Central School Gardens.*—Lectures and demonstrations on nature study were conducted at schools selected for the purpose. Teachers and pupils from neighbouring schools, and in some cases villagers as well, attended these lectures. On the whole, this scheme is working satisfactorily.

*Home Gardens.*—The number of home gardens was larger than in 1918. A sum of Rs. 700 voted by the Director of Agriculture was distributed among 103 pupils of 68 schools.

Mr. A. H. Senaratne of Badalagama estate, Wariyapola, kindly offered prizes for the best two home gardens in the Dewamedhi hatpattu, and these were won by R. K. Ranhamy of Itanawatta and A. B. Appuhamy of Awulegama. Mr. Senaratne has renewed his offer and increased the prizes to five, the first two consisting of cups, value Rs. 25 and Rs. 15, respectively, for competition among Dewamedhi and Katugampola hatpattus home gardens.

*Government Stock Garden.*—Additional nurseries of economic plants and food crops were opened up to meet the demand of the increasing number of registered school gardens. With the limited vote for their upkeep, I am glad to report that the work of the stock garden was maintained in as good a condition as could be expected. Surplus seeds, &c., received from 40 schools were distributed among other schools. 24,350 packets of vegetable seeds were provided for home gardens. 603 packets of flower and 2,825 packets of vegetable seeds and 32,851 ornamental and economic plants were distributed among school gardens during the year.

**Apiculture.**—On the suggestion of Mudaliyar Ilangakoon made at a meeting of the Ceylon Bee-keepers' Association re the encouragement of bee-keeping in schools, the various District School Committees were applied to for assistance. I am glad to be able to report that the response to the request for funds to provide standard hives and other bee appliances has been very encouraging.

**Poultry Scheme.**—The scheme for the improvement of village poultry, initiated with the help of the Hon. Dr. H. M. Fernando in 1918, received considerable attention during the year under review. Two new schools were supplied with pens of poultry in June last, i.e., the Church Missionary Society schools at Padukka and Kesbawa, and fresh supplies of fowls, provided by Mr. Reginald Fernando, were given to the Roman Catholic school, Wahakotte, and the Church Missionary Society school, Teldeniya, where work is being carried on in a satisfactory manner.

Peradeniya, January 29, 1920. ♀

ALEX. PERERA,  
Acting Superintendent, Low-Country Products  
and School Gardens.

## V.—REPORT ON THE WORK OF BOTANIC GARDENS.

### ROYAL BOTANIC GARDENS, PERADENIYA.

THE principal works, in addition to routine, included the cutting down, uprooting, and removal of numerous superfluous and overcrowding trees, especially in the arboretum and south end, thus providing larger space for more important species, whilst the trees removed furnished useful timber for general purposes.

The site of the former cooly lines has been levelled down and planted over with grass, as has also the site of the former draughtman's quarters, now included in the extension of the Coniferæ section, &c.

\* Rampant weeds, especially the "sensitive plant" (*Mimosa pudica*), coarse grasses, &c., obtained the upper hand during the unusually wet period from September to end of December, when concentrated efforts were made to overcome these.

Mr. T. H. Parsons, Curator, Peradeniya, returned in June from war service and resumed duties. Mr. J. J. Nock, Curator, Hakgala, who assisted at Peradeniya, in addition to his own duties, during most of Mr. Parsons' absence, returned to Hakgala in March.

#### PLANTING OUT.

The planting out of additions to the collections in their various positions has been energetically carried on, special preparations being made by providing each plant with a large deep hole filled with good soil and manure. In the arboretum about 260 plants have been planted out in their respective orders; of these, 128 being introduced species. The conifer collection has been extended, some 44 new plants, mostly obtained from Hakgala Gardens, being planted out. The palmetum has been increased by the addition of 56 plants, 27 of these being new additions.

The fernery has been overhauled, and a number of indigenous ferns obtained and planted in vacancies.

A number of aromatic herbs has been planted in separate beds in the spice collection.

#### CULTIVATION, PRUNING, &C.

The nurseries, both of economics and ornamentals, have received special attention, and a general price list of the contents has been published. The economic nursery has been considerably extended and re-arranged, while the ornamental nursery has also been improved in general plan. The contents of both nurseries are in process of being replenished, and as far as practicable kept distinct. A considerable amount of overflow of stock has been planted on the river bank opposite the latter nursery.

The new palmetum, begun in 1915, is making very good progress, thanks to good preparation of the soil before planting. Most of the *Gliricidia* shade trees, no longer necessary, and of the useless old mango trees imported from Poona some thirty-five years ago have been removed.

The area under fodder grasses on the east river bank has been maintained and extended. The frequent weeding of this during the greater part of the year involved a good deal of labour. The new fodder grass referred to in last year's report as *Paspalum virgatum* (now determined as *Paspalum dilatatum*) has fully justified the favourable opinion formed of it, being in all respects a first class fodder grass. Unlike the "Mauritius" and "Guinea" grasses, it thrives at a wide range of elevation, and does not require irrigation. It is quite different in growth and general appearance from the grass commonly known as *Paspalum dilatatum* in Ceylon.

The new *Ficus elastica* row, planted in 1914, is making good progress, the trees now averaging about 20 feet in height. Some of the tallest have recently been cut back, and others shaped in order to present more uniformity.

The pruning and shaping of trees in the spice collection, arboretum, &c., and the fencing and staking of young plants received special attention.

#### FRUIT AND SEED PRODUCTION.

The year, on the whole, has favoured fruit and seed production. An exception has been the mangosteen crop, which has been an entire failure in some districts, as at Henaratgoda, but it has been fairly normal in others. The durian, mango, avocado pear, sapodilla, and rambutan crops have all been formal, and selected seeds of these were obtained and propagated for stock purposes.

Rubber seed was again plentiful. About 222,000 seeds were collected in Henaratgoda Garden, on which 192,600 were sold to applicants. About 20,000 seeds were collected in Peradeniya Gardens, of which, however, none were sold.

A tree of sapodilla (*Achras sapota*) fruited in Peradeniya Gardens, but almost every fruit was eaten or destroyed by bats or birds before it was nearly ripe. Seeds for stock purposes were, however, obtained from trees in the Kalutara District, where the fruit attains greater perfection than at Peradeniya.

## ACCLIMATIZATION.

The plants of the oil seed trees of China (*Aleurites* spp.), referred to in last year's report, on becoming sufficiently established, were distributed as follows:—Experiment Station, Peradeniya: *Aleurites Fordii* 100 plants; Peradeniya Gardens: *A. Fordii* 2, *A. trisperma* 1; Hakgala Gardens: *A. Fordii* 18; Henaratgoda Gardens: *A. Fordii* 6, *A. trisperma* 3. The few remaining plants were issued to applicants. The plants of *A. montana* sent to Hakgala are not thriving or fit for planting out yet.

A consignment of seed of the grape fruit (*Citrus grandis*) was received from Jamaica, but they failed to germinate. A small stock has, however, been raised from local seed, and efforts are again being made to supplement this with foreign seed.

The Japanese vegetable (*Aralia cordata*) received from Japan last year has now become well established, but so far has not tempted any one to test its edible qualities, the root being woody and tough.

A fine collection of some 126 varieties of Cannas were presented by Mr. E. C. Villiers, Balangoda, to the Gardens.

Seeds of *Sequoia gigantea*, the giant coniferous tree of California, received from the Forest Department, have germinated at Hakgala Gardens, and a small stock has been raised.

*Ceratothera sesamoides*, an oil seed plant from tropical Africa, has been received from Kew and become established.

## NOTES OF BOTANICAL INTEREST.

The talipot palms (*Corypha umbraculifera*) in the avenue, referred to in last year's report as having flowered, are now ripening fruit.

*Maximiliana regia*, the handsome Cocurito palm of Brazil, introduced probably some sixty years ago, has produced seed here for the first time on record. A number of the seeds has been distributed to foreign institutions, the rest being sown here.

*Treculia africana*, sometimes known as the West African breadfruit, introduced and planted out in 1902, has fruited for the first time. The fruit, however, is small, and contains little that can be considered edible.

*Stenocarpus sinuatus*, a beautiful flowering tree introduced in 1883, has fruited for the first time, but the seeds failed to germinate. *Sterculia alata*, a large tree introduced in 1890, has also fruited for the first time.

*Miconia magnifica*, a small tree with very large handsome leaves, has produced fertile seed for the first time, from which a small stock has been raised.

*Dimorphandra Mora*, a large leguminous tree of British Guiana, has again produced a small crop of its enormous seeds, from which a limited stock has been raised.

The oil palm (*Elæis guineensis*) trees raised from seeds received from the Gold Coast in July, 1915, and planted at the Experiment Station, Anuradhapura, in 1916, have during this year produced a crop of fruit, i.e., about four years from seed.

*Ceroxylon andicola*, the wax palm of New Grenada, flowered at Hakgala for the first time, but is now dying. It was planted here about thirty years ago and flourished until it grew up and formed a stem, when it became exposed to the effects of the south-west monsoon.

*Adenium* sp. (probably *A. speciosa*), a beautiful succulent plant from tropical Africa, introduced in 1912 from East Africa, flowered for the first time here.

## PESTS, &amp;c.

The introduced snail pest (*Achatina fulica*), first noticed in Ceylon in 1910 in Kalutara, is increasing rapidly in the neighbourhood, as well as in the Gardens, especially in the south end, that is the portion bordering on New Peradeniya estate and Peradeniya bridge. The abutments of the latter become literally covered with them during the wet season.

## PESTS, DISEASES, &amp;c.

The "flying foxes" (*Pteropus*) continue to be a nuisance, doing permanent injury to the tops of the handsome row of *Canarium commune* trees, which they constantly occupy in the daytime. Searing them away by frequent shooting is the only practical remedy.

The "sensitive plant" (*Mimosa pudica*) practically superseded all other weeds, especially in the arboretum, where much of the labour force was employed to keep it in check.

The row of *Cassia nodosa*, a beautiful flowering tree, has now almost entirely succumbed to root disease, only six trees remaining, and these are badly affected.

The Oxalis weed now practically overruns Hakgala Gardens, and the effort to suppress it robs the Gardens of a great part of the labour force.

A substantially built chamber for fumigating purposes has been erected in Peradeniya Gardens. \*

## ECONOMIC MUSEUM.

The painting of the interior of all the central show cases, begun last year, has been completed, it having been found that neither distemping nor whitewashing was satisfactory. A great improvement has thus been effected.

The timber specimens have been cut to uniform sizes and arranged systematically in general and orders, and in these alphabetically.

A collection of articles has been obtained on loan from the Kalutara Hat and Basket Association, and is shown in a special case.

A case has been put apart for named specimens of palm seeds in glass jars, and another case for a collection of ornamental seeds capable of being used as curios or in making articles of ornament or utility.

## MISCELLANEOUS.

Peace celebration was observed on July 19, when sports were held in the Gardens and refreshments provided. A plant of *Tabebuia rosea*, a beautiful flowering tree, was planted as a memorial tree on the north-west side of the Great Circle by Mrs. F. A. Stockdale. Numerous inquiries were received on the question of planting memorial trees in different localities, and twenty-six plants were issued for this purpose.

The Superintendent visited the King Edward Memorial Sanatorium for Consumptives at Kandana, and submitted plans and estimates for laying out the grounds to good effect.

The Colombo Museum Garden and the Residency grounds at Ratnapura were also visited, and reports thereon submitted for their general improvement.

The fodder grass experiments at Diyatalawa, referred to in last year's report, were brought to an end in June. The results were satisfactory so far as the growth of the grasses was concerned, but the main object, viz., to provide grass for the camp, does not now exist.

The Superintendent served as a judge at the Moratuwa, Rambukkana, and Nuwara Eliya Shows; also judged up-country gardens in connection with the latter show. He also judged students' plots at the Experiment Station on two occasions, and set an examination paper for and examined the students of the School of Tropical Agriculture.

A shortage of rice was experienced from July onwards, causing a good deal of inconvenience, as well as dissatisfaction, among the staff and labour force. The rations allowed by Government have, however, so far been sufficient to keep the labour force together, but that the average quality of the latter should proportionately suffer is only to be expected.

The creation of the new post of Foreman of Government Gardens in Colombo was sanctioned by Government and took effect from October 1, Mr. D. A. W. Ranasinha being appointed to the post. With this change the establishment of a small nursery in the former Government Stock Garden and the general supervision of the Colombo Museum Garden were taken over by this Department.

I annex a report on Peradeniya Gardens by the Curator, Mr. T. H. Parsons :—

## NURSERIES.

Extension of nurseries on a considerable scale has been undertaken during the latter end of the year. The economic nursery has been considerably enlarged to allow of larger quantities of economic plants to be raised, the total area for this purpose being approximately 88 yards by 74 yards. A plan of this nursery has been made, and the areas apportioned to the various economics defined.

Increased demands for ornamental plants have necessitated the re-opening of the portion below the River Drive and opposite the ornamental nursery. This should afford greater facilities for coping with such.

## ARBORETUM.

A good deal of attention has been given to the systematic collections in arboretum, and some 263 plants have been put out during the year. Among the new and interesting or re-introduced plants are the following :—

*Aleurites Fordii.*  
*Aleurites trisperma.*  
*Albizia procera.*  
*Antidesma dallychrysanum.*  
*Azizia africana.*  
*Chorisia insignis.*  
*Ceratonia siliqua.*  
*Canarium luzonicum.*  
*Corynocarpus laevigata.*  
*Coccoloba uvifera.*

*Ficus eugeniodes.*  
*Flacourtia cataphracta.*  
*Hernandia ovifera.*  
*Lonchocarpus formosianus.*  
*Murraya amphalocarpa.*  
*Ormosia calavensis.*  
*Palaquium formosana.*  
*Semecarpus vernicifera.*  
*Sphaeralcea umbellata.*  
*Terminalia Brownii.*

## PALMETUM.

All vacancies have been filled, and a number of new and re-introduced palms has been planted in the new palmetum, notably—

*Cocos schizophylla.*  
*Calyptrogyna Swartzii.*  
*Coleospadix oninensis.*  
*Hypophorbe amaricaulis.*  
*Licuala ferruginea.*  
*Latania Loddigesii.*

*Livistona Mariae.*  
*Livistona subglobosa.*  
*Nenga Wendlandiana.*  
*Phoenix Hanceana.*  
*Pinanga Kuklii.*  
*Ptychoraphis angusta.*

The total number of palms planted during the year, including filling of vacancies and transplanting, is 56. The cutting out of old and superfluous trees of the old arboretum order in south garden for extension of the groups continues, as these trees are established in the arboretum proper.

## CONIFER COLLECTION.

A number of conifers was obtained from Hakgala and from the Seminary, Kandy, and has been planted out in the collection. A good deal of labour was necessitated in clearing and cutting down old trees in order to enlarge this area on South Garden Hill. Forty-four plants have been put out here during the past year.

## FERNERY.

The collection of Ceylon indigenous ferns in the fernery has been manured and re-labelled and vacancies filled, some 40 plants having been put out and are now well established.

## LABELLING.

Progress in the labelling of the garden has been made, some 1,443 brick and 205 wooden labels being put out during the year, in addition to 14 signboards painted or re-painted.

## VISITORS.

The number of visitors, mostly from abroad, who signed the Visitors' Book during the year is 3,634, a considerable increase on the figures of previous years.

## RAINFALL.

The rainfall for the year has been normal, 88·64 inches, against an average of 89·24 inches, and 154 rainy days equal to the average for the past thirty-six years. A lengthy drought was experienced during January, February, and the first half of March, the wettest month being November, with a rainfall of 17·63 inches for the month. The highest fall in any 24 hours measured 2·72 inches on November 27. The following is the rainfall for the year, with the average for the last thirty-six years :—

| Month.    | Rainfall for 1919. |       | Average from (1884) to 1919 inclusive. |       |
|-----------|--------------------|-------|--|-------|
|           | Inches.            | Days. | Inches.                                | Days. |
| January   | 1·57               | 4     | 3·60                                   | 6     |
| February  | —                  | —     | 1·63                                   | 4     |
| March     | 5·79               | 6     | 4·68                                   | 7     |
| April     | 6·22               | 14    | 8·50                                   | 12    |
| May       | 10·00              | 21    | 8·02                                   | 12    |
| June      | 7·31               | 18    | 10·90                                  | 17    |
| July      | 7·60               | 19    | 8·36                                   | 18    |
| August    | 3·06               | 10    | 6·01                                   | 14    |
| September | 10·47              | 13    | 6·84                                   | 16    |
| October   | 7·73               | 13    | 13·69                                  | 19    |
| November  | 17·63              | 20    | 10·20                                  | 16    |
| December  | 9·26               | 16    | 8·81                                   | 13    |
| Total     | 88·64              | 154   | 89·24                                  | 154   |

## SALES.

4,174 plants and 692 packets of seed have been issued gratis or in exchange, and 6,168 plants and 540 packets of seed have been distributed for payment, the amount realized by sales of plants and seeds being Rs. 1,858·22, and gratis issues Rs. 866·19.

## BOTANIC GARDENS, HAKGALA.

The following is a report by the Curator, Mr. J. J. Nock :—

## ARBORETUM.

The arboretum below and above the path leading from the fernery to entrance gates has been thoroughly overhauled. The trees which had become too crowded have been thinned out, all stones removed where possible, and the ground suitably sloped. A collection of indigenous tree, shrubs, &c., is to be made in the triangular portion above the Cupressus avenue. All the paths leading through the arboretum have been re-made, the side drains re-paved, and the banks re-sloped. Loranthus has, as far as possible, been removed from the trees in this portion of the gardens. Plants of the following have been put out above the main path :—*Quercus glauca*, *Q. variabilis*, *Stereospermum sinicum*, *Schinus molle*, *Castanospermum australe*, *Cassia australis*, *Grevillea Banksii* var. *Forsterii*, *Acacia linearis*, *A. nerifolia*, *A. adunca*, *A. decurrens* var. *pauciglandulosa*, *A. glaucescens*, *A. saligna*, *A. lanigera*, *A. gladiiformis*.

## ACACIA COLLECTION.

The ground has been sloped and all stones removed where possible. The following flowered during the year :—*Acacia Baileyana*, *A. juniperina*, *A. podalyriæfolia*, *A. longifolia*, and *A. falcata*. The following have been added to the collection :—*Acacia decurrens* var. *normalis*, *A. decurrens* var. *pauciglandulosa*, *A. gladiiformis*, *A. glaucescens*, *A. spectabilis*, *A. aneura*, *A. modesta*, *A. lanigera*, *A. nerifolia*, *A. decora*, and *A. linearis*, making in all thirty kinds in the collection. Seeds have been collected from *A. podalyriæfolia*, which flowered during July-August. None of the other species which flowered has produced any fruit.

## SUCCULENT COLLECTION.

This was planted up on May 23, the following received from Peradeniya being added to the collection :—*Sansevieria Davii*, *S. variegata*, *S. guineensis*, *S. zeylanica*, *S. cylindrica*, *Euphorbia nerifolia*, *E. Tirucalli*, *Elaeophorbia arborea*, *Opuntia Dillenii*, *Cereus grandiflorus*, *C. peruvianus*, *Agave miradorensis*, *A. elongata*, *A. Morrisii*, *Furcraea cubensis*, *F. gigantea*, *Nopalea coccinellifera*. In all seventy-six holes were prepared and planted.

## FERNERY POND.

This was enlarged in September. Five small beds have been built, and the following kinds of *Nymphaea* planted :—Pink 1, yellow 2, blue 1, and a variety which has not yet flowered at Hakgala. The yellow variety (received from Mr. Campbell Dudley) has flowered well. The banks have been covered with *Selaginella Kraussiana*, and the following planted in clumps :—*Tritonia crocusæflora*, *Calla Aethiopica*, *Klugia Notoniana*, *Imantophyllum*, &c.

## UPPER POND.

This has been thoroughly cleaned out and eighteen substantial rock beds built round the sides to take the place of the smaller beds, which were constantly giving trouble and had to be rebuilt frequently. The following have been planted in the new beds :—*Calla Aethiopica*, *Phormium tenax* var. *variegata*, *Phormium tenax*, *Cyperus Papyrus*, *Tritonia crocusæflora*, *Crinum giganteum*, *Typha angustifolia*, *Klugia Notoniana*, *Pennisetum macrourum*. Plants of *Nymphaea stellata* have been planted round the edges of the pond. The inlet drain has been rebuilt and put in good order.

## NEW LAWN.

All the bad patches in the new lawn near the rose garden have been re-turfed. The flower beds have been re-arranged and planted with the following :—*Salvia splendens*, *Begonia* "Crimson Gem," *Impatiens Holstii*, and *Chrysanthemum anethifolium*. The long borders have been widened, manured, and planted with ornamental and flowering shrubs and herbaceous perennials, &c.

## SHRUBBERIES.

Most of the shrubberies have been tidied up, and the weeding of *Oxalis* has been continued throughout the year.

## COOLIES' GARDENS.

The plot in front of the lines has been suitably sloped and divided up into sections, which have been fenced with *Artemisia vulgaris*. Vegetable plants raised from seeds received from the Ceylon Agricultural Society have been distributed to the coolies, and also cuttings of sweet potato and seeds of maize from the Gardens. The cattle and goat sheds, which were too close to the lines, have been removed, and the animals housed in the garden cattle shed. It is now possible to keep the surroundings of the lines in a sanitary condition.

## CHINESE OIL TREE.

A plot opposite the laboratory was cleared early in October, and eighteen basket plants of *Aleurites Fordii*, raised from seed received from the Ceylon Agricultural Society, planted out and are coming on well.

## CINCHONA.

Ten plants of *Cinchona succirubra* were planted out on the old Sinhalese lines site on December 10. A plot near the nursery packing shed has been cleared and eight plants of *Cinchona hybrida* put out on the same date.

## CINNAMOMUM CAMPHORA.

The three-stemmed tree near upper pond was in flower during the last week in September. Specimens are being prepared for Peradeniya. Leaves and twigs from this tree and from another variety growing near the camphor plantation were sent to the Acting Government Chemist on October 6 for analysis.

## CUPRESSUS FUNEBRIS (WEEPING CYPRESS).

A few more trees of this cypress have fruited for the first time, but seeds collected and sown have so far failed to germinate.

## HAKEA SALIGNA.

Seeds collected from the tree below lower pond and sown in November have germinated well.

## SAMBUR DEER.

A good deal of damage was done to Begonias, Impatiens, &c., in the fernery by these deer during June-July, and a stag was shot by the Curator on the night of July 11.

## CUTWORM EXPERIMENTS.

Forty-eight small beds have been laid out on the top terrace of the nursery for experiments with poisoned bait. Half of the beds have been planted with vegetable seedlings, and the remainder sown with seeds. The experiments were started on October 28, after arrangements had been made with the Government Entomologist on the spot.

## EXCHANGES.

Plants and seeds have been received from the following:—Royal Botanic Gardens, Kew; Botanic Gardens, Sydney; Waitata Botanic Gardens, Auckland; Mrs. C. Brett, England; and Public Gardens, Monte Video. And from the following in the Island:—Royal Botanic Gardens, Peradeniya; Mr. Campbell Dudley, Namunukula; The Secretary, Ceylon Agricultural Society; Mr. C. C. Wilson, Halgran-oya; Mr. P. Macdonald, Nuwara Eliya; Mr. A. J. Kellow, Albion, Ambawela; The Queen's Cottage Gardens, Nuwara Eliya; Mrs. A. M. Hurst, Nuwara Eliya; Miss Tilly, Talawakele; Mrs. A. N. Robertson, Nuwara Eliya; Mrs. A. M. MacNeill, Tebuwana; Assistant Conservator of Forests, Nuwara Eliya; Mrs. W. P. Spurway, Kandapola; Mr. L. O. Gilliat, Nuwara Eliya; and Mr. John Horsfall, Bandarawela.

## CLIMATE.

The number of inches of rain recorded during the year was 100·24, falling on 255 days, compared to 90·51 on 234 days for 1918. The wettest month was October, with a rainfall of 16·28 inches, and the driest February, with 0·93 inches. The highest temperature in the sun's rays was 154·1 on October 12, compared to 153·1 on May 10 of the previous year. The lowest temperature on the grass was 37·5 on March 9 compared to 36·3 on February 18 of the previous year. Exceptionally strong wind was experienced during June and July, and a considerable amount of damage was done to the trees, several Acacias, Eucalyptus, &c., being blown down.

## REVENUE.

The amount realized by the sale of plants and seeds during the year was Rs. 350. The value of plants and seeds given gratis or in exchange to Government institutions, &c., was Rs. 474·80.

## NUWARA ELIYA GARDENS.

The Curator, Hakgala, reports:—

## GENERAL.

The path along the upper shrubbery has been lowered and put in order and the path through the new lawn gravelled. The digging out of *Sporobolus indicus*, the coarse grass which is spreading all over Nuwara Eliya, has been continued. The swamp near the tennis court has been mostly filled in, and the surrounding banks sloped and turfed. The fence round the nursery and plant sheds has been altered to make room for a path inside, and the path outside and above this plot has been altered accordingly. All the shrubberies have been overhauled and the necessary planting done.

## THINNING OUT TREES.

The twelve trees of *Cupressus macrocarpa*, forming the centre of the three rows of trees near the Post Office, have been cut out, the stumps removed, and the ground levelled and turfed. The clump of *Eucalyptus robusta* on the island in the lake has been taken out and the island re-planted with Pampas Grass (*Gynerium giganteum*), *Phormium tenax* (New Zealand flax), *Pleroma macranthum*, &c. A few poor specimens of *Acacia decurrens*, *A. melanoxylon*, and *Rhododendron arboreum* have also been cut out.

## REVENUE.

The amount realized by the sale of plants and seeds during the year was Rs. 46·55. The value of seeds and plants given gratis or exchange to Government institutions, &c., was Rs. 30.

## HENARATGODA GARDENS.

The rubber trees produced a normal crop of seeds, some 222,000 being collected, of which 192,600 were sold to applicants. Several of the oldest trees developed root disease, and were treated in accordance with instructions from the Botanist and Mycologist. So far the famous No. 2 tree has shown no sign of disease.

The new rubber clearing (1913) was used for growing food crops, including cassava, maize, millet, &c., between the rows, the latter being 33 feet apart.

An experiment is in process for propagating *Hevea* by vegetative means, which, if practicable, would have an important effect on the selection of varieties. It is yet too early to report results.

A new plot of *Ipecacuanha* has been begun in virgin jungle soil, and under the shade of what is supposed to be original jungle. The plants in the old plot are not thriving owing probably to the close retentive nature of the soil.

A portion of the grounds has been cleared and set apart for the Education Department for the purpose of building a school and for demonstration plots. The school has been built, and the land cleared and enclosed by a wire fence.

A new nursery, surrounded by a hedge, has been made and stocked with young plants of different kinds.

The "double coconut" (*Lodoicea sechellarum*), being pollinated by pollen sent from the old staminate tree at Peradeniya, has set three more fruits. This makes nineteen fruits in all on the tree, the oldest of which, set in 1912, being now seven years old and not yet ripe, or apparently full grown.

The two wells have been cleaned and concreted, and the plant house, office, and storerooms have also been put in good repair by the Public Works Department.

The total rainfall for the year was 117.90 inches, against 86.94 inches for last year. May was the wettest month with 23 inches, and February, as usual, the driest.

#### THE GOVERNOR'S AND COLONIAL SECRETARY'S GARDENS.

*The King's Pavilion Garden, Kandy*, has been well maintained. The new flower garden has been extended, and presented an attractive appearance through the greater part of the year, the Canna beds being particularly showy. A few wild mango trees were cut down and removed, several of the banks and terraces were repaired and re-turfed, the cave and bamboo arches for climbers renewed throughout, and all the borders overhauled and manured.

*The Lodge Garden* has received a good deal of attention. Certain unhealthy or useless trees and old palms were cut down and removed, and some of the flower beds re-arranged. The former included a rather good specimen of *Amherstia*, which died from the pink disease.

*The Queen's House Garden, Colombo*, has been carried on in good order, and several improvements have been effected. A collection of *Hibiscus* in beds has been begun, and many of these already look very attractive.

*The Temple Trees Garden, Colombo*, has been considerably improved in general condition, new ornamental trees being planted to take the place of less desirable ones, the drive and paths reduced to uniform widths and re-gravelled, &c.

#### QUEEN'S COTTAGE GARDEN, NUWARA ELIYA.

The Curator, Hakgala, reports:—

A number of *Acacia melanoxylon* trees covered with loranthus and a few poor specimens of *Acacia decurrens* have been cut out and removed by the Forest Department at our request. Annuals in the flower garden did exceptionally well during the season.

A good deal of work has been done in the vegetable garden during the year. The paths have been re-made, and most of the plots re-arranged. The portion which has for some years lain fallow has been opened up and terraced and is now cultivated. The plant shed has been rebuilt and put in order. Club root and cutworm are still very troublesome, and it is very difficult to grow vegetables at all satisfactorily. A large plot of ground, which had been under parsley for about two years, was planted up with cauliflowers in September, but most of the plants were attacked by club root. The whole garden is infected with this disease, and it is impossible to grow any cruciferous vegetables satisfactorily, excepting perhaps cabbages, and these only when grown from cuttings.

Following instructions, green peas have been sown every three or four weeks since April, but owing to wet weather during the time the different batches were in flower, practically all the crops were failures.

#### CUDESSEDON GARDEN, NUWARA ELIYA.

The chief work during the twelve months has been the general upkeep of the gardens and grounds. *Oupressus macrocarpa* plants have been put out along the drives to take the place eventually of the present *Spiraea* hedges, which are not satisfactory, and need constant attention.

The banks and lawns have received attention, and re-turfed where necessary.

A wire-netting fence is badly needed for the vegetable garden, where damage is continually being done by hares and porcupines.

The path through the *Cryptomeria japonica* has been re-made, and a new gate and electric lamp erected at the lower end by the Public Works Department.

The grass verges along the main drive have been relaid, and the latter is now of a uniform width throughout.

*The Stock Garden Nursery, Colombo*, was taken over by this Department from October 1. After draining the ground and removal of superfluous growth, a number of beds were prepared and stocked with various ornamental plants sent from Peradeniya.

*The Colombo Museum Garden* has received attention, and certain improvements have been carried out under the immediate supervision of the Foreman of Government Gardens, Colombo.

Peradeniya, January 28, 1920.

H. F. MACMILLAN,  
Superintendent of Botanic Gardens.

#### VI.—REPORT ON THE WORK OF THE EXPERIMENT STATION.

##### PERADENIYA.

##### TEA.

The total output of green leaf for the year was 36,059 lb. from 11 acres. Plot 150 has been given the highest yield, 4,681 lb. in green leaf. The highest price paid for broken orange pekoe was 75 cents per lb., and the cost of manufacture has been 12½ cents per lb. Towards the end of the year it was found more profitable to sell as green leaf.

The whole area (11 acres) was manured in May and pruned in October, in accordance with the new scheme. In plot 144 the dadaps have been pruned twice, yielding 6,730 lb. of mulch. In plot 149 the dadaps have been pruned twice, yielding 9,234 lb. of mulch. In plot 150 the albizzias have been pruned once, yielding 16,965 lb. of mulch.

The old plot of coconuts (2½ acres) below the teas and adjoining the village was cleared and planted out with light leaf Manipuri indigenous stumps in June, half of the area being planted with dadap and the other half with *Gliricidia* stumps.

## CACAO.

16,467 lb. of cured cacao has been sold during the year. The old cacao plots were manured in April, according to the scheme laid down in 1916. The operations of pruning and lopping of dadap shade were carried out through the whole area of 40 acres.

## RUBBER.

New experiments on untapped trees in plots 151–154 were started in January. The whole area was divided into 6 series of 30 trees each, the method of tapping being as follows :—Half circumference one cut to left at 27 inches from the ground at an angle of 22½ degrees, half the series being tapped every second day and half every third day.

The following experiments, which were in progress from January, 1914, were stopped by end of May on completion :—

*Plot 78 C (Section 1)* “Continuous” tapping : One-fourth circumference one cut to left at 15 inches tapped on alternate days. (Section 2) “Change-over tapping” : Similar as for section 1, but changed over at end of every three months.

The following experiments, which were in progress from January 1, 1918, was stopped at the end of the year :—

(1) One-third circumference one cut to left at 3 feet tapped on alternate days.

(2) One-third circumference with a single V at 3 feet from ground tapped on alternate days.

The following experiment, which was in progress from July, 1912, was stopped by end of August on completion :—

*Plot 81 C.*—One-third circumference one cut to left at 3 feet tapped daily (excepting Sundays).

The following experiments, which were in progress from June 1, 1915, were stopped by end of March, 1919, on completion :—

*Plot 82 C, Group A*, “Change over” : Half circumference single V at 18 inches above previous tapping tapped on alternate days for three months and then the opposite side.

*Group B*, “Continuous” : Half circumference single V at 18 inches above previous tapping tapped on alternate days.

The experiment in the old tea plots was stopped by the end of January.

Plots 83 A, B, D, 84 A, B, C, D, 85 D, and 86 A, and also the 2-acre plot planted in avenues were manured in April, according to their schemes. The young rubber has been catch-cropped with food crops : 2 acres with *Cajanus indicus* (dhall), 1 acre with cassava, and 5½ acres with maize.

## COCONUTS.

During the latter half of the year the 11 acres of young coconut experiments at Bandarattenna, which had perforce been somewhat neglected, were cleared, ploughed, and disc-harrowed, and the drains cleaned. The highest price obtained by auction for nuts was Rs. 69 per 1,000 nuts in August, and the lowest Rs. 44 in February.

## COFFEE.

The total quantity of Robusta berries picked and sold during the year was 1,063 lb. Of Hybrid berries, the yield was 408 lb.; and of *Canephora* berries, the yield was 170 lb.

## PADDY.

In the maha season of 1918–19 trials were made with the following varieties :—

| Variety.          | Calculated Yield per Acre.<br>Bushels. |
|-------------------|--|
| Hatial            | 53                                     |
| Muttusamba        | 45½                                    |
| Molagusamba       | 43½                                    |
| Phillippine       | 26½                                    |
| Dr. Lock's Hatial | 15½                                    |

This same field of 3 acres was then prepared for the yala crop. A manurial mixture at the rate of 400 lb. per acre and yielding 6 per cent. of nitrogen and 13 per cent. of phosphoric acid was applied. 2½ acres sown broadcast with hineti yielded 20 bushels per acre. Half acre sown broadcast with molagusamba yielded 10 bushels per acre. Both crops were very late in ripening, and this adversely affected the yields.

In order to provide material for investigation by the Economic Botanist, seed of 324 varieties, which had been collected from all over the Island, was put out and transplanted into separate strips in duplicate in November for the maha season of 1919–20. The germination and subsequent growth of a large number of the varieties has been very poor. An area of 2 acres of waste land below the reservoir has been converted into a paddy field, and plots of molagusamba, muttusamba, Dr. Lock's hatial, village hatial, Phillippine, and el-wi were transplanted in November for the first crop. In August 6 acres of the new economic section were sown broadcast with el-wi (hill paddy). This will be harvested by the end of January, and a good crop is expected.

## GENERAL.

*Economic Section.*—Ten acres have been laid out in one-tenth acre plots separated by paths and roads, a dividing belt of two rows of rubber stumps from No. 2 tree has been established.

*Sugar Cane.*—Samples of each of the eleven varieties of cane have been sent to the Government Chemist for analysis.

Three and three-quarter acres were cultivated, yielding a total of 3,760½ lb. The varieties grown were Hickory King, Eureka, Potchefstroom Pearl, Chester Co Mammoth, and Ceylon Yellow.

*Sorghum*.—Quarter acre was cultivated, yielding a total of 87 lb. The varieties grown were Monpupu, White Sudan Dura, Dwarf Milo Dura, and Ursut Hwazana.

*Fruit Plots*.—A plot was planted at 16 feet by 16 feet with twenty-one grape fruit plants received from the Royal Botanic Gardens in September, 1919.

#### RAINFALL.

The rainfall for the year has been normal, although the number of rainy days has been excessive. There was no dry period in September. The total rainfall was 92·04 inches. Rain fell on 177 days, the wettest month being November, with 16·43 inches in twenty-one days. The greatest fall of rain during any 24 hours was 2·21 inches on September 24.

G. HARBORD,

Peradeniya, February 9, 1920.

Manager, Experiment Station, Peradeniya.

#### ACTING DIVISIONAL OFFICER (CENTRAL).

I took up duties as Acting Divisional Officer on August 1.

The tobacco experiments which were being carried out at the Teldeniya Trial Ground by Mr. Wilson were, on his departure from the Island in November, 1919, continued by me. The tobacco which had been harvested and cured under Mr. Wilson's supervision was brought to Gannoruwa Experiment Station for the fermentation and grading processes. The fermentation had not been completed by the end of the year.

Steps were taken to clean up the Tobacco Trial Ground at Teldeniya and prepare for further trials in 1920 by sowing a green manuring crop of green gram during the north-east monsoon.

The monthly meetings of the Food Production Committees in Kandy and Matale were attended as regularly as possible.

Visits were made to the Matale District and the Dumbara Valley to obtain a knowledge of the agricultural conditions and possibilities of the Central Province.

G. HARBORD,

Peradeniya, February 9, 1920.

Acting Divisional Officer, Central Division.

#### ANURADHAPURA.

##### STAFF.

MR. H. A. DEUTROM continued to be in charge of the station till July 31 as Acting Manager, and was subsequently appointed Manager, with effect from August 1, 1919.

#### RAINFALL.

2. The number of inches of rain recorded during the year was 59·07 falling in 120 days compared with 69·16 inches on 117 days for 1918. The wettest month was December, with a rainfall of 12·66 inches.

#### PADDY.

3. The following varieties of paddy were sown for the maha crop this year in nurseries and transplanted in the fields four to six weeks from sowing:—Molagusamba, Philippine, Dr. Lock's hatial, and murunga. The results were not as good as last year. Most of the plots were badly attacked by the paddy fly.

A yala crop of el-wi was sown in May and harvested in September. Very encouraging results were obtained from the crop, 4 acres yielding 185½ bushels of clean paddy. This is reported to be a hardy variety, producing a long grain, which is in great favour with villagers.

*Time of Planting Experiments*.—These experiments were started in September at monthly intervals. This is intended to test (over a series of, say, three years) the best average season to plant, and when paddy fly and other pests may be expected to be troublesome.

*Varietal Tests and Botanical Examinations*.—Small plots of 105 varieties of six to seven months' paddies and 272 varieties of four to five months' paddies collected from all the Provinces in the Island have been planted in duplicate in definite labelled blocks. Of these, a disappointingly large proportion showed considerable mixture, and a few failed to germinate. The pure plots of typical plants for starting pure line cultures are being collected by the Assistant Economic Botanist, from which full description will be made and Herbarium specimens kept. It is of interest that the duration of some of these varieties, as grown at Anuradhapura, varied considerably from that recorded in their natural habitat.

*Seed Distribution*.—There was a very keen demand for seed paddy, and the whole of the 1919 crop, which was available for sale as seed, has been sold as such. Inquiries made among purchasers of our seed are very encouraging.

A demonstration on the economic transplanting of paddy and the diminished seed rate of paddy in the nursery was given. Several villagers and others were present, and it is of interest to note that many have adopted transplanting, with very interesting results.

#### FIBRES.

4. *Sisal Hemp*.—The whole of the area of unirrigable land cleared last year (24 acres) in extent has been planted with Sisal fibre. The plants were obtained from the Maha Iluppallama Experiment Station. The plants are all making headway. *Cassia auriculata* (Ranawara S.) is being planted between the rows of fibre.

*Mauritius Hemp*.—The plot of Mauritius hemp has been extended, and the vacancies planted up. The plants have made good growth. The interplanted dhall plants have all been uprooted and replaced with *Leucaena glauca*.

## CITRUS.

5. The plots of lime raised from seed received from British Guiana have begun to blossom two years from planting. The leguminous crops intergrown are being continually dug in round the plants. The trees planted in 1914 are bearing good crops of fruits. The 6 acres planted out last year are making fair growth. The vacancies are being supplied.

## COCONUTS.

6. The unirrigable plot of 4 acres have continued to make exceedingly satisfactory growth. All the trees are in a thriving and healthy condition. The weeds have been kept down as much as possible during the rains by means of ploughs, and the surface soil to the depth of 6 inches has been kept friable, loose, and free from weeds in the dry season by means of disc-harrows. The coconuts on the irrigable land are making excellent growth.

## COFFEE.

7. The general appearance of the Robusta coffee trees grown under dadap, *Leucaena*, and *Gliricidia* shade is favourable. 60 lb. of berries have been picked from one-tenth of an acre at one picking.

## FOOD PRODUCTS AND CURRY STUFFS.

8. The crops raised on the station this year were as follows:—Lima beans, maize, Jaffna yams, dhall, sweet potatoes, green gram, different varieties of sorghums, maniocs, arrowroot, drum sticks, chillies, onions, mustard, aniseed, cummin, coriander, ginger, and turmeric. The raisin variety of sweet potato yielded a crop of 6,550 lb. per acre of large yams. Select Millo and Dwarf Millo, the two close-headed varieties of sorghum, did best, yielding 25 and 22½ bushels of grain per acre, respectively. Chillies and onions give promise of most satisfactory crops. Turmeric did well, and gave a yield of 3,400 lb. per acre. Fresh selected seed and cuttings have been supplied to *bona fide* growers.

## OIL PALMS.]

9. The oil palms (*Elaeis guineensis*) planted in November, 1915, are seeding freely. Two distinct varieties are noticeable, one containing black and the other green fruit. 136 lb. of dry seed has been gathered up to date. Seed of both varieties have been planted for experimental purposes.

## SUGAR CANES.

10. Eleven varieties were established this year. The yields have not yet been determined.

## FRUIT SECTION.

11. Pineapples did well. The Kew and Riply Queen, weighing 10 to 15 lb. each, were readily sold on the spot. This plot has been extended. Grape fruit planted in October, 1915, fruited this year for the first time. Melons, soursops, custard apples, mulberries, guavas, and pomegranates fruited well. Two plots of papaw have been established. Plantains did well, being free from disease.

## CASTOR.

12. 3,267 lb. of castor seed was collected during the year from 10 acres. Some were sent to the Railway Department for crushing.

## NEW WORKS.

13. During the year 500 new posts have been erected, and barbed wire fixed round the village boundary. The area for the new cooly lines, store, and Foreman's quarters were freed of stumps, and depressions filled in and levelled. A new water channel was made to irrigate the paddy land.

## LABOUR.

14. Labour is not very satisfactory owing to the higher wages paid elsewhere and lack of proper accommodation. A gang of Sinhalese coolies were obtained from the Matale District. The health of the coolies has not been very satisfactory. Fever, dysentery, and influenza disabled half the coolies early in the year.

## VISITORS.

15. Several visitors were personally conducted round by the Manager.

Anuradhapura, February 4, 1920.

H. A. DEUTROM,  
Manager, Experiment Station, Anuradhapura.

## VII.—REPORT ON THE WORK OF THE SCHOOL OF TROPICAL AGRICULTURE.

CONSIDERABLE changes have been made in the school since the last report was furnished. The stand-out feature was the acquisition by Government of the Irene House property for the school in October. This has given the school a sense of stability, and provided a centre for its many activities. The property covers 17½ acres, 13½ of which has been taken over by the school. There is sufficient tea, rubber, and paddy field to work on a demonstration scale; and plots will also be laid out in cacao, coffee, dry grains, and fodder grass. Plots cultivated in food crops by students at Gannoruwa have been given up and plot work located in the school grounds. This change implies a considerable saving of time, and will give early evidence in a higher standard of work and efficiency on plots.

Three members of the staff have been transferred from the school on promotion; Mr. W. P. A. Cooke to tobacco work at Jaffna; Mr. G. E. Jayatileke Hulugalle to the Experiment Station, Peradeniya, as Acting Assistant Manager; and at the close of the year Mr. H. L. van Buuren as Assistant to the Economic Botanist. Such changes are inevitable in the expansion of the Department, but the immediate loss to the school is great. These officers did the pioneer work, and to them is largely due what success has so far been achieved. Only Mr. J. C. Driberg is now left to the school of the original quartette trained for school work, and he has been placed in charge of Irene estate and of all the field work of the school. In the place of Messrs. Cooke and Hulugalle, who left at the close of the school session in September, Messrs. C. Ragunathan and C. Canagarettnam have been temporarily appointed, both of them holding the Diploma of the Poona College of Agriculture. They have shared with Mr. van Buuren the lecture work of the English and Tamil sides; while Mr. Driberg has since October been in charge of all the Sinhalese work of the school. In spite of these changes, I am able to record satisfactory progress of all work.

The Principal proceeded on leave on November 6, Mr. T. Petch acting as in 1916, and it is a pleasure to record his ready sympathy and help at all times. On November 21 the Vice-Principal, Mr. C. Driberg, retired from the Public Service, alike an ornament to the school and an example and inspiration to its students.

The Registrar was absent from Peradeniya on Military duty in Diyatalawa for four weeks in July-August, and Messrs. Cooke and Hulugalle then shared his work, in addition to their own duties. The Registrar was also mobilized for military duty at Kandy from August 23 to the end of the year, but attended to his own duties in addition.

Messrs. N. Wickremaratne and L. S. Bertus (of the Department of Agriculture) and D. C. de Silva (of New Peradeniya estate) continued during the year to assist in co-operation, plant diseases, and estate accounts, respectively.

Regular meetings\* of the staff were held monthly throughout the year.

#### 1917-1919 ENGLISH CLASS.

Of the thirty students admitted to the English two-year course in May, 1917, twenty-six qualified for the school certificate in March, 1919, four having withdrawn during 1918 from various causes as reported. On the results of the course the following awards were made :—

##### *First Class Certificate.*

Joseph Anthony Alles, Senanayake Prize for Agricultural Botany.  
Quaten Charles Fernando, H. L. de Mel Prize for Agricultural Economics.  
Nelson Senaratna, Salgado Gold Medal for Fieldwork, De Soysa Prize for Agriculture, Fernando Prize for Agricultural Chemistry.  
John Karl van Buuren, Dias Bandaranaike Prize for Agricultural Zoology, Namasivayam Prize for Agricultural Chemistry.  
Graham Vincent Wickremasekera, Rajapakse Gold Medal for best all-round student of the course, Pandittasekera Prize for Agricultural Botany, Martin Prize for Agriculture.

##### *Second Class Certificate.*

Valandy Aiappen, Arthur Bartholomew Attygalle, \*Bertram George Buultjens, K. B. Valentine de Silva, D. P. Peter de Silva, Peter de Silva, Wijeyesekera Prize for Agricultural Economics; Charles Henry Jayasingha, De Silva Prize for Agricultural Zoology; J. Don Nicholas.

##### *Pass Certificate.*

Tikiri Banda Beddewala, K. Samson de Silva, S. Charles Fernando, Eric Daniel Fernando Jayasingha, \*Wilfred Perera Karanagoda, H. Piyatissa Perera, Henry Pussegoda, Sinnetamby Thurai Raja, Walter Herbert Rajapakse, George de Alwis Seneviratne, Herbert Nasadurai Solomons, Daniel Thomas Jayawickrema Weerasuriya.

##### *Partial Certificate.*

\*Rasdeen Ibrahim Jainudeen.

Three of these students were offered, and accepted, Government Scholarships for further training in India: J. A. Alles, N. Senaratna, and G. V. Wickremasekera. They proceeded to Poona in June, and have been entered in the Agricultural College there.

#### 1918-20 ENGLISH CLASS.

Of the original twenty students admitted in May, 1918, one had withdrawn as reported in 1918. Three others withdrew during 1919: one owing to the sudden death of his father, and two others on account of continued ill-health. The remaining sixteen students have continued to do good work.

#### 1919-21 ENGLISH CLASS.

Twenty-one students were selected for admission in May, 1919. In December one of them was withdrawn. The class has been in regular session. The admissions each successive year have been gradually rising to a higher standard, and better results are anticipated from the classes now in session than have been recorded to date.

#### 1919 COURSE FOR VERNACULAR TEACHERS.

In January, 1919, twelve Sinhalese teachers from Government village schools selected by the Director of Education were admitted for a one-year course. The instruction followed the lines of the 1918 course, and was satisfactorily completed in December, when all twelve men qualified for the School Certificate for Vernacular Teachers. The class comprised five head teachers, six assistant teachers, and one monitor who came from seven provinces (eight districts). On the results of the course the head teachers took the first, second (tie), fourth, and twelfth places, and all prizes, the assistant teachers fourth and eighth to eleventh places, and the monitor tied for the fourth place in order of merit. The Department of Education offered three medals for competition, and the awards made were as follows :—

(Names in Order of Merit.)

V. W. S. Wijesekera, Silver Medal and Certificate.  
A. J. Endoris de Silva, Bronze Medal and Certificate.  
P. Martin Fernando, Bronze Medal and Certificate.  
Rathenis Gunasekera,  
D. M. D. B. Jayawardena,  
Alvis Haputantiri,  
W. B. Harmanis,  
D. P. Ranaweera,  
S. M. P. Perera,  
J. P. G. Abeykoone,  
R. P. Appuhamy,

Certificate.

A report, with detailed results of the course, was furnished to the Director of Education in due course.

\* Excluding Estate Accounts.

## 1919 COURSE FOR HEADMEN.

In May, 1919, fourteen Village Headmen recommended by the various Government Agents were admitted to a two-terms course (twenty-seven weeks) of instruction. Of these men, twelve were Sinhalese and two Tamils. Average age 30·5, oldest 41, youngest 20, representing all nine Provinces and twelve districts. One of these headmen had taken part in the previous Headmen's course (1917) and returned to complete his studies. The course, as in 1917, was conducted in the vernaculars, and satisfactory progress was registered. The course terminated in December, and all fourteen men qualified for the School Certificate for Headmen. Three medals were offered for competition; this number was increased to four, as the results justified the further award, the extra medal being one awarded on the 1917 course and offered by the winner for the 1919 course. A report, with detailed results of the course, was duly furnished to Government Agents and to Government. The awards made were, as follows:—

(Names in Order of Merit.)

|   |                |
|---|----------------|
| R. D. D. B. Alawattagama, Peace Officer, Matale District, Silver Medal and Certificate. |                |
| S. Velupillai, Police Vidane, Trincomalee District, Bronze Medal and Certificate.       |                |
| I. B. Illankoon Bulupitiya, Korala, Kurunegala District, Bronze Medal and Certificate.  |                |
| K. L. Don Andarayas, Vel-Vidane, Matara District, Extra Bronze Medal and Certificate.   |                |
| Heen Banda Ekanayake, Korala, Kandy District,   | } Certificate. |
| V. Dingirimahatmaya, Gan-Arachchi, Ratnapura District,                                  |                |
| P. Charles Chandarasekera, Police Vidane, Colombo District,                             |                |
| R. M. Ukubanda Magandana, Arachchi, Badulla District,                                   |                |
| Vytilingam Kandiah, Police Vidane, Jaffna District,                                     |                |
| I. Charles Perera, Police Headman, Negombo District,                                    |                |
| A. D. Thepanis Gunawardhana, Vel-Vidane, Kalutara District,                             |                |
| Mederigamaralage Kiribanda, Arachchi, Kegalla District,                                 |                |
| K. Punchiappu, Arachchi, Anuradhapura District,   |                |
| K. Velathai, Arachchi, Trincomalee District,  |                |

## PASSED STUDENTS.

Sixteen passed students have now been appointed to Agricultural Instructorships. The services of many others have been secured by various Food Production Committees. Four vernacular teachers, one of the 1916 class and 3 of the 1918 class, have been appointed to Agricultural Instructorships in the Kegalla District. Two passed students hold honorary office in Co-operative Credit Societies. The Department of Agriculture now employs five passed students, one of these having been sent in May for special training at the Imperial Research Institute, Pusa. One other passed student has been selected and sent for further training to Coimbatore. The majority, of course, has gone on to estates throughout the Island, and satisfactory reports of their work have been received from many employers.

## HOSTELS AND SPORTS.

There were four hostels for resident students during the year, two for the English classes (thirty-seven), and one each for the teachers (twelve) and headmen (fourteen). The vernacular hostels were regularly visited and inspected, prefects being selected from among the residents and placed in charge of the remainder. The system worked satisfactorily. A serious difficulty was encountered in the case of the English hostels. The Entomologist's bungalow, occupied on loan for the past 3½ years as "Green's Hostel," had to be vacated; and the only suitable substitute for it was found in a house overlooking the Peradeniya Junction station. Being so far removed from the school, the students resident there have been put to considerable inconvenience. The need for the location of all hostels in a convenient area has been pressing, and with the purchase of the school property this has come nearer realization.

The standard of discipline and cleanliness in the school hostels has been maintained. The medical inspection of hostels was made at regular intervals by the Visiting Medical Officer, Kandy, and the health of all the students was very satisfactory.

The economic distress affected the school hostels very seriously, but all difficulties were successfully tidied over.

The sports clubs of the school have been active throughout the year. Definite proposals have been formulated for distinctive club colours, and a trial order successfully placed with a London firm of sports outfitters.

## MISCELLANEOUS.

On January 13 the staff and students, numbering sixty-one, left for Anuradhapura, and two days were spent studying local agriculture under tank irrigation. The essays submitted on the return to Peradeniya showed lack of proportion, but proved that the visit had been of considerable value, and that the impressions received were as vivid as they were varied. It also served to give reasonable assurance that frequent trips to various agricultural areas of the Colony would add considerably to the value of the training afforded by the school.

The staff assisted at the Rambukkana Exhibition (February), and facilities were afforded to students to visit it.

On June 21 the second annual prize giving of the school was held in the class room, Colonel T. Y. Wright, Chairman, Planters' Association, presiding. Two gold medals and ten prizes of books were distributed, with the certificates, to successful candidates of the 1917-19 course. The donors of the medals and prizes were all prominent Ceylonese agriculturists.

In July the Peace Celebrations were observed in the school in an enthusiastic manner.

The fourth number of the "Peradeniyan" was issued during the year, and maintained its reputation for interesting and readable contents.

Visits were also arranged to the Kandy Municipal market, the dairy at the Ampitiya Seminary, and the tea and rubber factories at New Peradeniya estate.

The Students' Debating Society and Students' Council have continued to do useful work.

February 10, 1920.

ST. L. H. DE ZYLVA,  
Registrar, School of Tropical Agriculture.

## VIII.—REPORT ON THE WORK OF CO-OPERATIVE CREDIT SOCIETIES.

THE beginning of the year was somewhat favourable, and the price of local produce rose rapidly. This had signs of regaining normal conditions of the business, but the unprecedented increase in the price of rice and other domestic necessities disorganized the tranquillity of the rural areas, and the co-operative movement again suffered. Yet the movement overcame the difficulties and continued to progress.

2. The Registrar went on furlough in November, and the Acting Director of Agriculture was appointed Registrar of Co-operative Credit Societies. Mr. P. B. Herat, Office Assistant to the Director of Agriculture, was appointed Assistant Registrar in March.

## SOCIETIES.

3. Thirty new societies were registered during the year, bringing up the total to 127, which is an increase of 30 over last year. Four are industrial societies, and the rest are agricultural. The new societies are Yatiyana, Marawila, Sinhalese Young Men's Association, Morawaka, Deniyaya, Urubokka, Matara Gangaboda Pattu, Ganga Ihala korale, Wellawaya, Ransegoda, Wiyaluwa, Mahanuware, Janopakari, Matale East, Nagoda, Yatalamatta, Magura Palata, Warakagoda Palata, Welgam Palata, Migahatenne, Kewitiyagala, Galkissa Peruwa, Bellapitiya Palata, Uduwara Palata, Kumbukke Palata, Alutgama Agricultural, Matale South, Haris Pattu, Yalegala Palata, Padukka, and Uruwela Peruwa.

## MEMBERS.

4. The membership shows an increase of 4,615, or a total of 15,160. This is against a total of 10,545 last year.

## CAPITAL.

5. The paid-up capital of all the societies was increased to Rs. 86,721, showing an increase of Rs. 37,364·71 against last year. This increase is largely due to the establishment of new societies.

## LOANS.

6. At the end of last year a sum of Rs. 59,244·76 was outstanding, and Rs. 75,347·47 were given on loan to members this year, and Rs. 68,707·34 were recovered, and a balance of Rs. 81,870·50 was outstanding.

## RESERVE FUND.

7. The reserve fund as it stood at the end of last co-operative year March 31, 1919, namely, Rs. 11,243·17, shows an increase of Rs. 4,568·17 over last year.

## DEPOSITS.

8. The total amount of deposits by members in the societies was Rs. 7,415·01.

## PROGRESS OF SOCIETIES IN THE PROVINCES.

9. *Western Province.*—The number of societies increased to 42, the Kalutara District leading in the number of societies and in the volume of business done. New societies were started in Pasdun korale east, Rayigam korale, Hewagam korale, and the Siyane korale west. The areas of operations of the societies of Rayigam korale were reduced and new societies were formed. Similarly, the area of operation of the Udugaha Meda Depattuwa Society in the Hewagam korale was reduced, and a new society was formed at Padukka. The progress is satisfactory.

10. *Central Province.*—There are sixteen societies in the Province, an increase of six over last year. Four of the new societies have started work earnestly, and the remaining two have not yet begun work. The condition of the most of the old societies is far from satisfactory.

11. *Southern Province.*—Eight new societies were registered during the year. The total number of societies is twenty-eight. Of the eight new societies, six from Matara and two from Galle Districts. All, except one society, have made satisfactory progress.

12. *Northern Province.*—The number of societies remains the same, viz, sixteen. Several societies received loans from Government during the year. There were no societies in the Mullaitivu District, and it is pleasing to note that a beginning has already been made to organize societies in the district.

13. *North-Western Province.*—There are four societies in the Province, one each in the Kurunegala and Puttalam Districts and two in the Chilaw District. The latter two have already started work.

14. *Eastern Province.*—No increase of societies was evident in this Province. Of the six societies, the Trincomalee District Society is showing some progress.

15. *North-Central Province.*—The only society in this Province, viz., Anuradhapura Society, has not transacted business, and the Secretary has resigned. The resuscitation of the society and the inauguration of other societies are receiving the attention of the Government Agent and others.

16. *Province of Uva.*—Two new societies were registered during the year, raising the total number of societies to seven. All are working societies, but the Uva Society requires re-organization.

17. *Province of Sabaragamuwa.*—This Province does not show any increase in the number of societies, but it is showing a renewed interest in the matter of co-operation.

## INSPECTION AND AUDIT.

18. The Registrar, Secretary, and the Inspector attended to the annual inspection of societies and auditing of accounts. The Assistant Registrar accompanied the Registrar in his visit of inspection in the Western Province.

## FINANCIAL ASSISTANCE BY GOVERNMENT.

19. Four societies received loans from Government during the year, and the number of societies which have received loans from Government is eighteen. The total amount lent to them was Rs. 13,935, and the amount refunded was Rs. 1,769. The American Mission Agents' Society refunded the loan taken in the previous year, and received a fresh loan this year. Rs. 12,166 were outstanding at the end of this year.

## AGRICULTURAL SHOWS AND GARDEN COMPETITIONS.

20. The Galboda and Kinigoda Korales Society held an Agricultural and Industrial Show in February, which was opened by His Excellency the Governor. This was the second show held under the auspices of this society, and the Godakaha Palata Society held a Village Show in March. Members of three societies took part in the garden competitions, and received three money prizes awarded by the Ceylon Agricultural Society.

## SUPPLY OF MANURE, IMPLEMENTS, AND SEEDS.

21. The supply of manure through societies is highly appreciated by the members of the societies. As a result the supply is increasing gradually. In the year under review 328 tons 16 cwt. of bone manure, costing Rs. 37,074·53, were supplied through societies. The price of manure has again risen, and the price at the end of the year was Rs. 120 per ton. The price at the beginning of 1918 was Rs. 70 per ton. The increase in the supply over last year is exactly double, and the value has been increased by Rs. 21,000.

22. Ninety-eight societies have been supplied with over 2,000 packets of vegetable seeds for distribution among members.

23. Several societies have purchased on credit agricultural implements and barbed wire and sold them to members at cost price.

## CO-OPERATIVE EDUCATION.

24. The Sinhalese and Tamil magazines of the Ceylon Agricultural Society containing articles on co-operation were continued to be issued free of cost to societies. The usual courses of lectures on co-operation were given to the students of the school of Tropical Agriculture.

## MISCELLANEOUS.

25. A Conference of Co-operative Credit Societies was held at the Council Chamber on July 2, and was opened by His Excellency the Governor, who presided at the morning session and took part in the discussions. Some very important subjects conducive to the progress of the movement were discussed. Representative delegates of 104 societies and a number of distinguished visitors were present. At the evening session of the Conference the Registrar presided. The following are the important subjects discussed :—

- (1) Incorporation of Mutual Provident Associations.
- (2) Penalization or registration of chittu clubs.
- (3) Provision of facilities for the collection of debts due to Co-operative Credit Societies.
- (4) Exemption of postage on official correspondence by societies.
- (5) Reduction of railway freightage on manures and other supplies.
- (6) Extension of demurrage periods on manures supplied to societies through Railway.
- (7) Establishment of a Central Co-operative Supply Society.
- (8) Lease of Crown lands to societies for food production.
- (9) Extension of co-operation to industries.
- (10) Provision of training classes to co-operative workers.
- (11) Amendments of the Co-operative Credit Ordinance, No. 7 of 1911.
- (12) Amendments of rules and provision of new rules.
- (13) Utilization of reserve fund.
- (14) Formation of unions, central banks, &c.
- (15) Working capital for Co-operative Societies.
- (16) Publication of reports of the Registrar, &c., in the vernacular languages.

26. An event of importance in connection with the co-operative movement in the Colony was the visit paid by His Excellency the Governor to Ratnapura Co-operative Credit Society. His Excellency presided at the annual general meeting and delivered an interesting address. This was published in leaflet form and circulated to all societies.

27. As a rule, every rural society has taken an interest in agricultural work, and has done its utmost to bring larger areas under food crops. The leaflets published by the Department on the production of food were circulated to societies, and were read at the meetings and distributed to their members. These were of use to them in their endeavours to produce more food.

Peradeniya, February 3, 1920.

N. WICKREMARATNE,  
Secretary, Board of Control, Co-operative  
Credit Societies.

## CO-OPERATIVE CREDIT SOCIETIES.

### REPORT OF THE REGISTRAR OF CO-OPERATIVE CREDIT SOCIETIES FOR, 1919-20.

I HAVE the honour to submit the following report on the working of Co-operative Credit Societies during the co-operative year 1919-20 (April 1, 1919, to March 31, 1920). The delay in submitting this report has been occasioned by the Registrar's being on leave of absence from November 10, 1919, to July 21, 1920, and consequently the annual inspection of the increased number of societies had to be carried out by the Secretary, Board of Control, and the Inspector of Co-operative Credit Societies, without his assistance.

2. Mr. T. Petch acted as Registrar of Co-operative Credit Societies from November 10 to May 15, 1920, and Mr. M. K. Bamber from that date to July 21.

3. The difficulties arising out of the high cost of living, the scarcity of rice and other foodstuffs, and the increased cost of manures were unfavourable to the operations of co-operative societies during the year under review. In spite of these adverse circumstances, societies made progress, and new societies commenced business.

4. The distribution of societies is now as follows :—

| District.                     | Societies on March 31, 1919. | Total on March 31, 1919. | Societies Registered in 1919-20. | Total. | District.                        | Societies on March 31, 1919. | Total on March 31, 1919. | Societies Registered in 1919-20. | Total. |
|-------------------------------|------------------------------|--------------------------|----------------------------------|--------|----------------------------------|------------------------------|--------------------------|----------------------------------|--------|
| <i>Western Province.</i>      |                              |                          |                                  |        | <i>Eastern Province.</i>         |                              |                          |                                  |        |
| Colombo District              | 13                           | 29                       | 4                                | 46     | Batticaloa District              | 2                            | 6                        | —                                | 6      |
| Kalutara District             | 16                           | —                        | 13                               | —      | Trincomalee District             | 4                            | —                        | —                                | —      |
| <i>Central Province.</i>      |                              |                          |                                  |        | <i>North-Western Province.</i>   |                              |                          |                                  |        |

| Matale District               | 1                            | 11                       | 2                                | 16     | Puttalam - Chilaw Districts      | 3                            | 4                        | —                                | 4      |
| Nuwara Eliya District         | 2                            | —                        | —                                | —      | <i>North-Central Province.</i>   |                              |                          |                                  |        |
| <i>Southern Province.</i>     |                              |                          |                                  |        | Anuradhapura District            | 1                            | 1                        | —                                | 1      |
| Galle District                | 11                           | —                        | 3                                | —      | <i>Province of Uva.</i>          |                              |                          |                                  |        |
| Matara District               | 11                           | 24                       | 2                                | 30     | Badulla District                 | 5                            | 5                        | 2                                | 7      |
| Hambantota District           | 2                            | —                        | 1                                | —      | <i>Province of Sabaragamuwa.</i> |                              |                          |                                  |        |
| <i>Northern Province.</i>     |                              |                          |                                  |        | Ratnapur District                | 2                            | 7                        | 1                                | 9      |
| Jaffna District               | 15                           | —                        | —                                | —      | Kegalla District                 | 5                            | —                        | 1                                | —      |
| Mannar District               | 1                            | —                        | —                                | —      | Total                            | 103                          | 103                      | 33                               | 136    |
| Mullaattivu-Vavuniya District | —                            | 16                       | 1                                | 17     |                                  |                              |                          |                                  |        |

5. The number of societies in the Western Province has increased by 17. This increase is largely due to the increased attention given in the Kalutara District to co-operation. Kalutara has now the largest number of societies in any district of the Island. Some of the new societies are not at present in full working order. This is largely due to insufficiency of staff capable of attending to propaganda and organization work, and to changes of Chief Headmen in two of the divisions. The increase of the inspecting and instructional staff is urgently necessary, and representations on the matter to Government have been favourably considered. Rayigam korale of the Kalutara District now has a society formed for each Vidane Arachchi's division. Some of these new village societies are well established and upon a sound footing. These are beginning to do useful work. Other societies still require attention before they can be considered to be satisfactory. The Minuwangoda Society of the Colombo District at its last annual general meeting resolved to organize itself into a central bank, and substantial financial support was promised. The Handapangoda Society—another thriving society in the Western Province—has begun a paddy store with the society's share of paddy from the land leased from the Crown for cultivation of food crops. The Kevitiyagala Society also proposes to start a paddy store from next season. The Panadure-Talpitibadda Society has made rapid progress during the year, having increased its share capital by over Rs. 1,000. The Government Printing Office Society has suffered the loss of its President by retirement, and its Vice-President by death. The society, however, continues to do good work.

6. In the Colombo District there are still several divisions in which societies have not yet been formed, and there is no doubt that a considerable increase in the number of societies in the district could with advantage be made.

7. In the Central Province there has been an increase in the number of societies, but progress is slow. Many of the older societies have accomplished but little up to the present. With increased attention by Chief Headmen and by inspecting officers there is no reason why success should not be achieved, and two of the newer societies have made promising beginnings.

8. Substantial progress has been made by the societies in the Matara District of the Southern Province. The societies in the Morawak korale, particularly that at Deniyaya, have identified themselves successfully in the supply of manures for paddy cultivation. The Weligam Korale Society also made further satisfactory progress this year. The Matara Gangaboda Pattu Society has done good work. The Sunday market established under the auspices of the Mawarala Society has been successful. The Talpe Pattu Society in the Galle District has doubled its membership and paid-up capital during the year. The Akmimana Society made trials with new paddy manures. Members of the Government Service at Hambantota have formed a Co-operative Store Society, which meets the requirements of its members in loans and provisions.

9. The Northern Province shows an increase of one society during the year. The older societies have consolidated their positions, but their work has been hampered by reason of high cost of living and scarcity of foodstuffs. The Columputurai-Poonakari Society, which has attained its object in reducing the boat fare from the peninsula to the mainland, now proposes to discontinue its service, and to pay particular attention to the paddy bank it has established. The American Mission Agents' Society has made good progress. The Mullaattivu-Vavuniya District started its first society during the year. This was the only district in the Island in which there was no co-operative society, and it is hoped those who have organized the present society will make it useful to the village cultivators.

10. The Kalmunai Society in the Batticaloa District has collected a small share capital. The Trincomalee District Society has done well in the collection of share capital and the granting of loans. This society has received very close attention by the Assistant Government Agent, Trincomalee, and by Mudaliyar Vallipuram. A new movement has been begun by the Government Agent, Eastern Province, at Batticaloa in the establishment of a central paddy agricultural bank with smaller co-operative societies in the various villages. These proposals have been received in the Province with interest and enthusiasm, and should help considerably towards the spread of co-operation and better agricultural methods in a backward area of the Colony.

12. The Chilaw and Marawila Societies in the North-Western Province have started work. The re-organization of the Puttalam Society has not yet been given effect to.

13. Two new societies have been organized in the North-Central Province, whilst one more is now under consideration. The Government Agent of the Province has evinced much interest in the establishment of new societies, and it is hoped that they will progress.

14. The Province of Uva has formed two more societies during the year. The Uva Society has been re-organized. The societies in Wellassa work under the supervision of the present Ratamahatmaya, son of the late Ratamahatmaya Bibile, who organized them.

15. There are two new societies in the Province of Sabaragamuwa, and there are indications of more societies being formed. The Ratnapura Society has made some progress, and has made advances of paddy manures to members. The Three Korales Society has increased its share capital. The Kendangamuwa Society was re-organized with the new Ratamahatmaya as President.

#### • SUMMARY OF PROGRESS.

16. The general progress of societies is shown in the following statement :—

|                        | Type of Societies. |                   |  | Total. |                    | Type of Societies. |                   |           | Total. |
|------------------------|--------------------|-------------------|--|--------|--------------------|--------------------|-------------------|-----------|--------|
|                        | Agricultural.      | Non-agricultural. |  |        |                    | Agricultural.      | Non-agricultural. |           |        |
| Number of societies :— |                    |                   |  |        | Paid-up capital :— |                    |                   |           |        |
| 1918-19 ..             | 100                | 3                 |  | 105    | 1918-19 ..         | Rs. 64,117         | c. 30             | Rs. 4,010 | c. 25  |
| 1919-20 ..             | 132                | 4                 |  | 136    | 1919-20 ..         | Rs. 93,909         | c. 0              | Rs. 5,375 | c. 0   |
| Number of members :—   |                    |                   |  |        | Reserve fund :—    |                    |                   |           |        |
| 1918-19 ..             | 11,026             | 284               |  | 11,310 | 1918-19 ..         | Rs. 10,842         | c. 19             | Rs. 400   | c. 28  |
| 1919-20 ..             | 14,883             | 327               |  | 15,210 | 1919-20 ..         | Rs. 13,993         | c. 44             | Rs. 669   | c. 29  |

17. The classification of existing societies is shown in the following statement :—

|            | A = B = C = D = E = |       |      |                  |              | Total. |
|------------|---------------------|-------|------|------------------|--------------|--------|
|            | Good.               | Fair. | Bad. | Recently formed. | Not working. |        |
| 1918-19 .. | 57                  | 29    | 10   | 2                | 5            | 103    |
| 1919-20 .. | 90                  | 25    | 12   | 4                | 5            | 136    |

18. The statement giving details of the working of each society is embodied in the summaries furnished by the Secretary of the Board of Control and annexed to the report.

#### AGRICULTURAL WORK OF SOCIETIES.

19. The main feature of business transacted in the village societies of the Western and Southern Provinces is the supply of manure for paddy, and the number of societies dealing in manure is increasing. The following statement shows the business done in manure during the last five years :—

|            | Quantity. |      |     |     | Cost.  |    |
|------------|-----------|------|-----|-----|--------|----|
|            | Tons.     | cwt. | qr. | lb. | Rs.    | c. |
| 1915-16 .. | 81        | 12   | 0   | 0   | 6,844  | 15 |
| 1916-17 .. | 99        | 13   | 2   | 0   | 7,528  | 45 |
| 1917-18 .. | 160       | 2    | 2   | 8   | 13,591 | 85 |
| 1918-19 .. | 233       | 6    | 1   | 24  | 25,600 | 70 |
| 1919-20 .. | 197       | 5    | 2   | 0   | 27,477 | 47 |

The quantity of manures supplied during the year was less than that of the previous owing to the increased cost of the commodity. Great difficulty was experienced in securing supplies of bone manures even at the higher rates. Considerable disappointment was expressed by members of societies, and eventually other arrangements were made in the supply of fertilizers. The Government Agricultural Chemist, in consultation with the Director of Food Production, has recommended a paddy manure containing nitrolim, fish manure, and ephos-phosphate, which could be supplied to societies at a uniform price of Rs. 10 per 1½ cwt. required to manure one acre. The results of the experiments with this new manure are awaited with interest. The Agricultural Instructors were detailed to assist in the application of manures, and have rendered considerable assistance to some societies. The settlement of manure accounts has in almost all cases been satisfactory. Only a few societies were unable to meet their liabilities on due dates.

20. Transactions in supplying agricultural tools and barbed wire are on the increase, and the number of societies which deal in this line is becoming more numerous.

21. Several societies applied for seed paddy, but all could not be supplied owing to want of suitable seed. The Makulla Society through its President purchased seed from Batticaloa and distributed the same among its members. The Urubokka Society secured a small stock of seed and distributed it amongst its members. The Handapangoda Society lent out a small quantity of seed paddy which had

been received as the society's share from the lands leased to the society by the Crown. The Paddy Bank in connection with the Columputurai-Poonakari Society dealt in paddy on a small scale, with satisfactory results.

22. Though some of the Agricultural Shows held during the year were not strictly under the auspices of the Co-operative Credit Societies, the societies within whose area of operations lie Gampola, Matugama, Ibbagamuwa, and Henaratgoda took a prominent part in the Shows held at these centres.

23. Dakunu-Talangama, Udugaha-Medadepattu, Ittapana, Namuttuduwa, and Matugama, Unanwitiya, Kandaboda Pattu, and Tellippalai Societies arranged to take part in the garden competitions, for which prizes were offered by the Ceylon Agricultural Society. Prizes were awarded to members of the Dakunu-Talangama, Udugaha-Medadepattu, and Ittapana Societies.

24. Though it is not the business of the Co-operative Credit Societies as societies to undertake agricultural work, Handapangoda and Akuratiya Societies have obtained leases of Crown lands for growing food crops. The procedure adopted is that the society obtains the leases and gives over land to such members as will cultivate on the share system. Several other societies applied for similar leases, and the applications were referred to the Government Agents of the respective Provinces. If lands can be leased to societies strictly for growing food crops, it will not only popularize the societies, but also help towards the increase of local food production. The societies are giving more and more attention to granting loans for growing food crops, and the members of some rural societies have done their utmost to bring larger areas under the cultivation of food crops. The example set by the Unanwitiya Society in this respect is a notable one. This society is a village society on the banks of the Gin-ganga in the Galle District, and its members brought under paddy during the yala season of 1919 all the lands of the village, viz., some 500 acres, as well as 100 acres of owita lands.

25. The financial position of each society on March 31, 1920, is given in the balance sheet annexed hereto.

26. *Members.*—The number of members of societies is 15,210, as against 11,310 in 1918-19. The average number of each society is 120, and the average for last year was 110.

27. *Paid-up Capital.*—The paid up capital of the societies is Rs. 99,284·37. This is an increase of Rs. 31,156·82 over that of last year, which stood at Rs. 68,127·55.

28. *Deposits.*—The amount of money on deposit is Rs. 6,498·90, as against Rs. 4,772·51 in the preceding year.

29. The following statement will show the position in regard to loans :—

|            | Loans given. |    | Loans recovered. |    | Loans outstanding. |    |
|------------|--------------|----|------------------|----|--------------------|----|
|            | Rs.          | c. | Rs.              | c. | Rs.                | c. |
| 1918-19 .. | 74,605       | 0  | 50,935           | 74 | 70,605             | 45 |
| 1919-20 .. | 99,490       | 0  | 68,958           | 0  | 99,949             | 69 |

The volume of business has increased during the year to a considerable extent. The high price and the scarcity of food products hampered the repayments of loans, but the general tone of the year's work has been more satisfactory than that of previous years. There were some cases of recoveries which had to be effected through the courts, but it is satisfactory that these cases are rare. It has been proposed to collect and record statistics of such recoveries in future.

30. *Government Loans to Societies.*—Four loans were granted during the year to societies by the Local Loans and Development Commissioners amounting to Rs. 5,000, and eight societies repaid their instalments. The table given below shows the position in regard to Government loans on March 31, 1920 :—

| Name of Society.        | Loan granted. |    | Repaid. Balance. |       | Name of Society.           | Loan granted. |    | Repaid. Balance. |        |
|-------------------------|---------------|----|------------------|-------|----------------------------|---------------|----|------------------|--------|
|                         | Rs.           |    | Rs.              | Rs.   |                            | Rs.           |    | Rs.              | Rs.    |
| Walapane ..             | 660           | .. | 330              | 330   | Valikamam West Head-       | 500           | .. | —                | 500    |
| Hinidum Pattu ..        | 225           | .. | 180              | 45    | men's ..                   | 250           | .. | —                | 250    |
| Kalapaluwawa ..         | 250           | .. | 200              | 50    | Akumimana ..               | 600           | .. | 600              | —      |
| Kumbukke Pattu ..       | 1,000         | .. | 300              | 700   | American Mission Agents .. | 200           | .. | —                | 200    |
| Pandatarippu ..         | 1,000         | .. | 100              | 900   | Matara ..                  | 1,000         | .. | —                | 1,000  |
| Nanaddan East ..        | 500           | .. | 50               | 450   | Tellippalai ..             | 1,500         | .. | —                | 1,500  |
| Galboda and Kinigoda .. | 750           | .. | 75               | 675   | American Mission Agents .. | 1,500         | .. | —                | 1,500  |
| Korales ..              | 1,000         | .. | —                | 1,000 | Tholpuram Moolai ..        | 1,500         | .. | —                | 1,500  |
| Adikari Pattu ..        | 1,000         | .. | —                | 1,000 | Matara District Wesleyan   | 1,000         | .. | —                | 1,000  |
| Haltota ..              | 500           | .. | —                | 500   | Methodist Church           | —             | .. | —                | —      |
| Handapangoda ..         | 1,000         | .. | —                | 1,000 | Workers ..                 | —             | .. | —                | —      |
| Dakuna-Talangama ..     | 500           | .. | —                | 500   |                            |               |    |                  |        |
| Unawitiya ..            | —             | .. | —                | —     | Total ..                   | 14,935        |    | 1,835            | 13,100 |

These loans went some way towards facilitating the transactions of the societies, and were much appreciated by members.

31. *Profits.*—The total profits earned by all the societies during the year were Rs. 10,712 and the working expenses Rs. 2,777, leaving a nett profit of Rs. 8,186·53.

32. *Distribution of Profits.*—A large number of societies distributed profits this year, viz., Minuwangoda, Government Printing Office, Handapangoda, Dakuna-Talangama, Weligam Korale, Kalapaluwawa, Udugaha-Medadepattu, Galpatha, Unanwitiya, Kandaboda Pattu, Udupiddi Parish, Pandatarippu, and American Mission Agents' Societies. These have declared bonuses on shares, and the amounts thus apportioned have been placed to the credit of members as non-interest-earning deposits.

33. The reserve fund of societies has made appreciable increases. The total to the credit of reserve fund in all societies is Rs. 14,662·73. This is an increase of Rs. 3,420·26 over the last year's figures.

#### GENERAL.

34. The Secretary inspected 105 societies, and attended the annual general meetings of most. The Inspector took twenty-one societies, and attended annual general meetings of all societies in Jaffna and Mannar Districts. In addition, he visited the societies in the Northern Province in October and supervised their work.

35. The keeping of accounts in many societies requires regular attention and guidance by inspecting officers. Some societies have developed their business to such a noticeable extent that the keeping of proper accounts has become a matter of very considerable importance. Separate manure account books were supplied to all the societies dealing in manures in the hope of simplifying the accounts of manure purchases and supplies.

36. *Administration.*—Work in connection with the Co-operative Credit Societies has considerably increased, and on representation made to Government two additional Inspectors to the staff have been sanctioned. Additional clerical assistance is also expected. After they have obtained a knowledge of the local work, the Inspectors will be sent to India for a period of training in order to qualify themselves for their being permanently employed in the Department.

37. Co-operative education is a subject which has received attention. Lectures on co-operation are given by the Secretary to the students of the School of Tropical Agriculture, and it is proposed to begin a co-operative library in Colombo and to arrange for the training of secretaries and other office bearers of working societies.

38. The demand for information on the subject of co-operation is daily increasing, and a fresh supply of leaflets and specimen by-laws had to be requisitioned. The vote to meet this expenditure had to be doubled. A report of the proceedings of the Second Co-operative Conference was published as a Sessional Paper and distributed, and a summary of this report in the vernaculars was issued to all the societies and Government Agents.

The following co-operative leaflets are now available :—

No. 1.—Advantages of Co-operative Credit Societies.

No. 2.—Hints on the Organization of Co-operative Credit Societies.

No. 3.—The Importance of greater Local Production of Foodstuffs.

No. 4.—Co-operative Credit Societies and Deposits.

40. The “Govikani Sangarawa” and “Kamat Tolil Vilakkam,” the two vernacular magazines of the Ceylon Agricultural Society, which contain articles on co-operation, were supplied to the societies free of cost.

41. The Secretary was on tour for 148 days, and the Inspector for the Tamil Districts for 40 days. The Secretary had to make prolonged tours in connection with annual inspections. He also attended a number of inaugural meetings of societies and addressed the gatherings thereof. The Secretary had conferences with the Government Agent, Anuradhapura; the Government Agent, Eastern Province; and the Assistant Government Agent, Mullaitivu, in connection with the starting of new societies in their respective Provinces.

42. The Second Conference of the representatives of Co-operative Credit Societies, held in July, 1919, in the Legislative Council Chamber, was opened by His Excellency the Governor who presided at it in its morning session. The meeting of the afternoon session was presided over by the Registrar. The Conference was a very representative one. Delegates were sent from 104 societies. The matters discussed were very important and useful. The following is the list of subjects dealt with:—

(1) The Incorporation of Provident Associations.

(2) The Penalization of Cheetu Clubs.

(3) The Collection of Debts due to Co-operative Credit Societies—

(a) By facilities under the Village Communities Ordinance of 1889.

(b) By facilities under Head (p), Rule 12, of the Co-operative Credit Societies Ordinance of 1911.

(4) Additional concessions by Government to societies—

(a) Exemption of Postage on Official Correspondence.

(b) Reduction of Railway freightage on Manures and other Supplies.

(c) Extension of demurrage Periods on Manures supplied to Societies.

(5) Supplies of Manures, Tools, &c., to Societies.

(6) Lease of Crown Lands for Cultivation purposes to Societies.

(7) Extension of co-operation to Industries.

(8) Provision of Training Classes for Co-operation Workers.

(9) Amendment of Co-operative Credit Societies Ordinance, 1911.

(10) Amendment to Rules, and provision of new Rules.

(11) Utilization of Reserve Funds.

(12) Formation of Unions, Central Banks, &c.

(13) Working Capital for Societies.

(14) Publication of Annual Reports and other Proceedings in connection with co-operation in the Vernaculars.

43. The following resolutions were adopted :—

(1) “That steps should be taken to incorporate mutual provident associations or money-lending clubs, either by provision in the Co-operative Credit Societies Ordinance, or by the provision of further legislation.”

(2) “That legislation be introduced to regularize cheetu clubs.”

(3) “That additional facilities be provided for the collection of debts due to co-operative credit societies, either by the amendment of the Village Communities Ordinance, or by giving additional power to the Registrar of Co-operative Credit Societies.”

(4) “That additional concessions to societies be given by Government by exemption of official correspondence with the Registrar and the Revenue Officer of the Province or District from postage dues.”

(5) “That steps be taken for the formation of a Co-operative Credit Societies’ Supply Society, to facilitate the supply of manures, seeds, tools, and other requirements at the cheapest possible rates.”

(6) “That facilities be granted to Co-operative Credit Societies to lease Crown lands on easy terms for preparation of foodstuffs.”

(7) “That steps be taken to encourage co-operation in industries.”

(8) “That steps be taken to organize classes for the training of office-bearers of societies and other co-operative workers.”

- (9) "Amendments of Co-operative Credit Societies Ordinance."
- (10) "Amendments to rules and provision of new rules."
- (11) "That provision be made for the reserve funds of societies to be utilized, with the sanction of the Registrar, in part for the general business of the societies, and in part for investment upon approved security."
- (12) "The desirability of establishing unions and central banks for assisting primary societies."
- (13) "That means of securing additional working capital for primary societies be obtained."
- (14) "That the Annual Report of the Registrar and all proceedings of conferences dealing with the work of co-operative credit societies be published in the vernaculars and distributed widely throughout the Colony."

44. The death of the following supporters of the movement has to be recorded :—

Mudaliyar E. V. Gunaratne, President of the Akmimana Society.  
 Mudaliyar F. D. Samarasinha, President of five societies in the Pasdun korale east.  
 Mr. J. W. Ekneligoda, Ratemahatmaya, President of the Kendangamuwa Society.  
 Mr. L. B. Nugawela, Ratemahatmaya, President of the Beligal Korale Society.  
 Mr. H. M. Richards, Vice-President of the Government Printing Office Society.

September 8, 1920.

F. A. STOCKDALE,  
 Registrar of Co-operative Credit Societies.

#### APPENDIX.—WORKING OF SOCIETIES.

##### WESTERN PROVINCE. Colombo District.

*The Minuwangoda Society* continues to progress as a good working society. It has increased its profits and grown more useful. There are yet a few overdue loans to be recovered. It has proposed to extend its operations by the inauguration of a Central Bank. The Committee has devoted more attention to its working, and the Secretary, Mr. D. M. P. R. Senanayaka, was paid a well-deserved tribute by the society at the annual meeting for his ungrudging work. The President, Mr. C. H. A. Samarakkody, was made Gate Mudaliyar by His Excellency the Officer Administering the Government, who in conferring the rank mentioned the interest taken by Mr. Samarakkody in the co-operative credit movement.

*The Dakshina-Palangama Society* has amply demonstrated the benefits of organized co-operation. It has succeeded in collecting over Rs. 3,000 capital. This demonstrates the ability of the villager to make savings with proper guidance. The society has granted several loans of money; supplied manure and agricultural tools to its members. It has taken an interest in the garden competition and in the improvements of the general agricultural and economical condition of the villagers.

*The Udugaha-Medadepattu Society* has made satisfactory progress. At a special general meeting held in September last the future of the society was discussed and its area of operation was reduced. Those members who in consequence withdrew from the society formed themselves into a new society—Padukka Society. The society proposes to apply for a loan from Government.

*The Kalapaluwawa Society* has fully or over-subscribed its nominal capital, but has not been very successful in the recovery of overdue loans. The society continues to transact business.

*The Gangaboda Pattu of Siyana Korale East Society* has changed for the better, and has started work in earnest. Its President, Muhandiram E. T. P. Senanayaka, deserves credit for arousing an interest among the members after two years' stagnation. Meetings are now held regularly, and attendance at meetings is satisfactory. It is hoped that members will keep up their interest.

*The Siduwa Society* has again shown an increase of members and paid-up capital, and has distributed manures. But for the lack of interest on the part of some of the Committee members the society could have been more useful. It should hold its meetings more regularly and do more useful work. The society submitted to the Director of Food Production some proposals with regard to the prevention of floods in the locality.

*The Jayawardanapura-Kotte Society* has had a varied career, and its present condition is not satisfactory. The President, Muhandiram B. Charles Cooray, has

resigned owing to his transfer on promotion as President, Village Tribunal, Alutkuru korale south. The Committee should take more sustained interest in the society.

*The Henaratgoda Society* is doing business, but its methods are capable of improvement. The new Mudaliyar of the korale has promised to extend his sympathy to the society and bring it to a good footing.

*The Godakaha Palata Society* is not in good working order. The progress is very slow. The President of the society is being asked to re-organize it.

*The Aturugiriya-Kottawa Society* continued to transact good business and increased its usefulness. The Secretary, however, became slack, and as a result the society suffered. No meetings were held for some time. The President of the society is taking steps for the appointment of a new Secretary.

*The Kosgama-Kaluaggala Society* has collected some capital and begun to do business in a small way. The society should show better work if it is to receive recognition as a good working society.

*The Plumbago Employees' Society* shows no progress, and the question of winding it up has to be considered.

*The Padukka Society* is a new society formed by those members who withdrew from the Udugaha-Medadepattu Society within a smaller area. They succeeded in starting work immediately after registration. Meetings are held regularly, and the agricultural requirements of the members are attended to. Its Secretary is enthusiastic. Mr. D. A. Pathmaperuma and Mr. D. C. Pathmaperuma, Vidane Aratchchi, who were a great support to the Udugaha-Medadepattu Society as Vice-President and Treasurer respectively, have been elected as President and Treasurer of this society respectively.

*The Uruwela Peruwa Society* is also a new society organized under the auspices of the Uruwela Peruwa Food Production Committee. Mr. P. Weerasekara, a landed proprietor, who takes an interest in the well-being of the village, is the President. The society has collected share money and granted loans of money and manures. The Secretary, a retired Government school teacher, has so far shown interest in the work.

*The Dompe Peruwa-Palugama Society* was started by the villagers of this subdivision with the assistance of an assistant teacher of the school. A retired headman, who is a respected resident of the village, has been elected as President of the society. It should start work at an early date.

*The Galkissa Peruwa Society* was organized by the members of the Dehiwala Buddhist Association, and had not started work at the end of the year.

*The Government Printing Office Society* has strengthened its position as a sound society. It has a working capital of its own. It repaid the loan of Rs. 2,000 taken from the President, and has increased

the paid-up capital. Of the working capital of Rs. 5,378.55, a sum of Rs. 4,330 is the amount paid for shares, and the balance Rs. 1,048.55 is the accumulated profit made by the society. The society lost its President, Mr. H. C. Cottle, by retirement from Government service, and its Vice-President, the late Mr. H. M. Richards, by death. Mr. E. Selliah, who acted as Treasurer of the society from its inception, had to relinquish his duties on being promoted. Mr. H. R. Cottle, who succeeded Mr. H. C. Cottle as Government Printer, has assumed duties as President, and has already shown interest in the work. The Secretary continues to hold his office. The society is now self-supporting, and is a very useful institution.

#### Kalutara District.

The *Kumbukke Pattu Society* has increased its paid-up capital, and the volume of business is a sign of its prosperous condition. The society repaid another instalment of the Government loan during the year. A few of the loans given to members are overdue.

The *Adikari Pattu Society* continues business as usual, but shows no marked improvement. This is due to the starting of two other societies within the area of operation of this society.

The *Haliota Society* increased its membership and paid-up capital, though its area of operation was reduced by the establishment of another society. This society was unable to hold its meetings regularly owing to the change of its President and Secretaries. It continues to supply large quantities of manure for paddy to its members.

The *Handapangoda Society* is making satisfactory progress. It has collected sufficient capital of its own, and the society proposes to refund the loan taken from Government last year. The society has started a nucleus of a paddy bank with the society's share of paddy received from the members who cultivated the land leased out to the society by the Government.

The *Galpatha Society* continues to lend money and manure to the members. It has increased its membership and the paid-up capital.

The *Alutgama Agricultural Society* is a new society started during the year under review. It has collected a very satisfactory share capital, and the meetings are being held regularly. Mr. P. A. Gunaratne, J.P., U.P.M., of Panadure, takes a keen interest, and has assisted the society financially. Its Secretary, Mr. J. A. Abeysekara, a progressive and active teacher, takes a keen interest in the society and in agricultural work.

The *Kumbukke Palata Society* is also a new society, and has made good progress. The society supplied manures to its members during the last cultivating season.

The *Alutgama Moors' Society* is another new society, and is the only society started exclusively for Moors. It collected share capital, but has not started business as yet.

The *Yalagala Palata Society* is also one of the new societies in the Rayigam korale, and has not yet begun work beyond the collection of share money.

The *Kakupahana Palata Society* has collected a small share capital. It requires re-organization.

The *Millewa Palata Society* is another new society requiring more attention on the part of the organizers of the society. It has collected share money.

The *Udunara Palata Society*, also a new society, has a good future before it, and has many keen supporters. It has collected some share capital, and there is every possibility of its becoming a useful society.

The *Bellapitiya Society* has started business in a small way. With more attention from the organizers it should succeed in its work.

The above thirteen societies are situated in Rayigam korale, five are old societies, and the remaining eight are new. The latter were organized by Mudaliyar J. J. de Mel while acting as Mudaliyar of the korale in succession to Gate Mudaliyar Wirasinha. Mudaliyar de Mel took an active interest in the movement during his short régime in the korale, but he could not bring the societies into full working order owing to his transfer to Pasdun korale east. It is hoped that the permanent Mudaliyar of the korale, Mr. Emilian, will extend his support to the co-operative movement in the korale.

The *Panadure-Talpitibadda Society* has made striking progress. It has over-subscribed its capital and considerably increased its business. Mudaliyar Peiris and the Secretary, Mr. Kuruppu, continue to take a lively interest in the society.

The *Waddubadda Society* has increased its membership and share capital. Its affairs are, however, not conducted satisfactorily. A new Secretary has been elected, and it is hoped that the society will start work on more business-like methods.

The *Kalutrabadda Society*, as was expected, has made better progress this year with the appointment of the present Vice-President, who is able to give more attention to the society. The membership and the paid-up capital have increased.

The *Dodangoda Society* has made satisfactory progress under difficult conditions. If greater harmony prevailed among the members and the Secretary, who is very careful in his work, and he were more cordial in his dealings with them, the work of the society would have been more useful.

The *Namuttuduwa Society* has done fair work. It is supported by the leading residents of the locality. The members look to the society for assistance in the supply of manure, and the failure to supply manure during the last season owing to the scarcity of bone manures was a great disappointment to them.

The *Matugama Society* has increased its membership and the paid-up capital. Its meetings were not very regular. A new Secretary has been appointed, and the society is more active and regular in holding meetings.

The *Itapana Society* has increased its membership and the paid-up capital. It should hold meetings more regularly, and recover loans at the due dates. It has distributed a good quantity of bone manure.

The *Meegambadda Society* has given a few loans of money and manure. The members have taken a greater interest in the cultivation of paddy, and also brought fresh lands under cultivation. Periodical floods considerably damage the paddy crops.

The *Welipenna Society* has progressed under the management of the new Secretary, and has proved its usefulness by the distribution of manures. Greater efforts must be made to bring the society to the level of the other societies in the korale.

The *Maha Pattu North Society* shows little progress. A number of loans given are now overdue, and steps have to be taken to recover them. The death of the President of the society, the late Mudaliyar F. D. Samarasinha, was a blow to the society, which now looks to Mudaliyar de Mel to revive its working.

The *Mahagama Society* is making progress. Its meetings are very regular, and the work is methodical. Members take an interest in the work of the society and in the increase of the local production of food. The society will make still more progress if the headman gives his support.

The *Magura Palata Society*, also one of the new societies in the Pasdun korale east, has a fair number of members. It is a promising society.

The *Welgama Palata Society* has also started work. A leading business person in the place has been elected Secretary and is taking an interest in the work. This society shows promise of being a useful society.

The *Kevitiyagala Society* is a very successful new society in the korale. It has done fairly good business, and members have endeavoured to make it a leading village society. At the last annual meeting it was decided to open a paddy bank in connection with the working of the society.

The *Warakogoda Palata Society* has collected a fairly good capital, and has lent money and manures. Mr. R. C. Wijesekara of Gikiyanekanda estate has been elected Vice-President. He attends meetings regularly, and works for the interest of the society.

The *Meegahatenne Society* is the last of the new societies organized in the korale. It has enrolled members and collected share money. It is hoped the members would endeavour to bring the society to a satisfactory footing soon.

The last five societies reviewed above were organized by the late Mr. Samarasinha, Mudaliyar of Pasdun korale east, in July last. His death is a blow to their progress. Mudaliyar J. J. de Mel succeeded Mudaliyar Samarasinha, and has taken these societies in hand.

## CENTRAL PROVINCE.

*Kandy District.*

*The Kandyan Association Society* has been a failure. The initial enthusiasm of the members seems to have died away. Business is at a standstill. Loans are overdue.

*The Udugampaha Society* continues to make headway. The society distributed paddy manure among members. The society should begin to grant cash loans.

*The Uda Dumbara Society* requires re-organization. The loans given in 1918 have not been recovered. The Ratamahatmaya, who is the President of the society, and the headmen of the division have promised to bring the society into working order.

*The Galagedara Society* does not show any improvement. The late Secretary has given over the books and other documents to the President, and a new Secretary has to be elected.

*The Hataraliyadda Society* was re-organized with the Ratamahatmaya of Tumpane as President. Most of the old loans have been recovered, and the society has resumed work.

*The Uduwawela Society* has been wound up, and the registration of the society is to be cancelled.

*The Uda Bulatgama Society*, which could not start work last year owing to the prevalence of plague, lost its President by transfer. The new Ratamahatmaya has undertaken to revive the society.

*The Sinhalese Young Men Association Society* has increased its paid-up capital, and is endeavouring to acquire suitable lands for the cultivation of food crops. An application for the lease of lands in the Pata Hewaheta has already been sent to the Government Agent, Central Province.

*The Mahanuwara Janopakari Society* was organized by the artisan class and other small business men in the town of Kandy. A retired railway officer is the President, and is attending to his duties satisfactorily. A good sum has been collected by sale of shares, and the society is working satisfactorily.

*The Hariyapattu Society* was started for the second time in the division of Hariyapattu with the Ratamahatmaya as President. It has collected a small capital. The Registrar presided at the inaugural meeting.

*The Ganga Ihala Korale Society* was started at a meeting held at the Walahagoda school under the presidency of the Ratamahatmaya of Uda Palata. The society has distributed manures for paddy among members. It has been proposed to extend its area of operation to the whole of Uda Palata.

*The Uduwawara Society* is the latest society established in the Kandy District. The Ratamahatmaya of Uduwawara was elected President, and is giving the society his entire support. It has collected a good share capital, and is interesting itself in the use of artificial fertilizers in paddy.

*Matale District.*

*The Nagolla-Hulangamuwa Society* has fallen on bad days, and attempts to re-organize it were in vain for some time. The society was on the point of being wound up when the members regained their lost energy and re-organized the society. It remains to be seen whether they will continue to work the society satisfactorily.

*The Matale East Society* is the outcome of the activities of the Matale Food Production Committee. The society has a good committee with the Ratamahatmaya as President. The combined efforts of the President, the Secretary, and the Treasurer produced good results, and the society is now in good working order.

*The Matale South Society* started by the Ratamahatmaya of Matale South with the assistance of some other townsmen took considerable time to start work.

*Nuwara Eliya District.*

*The Walapane Society* is not so active as it used to be. A large portion of the overdue loans has been recovered. The new Ratamahatmaya has been asked to bring the society to its former state.

*The Uda Hewaheta Society* has continued to progress. It has given a number of loans with the funds lying idle in the bank. It continues to try paddy manures. The society ought to make better progress.

## SOUTHERN PROVINCE.

*Galle District.*

*The Talpe Pattu Society* has doubled its paid-up capital. This is particularly satisfactory, considering the hard times experienced owing to high price and scarcity of rice. The society declared a bonus to members on the shares. There are still a few overdue loans to be recovered.

*The Wellaboda Pattu Society* has made progress, but lacks systematic business principles. The society has regularly distributed manures to members. Its affairs have to be re-organized upon a more business-like footing.

*The Akmimana Society* is interesting itself in the distribution of fertilizers other than bone manure for paddy, and supplied a fairly large quantity for experimental purpose at the last season. The results were satisfactory. The society lost its organizing President by death and the Vice-President, Mr. C. W. Goonawardena, is conducting the society until a new President is elected.

*The Galle Gangaboda Pattu Society* continues to work, but shows no improvement. The President, Mudaliyar H. D. Perera, retired from Government service, and his successor is being requested to improve its condition.

*The Hinidum Pattu Society* requires proper organization. Since the departure of the late Mudaliyar of the korale, the society has not been doing much satisfactory work. The loans given should be recovered, and the society should be worked more actively.

*The Unanwitiya Society* is the most satisfactory village society in the district, and is a useful and beneficial business concern. The society repaid its first instalment of the Government loan. Agricultural work, specially food production, receives first attention from the society.

*The Akuratiya Society* has increased its paid-up capital and its business transactions. The President of the society has too much work in hand, but with the assistance of a good Secretary he will be able to do better work. The work has not been begun in connection with opening of the lands leased from Government owing to the delay in the completion of lease bonds.

*The Ganegama Society* has also progressed, but the members should take more interest and push on its work.

*The Udugama Society* shows slight improvement. Since the election of the Assistant Secretary as Secretary work is more systematic. This society should endeavour to come into line with the rest of the societies in the pattu.

*The Nagoda Society* was organized by Mr. M. A. Jayasinha, Inquirer into Crimes, an influential resident of the place, and soon collected a substantial share capital and did considerable business. The members have confidence in him, and the society shows promise of becoming a leading village society in due course.

*The Yatalamatta Society* is another new society established in the neighbourhood of the Unanwitiya Society. The small capital collected has been utilized for loans.

*The Heenatigala Society* is the outcome of the endeavour made by the villagers to help themselves. It has an enthusiastic Secretary and an intelligent President, both of whom have experience of the working of co-operative credit societies.

*The Bentota Society* has not made sufficient progress. The committee should take an active interest in the society.

*The Elpitiya Society* has done business in the supply of paddy manures. The society suffered as a result of irregular meetings. This was rectified recently, and meetings will be held regularly in future.

*Matara District.*

*The Weligam Korale Society* has kept up its record as a progressive society. It always distributes a large quantity of manure, coming second to the Minuwangoda Society. A bonus was declared on shares. Its meetings are well attended, and its work is quite satisfactory.

*The Kandaboda Pattu Society*, the second oldest society in the district, maintains its reputation as a sound society. It requires a large capital to meet the demands of members. It has undertaken experiments with paddy fertilizers.

*The Matara Society* purchased paddy for distribution at cost price among the poorer members, and has also distributed paddy manures during the last season. This society is capable of making better progress.

*The Matara District Wesleyan Methodist Church Workers' Society* is doing useful work by helping the poorer mission workers. The members have begun to deposit their savings in the society. Thirteen members did so last year. The Rev. Mr. Mendis spares no pains in the promotion of the ideals of the society.

*The Matara Gangaboda Pattu Society*, which was registered at the end of last year, has justified the high expectations of last year. It has done quite good work. The Assistant Registrar presided at the annual general meeting and addressed the members. The President of the society and the members have taken an interest in the improvement of the cultivation of paddy in the Pattu.

*The Witiyala Society* was left neglected for a time owing to a misunderstanding. It has re-started work, and is now giving loans of money and manure and supplying implements.

*The Yatiyana Society* became slack owing to the apathy of the original office bearers. At a special general meeting of the society convened by them it was decided to wind up the society. Subsequently another meeting was held convened by the more popular member of the society, and it was resolved to reconstruct the society. Accordingly the society started work, and within a short time doubled its paid-up capital and the membership increased.

*The Walasgala Society* was very serviceable to its members during the rice crisis. The President, on behalf of the society, purchased green gram from Colombo and supplied to members at almost cost price. For the Sinhalese New Year cloths were similarly bought in Colombo and supplied to members at a small profit. They highly appreciated the service done by the society.

*The Ransegoda Society* is a new society. The Secretary is doing all he can to make the society a successful one. Manures for paddy have been distributed by the society. It is hoped that the society will increase its share capital.

*The Deniyaya Society* has made striking progress. It has become a very popular institution. A large quantity of manure passed through the society to its members. Agricultural implements have been distributed at almost cost price. All the office bearers are discharging their duties creditably. During the rice scarcity the society, with the sanction of the Registrar, distributed rice. The Assistant Government Agent, Matara, allowed sufficient quantities of rice for the society.

*The Morawaka Society* has also increased its usefulness to members by giving loans of manure and money and implements. The society should increase its paid-up capital.

*The Urubokka Society* was for a time stationary, and the Secretary did not take an interest in the work. A new Secretary was appointed later, and he has shown better work. At the annual meeting held under the presidency of Mudaliyar de Livera the society was given a new start with new office bearers. It has started to lend paddy, in addition to manure and implements.

*The Mawarala Society* has continued to supply manures and implements to members. A Sunday market was organized under the auspices of the society, and has met with fair success. The society should hold its meetings more regularly.

#### *Hambantota District.*

*The Magam Pattu Society* has carried on its usual amount of work. This society ought to extend its operations, as there is a large number of cultivators who do not yet enjoy the benefits of the society.

*The Giruwa Pattu Society* has granted more loans, but it should increase its activity so as to be beneficial to the greater number of cultivators in the division.

*The Hambantota Government Servants' Co-operative Credit Society*, the first co-operative store society to be registered under the Co-operative Ordinance, has started work. A store committee was organized under the committee of management to look after the supplying of stores to members. The society's business is being watched carefully and the work is done in a business-like way.

#### NORTHERN PROVINCE.

##### *Jaffna District.*

*The Pandatarippu Society* continues to do useful work. The society declared a bonus to members. It dealt in paddy during the scarcity of rice, and the members appreciate the work of the office bearers.

*The Tellippalai Society* has regained its popularity, and a new Secretary has been elected. The society should hold its meetings more regularly.

*The American Mission Agents' Society* has increased its business. It refunded its loan of Rs. 600 to Government, and a new loan of Rs. 1,500 was taken. The paid-up capital has been doubled, and a large sum of money has been received as deposits. The society should aim at consolidation rather than extension.

*The Uduppiddi Society* has continued to do business. A few loans are overdue. The defaulters should be called upon to repay the loans.

*The Karaveddi Society* is becoming more popular and useful. Its paid-up capital and membership have increased as a result of the interest taken by the President and the other members of the committee.

*The Tholpuram-Moolai Society* has shown ample proof of its earnestness to do good work. Its progress has made it possible to secure a loan of Rs. 1,500 from Government.

*The Colomputurai-Poonakari Society* has fulfilled its object in lowering the boat hire between the peninsula and the mainland. The members are considering the discontinuance of this part of the society's business. The paddy store attached to the society has been very useful during the recent crisis.

*The Pungudutivu Society* has made considerable progress, and has utilized all capital collected for loans. If the interest taken this year were to be continued it would become a leading society.

*The Copay Society* has been unfortunate from the start and requires special attention on the part of the organizers. Inquiries will be made as to the cause of its failure to progress.

*The Jaffna Industrial Society* has not made any improvement. The loan taken from the Jaffna Central Society has been repaid.

*The Jaffna Central Society* has made progress in the hands of the new Secretary, but it has yet to justify itself as a central society.

*The Anaikoddai Society* shows a little improvement, and the proposal to start a store was approved of by the Registrar, and a beginning was made with the distribution of paddy.

*The Valikamam West Headmen's Society* continues to transact business with members.

*The Achchuveli Society* has received the earnest attention of the Secretary. A loan was recommended from the Jaffna Central Society, as the poorer members are in need of support before they are able to increase the paid-up capital of the society.

*The Puloli Society* requires still a good deal of attention from its office bearers to bring it into good working order. It has shown some improvements this year.

##### *Mannar District.*

*The Nanaddan East Society* continues to do useful work and the members have realized the benefits of the society. The President of the society, son of the first President who organized the society, has been appointed Udaiyar to succeed his late father. The society repaid the first instalment of the Government loan.

##### *Vavuniya-Mullaitivu District.*

*The Vavuniya South Sinhalese Division Society* was organized in January last at a meeting held at the Court house, Vavuniya, presided over by the Assistant Government Agent, Mudaliyar, Madukanda was appointed Secretary. This is the first society to be started in the district. At the end of the year it had not started work.

## EASTERN PROVINCE.

*Batticaloa District.*

*The Kalmunai Society* has increased its paid-up capital and membership, but no loans were given within the year.

*The Bintenna North Society* has not been able to perform any work for the last two years. The cancellation of the society is under consideration.

The Secretary of the Board of Control and the Inspector visited the district at the request of the Government Agent (Mr. Brayne), who has taken a very keen interest in the matter of giving facilities to the cultivator on co-operative principles. The Government Agent has already started a central paddy bank, and desires to start a net-work of village co-operative credit societies. A number of societies has already been organized.

*Trincomalee District.*

*The Trincomalee District Society* had another President within the year. The new President, Mr. N. Izat, Assistant Government Agent, and the Secretary, Mudaliyar Vallipuram, have succeeded in creating an interest in the society. It has collected a substantial capital and given a large number of small loans. The Secretary's work is worthy of mention.

*The Tiriya, Pulmoddai, and Kuchchaveli Societies* have not yet started work.

## NORTH-WESTERN PROVINCE.

*Kurunegala District.*

*The Hiriyala Hatpattu Society* has not extended its operation. A village show was held under the auspices of the society.

*Puttalam and Chilaw District.*

*The Puttalam Society's* position has not changed. A few of the overdue loans have been recovered. The changes proposed in its constitution require early attention.

*The Chilaw Society's By-laws* were approved by the Registrar and the society started work. The progress so far made does not come up to expectations.

*The Marawila Society* has started work. The President and the Secretary and the majority of members are alive to their responsibilities. The society proposes to undertake improvement of paddy cultivation in the locality.

## NORTH-CENTRAL PROVINCE.

*Anuradhapura District.*

*The Anuradhapura Society* was dormant during the year under review, and the office bearers had left the society alone. The Secretary sent in his resignation about the end of the year. The Government Agent recommended the winding up of the society as was decided at a meeting. Subsequently another meeting was held, at which the majority of members present decided to re-organize the society, and accordingly new office bearers were elected. The society is expected to work.

At a conference held at the Kachcheri under the presidency of the Government Agent, the Secretary of the Board of Control explained the working of societies and the necessity of establishment of societies in the villages. The Government Agent expressed his sympathy. Several village societies have already been organized.

## PROVINCE OF UVA.

*Badulla District.*

*The Uva Society*, after a long period, succeeded in holding a general meeting and elected office bearers. The Government Agent was elected President, and Muhandiram D. H. Kotawala, J.P., Vice-President. It is hoped that the society will receive due attention at their hands, and the committee will begin to work.

*The Bibile-Nilgala Society* has given a large number of loans for cultivation purposes, and is proving very useful to members. The President continues to take an interest. He obtained seed paddy from the Batticaloa District and distributed to members at the last sowing season.

*The Medagama Society* has improved, and business is done more systematically since the election of Mr. Bakmigahawela as Secretary and Treasurer. A large portion of the overdue loans has been recovered.

*The Makulla Society* is also making progress, and has helped members with loans for cultivation purposes. The loans have been repaid at due dates.

The above three societies afford an object lesson in self-help and thrift in the villages. The history of these backward villages has been mentioned in previous reports. The villagers had no ready cash with them, and their economical condition was neglected. The money lender monopolized their earnings. Things are getting better where the movement has reached the villager. The following facts indicate the work achieved:—The three societies have 1,600 members. They have saved in cash Rs. 2,124 in the form of money paid for shares in the societies. A sum Rs. 603 has been accumulated as interest on loans to members.

*The Buttala Society* has done some useful business since the re-organization of the society last year, but it should increase its activity if it is to serve its purpose.

*The Wiyaluwa Society* was registered at the beginning of the year. The Ratamahatmaya of Wiyaluwa, President of the society, has taken an interest in its work, and a satisfactory start has been made.

*The Wellawaya Society*—another new society in the Province—has not been successful in the work owing to the transfer of the organizing Ratamahatmaya and the appointment of a new Ratamahatmaya. At the annual general meeting held this year the local Postmaster was elected Secretary.

## PROVINCE OF SABARAGAMUWA.

*Ratnapura District.*

*The Ratnapura Society* has shown progress. Its paid-up capital, membership, and business have increased. Manures for paddy have been distributed to members. The society should endeavour to become more popular.

*The Kendagamulla Society* was re-organized, and the new Ratamahatmaya of the korale, Mr. Muttettugama, was elected President. Greater progress could have been made.

*The Godakawela Society* is a new society started in the Atakalan korale on the initiative of Mr. Madugalla, Agricultural Instructor, and a passed student at the School of Tropical Agriculture. The Ratamahatmaya of the korale, Mr. Elapata, was subsequently elected President. It has commenced work.

*Kegalla District.*

*The Galboda and Kinigoda Korales Society* has not been able to continue its useful work owing to the resignation of the Secretary. The society paid its first instalment of the Government loan, and has recovered a few of the overdue loans. A new Secretary, Mr. E. A. P. Wijeratne, Proctor, was elected, and he has already taken action to improve the society.

*The Three Korales Society* has enrolled a few more members and collected a satisfactory share capital. But the activities of the society were hindered by the rice scarcity. It is hoped that progress will now be made.

*The Mawata Pattu Society* shows a slight improvement. It has to recover the loans given last year. Mr. Dodanwala, Korala, was appointed Secretary at the last annual meeting.

*The Kanduwaha Pattu Society* requires re-organization, and the attention of the President has been drawn to it.

*The Beligal Korale Society* lost its organizing President by death. No successor has been appointed. The new Ratamahatmaya has not yet extended his support to the society.

*The Gandolaha Pattu Society* is a new society started within the Beligal korale. The Agricultural Instructor stationed in Beligal korale organized the society. At the end of the year it had not started work.

N. WICKRAMARATNE,

Secretary, Board of Control, Co-operative Credit Societies.

Peradeniya, September 8, 1920.

## BALANCE SHEETS OF CO-OPERATIVE CREDIT SOCIETIES FOR 1919-20.

F. A. STOCKDALE, Registrar.

# THE COLOMBO MUSEUM.

## REPORT OF THE DIRECTOR FOR 1919.

### INTRODUCTION.

I RETURNED to Ceylon on July 22, 1919, after an absence of two and a half years on war service and resumed duties in the place of Mr. G. A. Joseph, who had acted as Director during my absence. Along with other Government Departments, the Museum has suffered through vigorous retrenchments during the war.

It is to be hoped that, as conditions gradually improve, the needs of the Museum will be considered. This applies most particularly to the need for expansion. The proposed west wing, which was sanctioned in 1914-15, should be built as soon as possible. At present the collections are over-crowded, and cannot be properly and artistically exhibited, and until further accommodation is provided, the Museum will be forced into a condition of stagnation. The question of adding an industrial and economic section to the Museum has lately been raised, but no such addition can be contemplated until the new wing is built. The same applies to a nature study section which I propose to add as soon as space is available. Following the example of the local branch of the Royal Asiatic Society, other learned societies have made use of the Museum as their headquarters. I am only too glad to offer the use of a room for the meetings of these societies, but it should be remembered that, totally unsuited as the present Museum buildings are for the purpose for which they were designed, they are still less adapted to the requirements of public meetings. It is high time that provision was made for a small lecture hall, which would offer a suitable home for the learned societies, and which at the same time could be used for chamber concerts, art exhibitions, and the like. It is not unlikely that money will shortly be available for an art gallery, and if, as has been proposed, the building is placed on Museum land, the opportunity of incorporating a small public hall in the scheme should not be missed. Thus, without breaking the association of the learned societies with the Museum, a much-desired relief would be afforded to my Department, and the societies would be provided with fitting headquarters, instead of the inadequate makeshift with which they have had to be content up to the present.

The Library continues to expand, and before long it will have outgrown its present quarters. The Library is in no sense a public institution. It is primarily for the use of the students engaged in research on subjects represented in the collections of the Museum, though duly authorized "readers" are permitted to consult books in the Museum Reading Room. Many people mistake the Museum Library for a lending library, and surprise and indignation are sometimes expressed when a request to remove books from the Museum is refused. In the present state of the finances of my Department the only part of the Library which can be satisfactorily maintained is that dealing with zoology and marine biology. Many of the other sections are hopelessly out of date, and have little or no practical value.

The question of how best to preserve specimens for exhibitions is one that presents innumerable difficulties in a moist and hot climate. This is particularly true of natural history exhibits. The colours of the birds' eggs and butterflies have been very successfully retained by having the Museum table cases covered with spring blinds of a dark green substance. Perhaps the most difficult animals to preserve are fishes. Many fluids have been suggested for retaining the natural colours of fishes, but unfortunately all seem to fail in the tropics. The first Director of the Colombo Museum, Mr. A. Haly, devoted considerable attention to this problem, and he devised a fluid composed of glycerine and gum arabic, which certainly proved more successful than most other methods. I am of opinion, however, that given a skilful artist the most satisfactory method is to make painted plaster casts (or papier-mâché casts) of the fishes. Experiments have been made during the present year, and thanks to Mr. G. M. Henry, Assistant in Systematic Entomology, who is an artist of some considerable ability, and to Mr. Eric Fernando, Assistant Taxidermist, who prepared the casts, the experiment has been successful.

In a previous report reference was made to the handbook of Ceylon Birds. I am glad to be able to state that owing entirely to the keenness and energy of Mr. W. E. Wait, of the Ceylon Civil Service, the handbook should be ready before the next Administration Report is published. This handbook, which will be published from the Museum, is very much needed by local naturalists, and I hope it will be followed by publications of a similar nature dealing with other groups of Ceylon animals. In connexion with this I may say that I am at present in correspondence with Lieutenant-Colonel F. Wall, C.M.G., of the Indian Medical Service, who has just completed a valuable handbook on Ceylon Snakes, and I think it very likely that this handbook, which will run to nearly 600 pages, will be published from the Colombo Museum.

The publication of "*Spolia Zeylanica*," which was suspended last year owing to the scarcity of paper and war economies, has been resumed. Two noteworthy papers on Ceylon Butterflies by Mr. W. Ormiston have recently appeared, and Mr. W. E. Wait has continued his series of papers on Ceylon Birds. By far the greater part of our knowledge of the fauna of India and Ceylon is due to the researches of amateur naturalists. At the same time, it is to be regretted that so few of our public servants, who are stationed in remote parts of the Island, have taken up the serious study of some branch of natural history. It is, perhaps, still more regrettable that many keen naturalists, who have after many years of labour built up extensive collections and have acquired unrivalled knowledge of some small group of animals, do not consider it worth while keeping a written record of their observations. "*Spolia Zeylanica*" was founded with the object of providing a means for such workers to place on record the progress of their investigations. It has only partially succeeded in achieving this object, and, as editor of "*Spolia*

Zeylanica," I take this opportunity of asking for a bigger contribution of natural history notes from those who, even if not specialists in the strict sense of the term, have at least some special knowledge of the fauna of Ceylon. With one or two notable exceptions, the Ceylonese have taken little or no practical interest in natural history up to the present. This may be partly due to the lack of educational opportunities. A naturalist, however, is "born and not made," and some of the most famous contributions to natural history have been achieved in spite of a lack of a scientific training. I understand that the principal schools of the Island are devoting more and more attention to biology and nature study, and with the advent of the University College it is to be hoped that the younger generation will remove this reproach. In the meantime a constant stream of medical students is passing through the Biological Department of the Ceylon Medical College. As Lecturer in Biology I have always made a point of stimulating an interest in natural history, and it is to be hoped that the younger generation of medical practitioners may make some use of the training in biology, which forms the groundwork of the more serious studies of the medical sciences.

#### CHANGES IN THE DEPARTMENT.

Mr. Gerard A. Joseph, after two and a half years' dual duties as Acting Director and Secretary and Librarian, Colombo Museum, was relieved by the Director of the charge of the Department on July 22.

Mr. G. M. Henry, Assistant in Systematic Entomology, returned to his substantive appointment on July 1, 1919, after serving in the Agricultural Department as Assistant Entomologist for three and a half years, relieving Mr. C. Solomons, who reverted to his post as Draughtsman and Laboratory Assistant. The services of Mr. M. M. Salim, who was temporarily employed as Draughtsman and Laboratory Assistant, were discontinued.

Mr. E. M. J. Abeyesinhe was transferred to the Principal Mineral Surveyor's Department, with effect from March 1, 1919, and Mr. A. B. M. Amarasekera from the Prisons Department succeeded him on June 16, 1919.

Mr. N. Rajendra having passed the Clerical Examination was appointed to the Government Veterinary Department, and Mr. A. E. Jayasinhe succeeded him as Clerk from March 1, 1919. Mr. M. H. Perera was appointed on March 10, 1919, to succeed Mr. Jayasinhe as Inspector of Watchers.

#### REPORTS.

The Secretary and Librarian reports as follows :—

The number of accessions to the Library during the year was 687, a small number compared with pre-war days. 274 tickets were issued to readers during the year. Many palm leaf manuscripts were consulted in the Library, especially by Buddhist priests. 285 books were issued to those engaged in special research for home study.

The Library is indebted to the following institutions for valuable additions :—

University Museum, Philadelphia, U. S. A.  
Smithsonian Institute, Washington, U. S. A.  
Museum of Comparative Zoology, Harvard University, Cambridge, Mass., U. S. A.  
United States Commissioner of Fish and Fisheries, Washington, U. S. A.  
Bryn Mawr College, Philadelphia.  
Philadelphia Academy of Natural Sciences, Philadelphia, U. S. A.  
American Philosophical Society, Philadelphia.  
Exchange Department, University Library, Berkeley, California, U. S. A.  
The United States National Museum, Washington.  
California Academy of Science, San Francisco.  
Secretary, Zoological Society, New York.  
The Honorary Secretary, Royal Society of Canada, Ottawa, Canada.  
American Academy of Arts and Sciences, Boston, America.  
Librarian, University of Toronto, Canada.  
Puget Sound Marine Station, University of Washington, Seattle, Washington, U. S. A.  
Secretary, Department of Marine and Fisheries, Ottawa, Canada.  
Museum of Fine Arts, Boston, Mass.  
Department of Entomology, Cornell University, Ithaca, New York, U. S. A.  
The Honorary Secretary, Royal Society of South Australia, Adelaide, South Australia.  
Linnean Society of New South Wales, Sydney, Australia.  
Australian Museum, Sydney.  
Entomological Branch, Department of Agriculture, Sydney, New South Wales.  
The Secretary, Department of Fisheries, Sydney.  
South Australian Public Museum, Adelaide, South Australia.  
Public Library, Museum and Art Gallery of South Australia, Adelaide.  
Librarian, New Zealand Institute, Wellington, New Zealand.  
Museum, Christ Church, New Zealand.  
Secretary, Royal Society of Tasmania, Hobart, Tasmania.  
Royal Physical Society, Edinburgh.  
Secretary, Fishery Board for Scotland, Edinburgh.  
The Honorary Secretary and Treasurer, Natural History Society of Siam, Bangkok, Siam.

Societe Portugaise des Sciences Naturelles, Lisbon.  
South African Museum, Cape Town, Cape Colony.  
Albany Museum, Grahamstown, Cape Colony.  
Rhodesia Museum, Bulawayo, South Africa.  
Natal Museum, Pietermaritzburg, Natal.  
Curator, Durban Museum, Natal.  
Bureau du Conseil Permanent Internat. pour l'Exploration de la Mer. Copenhagen.  
Zoologiske Museum, Universitat, Copenhagen, Denmark.  
The Department of Printed Books, British Museum, London, W.C., England.  
Linnean Society of London, Burlington House, Piccadilly, London, W.  
Entomological Society of London.  
Zoological Museum, Tring, Herts, England.  
Cambridge Philosophical Society, Cambridge, England.  
Editor, Imperial Bureau of Entomology, London, S.W.  
University of Liverpool, England.  
Secretary, Royal Geographical Society, Kensington Gore, London, S.W.  
Royal Dublin Society, Dublin.  
Royal Irish Academy, Dublin.  
Director, National Museum of Ireland, Dublin.  
Musée Oceanographique, Monaco.  
Museum de Histoire Naturelle, Paris.  
Academie des Sciences, Paris.  
Director of Museums, Kuala Lumpur, Federated Malay States.  
The Secretary, Nederlandsche Entomologische Vereeniging, Rotterdam.  
Indian Museum, Calcutta.  
Bombay Natural History Society, Bombay.  
Asiatic Society of Bengal, Calcutta.  
Fisheries Department, Government of Madras, Madras.  
Deputy Director of Fisheries for Bengal, Calcutta.  
Forest Zoologist, Forest Research Institute and College, Dehra Dun, U.P., India.  
The Agricultural Adviser to the Government of India, Pusa, Bengal.  
The Librarian, Bernice Pauahi Bishop Museum of Polynesian, Ethnology, and Natural History, Honolulu, Hawaiian Island.  
The Secretary, Hawaiian Entomological Society, Honolulu, Hawaii.  
Laboratorio d'Entomologia Agraria Portici, Italy.  
Istituto Zoologico R. Università, Naples.

The Secretary, Società Italiana di Scienze Naturali,  
e del Museo Civico Milano.  
Director, College of Science, Imperial University,  
Tokyo, Japan.  
Zoological Association, Batavia.  
Museum, Bergen, Norway.

Library Bureau of Sciences, Manila, P.I.  
Librarian, Naturforschenden Gesellschaft, Basel,  
Switzerland.  
Museo Civico di Storia Naturale, Genova.  
Le Secrétaire Ayuntamiento de Barcelona, Museo  
Municipal de Ciencias Naturales, Barcelona.

It is hoped with the return of normal conditions the Library will be in a position to augment its collections by purchase and exchange of publications. The Library embraces a fairly wide range of subjects, but in many respects it is out of date.

The Assistant in Systematic Entomology reports as follows :—

I resumed duties at the Museum on July 1, 1919, on the arrival of Mr. Jepson, as Assistant Entomologist to the Department of Agriculture. Since then I have been engaged in putting the entomological collections in order, and arranging unclassified material in systematic order. In order to do this, lists of Ceylon insects were compiled from the Fauna of British India Volumes on Insects, British Museum Catalogues, the Journal of the Bombay Natural History Society, and also from the recent monographs of the various orders. The collections of Blattellæ and Forficulidæ were arranged in accordance with these lists. A considerable number of insects have been collected in and around Colombo and added to the collection, but no collecting trips to outstations were made.

The climate of Colombo is probably one of the worst in the world for the preservation of entomological collections. The combination of heat and moisture is especially favourable to the growth of moulds, and these are certainly the worst foes of entomological collections out here. Thus, during the greater part of the year great difficulty was experienced, not only in keeping the existing collections free from mould, but also in effectively drying new specimens. In many cases (especially large and soft-bodied insects) it was found that, instead of drying, they slowly rotted, in spite of all precautions. A good drying oven for use in wet weather is a great desideratum for the Entomological Division. As the keeping quality of specimens depends entirely on their being thoroughly dried at the start, the importance of this may be readily seen. A thoroughly dry specimen can resist mould even in damp atmosphere, but a specimen that has not been rendered absolutely dry at the start is a constant source of trouble.

In addition to the entomological work, the Assistant in Systematic Entomology attended to the fumigation of plants, &c., entering the Island, at the Government fumigatorium, and this work took a great deal of time.

It was decided to replace the specimens of fish exhibited in the Museum by coloured models, and a number of plaster models of fish were prepared by the Taxidermist's Division, and were afterwards coloured by me. A coloured sketch of the fresh fish was first made, and this was afterwards utilized in colouring the model. A good deal of experimental work was done in order to determine the best method of making moulds of fish and casting from the moulds, and also to discover the best way to apply colour to the plaster models. The most satisfactory method was found to be to make the mould by pouring melted paraffin wax over the suitably mounted fish, allow it to cool, and then, after the fish had been removed, to pour plaster into the resulting wax mould; the paraffin was then melted off by placing it in boiling water. The method of colouring which was found to be most suitable was with oil colours made rather thin with turpentine painted over a preliminary coat of linseed oil. When dry the paint was varnished with copal varnish. Silvery fish proved to be very difficult to colour properly, as there appears to be no suitable substance which will adequately reproduce the wonderful sheen of such fishes, and in consequence they were painted with silver bronze ink, which, however, gives a very dull and leaden appearance when compared with the magnificent originals. Various experiments were also tried with the object of reproducing transparent objects, such as fins, which look very stiff and opaque when reproduced in plaster, thus considerably reducing the life-like effect. No really satisfactory method has been discovered as yet, however.

Several drawings in line and wash have been prepared in illustration of papers for "Spolia Zeylanica."

The Acting Assistant in Systematic Entomology states :—

The insect collection and the exhibited specimens were constantly attended to and kept in perfect condition. There were hardly any specimens added to the general collection, except a few occasionally presented by donors to the Museum. Mr. Ormiston and Mr. Mackwood worked at the insects, and were very helpful in giving first-hand information regarding new species, &c. In addition to my duties concerned with insects, I also inspected Lake Tamblegam in the latter part of January, and accompanied the Director in July on a further inspection. Mr. Henry returned from the Agricultural Department after a period of about four years and took charge of the collection from me.

The following is the Taxidermist's report :—

I left Colombo on March 18 for Anuradhapura accompanied by a collector and returned on March 31. On September 2 I proceeded to Anuradhapura with the Additional Assistant Taxidermist and two collectors and returned on September 15. Both these trips were chiefly in the search of mammals and birds.

A Bear Monkey (*Presbytes ursinus*) was secured at Sita Eliya in 1918, and two specimens of Mayor's rat (*Coelomys mayori*) were caught at Ohiya.

The skeleton of the very rare Pygmy Whale (*Kogia breviceps*), referred to in a previous report, has been exhibited, but the mounted specimen did not come up to expectations, due to the oily and fatty substances of the skin showing signs of early decay, although every possible means of preventing the skin from deteriorating had been tried. At the suggestion of the Director, a plaster cast of the specimen was taken, and a paper model is now in preparation, which, when completed, will be exhibited in juxtaposition with the mounted skeleton in the same case.

After the return of the Director some alterations and improvements were made, chiefly in the Mammalia Gallery. Forty-three specimens (twelve species) of small mammals were added to the duplicate collection, and in it are included the following, which were acquired by purchase :—

One Bear Monkey (*Presbytes ursinus*).  
One Ruddy Mongoose (*Mungos smithi*).

One Ceylon Brown Mongoose (*Mungos flavidens*).  
One common Otter (*Lutra lutra*).

During the two trips to Anuradhapura sixty birds (forty species) were secured, out of which twenty specimens were mounted and exhibited during the year.

Mr. W. E. Wait, C.C.S., while Assistant Government Agent at Puttalam, was fortunate in securing a specimen of a Wagtail (*Motacilla alba*), which he presented to the Museum. This species has not been previously recorded from Ceylon. Mr. Wait has also presented to the Museum the following skins :—Three Gray Wagtail (*Motacilla melanope*); one Rose-coloured Starling (*Pastor roseus*). These will enrich our duplicate collection.

A very fine specimen of the beautiful Giant Wrasse (*Chelinus undulatus*) was mounted, and several plaster of paris models of coloured fishes have also been made.

The mammalian skeletons have been cleaned and re-arranged. In every case the skeletons have been placed against the black background, with excellent results.

At the suggestion of the Director, all the wall and table cases were lined with dark green casement cloth, and the entire collection of minerals, gems, and stone implements was re-arranged and re-mounted.

## VISITORS.

The total number of visitors was 121,836, as follows :—Ceylonese, 109,725 ; European residents, 964 ; Strangers, 11,147.

## PURCHASES.

One old Kandyan walking stick with heavy brass mountings used by Kandyan Dissawas.

One pair large iron tongs and ancient scissors used for iron melting, &c., from Harispattu.

## DONATIONS (GENERAL).

One ancient brick with "hansa" design used for a frieze, Tissamaharama. Mr. D. C. W. Jayasekara, Government School, Tissamaharama.

One lot copper "massas," Sahasa Malla, Prakrama Bahu, Dharmasokadeva Raja Lilavati, &c., from Tumpane, Central Province. Government Agent, Central Province.

One lot ancient copper coins, Sri Mat Sahasa Malla, Vijaya Bahu, Prakrama Bahu, &c. Assistant Government Agent, Matale.

Eighty copper Roman coins from Kitalagama, Southern Province. Assistant Government Agent, Matara.

One ancient tile from a Walawwa at Delgoda, Meda pattu, Kukulu korale, Province of Sabaragamuwa. F. Lewis, Esq.

Medal. A tenth century medal of the Romanoff dynasty. G. Vassilieff, Esq.

Spear head found on a chena at Teppannawa. E. B. Alexander, Esq.

Paper document. Certificate of sale for Rs. 100 of a slave boy named "Pompey" by his owner, Simon Coere, the skipper of an English ship, the "Success" which put into Galle 1768. J. P. Lewis, Esq., C.M.G.

Beads embedded in concretionary hydroxide of iron (limonite). W. A. Elwell, Esq.

One ancient brick (broken) marked "N" from Sāṇḍagiri Vēhera. W. B. Nonis, Esq.

One ancient brick from Situl Pahuwa. A. Jayasingha Esq.

One ancient brick from Naga Maha Vihara, Yodakandiya. A. B. M. Amarasekara, Esq.

## ZOOLOGICAL DONATIONS.

Praying Mantis (*Gongylus gongyloides*). Miss Catherine Paulusz, Colpetty.

Praying Mantis (*Gongylus gongyloides*). Master J. R. O. Thambimuttu, Batticaloa.

Locust (*Sathrophyllia rugosa*). The Superintendent, Udagoda, Undugoda.

Larva of Moth (*Suana concolor*). J. T. David, Esq., Survey Department, Anuradhapura.

Snake (*Dipsas forstenii*). J. T. David, Esq., Survey Department, Anuradhapura.

Snake (*Lycodon aulicus*). F. Dornhorst, Esq., Colombo.

Death's Head Moth (*Acherontia lachesis*). J. A. Rodrigo, Esq., Timbirigasyaya.

Death's Head Moth (*Acherontia lachesis*). E. L. Davidson, Esq., Colombo.

Beetle (*Aspidomorpha miliaris*). C. D. Houpe, Esq., Kahawatta.

Snake (*Chrysopelea ornata*). V. A. Hoole, Esq., Veterinary Surgeon, Ratnapura.

Snake (*Dendrophis pictus*). John Rudd, Esq., Kandy.

Snakes (two) (*Cylindrophis maculatus*). P. B. Herat, Esq., Maradana.

Birds : Dusky-blue Flycatcher (*Stoparola sordida*) ; Red-vented Bulbul (*Molpastes haemorrhous*) ; Tickell's Flower Pecker (*Dicaeum erythrohynchus*). Master W. P. B. Goodfellow, Alutenne, Welimada.

Moth (*Antheræa paphia*). Maxwell de Silva Wijeratne, Esq., Colombo.

Moth (*Antheræa paphia*). E. H. Vidal, Esq., Delawaar, Colombo.

Bird : Black Eagle (*Ictinætus malayensis*). Rev. Father Goonewardene, Colombo.

Birds : Gray Wagtail (*Motacilla melanope*) ; White Wagtail (*Motacilla alba*) ; Rose-coloured Starling (*Pastor roseus*). W. E. Wait, Esq.

Snake (*Chrysopelea ornata*). J. P. Obeysekere, Esq.

Snake (*Dipsas Ceylonensis*). R. B. Black, Esq., Nanu-oya.

Bird : Malay Bittern (*Gorsachius melanolopus*). F. Dornhorst, Esq.

Birds : (two) Whistling Teal (*Dendrocyena javanica*). L. van Langenberg, Esq.

Bird : Malay Bittern (*Gorsachius melanolopus*). J. R. Denman, Esq.

Bird : Pied-ground Thrush (*Geocichla wardi*). George Brown, Esq., Balangoda.

## "SPOILIA ZEYLANICA."

During the year Part 41, Vol. XI., of "Spolia Zeylanica" was issued, containing—

- (1) Outlines of the Stone Ages of Ceylon, by E. J. Wayland, Esq.
- (2) Notes on Ceylon Butterflies (Part II.), by W. Ormiston, Esq.

## Notes.

- (1) *Toxorhynchites minimus* (Theob.), by R. Senior-White, Esq., F.E.S.
- (2) The Tea Tortrix (*Homona coffearia*, Neitner), N. K. Jardine, Esq.
- (3) Report of the Proceedings of the Second Entomological Meeting held at Pusa, February 5 to 12, 1917, edited by T. Bainbrigge-Fletcher, R.N., F.L.S., F.E.S., F.Z.S., by G. M. Henry, Esq.
- (4) Crocodiles' Nesting Habits, by C. T. Symons.

## EXPENDITURE.

The cost of the institution for 1919 was :—

|   | Rs. | c.    | Rs.    | c. |
|---|-----|-------|--------|----|
| Personal Emoluments .. ..                 | ..  | —     | 26,673 | 55 |

JOSEPH PEARSON,  
Director.

March 25, 1920.

GOVERNMENT BACTERIOLOGICAL AND  
PASTEUR INSTITUTES.

REPORT OF THE DIRECTOR, GOVERNMENT BACTERIOLOGICAL AND  
PASTEUR INSTITUTES, 1919.

PASTEUR INSTITUTE.

Four hundred and thirty-three patients attended the Pasteur Institute for treatment during the twelve months ended February 29, 1920. The nationalities of the persons treated were as follows :—

|               |    |     |             |    |     |
|---------------|----|-----|-------------|----|-----|
| Sinhalese     | .. | 207 | Europeans   | .. | 23  |
| Indian Tamils | .. | 130 | Muhammadans | .. | 4   |
| Ceylon Tamils | .. | 45  |             |    |     |
| Burghers      | .. | 24  | Total       | .. | 433 |

The number treated each month was distributed fairly evenly throughout the year as shown in the following table :—

Table 1.

| 1919.     | Adults. |          | Persons under 16. |          | Total. |
|-----------|---------|----------|-------------------|----------|--------|
|           | Males.  | Females. | Males.            | Females. |        |
| March     | 34      | 6        | 14                | 2        | 56     |
| April     | 31      | 3        | 7                 | 4        | 45     |
| May       | 21      | 6        | 12                | 7        | 46     |
| June      | 17      | 7        | 11                | 7        | 42     |
| July      | 13      | 4        | —                 | 2        | 19     |
| August    | 18      | 7        | 6                 | —        | 31     |
| September | 17      | 6        | 14                | 6        | 43     |
| October   | 24      | 7        | 8                 | 3        | 42     |
| November  | 25      | 7        | 6                 | 7        | 45     |
| December  | 11      | 6        | 13                | 3        | 33     |
| 1920.     |         |          |                   |          |        |
| January   | 9       | 5        | 4                 | 2        | 20     |
| February  | 6       | 1        | 2                 | 2        | 11     |
| Total     | 226     | 65       | 97                | 45       | 433    |

The number of patients who came from each Province for treatment is given in the next table. During the two years that the Institute has been opened 312 patients have come from the Western Province, whereas not a single person from the Eastern Province has been treated, and only very few persons from the North-Central Province and the Province of Uva. Although it is possible that rabies is very uncommon in these Provinces, it is more probable that few persons come from these Provinces, because they are unlightened as concerns this form of preventive treatment ; and I conclude from a study of the table that the Institute has not yet reached its maximum utility :—

| Province.     | Population. | Persons per Square Mile. | Number attended for Treatment. | Proportion of Inhabitants Treated. |
|---------------|-------------|--------------------------|--------------------------------|------------------------------------|
| Western       | 1,106,321   | 773                      | 198                            | 1 in 5,580                         |
| Central       | 672,258     | 294                      | 130                            | 1 in 5,170                         |
| North-Central | 86,276      | 21                       | 3                              | 1 in 28,755                        |
| Northern      | 369,651     | 110                      | 35                             | 1 in 10,560                        |
| Southern      | 628,817     | 293                      | 13                             | 1 in 48,200                        |
| Uva           | 216,692     | 66                       | 3                              | 1 in 72,000                        |
| Eastern       | 183,698     | 48                       | —                              | 1 in 183,698                       |
| North-Western | 434,116     | 144                      | 20                             | 1 in 21,000                        |
| Sabaragamuwa  | 408,521     | 216                      | 31                             | 1 in 13,000                        |

Inquiries are sent out every three months to all persons who have been treated at the Institute, so that an effective control may be kept of this treatment. 744 persons had been treated to February 29, 1920, and in the case of five of these the treatment failed, for the patients have since been reported to have died of hydrophobia. Therefore, the percentage of failures is .67, which approximates to the numbers reported from other Institutes which are working under similar conditions. Thus, the percentages of failures as stated in the 1918 report of the Coonoor Institute of Southern India was .75 for the 12,283 patients who had been treated there to the end of 1918.

The number of brains of dogs and other animals which were received for examination during the year is shown in the following table :—

Table 2.

|        | Positive<br>from<br>Microscopical<br>Examination. | Negative<br>from<br>Microscopical<br>Examination. | Negative from<br>Microscopical<br>Examination<br>and Positive<br>from Animal<br>Inoculation. | Received<br>unfit for<br>Examination. | Total. |
|--------|---|---|--|---------------------------------------|--------|

| Man    | —   | —   | 1  | —                                     | 1      |
| Horse  | 1   | —   | —  | —                                     | 1      |
| Total  | 72  | 31  | 8  | 32                                    | 143    |

The Provinces from which the brains were sent is shown in the next table :—

Table 3.

| Province.     | Total number<br>of Brains<br>examined. |
|---------------|--|
| Western       | 65                                     |
| Central       | 47                                     |
| Sabaragamuwa  | 13                                     |
| North-Western | 6                                      |
| Southern      | 5                                      |
| Northern      | 5                                      |
| Uva           | 2                                      |
| North-Central | —                                      |
| Eastern       | —                                      |
| Total         | 143                                    |

The persons treated may be divided into the following categories :—

(a) 127 persons were treated, and the animals which injured them were proved by microscopical examination or animal inoculation to have suffered with rabies.

(b) 54 persons were treated, and from the description of the symptoms, and the death of the dog or from the death of other persons bitten by the same dog there was no doubt that the dog was rabid.

(c) Three persons were treated, and a veterinary surgeon stated that the dog was rabid.

(d) 238 persons were treated, and the brains of the suspected animals were not available or were unfit for examination.

(e) Two persons were treated, and the brains of the suspected animals were negative on animal inoculation.

(f) Nine persons were treated for a few days and ceased treatment, because the suspected animal was found to be alive and well ten days after inflicting the bite.

It may be concluded from this that out of 433 persons treated, 184 had been exposed to a definite risk of infection, and in the case of 238 no definite decision could be made.

In addition to those treated, a number of people came to the Institute for advice. It is often very difficult to decide whether or not a person has run a risk of infection. The disease cannot be acquired by the contact of infected saliva with the unbroken skin. But infection has been known to take place by rubbing saliva from a rabid dog into very small cuts and scratches, the disease has even been inoculated by the point of a sewing needle.

Now, many patients are anxious for the medical officer of the Pasteur Institute to decide whether or not they have run any risk of infection, but it is obvious that the patient, and not the medical man, is in the best position to know if he (the former) may have infected cuts or scratches.

The attitude that I have adopted in these cases is to state the manner in which infection may occur, and leave the patient to decide what risks he may have incurred. At the same time I urge that if the patient has any doubts or anxieties in the matter, he or she should undergo treatment which, though a little unpleasant, is otherwise harmless.

There is another class of case in which no definite decision can be given; it is when the brain is microscopically negative for rabies. When the dog is received at the laboratory within a few hours of its death, the microscopical examination of the brain may be relied upon. But many of the examinations made at the laboratory are upon brains which have been sent in preserving fluid by medical officers, and frequently some degree of decomposition has taken place before the removal of the brain. Animal inoculation has shown that on six occasions in the examination of 143 brains the microscopical test was negative, when it should have been positive.

Here, again, the duties of the medical man is obvious, he must state the facts, but where there is any doubt, he must advise treatment as a safeguard.

## BACTERIOLOGICAL INSTITUTE.

*Routine Work.*—The number of examinations made during the year 1919 and the number of vaccines prepared is given in the following table:—

| Specimens.                              | Official. | Private. | Positive. | Negative. | Total. |
|---|-----------|----------|-----------|-----------|--------|
| Blood for Widal reaction                | 931       | 28       | 334       | 625       | 959    |
| Blood for para-typhoid A                | 298       | 14       | 5         | 307       | 312    |
| Blood for para-typhoid B                | 298       | 14       | 2         | 310       | 312    |
| Blood for Wassermann reaction           | 41        | 4        | 18        | 27        | 45     |
| Blood for malaria                       | 3         | 7        | 2         | 8         | 10     |
| Material for <i>B. pestis</i> (human)   | 28        | —        | 8         | 20        | 28     |
| Rats for <i>B. pestis</i>               | 2,634     | —        | —         | 2,634     | 2,634  |
| Guinea pig for <i>B. pestis</i>         | 2         | —        | —         | 2         | 2      |
| Sputum for tubercle bacilli             | 25        | 27       | 11        | 41        | 52     |
| Sputum for pneumococci                  | 1         | 1        | 1         | 1         | 2      |
| Material for cholera vibrio             | 154       | —        | 43        | 111       | 154    |
| Urine for examination                   | 5         | 10       | —         | —         | 15     |
| Urine for tubercle bacilli              | 1         | —        | —         | 1         | 1      |
| Urine for typhoid                       | 1         | —        | —         | 1         | 1      |
| Fæces for intestinal parasites          | 4         | 3        | 1         | 6         | 7      |
| Fæces for typhoid                       | 1         | —        | 1         | —         | 1      |
| Fæces for dysentery                     | 3         | —        | —         | 3         | 3      |
| Water for cholera vibrio                | 1         | —        | —         | 1         | 1      |
| Water for examination                   | 45        | 6        | —         | —         | 51     |
| Mineral water for examination           | —         | 4        | —         | —         | 4      |
| Material for diphtheria                 | 13        | 4        | 5         | 12        | 17     |
| Material for <i>B. lepræ</i>            | 1         | —        | —         | 1         | 1      |
| Discharge, &c., for gonococci           | 3         | 3        | 3         | 3         | 6      |
| Catgut for sterility                    | 1         | —        | —         | 1         | 1      |
| Miscellaneous specimens for examination | 14        | 4        | —         | —         | 18     |
| Auto-vaccine                            | —         | 1        | —         | —         | 1      |
| Anti-cholera vaccine doses              | 988       | —        | —         | —         | 988    |
| Anti-plague vaccine doses               | 300       | —        | —         | —         | 300    |
| Fluid for cytological examination       | 2         | —        | —         | —         | 2      |
| Total                                   | 5,798     | 130      | 434       | 4,115     | 5,928  |

*Research Work.*—Investigations were carried out on the preparation of vaccines, and to test the effect of heat, drying, and chemicals upon them. The present method of sterilizing vaccines consists in heating a suspension of the organism to its lowest thermal death point, or by adding a small quantity of carbolic acid or other disinfectant.

It was found that such vaccines as those of dysentery, cholera, and typhoid could be desiccated over sulphuric acid and heated to the boiling point of water without materially affecting their properties of giving rise to antibodies when injected into animals. In fact, for the preparation of antisera, they were far superior to vaccines prepared in the usual manner, for they were less toxic, and much larger doses could be administered safely.

An anti-plague vaccine was prepared in this manner. Large quantities of the organism was grown on agar media in Roux bottles. It was washed off in a small quantity of water and precipitated by adding absolute alcohol. The insoluble mass of *B. pestis* was filtered off on hardened filter paper and well washed with 75 per cent. alcohol.

The mass was removed from the filter paper and dried over sulphuric acid; when thoroughly desiccated, it was ground to a fine powder. A 1 per cent. suspension was made of this powder in normal saline. When  $\frac{1}{2}$  cc. of this suspension is injected into a guinea pig, it was followed by pyrexia for about 36 hours' duration, and after five days the animal is immune to the inoculation of small doses of an extract of the spleen of a guinea pig which has died of plague. In respect of convenience, accuracy of dose, and efficiency, this vaccine is superior to such preparations as Haffkine's vaccine, which is extensively used in India.

The human subject may be injected with  $\frac{1}{2}$  cc. to 1 cc. of an aqueous suspension of 1 in 200 of this powder. This gives rise to pyrexia, but not to a severe reaction at the site of inoculation.

*Fowl Plague.*—Numerous outbreaks of disease have occurred in poultry yards in Colombo and other parts of Ceylon, and have caused very considerable loss to the owners of poultry. The examination of a number of diseased or dead fowls sent to the Bacteriological Institute showed that the condition is due to an organism known as *Pasteurella gallinæ*, which belongs to the same group of bacilli as *Bacillus pestis*.

The symptoms of the disease vary. Sometimes it occurs as an acute septicæmia, when the fowl usually dies in twenty-four hours or less, after it has first shown signs of sickness; frequently there is an attack of diarrhoea, hence veterinary surgeons have called the disease fowl cholera, though fowl plague or fowl septicæmia would be terms more in accordance with the symptoms. In other outbreaks the disease has been less acute, and the symptoms show that the lungs have been implicated, and the fowl appears miserable and drowsy, is continually sneezing, and a glary muco-purulent discharge comes from the nose and beak. The birds do not feed, their feathers are dull and bristling, their combs and wattles are dusky, and they refuse food. A bird may be sick for a week or more before it dies. Occasionally recovery takes place. The disease under these circumstances is diagnosed frequently by the veterinary surgeons as Roup, but a bacteriological examination shows that it is a form of fowl plague.

Experiments were carried out for the purpose of finding a rapid and practical method of immunizing fowls to this disease. It was found that the injection of  $\frac{1}{2}$  cc. of a 1 per cent. suspension of dried bacterial mass conferred considerable immunity to the bird, and was sufficient to prevent the disease being acquired by the natural means, *i.e.*, by the mouth, though not sufficient to confer complete immunity to the subcutaneous injections of large doses of virulent organisms. The vaccine has been supplied to two owners of poultry runs, and they found no difficulty in using it. The fowls are inoculated in the breast muscle by means of a hypodermic syringe. Not a single case of the disease occurred among the fowls which were inoculated.

The prevention of the disease by disinfecting fowl houses and runs is very difficult, for crows and other birds are susceptible to the disease, and carry it from an infected locality to one that is not infected. Hence the inoculation of a vaccine is the most practical means of eradicating the disease.

LUCIUS NICHOLLS, M.D., B.A. (Cantab.),  
Director.

## VETERINARY.

### REPORT OF THE ACTING GOVERNMENT VETERINARY SURGEON FOR 1919.

#### I.—STAFF.

*Assistant Veterinary Surgeons.*—Mr. E. T. Hoole, G.B.V.C., Colombo; Mr. M. D. S. A. Wijayanayaka, G.B.V.C., Nuwara Eliya; Mr. G. B. de Silva, G.B.V.C., Kandy; Mr. V. A. Hoole, G.B.V.C., Colombo; Mr. J. I. Apponso, G.B.V.C., Badulla; Mr. C. H. de Saram, G.B.V.C., Ratnapura.

*Manager, Government Dairy.*—Mr. P. C. J. Fernando.

*Manager, Model Farm.*—Mr. V. H. Herat.

*Manager, Ambepussa Farm.*—Mr. R. F. P. Jayawardena.

*Laboratory Assistant.*—Mr. E. D. Perera.

*Stock Inspectors.*—Messrs. A. M. Ahamat, B. D. Stephen, D. P. A. Dissanayaka, R. F. P. Jayawardena, G. E. P. Senaratne, S. E. Samaranyaka, J. Habaragoda, D. L. Dias, Tassim Mahameeth, H. E. P. Jayawardena, D. de A. Seneviratne, S. N. Samuel, and S. W. Jansz. The College year at the Bombay Veterinary College now begins on August 1. As Mr. A. M. Ahamat discontinued his studies on grounds of ill-health and reverted to his post as Stock Inspector, it is intended to send Mr. R. F. P. Jayawardena to Bombay at the end of next July.

Mr. G. W. Sturgess, the Government Veterinary Surgeon, left for England in July on a well-earned furlough of nearly fifteen months. His health was affected a great deal by repeated attacks of pandemic influenza, but even when he was very weak his interest and zeal in the work never flagged. It is earnestly hoped that he will be able to recruit his health thoroughly during his stay at home, and return with renewed health and vigour for another spell of work.

#### II.—INFECTIVE DISEASES.

*Rinderpest.*—This disease prevailed chiefly in the Western, North-Western, Sabaragamuwa, and Central Provinces, the disease being introduced from India to Colombo, and radiating from the outskirts of the Municipality to the Western Province in a north-easterly direction along the main lines of traffic, and from this Province to the three others in the same direction. The total number of cases in Colombo town during the year under review was 790; in the Western Province 1,140, of which 182 recovered, 861 died, 45 were shot, and 52 remained ill at the end of the year; in the North-Western Province there were 237 cases; in the Province of Sabaragamuwa 329; and in the Central Province 437. In the latter part of the year the outbreak was completely stamped out in the Central and Sabaragamuwa Provinces, and at the end of the year the disease was well under control in the North-Western and Western Provinces.

It has been felt that the work of selecting and transporting cattle from India requires more careful and conscientious management, and this may also be said of the quarantine arrangements in Colombo. As desired by His Excellency the Governor, a Conference, consisting of the Government Agent, Western Province, the Government Agent, North-Western Province, the Mayor of Colombo, and the Government and Municipal Veterinary Surgeons, was held on December 9 last to formulate a scheme of concerted action, in order to check the introduction and prevalence of rinderpest in future. The names of Dr. L. Nicholls, Director of the Bacteriological Institute, and Dr. L. F. Hirst, Municipal Bacteriologist, have been subsequently added to the list of members of the above Conference.

A quarantine camp in Colombo at a distance from the cattle mart is felt a necessity, and when this is established, arrangements will probably be made to take all imported cattle to it by direct rail communication from the harbour.

*Anti-rinderpest Inoculation.*—Owing to a shortage of the supply of anti-rinderpest serum from India about the end of the year, inoculation of contacts could not be carried out regularly in December. But during the rest of the year all immediate contacts were successfully inoculated, when the cattle owners allowed the inoculation to be done. When serum was not available, the Assistant Veterinary Surgeons and Stock Inspectors, in co-operation with the Government Agents and their headmen, endeavoured to check the spread of the disease by the destruction or isolation of cases, the segregation of contacts, disinfection, proclamation of infected areas, and closing of infected halting sheds, redoubling their efforts at these time-honoured and common-sense methods of prevention and suppression. An attempt will most likely be made in the near future by the Director of the Pasteur Institute in Colombo to manufacture serum in Ceylon with a view to carry out simultaneous inoculation by the sero-virus method in infected herds, thus rendering them permanently immune by passing through a mild form of the disease, having first fortified them with a dose of simple anti-rinderpest serum.

*Foot-and-Mouth Disease.*—The disease prevailed to a certain extent throughout the year, almost all Provinces being more or less infected, but not in a very virulent form. The total number of cases was 10,907, against 10,377 last year. The total number of cases outside Colombo town was 10,887, of which 10,600 recovered, 285 died, and 2 were shot. In Colombo town only 8 cases were reported, and at

the quarantine station 12 cases. As usual, the disease was of a very mild type, and spread with great rapidity. There was an extensive outbreak in the Province of Uva, the number affected being 4,584, of which 4,532 recovered and 52 died. Unlike rinderpest, this disease seems to be enzootic in the Island, although fresh waves of infection are often introduced to Colombo and the Western Province by imported cattle from India.

**Anthrax.**—In the various Provinces 259 cases were reported, of which 251 died and 8 recovered. In Colombo town there were 16 cases and at the quarantine station 395 cases amongst sheep and goats imported from South India. 151 cases of anthrax were met with in Mannar District in Northern Province, and 49 cases in Matara District in the Southern Province. Certain low swampy pasture lands were suspected to be the breeding ground of this disease in Matara District, and on the cattle being removed from such lands the disease soon subsided. This is a point that requires further investigation, especially as this disease may affect human beings in the form of malignant pustule by accidental inoculation. An intestinal and a pulmonary form of anthrax are also known to affect man.

**Rabies.**—160 suspected cases were examined at the Bacteriological Institute, of which 60 were from Colombo town; of these, 43 gave positive and 14 negative results. Three were received unfit for examination. 522 persons underwent treatment at the Pasteur Institute in Colombo. It is felt that this humane institution is a great boon to the public; and especially poor people, who had formerly to go all the way to Coonoor for treatment when bitten by mad dogs, are thankful that they can have it now almost at their very door.

**Black Quarter or Quarter Ill.**—Fifteen cases were reported in the Province of Uva, of which all proved fatal. This disease, which is hardly amenable to treatment, and is responsible for a great deal of mortality among young stock in certain countries, is comparatively rare in Ceylon. When present it can be made out by the crackling tumours or swellings and the resulting lameness.

The Island was free from swine septicaemia, which gave considerable trouble during the previous two years; and no cases of surra occurred, although this disease seriously affects horses, cattle, and camels in India, and was met with among cattle up-country in Ceylon in some previous years.

**Horses.**—There was no outbreak of infectious disease among horses during the year, and the dire disease, glanders, which is such a pest in certain Indian coast towns, is practically unknown in this Island.

Cattle and Disease Return for 1919.

\* "All diseases" are from provincial returns. The cases of infectious diseases are from Stock Inspectors' reports.

The total number of cattle and buffaloes for the whole Island is 1,597,617.

The statement of diseases above excludes Colombo Municipality, the figures within Municipal limits being—

| Disease.                   | Number of Cases. | Recoveries. | Deaths. |

Compared with 1918 there has been an increase of 10 horses, 4,613 cattle, and 2,526 sheep, and a decrease of only 594 goats. Although there has been a large decrease during the period of the war, there has been no shortage of meat in the Island. The meat supply has been largely drawn from country cattle.

### IV.—IMPROVEMENT OF CATTLE.

A fresh impetus has been given to the improvement of cattle by the great interest taken in it by His Excellency the Governor, and by the publication of the report of the Cattle Breeding Committee. This report is a concise document containing in a small compass a good deal of useful information on the improvement of cattle. The Committee held six meetings, gathered information from several important witnesses, and visited several cattle-breeding establishments and dairies. The number of native cattle in the Island is said to be very considerable, taking into account the inadequate attention given to their feeding and maintenance by the owners. The Government has offered to supply land for communal pastures where suitable Crown land is available, provided that cattle owners will fence it. The Committee deplores the fact that no attempt has been made to take advantage of this offer.

The following paragraph on milk supply is worth quoting :—“An improvement of the town supplies of milk can be affected by an improvement of the milch cows by crossing and selection, and by attention to the feeding of calves and young stock. This has been demonstrated in the military dairies in India, and the Tamil cow-keepers upon estates up-country realize the advantage of the services of good stud animals. The dairies in the town of Colombo are chiefly in the hands of Indian milkmen, and the conditions of housing are not ideal. Improvement in the sanitary conditions under which milk is produced has been effected in the past few years by the Sanitary Inspectors and by the Ladies' League. Several dairies have been started in the residential suburbs of Colombo for the supply of the well-to-do residents. These are under intelligent management, and are being well run. The price of milk in Colombo is, however, extravagantly high, and beyond the means of the poorer classes. This high price is attributed to the high cost of grass and feeding stuffs, but a most important contributory factor towards this high price of milk is the poor milking qualities of the majority of the cows in the dairies. The establishment of dairies without Municipal limits, where supplies of grass can be readily grown, is to be recommended, and the possibilities of co-operative dairies are worthy of close investigation. In the majority of the dairies of the Colony calf starvation is common, and no improvement in the quality of dairy stock is to be expected so long as this neglect in the feeding of calves is continued. At the present time the loss arising from this practice of calf starvation is considerable.”

In order to impress these important suggestions of the Committee more fully on the people, a leaflet was issued by this Department at the request of Government, both in English and the vernaculars. The following is an extract from it :—“The Committee on Cattle Breeding appointed by Government have devoted much time and taken a good deal of trouble to ascertain the defects in the system of cattle breeding in Ceylon, and have suggested ways and means by which those defects could be rectified and substantial improvements effected in cattle breeding. They have done all this for the benefit of the cattle-owning inhabitants of Ceylon. While we should be grateful to them for the trouble they have taken and the suggestions made by them, I think one of the best ways by which we can show our gratitude to them is by adopting and carrying out the improvements they have suggested as far as possible, so that

they may have the satisfaction of seeing that their efforts have not been in vain, and that they have been appreciated by the cattle-owning public of Ceylon. The following are some of the means by which improvements can be carried out in cattle breeding in Ceylon :—

- “(1) By using good stud bulls.
- “(2) By good feeding.
- “(3) By taking care of the calves and young stock.
- “(4) By selection of cows.”

For fuller information on these four heads, reference may be made to the leaflet itself, the concluding lines of which run thus :—“Some of the wealthy residents in Colombo and several planters up-country have done a good deal in the selection and breeding of cows of superior breeds. But the ordinary householders should also do what they can in this direction, and if they could not singly afford to do much, they should join together and form co-operative dairies established on a proper systematic basis so that milk might be sold at a reasonable price, and form not merely a luxury, as it is in most of the towns in Ceylon at present, but a staple article of diet of everyday use, especially for the young, the aged, and the invalid.”

The Agricultural Department and the local Agricultural Societies are also trying to improve the breed of cattle. The Assistant Veterinary Surgeon, Nuwara Eliya, reports that there is a movement to open a “Cattle Club” under the auspices of the Nuwara Eliya Branch of the Agricultural Society, and to improve the breed of cattle by introducing superior stud bulls from Europe.

Mr. H. L. de Mel intends opening a cattle-breeding farm in the Ragedara district of the North-Western Province, in the neighbourhood of Melgreen estate. It is from philanthropic private efforts of such public-spirited gentlemen that the greatest good can be expected in the way of improvement of cattle, and the scheme contemplated by Mr. de Mel has the hearty sympathy and approval of Government. Mr. de Mel's object is to breed cattle both for milk and draught purposes, including buffaloes for agricultural work. He also intends rearing pigs, goats, and poultry. The growing of suitable fodder crops and experimenting with cattle foods of various description will receive attention. A lease of about 500 acres of land will probably be obtained from Government for the purpose. The farm will be in charge of one of Mr. de Mel's superintendents, who holds a diploma in agriculture and has specialized in diseases of animals. When this farm is opened and worked in conjunction with his farm school, it is bound to prove a great factor in the amelioration of the people's condition, and will undoubtedly tend to their advancement.

#### V.—QUARANTINE.

The Municipal Veterinary Surgeon kindly furnishes the following information :—

##### Colombo Quarantine Station.

##### Statement showing the Number of Cattle admitted during 1919.

|   |        |  |       |

| November ..  | 171             | 25               | 8                     | 126   | 87    | 417   |        |
| December ..  | 409             | 59               | 25                    | 243   | 132   | 868   |        |
| Total ..     | 4,894           | 769              | 192                   | 1,982 | 1,144 | 8,981 |        |

The Veterinary Officer in charge reports as follows :—

**Staff.**—Veterinary Inspector Mr. S. C. Jeysingh Raj held charge till July 4, when he was relieved by the present Inspector, Mr. T. S. Alagappa Pillai. One attendant and one peon constitute the menial staff.

**Number of Cattle, Sheep, and Goats passed through.**—8,981 head of cattle, including 1,336 calves, were passed for shipment during the year under report, against 4,793 of the previous year, thus showing an increase of 4,188. There was no quarantine for sheep and goats, and there was no outbreak of infective disease in the depôt.

**Nature of Disease, Recoveries, Deaths.**—One death was suspected to have been from anthrax in August, but the result of the microscopical examination at the Madras Veterinary College was negative. There were two deaths from anthrax among the cattle awaiting admission in June, and the batches to which the victims belonged were kept under observation for a week before admission into the depôt.

**Inoculation and General Remarks.**—5,472 head of cattle were inoculated against rinderpest during the year. No protection from the sun and rain is afforded to the cattle. There are no separate yards provided in the depôt. The period of quarantine has been raised from six to ten days. All these go to show that it is not safe to continue a temporary depôt, like the present one, any longer.

From the concluding paragraph of this report, it is evident that there is a good deal of room for improvement in the arrangements and accommodation at the Tuticorin Depôt. The Chairman and the Veterinary Surgeon of the Colombo Municipal Council accompanied by an Engineer of the Public Works Department have just paid a visit to this depôt, and the quarantine arrangements will be modified and improved on lines recommended by them and approved by Government.

*Kayts Quarantine Camp.*

Statement showing the Number of Cattle admitted during 1919.

|   |     |
|---|-----|
| Number imported for draught work—cattle | 689 |
| Number imported for milking—cattle      | 3   |

The appearance of rinderpest among the cattle imported through Kayts has been a comparatively rare occurrence. During last March and April nearly 50 cases of this disease occurred among the cattle brought to the Kayts Quarantine Camp from Kodikarai and Adirampatam in Southern India. The insular position of the Quarantine Station proved a great safeguard against the prevalence of the disease, and the Stock Inspector was kept very busy in trying to stamp it out. The question as to whether Kayts should be kept on as a port of landing for cattle or discontinued is now under consideration. Judging from what occurred last year, one thing is quite clear. If the importation of cattle at Kayts is to be continued, greater attention should be paid to the quarantine camp, and especially to the fence around the camp sheds. The present live fence around the sheds should be kept in good repair, and a watcher should be on guard at the gate during the season when cattle are imported. A wire fence around the camp at a little distance outside the present fence, with an empty space of ground between the two fences, is a great desideratum, and would effectually prevent the spreading of any infectious disease to the native cattle on the Island of Kayts when it breaks out at the camp.

VI.—RABIES.

| District.    | Number of Cases examined at the Bacteriological Institute. | Number Positive. | Number Negative. | Unfit for Examination. |
|--------------|--|------------------|------------------|------------------------|
| Colombo      | 60   | 43               | 14               | 3                      |

| Weligama     | 1  | 1                | —                | —                      |
| Hikkaduwa    | 1  | —                | —                | 1                      |
| Nawala       | 1  | 1                | —                | —                      |
| Total        | 160  | 90               | 38               | 32                     |

Five hundred and twenty-two people underwent treatment at the Pasteur Institute in Colombo during the year 1919.

The Directors of the Bacteriological Institute and the Pasteur Institute, Colombo, have kindly furnished the above information.

VII.—MISCELLANEOUS.

The horses of His Excellency the Governor's Escort, the Police horses, the draught bulls of the Public Works Department, Convict Establishment, and Botanic Gardens, and the Government Dairy cattle have been treated when necessary; and animals were examined as to soundness and valuation prior to purchase for these institutions.

An illustration of the proper use and the resulting advantage of anti-rinderpest inoculation was afforded in the case of the bulls at the Public Works Department Store. One of the animals got an attack of rinderpest, and on information about it being received, the other animals were inoculated with anti-rinderpest serum, and were saved from what might otherwise have proved a virulent outbreak.

C. M. R. horses were examined whenever required for insurance under the Volunteer Horse Insurance Scheme. This is a piece of work that will probably require a separate qualified Veterinary Surgeon being set apart for it in course of time.

The examination of imported dogs has been carried out regularly with a view to preventing the introduction and spread of rabies. Considering the frequency of their importation and the increasing number of dogs brought over from Europe, India, and the Far East, the question of imposing a small fee payable by the owner for each dog examined and passed by the Veterinary Surgeon may have to be considered in the near future.

VIII.—GOVERNMENT DAIRY, BRANCH FARM AT AMBEPUSSA, AND MODEL FARM.

*Government Dairy.*

The Manager, Mr. P. C. J. Fernando, presents the following report:—

*Disease among Stock.*—No disease of a contagious nature occurred during the year. Rinderpest was prevalent in the town to a great extent. Strict measures were taken, with success, to protect the herd from infection. Parasitic gastritis due to *Hæmonchus contortus* was responsible for the loss of 11 cows and 17 calves.

*Purchase of Stock.*—7 cows and 5 bulls were purchased during the year at a cost of Rs. 3,465.0

*Sale of Stock.*—The proceeds of the sale of stock amounted to Rs. 3,785.57. Five young Scinde bulls, valued at Rs. 850, were sold to the French Consul, and were sent to Morocco for breeding purposes.

*Working of the Dairy.*—The total working expenses were Rs. 46,177.08, and the total credits Rs. 47,889.47, giving a balance of Rs. 1,712.39. Owing to rinderpest in the town, the use of the bulls for stud purposes was suspended during most of the year.

The total output of milk for the year was 23,791 gallons, most of which was supplied free to the Government hospitals in Colombo. The cost of production was practically 32½ cents per bottle. The price debited to Government institutions was 45 cents per quart, which is equal to 30 cents per bottle. The price of cattle food has risen considerably, and an increase in the price of milk to 51 cents per quart is found necessary from 1920. This will work out at 34 cents per bottle. The price of milk in town is 38 to 40 cents.

*Removal of the Dairy.*—The new land at Narahenpita, acquired for the purpose of the removal of the dairy, was taken in charge during the year. The work in connection with the building is in progress, and it is hoped to move the dairy to its new site in 1920.

Statement of Receipts and Expenditure and Return of Live Stock on hand are annexed:—

Receipts and Expenditure Statement of the Government Dairy for 1919.

| RECEIPTS.  |            | Amount.   | EXPENDITURE.                |  | Amount.   |

Branch Farm, Ambepussa.

*Manager.*—Mr. R. F. P. Jayawardena (acting).

*Health of Cattle.*—The health of cattle has been satisfactory on the whole. In the latter part of the year a few cases of worm disease proved fatal.

*Additions and Repairs to Buildings.*—No repairs were done during the year. The cattle shed and cooly lines require shifting of tiles, tarring, plastering, and whitewashing. The Manager's bungalow requires whitewashing and painting. A separate storeroom is required for keeping cattle food, &c.; at present a part of the bungalow is utilized for the purpose.

*Roads.*—The approach road to the farm from the railway station was repaired during the year, but the curve at the junction is too steep and abrupt, and requires filling up and metalling. This piece of work will probably be attended to by the Public Works Department at an early date.

*Fencing.*—The fence round the quarantine shed and cooly lines were repaired by the farm coolies.

*Grass Field.*—A few acres of jungle were cleared and planted with Mauritius grass during the year, and all shrubs and weeds in the existing grass field were cleared and manure applied regularly. There was a shortage of grass in March, and the cattle had to be fed with straw and an additional allowance of artificial food. It is intended to extend the grass field along the banks of the Maha-oya.

Well.—The pump goes out of order in dry weather, and when the water level gets low, it cannot be worked. A more powerful pump than the present one is required

The total expenditure was Rs. 6,056·08.

Statements of expenditure and live stock are annexed :—

Model Farm.

Manager.—Mr. V. H. Herat.

The grass lands and the grazing lands which were hitherto attached to the Model Farm and yielded an annual income of about Rs. 1,500 were handed over to the Hon. the Government Agent, Western Province, in March last, to be dealt with by him.

The sheep on this farm are thriving fairly well. Six ewes were purchased from Mr. J. J. Patterson of Coil estate, Pallai, with a view to improve the breed by the introduction of fresh blood. These new animals are doing well. There are several applications for sheep, and it is hoped to dispose of a select number of animals at an early date.

The Model Farm, while continuing to be a farm as heretofore, will, in addition, be made use of as a quarantine camp for the dairy cattle whenever required.

Statement of receipts and expenditure and live stock are annexed :—

Receipts and Expenditure Statement of the Model Farm for 1919.

| Total ..                | 231 31            | Total ..                      | 1,204 24          |

Live Stock Return of the Model Farm for 1919.

| Particulars.     | Balance on December 31, 1918. | Purchased during the Year. | Born during the Year. | Total. | Died during the Year. | Sold during the Year. | Number to be struck off. | Balance on December 31, 1919. |
|------------------|-------------------------------|----------------------------|-----------------------|--------|-----------------------|-----------------------|--------------------------|-------------------------------|
| Ewes and rams .. | 14                            | 6                          | —                     | 20     | 2                     | —                     | 2                        | 18                            |
| Lambs ..         | 20                            | —                          | 12                    | 32     | 10                    | —                     | 10                       | 22                            |

In conclusion, I have to thank the members of the staff for their service. The work is of an arduous nature, and the Department being a comparatively small one, a considerable share of responsibility devolves on each individual officer ; and I thank them all for the faithful discharge of their respective duties.

Colombo, February 28, 1920.

E. T. HOOLE,  
Acting Government Veterinary Surgeon.

# GOVERNMENT ANALYST'S DEPARTMENT.

## REPORT OF THE GOVERNMENT ANALYST FOR 1919.

### I.—INTRODUCTORY.

THIS report covers the work carried out in the laboratory during the year 1919. The figures show that there was a very considerable increase in the work as compared with the year 1918, and the number of reports made constitutes a record for the Department. The following figures also show a comparison with the last complete pre-war year :—

|      | Analyses. | Reports. |      | Analyses. | Reports. |
|------|-----------|----------|------|-----------|----------|
| 1913 | 789       | 308      | 1919 | 1,261     | 488      |
| 1918 | 1,013     | 423      |      |           |          |

### II.—STAFF.

2. Mr. K. C. Browning, who had been in England on war service since December, 1916, retired from Government Service through ill-health, with effect from June 9, 1919, and Mr. C. T. Symons, who had been acting for Mr. Browning during the whole of the period, was appointed Government Analyst from the same date. Mr. W. N. Rae, Lecturer in Physics and Acting Professor of Chemistry at the Ceylon Medical College, was appointed Assistant Government Analyst, with effect from October 8, 1919.

### III.—MEDICO-LEGAL INVESTIGATIONS.

3. During the year 801 productions, &c., from 260 cases were examined, as compared with 820 productions from 270 cases in 1918.

4. *Stains*.—This year 361 productions of various kinds, including the accused persons in two cases, were examined for blood and seminal stains, a slight increase on 1918 figures. It was not found possible again this year to use the precipitin test, but it is hoped to adopt it when full staff and proper facilities are provided. It is once more to be noted that in nearly every case where the identification of human blood was required no blood at all was found on the production.

5. The results of 45 cases have been reported to me by the Police, showing convictions in 16 cases.

6. *Poisoning Cases*.—The number of cases dealt with was 67, with 224 productions, as compared with 56 cases and 136 productions in 1918. The following table gives the nature of the poison or drug where any was identified, with arsenic as usual most prominent :—

| Poison.                          | Productions. | Poison.                | Productions. |
|----------------------------------|--------------|------------------------|--------------|
| Aconite ..                       | 2            | Jeyes' fluid ..        | 1            |
| Ammonium aluminium sulphate ..   | 1            | Mercury ..             | 2            |
| Arsenic ..                       | 28           | Opium ..               | 5            |
| Atropine ..                      | 5            | Potassium bromide ..   | 1            |
| Atropine and opium ..            | 1            | Quinine sulphate ..    | 1            |
| Boric acid and powdered glass .. | 1            | Sal ammoniac ..        | 1            |
| Cocaine ..                       | 2            | Strychnine ..          | 5            |
| Croton oil ..                    | 1            | Unidentified poison .. | 4            |
| Gloriosa superba ..              | 2            |                        | 63           |

7. Reports have been received from the Police with regard to only 27 of these cases, showing 3 convictions.

8. *Prohibited Drugs*.—In this section the number of productions has dropped very considerably as compared with the year 1918. In 1919 the productions numbered 200 in 60 cases, as compared with 384 in 102 cases in 1918. Ganja and opium accounted for all the productions except one, which was wrongly suspected to contain cocaine. One or other of the two former drugs was identified in 122 of the productions, of which 61 were imported ganja.

9. The reported results of 50 cases show convictions in 23 cases.

10. *Miscellaneous*.—Six cases occurred in which productions of a miscellaneous character were examined, including crude potash, charred bones, sand, arrack.

### IV.—REMARKS ON MEDICO-LEGAL WORK.

11. There is still ample room for improvement in the manner of labelling and forwarding productions for examination. In four cases this was so careless that the productions were rendered unsuitable for examination. Three classes of Police in training were given demonstrations as to the methods used in the laboratory.

12. The condition of productions on receipt at the laboratory in certain poisoning cases has been such that the isolation of an active toxic principle from the productions still left a doubt as to whether this principle was due to decomposition or to some poison introduced into the productions.

## PART V.—PUBLIC WORKS.

## PUBLIC WORKS DEPARTMENT.

## REPORT OF THE DIRECTOR OF PUBLIC WORKS FOR 1919.

I HAVE the honour to submit the following report on the operations of the Public Works Department during the year 1919.

## EXPENDITURE.

2. The amounts expended under the respective heads of the Supply Bill for the financial period October 1, 1918, to September 30, 1919, are as follows :—

|  | Rs.       | c. |
|--|-----------|----|
| Personal Emoluments (inclusive of Clerical Service) .. | 907,305   | 79 |
| War Allowances to Government Servants and Temporary .. |           |    |
| Increases of Salaries ..                               | 162,555   | 74 |
| Other Charges ..                                       | 125,060   | 35 |
| Public Works Recurrent ..                              | 4,503,263 | 9  |
| Public Works Extraordinary ..                          | 2,736,367 | 5  |
| Other Departmental Votes, &c. ..                       | 330,473   | 19 |
| Total ..   | 8,765,025 | 21 |

3. For purposes of comparison the statement of expenditure during the last twenty-four years is tabulated :—

| Year.       | Recurrent. | Extraordinary. | Miscellaneous,<br>including<br>Loans, &c. | Total.     |
|-------------|------------|----------------|---|------------|
|             | Rs.        | Rs.            | Rs.                                       | Rs.        |
| 1895 ..     | 1,756,001  | 1,286,889      | —   | 3,042,890  |
| 1896 ..     | 1,823,558  | 1,219,106      | —   | 3,042,664  |
| 1897 ..     | 1,726,669  | 1,838,650      | —   | 3,565,319  |
| 1898 ..     | 1,900,307  | 1,510,143      | 369,324                                   | 3,779,774  |
| 1899 ..     | 2,040,684  | 1,707,119      | 1,250,125                                 | 4,997,928  |
| 1900 ..     | 2,029,279  | 1,610,261      | 1,074,665                                 | 4,714,205  |
| 1901 ..     | 2,112,905  | 1,348,032      | 666,028                                   | 4,126,965  |
| 1902 ..     | 2,163,394  | 1,448,491      | 572,143                                   | 4,184,028  |

| Total ..  |   |    |   |    | 8,765,025 | 21 |

\* Includes Miscellaneous.

The expenditure incurred at the Government Factory and in connection with the Colombo Lake Development Scheme is included in that of the Western Province, and that incurred on the Mandapam Cooly Immigration Camp in the expenditure of the Northern Province.

5. The expenditure under the different sub-heads of the Annual Estimates, excluding Personal Emoluments and Other Charges, is shown in tabular form on page 3.

6. During the year under review the progress and execution of works of maintenance and construction has been retarded by general ill-health in the earlier months, difficulties in regard to rice and food supplies, and to an unusually wet year. The return of officers from war service has been slow, and considerable strain on the staff generally has resulted, but all have worked loyally and well.

## MAINTENANCE OF ROADS.

7. The total mileage of roads maintained is 4,086·19, being 13·11 miles in excess of the previous year.

8. Classified as metalled, gravelled, and natural, the mileage of roads in the various Provinces is as follows :—

| Province.         | Metalled.<br>Miles. | Gravelled.<br>Miles. | Natural.<br>Miles. | Total.<br>Miles. |
|-------------------|---------------------|----------------------|--------------------|------------------|
| Western ..        | 424·68              | 17·73                | —                  | 442·41           |
| Central, North .. | 302·79              | 49·72                | 30·75              | 383·26           |
| Central, South .. | 345·65              | 4·33                 | 26·13              | 376·11           |
| Southern ..       | 320·12              | 16·29                | —                  | 336·41           |
| Northern ..       | 383·69              | 76·29                | 57·08              | 517·06           |

11. The roads generally have been maintained in satisfactory condition and state of repair. There has been a steady increase in motor traffic of all kinds, pointing to the necessity for further road improvement in the matter of widening and strengthening, and a still more liberal allowance for maintenance if traffic and road requirements are to keep pace with each other, as they should. The votes allowed for road improvement and widening hitherto have yielded excellent results, but a far larger annual expenditure is possible under this head, and it would be a wise policy considerably to increase the allocation of funds for this necessary work, so that it may be systematically continued to completion on the hill roads and in the more developed and populous parts of the low-country.

12. The number of steam rollers available is now eighty-five, five new ones being received during the year. Numbers of the older rollers have been in use for many years, and extensive boiler repairs are becoming necessary. Work has been commenced on making a new boiler for the 10-ton roller, which has been in constant use for twenty-nine years.

With a fleet of steam rollers gradually increasing towards a hundred, and in constant use all over the Island, the question of effecting running and major repairs has become a serious one. Minor repairs, which are easily carried out with good workshops at hand, present quite a different proposition on the side of a country road, and the "stitch in time" or small adjustment is often not made because of time that would be lost in driving a cumbersome machine to the district headquarters, where it might be effected. To remedy this and so prolong the period between overhauls the provision of a portable repair outfit on a motor lorry, with an experienced mechanic in charge, is under consideration.

13. The provision for more accommodation for the labour force working on roads is still most necessary; the number of lines is inadequate, and in many instances of a temporary nature.

14. The roads now open to motor lorry traffic, with the gross weights admissible, are as follows:—

(a) Roads on which there is no objection to Motor Lorries being run under the Regulations (maximum weight, 6 tons).

|--|--|--|

(b) Roads on which there is no objection to Motor Lorries being run under modified conditions as to Total Weights stated.

[illegible]

## INLAND NAVIGATION.

15. The canals, waterways, and channels open to navigation have been kept in a fair state of repair; more attention will, however, be required in future in respect of those in the North-Western Province, the accumulation of silt having been unusually heavy in places during the last twelve months.

## MAINTENANCE OF BUILDINGS.

16. The number of buildings in charge of this Department and the cost of maintenance for the year under review were as follows :—

| Class of Building.  | Number.  | Average Cost. |
|---|----------|---------------|
|   |          | Rs. c.        |
| Government buildings, exclusive of Medical and Police buildings, and excluding King's Houses .. | 1,038 .. | 179 64        |
| Medical buildings .. ..   | 266 ..   | 324 26        |
| Police buildings .. ..  | 92 ..    | 277 70        |

.. All buildings have been kept in a satisfactory state of repair.

## ADDITIONS AND IMPROVEMENTS TO BUILDINGS.

17. Many minor alterations were effected to various buildings at a total cost of Rs. 32,678·96.

## MAINTENANCE OF BRIDGES.

18. The bridges of 50 feet span and over, numbering 322, were kept in an efficient state of repair. The increasing axle loads and higher speed of motor vehicles demand a stronger type of bridge, and many of the older bridges, some of them of long span, have become obsolete, and will have to be replaced as soon as possible.

Some 250 timber platform bridges still remain on the main roads of the Colony, and the policy of gradually replacing them by modern structures is being continued. The money voted for this work does not, however, go as far as it did owing to the high price of steel now obtaining.

## PUBLIC WORKS EXTRAORDINARY.

19. The expenditure incurred under this head of the Estimates was as follows :—

|  | Ra.       | c. |  | Ra.       | c. |
|--|-----------|----|--|-----------|----|
| New works and buildings ..                 | 1,134,514 | 2  | New roads ..                           | 19,474    | 93 |
| Additions and improvements to buildings .. | 194,682   | 6  | Additions and improvements to roads .. | 344,521   | 36 |
| New bridges ..                             | 102,121   | 47 |  |           |    |
| Repair of bridges ..                       | 43,275    | 17 |  |           |    |
| Miscellaneous ..                           | 897,828   | 4  | Total ..                               | 2,736,367 | 5  |

**The distribution of this expenditure was as follows :—**

| Province.      | New Works and Buildings. |      | Additions and Improvements to Buildings. |      | New Bridges. |      | Repair of Bridges. |      | Miscellaneous. |      | New Roads. |      | Additions and Improvements to Roads. |    |

20. The allocation of funds for the prosecution of extraordinary works during the year under review was more restricted than usual and confined chiefly to works already in hand, comparatively few new works of importance being undertaken. The effect of the curtailment of expenditure was most pronounced at the Government Factory and on the Colombo Lake Development Scheme, where the labour forces had to be considerably reduced.

#### Western Province.

Provincial Engineer, Mr. E. H. van der Straaten.

21. Apart from the Government Factory and Colombo Lake Development Scheme, which are dealt with separately, expenditure in the Western Province amounted to Rs. 1,794,948, Rs. 833,555 being on account of road maintenance and other recurrent works, and Rs. 940,914 on new works and buildings, &c. The principal works in hand are enumerated below.

#### New Buildings and Works.

22. *New Lunatic Asylum, Angoda, Colombo.*—Substantial progress has been made in the construction of this institution, the aim being to complete the administrative buildings and wards for females first, in order to relieve congestion at the present asylum, and then to complete the male side. The work is one of magnitude, and will take several years to finish completely. Quarters for the staff as follows have been completed :—

- (a) Medical Superintendent's bungalow, costing 32·2 cents a cubic foot.
- (b) Medical Officer's quarters, costing 31·1 cents a cubic foot.
- (c) Matron's quarters, costing 29·8 cents a cubic foot.
- (d) Quarters for Assistant Matron and six nurses, costing 28·1 cents a cubic foot.
- (e) Quarters for sixteen attendants, costing 16·9 cents a cubic foot.

Each building is self-contained, with all necessary kitchen, latrine, and bath accommodation; fencing has been erected, and the surrounding compounds planted with shade and fruit trees. The construction of the dispensary, kitchen block, and dining hall for females, and quarters for overseers and apothecaries is approaching completion, and arrangements for building the wards are in hand.

The drainage of all buildings in this institution will be on the water-carriage system, treated by the activated sludge process.

23. *Police Headquarters, San Sebastian, Colombo.*—The first block of buildings of the new Police Headquarters was completed. It provides accommodation for twelve married European sergeants in separate flats in a three-storey building. Cost per flat Rs. 11,226. Cost per cubic foot 35 cents. The flats are well arranged and self-contained.

24. *Training College, Colombo.*—On the completion of the new south-east block of the female side of the College, the old single-storey building on the east side of the quadrangle was demolished and a new and spacious block of two-storeys erected in its place, comprising lecture halls, kitchen, stores, baths, lavatories, dining room, and dormitories for students. The completion of this block places the female side of the College in a very satisfactory position as regards accommodation. Cost per cubic foot 33½ cents.

25. *Science Block, Royal College, Colombo.*—In connection with the University College Scheme the erection of the new science block made satisfactory progress, and is nearing completion. It is a building 187 feet long by 62 feet wide, and provides extensive laboratories and lecture halls, the design being in keeping with the adjacent College.

26. *New Royal College, Colombo.*—Unavoidable delay occurred in starting the construction of this building facing Racecourse avenue, but at the time of writing the foundations have been laid and the walling is being started.

27. *Explosives Magazine, Welikada.*—Urgent necessity for increased accommodation for explosives having arisen, an extension to the existing magazine providing 8,315 cubic feet additional space with 308 feet of boundary wall was erected. The design of the new magazine is an up-to-date one, and the work was executed in three months in a very satisfactory manner. Cost per cubic foot 52½ cents.

28. *New Government Dairy, Narahenpitiya.*—Progress on this work, which when completed will do away with the present dairy near the Royal College, was delayed by alterations to plans asked for by the Finance Committee, with a view to reducing the cost of the project from Rs. 165,000 to Rs. 125,000. At the close of the year the approach road had been constructed, water laid on, fences constructed, and the foundations laid for the main cattle shed.

29. *Land Registry, Negombo.*—Commenced in February, 1918, this building was satisfactorily completed during the year. It consists of a record room 75 feet long by 25 feet wide, with clerks' room 50 feet by 25 feet, Registrar's office bookbinder's room, tiffin room, a 9-feet verandah round the building, and the necessary fencing, latrine accommodation, &c. Cost per cubic foot 22 cents.

30. *Elementary Schools, Dematagoda, and Technical School, Colombo.*—These two schools were erected at a cost of 21½ cents a cubic foot, and are not only well suited to the purpose for which they were designed, but are pleasing to look at and a credit to the designer.

31. *Additions to Hospitals, Colombo.*—(a) At the De Soysa Lying-in Home a new two-storey building to provide for patients upstairs and lecture and office rooms on the ground floor, with necessary lavatories, &c., was in hand, and nearly completed.

(b) At the Lady Havelock Hospital additional five rooms to the nurses' quarters were built, while existing rooms were enlarged.

(c) At the General Hospital the following works were completed :—A new mortuary for the pauper section and extending the existing post-mortem room; additional ventilation to diarrhoea wards, with ceiling to one ward; sundry improvements to the main kitchen and fuel shed; providing permanent roofs to ulcer and syphilis wards; and six sinks and water taps to verandahs of six wards.

32. In addition to the above particular works, miscellaneous buildings and extensions of minor importance were erected or were in hand to the number of 222.

33. The works embraced by the Colombo Lake Development Scheme, Parsons road bridge over the Railway and the Passenger Jetty and Customs road improvements, progressed slowly for various reasons. Funds for the prosecution of the Lake Scheme proper were very limited, and the programme of work had to be restricted accordingly. The steelwork for Parsons road over-bridge did not arrive

until late in the year, and difficulties in connection with the town drains under the approaches have retarded the completion of the roadways. Work on the Customs roads, i.e., Wharf road and Customs yard, was practically completed, but the approach to the bridge to the Passenger Jetty was delayed owing to negotiations with the Fort Land Company being incomplete.

34. The Chief Engineer, Lake Scheme, Mr. J. Strachan, reports as follows in regard to the Lake Development Scheme, the total cost on which to the end of December, 1919, was Rs. 5,959,641·71, the estimated cost for the completed project being Rs. 8,718,345 :—

*Colombo Lake Development and Canal Lake to Harbour, including Lakeside Basin and Lakeside Warehouses.*

1. Further dredging in the lake has been carried out, and reclamation made behind St. Andrew's Church, between the railway bridge crossing the lake and the footbridge to Wekanda Mills.
2. The total dredging to date is 30,038,457 cubic feet.
3. The total reclamation to date is 52·03 acres.
4. The east and west locks were completed, and the construction of a lock-keepers' office was commenced.
5. The bridges over the locks were completed, with the exception of the roadway and the parapets, which have not been taken up.
6. The work of lowering the inverts in the two central spans of the bridge carrying the Coast line of railway over the canal lake to harbour was begun by the Railway Construction Department. One invert was completed, and the other commenced.
7. Very little work was done on the bridge carrying Norris road over canal lake to harbour, beyond the diversion of tramway tracks and other minor preparatory works.
8. On the bridge carrying Main street over the canal lake to harbour, the abutments and piers, except in the east span, were raised to required levels, and 18 inches by 7 inches steel joists are being placed in position. Operations in connection with the raising of the decking of the east span were begun.
9. The new bridge carrying Norris road over the connecting channel between the San Sebastian canal and the canal basin was completed by the Railway Construction Department, and the waterway under the new bridge opened to traffic.
10. A wall 34 feet long to connect the west wall of the San Sebastian canal with the abutment of the new bridge was completed, and the connecting wall to the east wall of the canal was begun.
11. The total length of walls, abutments, piers, &c., built to December 31, 1919, is 17,141 lineal feet.
12. Part of the pumping machinery for the San Sebastian pumping station was received. The construction of the foundations for the machinery was begun and very nearly completed.
13. *Lakeside Warehouses.*—The area was excavated to required depth. After trial piles had been driven, it was decided to adopt reinforced concrete raft foundations. A good deal of work was done in the preparation of the reinforcing steel, and the construction of raft foundation was begun.
14. The extension of drains to the new lines of reclamation was taken up, and drains along Lilly street and Jefferson street in Slave Island were extended through reclaimed land to the lake.

*Bridges.*

35. *Digarolla Bridge.*—The construction of this bridge across the Panadure river, under the supervision of the Factory Engineer, was proceeded with, the under water work of the seven piers and two abutments being practically completed, the depth to which the cylinders or wells were sunk being on an average 45 feet below water level. The raw material, i.e., steel channels, angles, bars, plates, &c., for the sixteen main girders and superstructure is slow in arriving from England, but little having been received as yet.

36. *Dematagoda Bridge.*—To provide head room for barges, this 40 feet span lattice girder bridge was raised 3 feet 6 inches in height, the abutments being built up to a similar extent. The work was carried out without dismantling the bridge or removing a single stone sett from the platform. Timber trestles were erected 6 feet from each abutment, 9 inch by 7 inch R. S. joists were bolted vertically to the pillars of each main girder, with a cross girder underneath them. Ten-ton hydraulic jacks were then placed at the four corners underneath the cross girders and worked slowly and simultaneously, while timber wedges were inserted on the trestles as the bridge rose. About 9 to 12 inches of abutment was built at a time, the raising process being repeated as required.

*Roads.*

37. Rs. 61,271 was spent in road improvements and extensions in the Province during the year, the most important works being the Agalawatta-Badureliya road, Walbotale-Kinadeniya road, Nagoda-Matugama road, and the extension of the Kallawellawa road, the latter work being completed to within eleven chains of the Kalu-ganga. The deviation of the Kandy road at Peliyagoda to avoid the dangerous corners just across the Victoria bridge was begun late in the year, as was the acquisition of land for widening the first few miles of the Negombo road.

38. Increase of traffic with the wider development of the Province is noticeable on many roads, and lorries and motor buses are now largely in use everywhere one goes. The heavier loads carried at comparatively high speeds demand stronger and wider road platforms and bridges than now generally exist, and a systematic programme of improvement with funds to prosecute it is essential to place the roads of the Western Province in a satisfactory condition to meet coming needs.

**Central Province, North.**

Provincial Engineer, Mr. P. M. Bingham.

*Buildings and Works.*

39. *Teldeniya Police Station.*—The building of this new station was completed during the year. It consists of an administration block, quarters for an Inspector and sergeant, and barracks for eight married and four single constables, with a parade ground and the usual accessories, the total cost being Rs. 38,994. The cubic foot cost of the various buildings was as follows :—Administration block 23 cents, quarters and barracks 26½ cents, coach house and stables 22 cents, latrines and wash-houses 48 cents.

40. *District Court, Kandy.*—The construction of a record room with accommodation for clerks and recordkeeper, waiting room, and lavatory at this court-house was begun, and when completed will supply a long-felt want.

41. *Deltota Hospital*.—Considerable improvement was effected at the Medical Officer's quarters at this hospital by glazing in the verandah, providing a servants' lavatory, and carrying out various alterations at a cost of Rs. 1,945.

42. At Mulhalkele and Matala hospitals alterations and additions were in hand with a view to improving the latrine accommodation.

#### Miscellaneous.

43. The roll of flood damages was smaller in the year under review than usual, due probably to a more regularly distributed rainfall and the absence of heavy downpours. Fifteen different items of repair on various roads were necessary, and an expenditure of Rs. 3,300 incurred thereon.

#### Roads.

44. Improvements were carried out on the Nawala-Elahera road, Deltota-Rikiligasgoda road, and commenced on the Galahenwatta-Yatawatta road, North road to Mahawela, Kandy-Hewaheta road, Kandy-Haragama road, and Peradeniya-Deltota road.

### Central Province, South.

Provincial Engineer, Mr. R. A. Powell.

#### New Works and Buildings.

45. *Hospital, Agrapatana*.—This hospital, which was begun in 1918, was completed and handed over to the Medical Department in May, the total cost being Rs. 91,998 and the cubic foot cost 39 cents. The buildings consist of two wards accommodating 24 patients, an administration block, Medical Officer's quarters, apothecary's and nurses' quarters, attendants' quarters, and bathrooms and latrines, &c. The cost of levelling the site was heavy; the hospital is situated on the top of a hill, which was cut down to allow of all buildings being erected at one level, enabling the working of the hospital to be carried on with much advantage, which can seldom be obtained in hospital sites up-country.

46. *Police Inspector's Quarters, Hatton*.—This building was completed. It is conveniently situated near the police station on a site acquired from Hatton estate. Cost Rs. 7,999, or 34 cents per cubic foot.

47. *Visiting Apothecary's Quarters, Dolosbage*.—This building was built and completed at a cost of Rs. 8,774, or 39 cents a cubic foot. It is of the usual type for such quarters, and is situated about a quarter of a mile from the hospital on the Nawalapitiya road.

48. *Nawalapitiya Hospital*.—New quarters for the Medical Officer and a new operating room have been completed at a cost of Rs. 19,796, or 34 cents a cubic foot. The quarters are somewhat larger than the usual type; a consulting room has been added, and the verandahs enclosed owing to the exposed position.

49. *Cooly Lines*.—The following were erected for the accommodation of road coolies:—

|                               |     |     |             |
|-------------------------------|-----|-----|-------------|
| Craigie Lea-Nawalapitiya road | ... | ... | .. 10 rooms |
| Nuwara Eliya-Ramboda road     | ... | ... | .. 5 rooms  |
| Uda Pussellawa road           | ... | ... | .. 4 rooms  |
| Dolosbage road                | ... | ... | .. 4 rooms  |

An expenditure of Rs. 5,400 was incurred in improving the sanitary condition of existing lines on the roads in the Province to great advantage.

#### Bridges.

50. *Bridewell Bridge, Bogawantalawa Road*.—The present bridge, which is too weak to take the heavier type of motor lorries, is now being replaced by a stronger bridge. The new bridge is being erected alongside the old one, and on a better alignment, as a skew steel structure of 30 feet span and 18 foot roadway. This work is well advanced.

51. *Gampola Bridge*.—Borings were taken and plans prepared for the erection of a new bridge at Gampola to replace the present suspension bridge, which has done duty for over half a century, but is no longer strong enough to take the heavy traffic from the Pussellawa and Ramboda districts. At the date of writing this report actual construction has already been begun, but the work is one of some magnitude and difficulty, and will probably take 2½ years to complete. In the meantime the old bridge will be used for traffic as heretofore.

#### Miscellaneous.

52. *Nawalapitiya*.—Consequent on the outbreak of plague at Nawalapitiya, a scheme for the improvement of the town was prepared and has been sanctioned. A swamp near the railway station has been filled in and converted into a recreation ground, drains have been laid, insanitary buildings are either to be replaced by a modern type or re-modelled in conformity to the Town Planning Ordinance, and streets are to be widened and back lanes constructed. The work is in hand.

53. Rs. 23,000 was spent during the year in putting to rights damage caused by floods in the shape of landslips, scoured inverts and broken culverts, and damaged walls.

#### Roads.

54. *Strathdon-Fruithill Road*.—The widening of this important link was completed during the year. The road has been doubled in width, corners have been eased, and the alignment generally much improved. Close to Strathdon factory a new stone-arched bridge of 30 feet span has been built; this is one of the largest span masonry bridges up-country.

55. *Lindula-Talawakele Road*.—The widening of this important road, which has been in progress for some time, was completed during the year, and it is now in many ways the finest road in the hill country.

56. It is regretted that so small a sum was available for road improvements in this Province (as in others) during the year. The continuous increase in the number of cars and lorries makes the improvement of up-country roads more necessary every year, and the danger of accident ought to be reduced as much and as soon as possible.

## Southern Province.

Provincial Engineer, Mr. A. E. Mayes.

*New Works and Buildings.*

57. *Udugama Hospital.*—As stated in my last report, progress in the construction of this hospital was so slow that the work had to be taken out of the hands of the contractor. Since then a contract has been entered into with Messrs. Clark, Spence & Co., of Galle, and the work is now in hand and progressing satisfactorily.

58. *Medical Buildings, Elpitiya.*—The land for these buildings was not handed over to this Department till late in the year. The levelling of the site and collection of materials is now in hand.

59. *Survey Department, Office and Quarters, Galle.*—Land was acquired as a site for these buildings during the year at a cost of Rs. 17,171.

60. *Hospital, Galle.*—The new two-storey ward and other alterations consequent on its erection were nearly completed, the expenditure at the close of the financial year being Rs. 26,464.

*Miscellaneous.*

61. *Coast Protection.*—The throwing in of a rubble protection apron was continued near the 60th mile, Colombo-Galle road, and extended both north and south to meet fresh inroads of the sea. The erosion to the south appears to have now ceased, but to the north it has been unusually rapid, and urgent measures had to be taken to divert the road. Altogether 605 cubes of rubble were deposited during the year at this place.

At Matara the protection works were continued with success; there has been a considerable excretion of sand, and groynes Nos. 5 to 16 have been extended seaward some 30 feet each.

62. *Water-collecting Tanks, Hambantota District.*—Two reinforced concrete tanks, 16 feet in diameter and 10 feet deep, were constructed at the cooly lines at the 143rd mile, Tangalla-Hambantota road, and 12th mile, Hambantota-Tanamalwila road, to collect and store rain water from the roofs of the lines for drinking purposes. Expenditure Rs. 4,126. Water is scarce throughout the Hambantota District, and similar tanks erected at other lines have proved a success and a great boon to the labour force employed on the roads.

*Roads.*

63. *Ambalangoda-Elpitiya Road.*—Work on this road has been continued, and the road has now been widened and metalled to the 9th mile, and work has been begun on the 10th mile.

64. *Hambantota-Tanamalwila Road.*—It was hoped that the sanctioned improvements to this road would have been completed during the year, but the outbreak of cholera and the rice difficulty prevented this from being done.

65. *Wirawila-Kirinda Road via Tissu.*—The work of improving this road was continued, but progress was very slow owing to scarcity of water, the outbreak of cholera, and difficulty over rice. Miles 2, 6, 10, and 11 were metalled, and miles 3, 4, and 5 partially metalled.

66. *Weligama-Telijjawila Road.*—Good progress was made with the improvement of this road, and the 6th and 7th miles are completed, while a considerable amount of work has been done on the 2nd, 3rd, 4th, and 5th miles. Expenditure to September 30, 1919, Rs. 29,721.

67. Minor improvements were also effected on the Deniyaya-Hayes road, the Galle-Bentota road, Matara-Akuressa road, Udugama road, and the Tangalla-Hambantota road.

## Northern Province.

Provincial Engineer, Mr. Walter C. Price.

*New Works and Buildings.*

68. *Sanitary Department, Cooly Lines, Talaimannar.*—The reconstruction of these lines was completed at a cost of Rs. 2,214 and the buildings occupied. They are a distinct improvement on the old ones.

69. The construction of an overseers' quarters and Public Works Department lines at Talaimannar was also completed, as was the mosquito proofing of these buildings.

70. *District Court, Jaffna.*—Additions, comprising offices, record and consulting rooms, and sundry other improvements, were completed at a cost of Rs. 20,484.

71. *Jaffna Hospital.*—The final touches were put to the first and second class paying wards at the Jaffna hospital. These wards are well patronized and generally full. The expenditure amounted to Rs. 14,930.

72. *Court-house, Chavakachcheri.*—The roof of this court was renewed throughout at a cost of Rs. 6,996.

*Miscellaneous.*

73. *Karayur Reclamation.*—During the year a further area of 7 acres 3 roods 11 perches was reclaimed, bringing the total area reclaimed to a little over 45½ acres, and leaving 19 more to complete. In addition to this, an area of 1 rood 2½ perches previously reclaimed was raised 2 feet higher and five culverts were built. The reclamation was carried out entirely by prison labour.

During the year two mud barges were erected and a quarter mile of trolley track were supplied, while an additional 4 pontoons, 20 trollies, and a mile of portable track were arranged for and are now being delivered.

74. *Talaimannar.*—The project for filling in the low ground adjoining Government buildings at Talaimannar to prevent accumulation of water was completed and a great improvement effected, but there is still much more work of this nature to be done in and around the settlement.

75. *Flood Damages.*—The unusual rainfall of 23 inches in 24 hours which occurred at Jaffna on November 18, 1918, and extended to certain other parts of the Province as well, raised the level of the lagoon to 4 feet above normal and caused very considerable damage to roads, bridges, and culverts, as well as to private property.

To relieve the floods, the cutting and deepening of the channel from Tervervayal to bridge No. 15, near the 3rd mile on the Jaffna-Kankasanturai road, was undertaken, with a most beneficial effect on large areas of cultivated land. The construction of thirteen bridges and culverts was also undertaken and completed, being necessary for the better drainage of lands bordering public roads in the peninsula. Expenditure under this head in carrying out the above works and rectifying damage done in the Province by these floods amounted to Rs. 68,194.

76. In connection with the surveys and demarcation of flood channels in the Jaffna peninsula, which was also in progress during the year and is being continued, much useful work has been done, and the network of channels as they appear to have existed before they were encroached upon or filled in in cultivation operations is being gradually defined and recorded for future use. The Provincial Engineer in reporting on this matter states :—

There are about 200 miles of drainage channels in the Jaffna peninsula. During recent years many of these have been blocked up or partly closed by the operations of cultivators. These channels may be divided into three groups :—

- (a) Channels which flow into the Jaffna lagoon ;
- (b) Channels which discharge into the sea on the north coast ;
- (c) Channels which discharge into the land-locked lagoor known as Tondaimanaru, which extends from the north to the south of the peninsula, dividing it into two islands.

The surveys, investigation, and demarcation which have been carried out during the year have been confined to those channels (a) which flow into the Jaffna lagoon, and three different systems have been investigated and channel surveyed and demarcated on the ground by the fixing of concrete pickets. These systems are :—

- (1) The Kondavil-Taddatturai system ;
- (2) The Valukkai-arū system ;
- (3) The Punnalai system.

The survey of (1) (Kondavil-Taddatturai) was taken up in December, 1918. There are 8½ miles of channel, and the land drained by these channels is 8 square miles in extent ; two kulams and seven villages are drained by this system of channels. While the survey was in progress it was found that immediate relief could be given to this large area by the deepening of the main channel, and a sum of Rs. 3,200 was allowed by Government for the work, which was carried out with a most beneficial effect to the land and villages. The survey indicates that much may still be done to improve the conditions, but the acquisition of land and the removal of encroachments will probably cause much delay in perfecting the undertaking. Seventeen sheets of plans have been drawn in connection with this system.

The Valukkai-arū system (No. 2) is the longest of the three systems. The survey was taken up in July last, and 15 miles of channel were surveyed and demarcated with stone pickets. The total length of channels to be so defined is 38½ miles. About 40 square miles of area subject to flood will be benefited by maintaining and guarding against encroachment ; the channels so defined—sixty kulams (twenty-two of which have been defined)—and twenty-four villages will be largely protected from floods if these channels are maintained and encroachment prevented. Twenty-six sheets of plans have been prepared in connection with this scheme. It is hoped to continue the defining of the remaining miles of these channels in the dry weather when the flood water has run off.

The Punnalai system consists of 18 miles of channels, which drain twenty-five kulams and four villages ; the survey of these channels will be taken in hand as soon as weather permits.

There are two other small systems, where the flood water is drained into the lagoon independently of the larger systems mentioned ; these are Verduvankandey and Anaikoddai channels, which fall into the Jaffna lagoon 2½ miles and 4 miles west of Jaffna ; there are 4½ miles of channels in these systems. Anaikoddai has been surveyed and demarcated. The two channels drain four kulams and two villages. Three sheets of plans have been drawn in connection with these systems.

When surveying these channels it was found necessary to survey and demarcate the various kulams through which the channels flow. It was generally found that these kulams had been encroached upon and parts filled in. This has much increased the liability to sudden flooding of lands and villages through which these channels run.

It should be explained that almost all the flood outlet channels in the Jaffna peninsula become perfectly dry in the month of January and remain so till October ; during the time they are dry they are used as cart roads and paths and are spoken of as “lanes,” and in many cases they are the only public means of communication between neighbouring villages. The vice of encroachment is more prevalent in the Jaffna peninsula than in any part of Ceylon, and it is due to this failing that the owners of lands adjoining these lanes or channels have year by year extended their cadjan fences in order to include a portion of the channel or lane in their holdings. Thus they fill up and raise to the level of their land. The channel or lane, which was originally 20 or 25 feet wide, is reduced to a ditch of 5 feet wide, with the result that extensive areas and numerous villages are flooded in November and December, and applications made for relief to conditions which they themselves have created, not without a full knowledge of the natural results of their encroachments. In some cases it has been found that 100 yards of channel has been completely filled up and all traces obliterated. This necessitates the acquisition of new land for the channel. The necessity for such acquisition will cause much obstruction and delay in the carrying out of any scheme for the improvement of the drainage of the peninsula. It appears that for the last fifteen years no steps have been taken by Government to guard these public channels from encroachment, and there has been no regular system of maintaining them by removing silt and keeping the outlets at the lagoon open, and there has been no united attempt by the owners of lands drained by these channels to keep them open and effective.

#### Roads.

77. *Vavuniya-Paraiyanalankulam Road.*—The track metalling of this road has now been completed for the whole length of 22½ miles, and is suitable for all traffic throughout the year.

#### Eastern Province.

Provincial Engineer, Mr. W. R. W. Morgan.

#### New Works and Buildings.

78. *Leper Asylum, Mantivu.*—The construction of this leper settlement on the island of Mantivu is now nearing completion. The administrative buildings, officers' and sisters' quarters, hospital, single women's quarters, and all subsidiary outbuildings have been finished, and the eighteen cottages for families are in hand. The drainage system is nearing completion, and materials for the water supply, which is to be a piped extension of the Batticaloa town supply, are expected to arrive shortly. The total expenditure to the end of the financial year 1918-19 was Rs. 147,934.

79. *Medical Officer's Quarters, Kattankudi.*—This building completing the group of medical buildings serving the populous town of Kattankudi was finished during the year at a cost of Rs. 6,484, or 18·49 cents a cubic foot.

#### Miscellaneous.

80. *Flood Damages.*—Considerable damage was caused by floods to the Batticaloa-Trincomalee road in the north-east monsoon of 1918, necessitating the renewing of embankments and the construction of an arched culvert on the 39th mile, and a considerable deviation at Uppar, where the ferry approaches were damaged by flood and the road encroached on by the sea.

81. *Flagstaff, Trincomalee.*—The flagstaff at Fort Frederick having become decayed and unsafe, it was taken down and replaced by a new laminated teakwood main mast 63 feet long, 24 inches diameter at butt tapering to 12 inches at the top, made at the Government Factory, the old top mast and fittings being used. Cost Rs. 4,069.

82. *Relief Works, Kalmunai.*—A sum of Rs. 9,988 was spent in relief work during the year in the Kalmunai district. The works undertaken were the further extension of the western approach to the Kiddanki ferry, the widening of embankments on the Karativu-Sammanturai road, Irrakamam-Arasadi road, Malkampiddi road, and the main South Coast road. The work done has greatly improved these roads.

#### Roads.

83. *South Coast Road Deviation.*—The metalling of the remaining  $1\frac{1}{2}$  miles of this road, which was constructed to avoid the congested and narrow roadway through Kattankudi, was completed during the year, and the 5 miles of it now form one of the finest roads in the Province.

84. *Old South Coast Road.*—The full metalling of miles 0-5 of this road has been completed at a cost of Rs. 12,990, and the road improved in other ways as far as is possible.

85. *Bar Road, Ratticaloa.*—The widening and metalling of this 3 miles of road has been completed. Cost Rs. 19,741.

86. *Road to New Salt Stores, Trincomalee.*—The opening of central salt stores at the gun wharf, Trincomalee, has necessitated the metalling of the road through the town from Nilaveli, as the heavy salt traffic cut the gravelled surface to pieces. A foundation of packed rubble was laid in the softer place, and the whole metalled at a cost of Rs. 5,650.

#### North-Western Province.

Provincial Engineer, Mr. R. G. Carte.

##### Works and Buildings.

87. *Dandagamuwa Hospital.*—The re-modelling of this hospital, which has been in hand for some time, has been completed, Rs. 24,928 having been spent in the process. The hospital is now convenient, up to date, and considerably enlarged.

88. *Steam Roller Sheds.*—Two sheds were built, one at Kurunegala and one at Dandagamuwa, for the housing and protection of steam rollers when not in use.

89. *Cooly Lines.*—The Public Works Department cooly lines in the Province were provided with latrine accommodation, and wells for the lines on the Nikaweratiya-Nikawewa road were sunk.

#### Roads.

90. *Alawwa-Dampelessa Road.*—The work of metalling this road was continued, but progress was disappointing, difficulty being experienced in procuring foundation stone in sufficient quantities, and in time to admit of the metal being spread in the wet weather. Expenditure Rs. 10,352.

91. *Nikaweratiya-Nikawewa Road.*—The track metalling of this road was proceeded with, the 16th, 17th, 18th, and 19th miles being completed. Six miles more remain to be track metalled and complete the work. Expenditure Rs. 3,633.

92. *Nattandiya-Dunkannawa Road.*—Work on the improvement and metalling of this road was practically completed. Rs. 4,933 was spent during the year in easing gradients and foundationing and metalling.

93. *Dankotuwa-Madampe Road.*—The metalling and improvement of this road made but poor progress during the year, as labour and transport conditions were difficult. Expenditure Rs. 7,735.

94. *Pannala-Kuliapitiya Road.*—Owing to delay in obtaining steelwork for bridges, work on the improvement of this road was much retarded. Good quantities of metal were procured, however, and, on the completion of the bridges, will be transported and laid. Expenditure Rs. 9,763.

#### North-Central Province.

Provincial Engineer, Mr. A. Rothwell.

##### Works and Buildings.

95. *Quarters for Provincial Surgeon, Anuradhapura.*—The construction of these quarters was completed at a total cost of Rs. 32,703. The building is one of two storeys, and specially adapted to the climate of the place.

96. *Circuit Bungalow, Keppitigollewa.*—This bungalow on the Horawapotana-Vayuniya road was reconstructed at a cost of Rs. 3,000, and is a great boon to officers and others using this road.

97. *Cooly Lines.*—Latrines for the use of coolies were erected for all Public Works Department lines in the Anuradhapura and Mihintale districts during the year at a cost of Rs. 2,598.

#### Roads.

98. *Madawachchi-Mannar Road.*—Track metalling this road was continued during the year on the 51st, 52nd, and 53rd miles. Expenditure Rs. 4,991.

#### Province of Uva.

Provincial Engineer, Mr. A. de C. Carson.

##### New Works and Buildings.

99. *Quarters for Assistant Conservator of Forests, Haputale.*—A bungalow consisting of drawing room, dining room, sitting room, three bedrooms, two dressing rooms, two bathrooms, a drying room, storeroom, kitchen, servants' room, garage, servants' latrine was built. The foundations are of stone masonry in lime mortar, the external walls of dressed stone masonry pointed in cement, the internal walls of random rubble masonry plastered and whitewashed two coats, except in the living rooms, where they are distempered. The sitting room is contained in the front porch, which has glazed frames on three sides and a rough cast and timbered gable. The roof is of Calicut tiles on sawn timber. Ceilings are of sapu wood. Fire places with chimney, cooking stove, and drying stove were provided. A gravelled road was constructed to the building from the main road. The cost a cubic foot was 34 cents, and the total cost Rs. 25,500. The expenditure during the year was Rs. 9,944.53.

100. *Post Office, Moneragala*.—This building consists of Post Office storeroom, Postmaster's quarters (three rooms), Assistant Postmaster's quarters (two rooms), with kitchens and bathrooms for each. The building itself was completed and occupied during 1919, but the estimate has not been finally completed, as a water supply has not yet been provided; this is in progress, and consists in catching the rain water from the roof and storing it in underground concrete tanks. Expenditure during the year was Rs. 7,340·64.

101. *Quarters for Married Surveyors, Diyatalawa*.—Two quarters each, consisting of living room, two bedrooms, kitchen, servants' room, bathroom, with water service and servants' latrine were built. The buildings are constructed of stone masonry in lime mortar, roof of Calicut tiles, and cement concrete floors. Cost a cubic foot 25½ cents. Total cost Rs. 11,149·73. Expenditure during the year Rs. 2,784·45.

102. *Quarters for Junior Clerks, Forest Office, Haputale*.—Quarters consisting of living room, two bedrooms, kitchen, bathroom were built. The foundations and walls are of stone; the walls are plastered and whitewashed, the roof is of Calicut tiles, and the floors are cement concrete. Cost a cubic foot 35 cents. Total cost Rs. 5,992·11. Expenditure during the year Rs. 1,099·53.

103. *Dispensary, Tanamalwila*.—This building consists of a dispensary and office, living room, two bedrooms, kitchen, bathroom. The foundations are of concrete, the walls of brick work plastered and whitewashed, roof of Calicut tiles, and floor of lime concrete rendered in cement. This building was costly on account of the distance it is situated from Haputale or any centre of bazaar. Cost a cubic foot 43·09 cents. Total cost Rs. 7,239·86. Expenditure during the year Rs. 3,040·52.

104. *Forest Ranger's Quarters, Haputale*.—This work was only lately commenced. It consists of a glazed verandah, sitting room, two bedrooms, kitchen, bathroom, office, and store. The expenditure during the year was Rs. 2,485·73.

105. *Improvements to Drainage, Survey Camp, Diyatalawa*.—The drainage system in the western portion of the camp was overhauled and the drains connected with the main camp outfall drain, which was extended 300 feet, to a stream. Total cost Rs. 6,967·18. Expenditure during the year Rs. 1,967·20.

#### Bridges.

106. *The Uma-oya Bridge*, crossing the Badulla-Uda Pussellawa bridle road across the Uma-oya, on the 9th mile, was completed during the year. It is 379 feet in length, and is constructed of old girders of the Brotherhood type brought from the Kurunegala District, and is 42 feet above the bed of the river. The work involved the construction of 1½ miles of new bridle road and the repair of damages previously caused by flood. The bridge is in a particularly wet and unhealthy valley, and the conditions of work were severe. Total cost Rs. 60,778.

#### Roads.

107. *Widening road from Haputale to Halpe*.—The widening of the road from 108½ milepost to Haputale has been completed, except for the spreading of a few cubes of metal. This is now a good wide road, and capable of carrying any traffic likely to come on to it. Work this year was carried out from the 110 to 111½ milepost. Total cost Rs. 53,355·76. Expenditure during the year Rs. 5,319·72.

108. *Metalling Muppane-Pottuvil Road*.—This work has now been completed, and there is a good metalled road from Muppane to the Province boundary at the 42nd milepost. The total cost was Rs. 80,179·40. Expenditure during the year Rs. 1,498·93.

109. *Widening road from Ella towards Namunukula*.—This work is progressing; owing to want of funds, only from the 4th to 4½ milepost was done last year. Cost Rs. 999·34.

110. *Widening Haldummulla-Wellawaya Road*.—Widening has been fully completed on the 112th mile; the 113th, 117th, 118th, and 119th miles have been widened, but the widened portion has not been metalled. Some widening has been done on 114th, 115th, and 116th; the remaining work to be done on these miles consists chiefly of paving and metalling. The Wiharagala slip has again consumed the major portion of the labour and money spent on this estimate, and work on it has been continuous in order to keep this important road open; there appears to be no end to it: only recently a rock 10 feet cube at least has risen up through the mud. The culverts on the Haputale Pass which is above the slip have been stopped and the water diverted, but this has had no effect on the slip. As far as can be seen there is no possibility of draining the slip, and it has become a serious problem how to deal with it.

111. *Improvements to Causeways, Bibile-Medagama-Muppane Road*.—All the causeways on this road have been relaid with proper stone paving. Danger signals are erected on either side of each causeway, some of which are at very sharp angles to the road, an improvement much desired by the travelling public. Cost Rs. 7,994·16.

112. *Widening 1st mile, Nawula-Spring Valley Road*.—Compensation was paid for land and buildings taken over and the work completed. Total cost Rs. 7,306·33. Expenditure during the year Rs. 1,307·86.

#### Province of Sabaragamuwa.

Provincial Engineer (Acting), Mr. O. T. Nettelton.

#### Works and Buildings.

113. *Survey Office, Ratnapura*.—This work, which was nearing completion at the end of 1918, was finished. Cost Rs. 16,727, or 27 cents a cubic foot.

114. *Balangoda Hospital*.—New stables, fencing in the hospital grounds, and servants' latrines were completed during the year, thus finishing the improvements to this hospital begun a year earlier.

115. *Karawanella Hospital*.—Delay in the acquisition of the sites for the new quarters for the visiting apothecary, second apothecary, and steward prevented an early start being made with these buildings. The land was taken over by this Department in July, 1919, and since then good progress has been made.

#### Miscellaneous.

116. *Water Supply, Avissawella*.—The construction of the dam was well in hand at the close of the year, the main laid, service reservoir nearly complete, and piping for the hospital provided. It is anticipated that the whole work will be finished in April, 1920. The cost has been greater than anticipated, the price of all materials has been high and uncertain, and rates of labour have advanced considerably since the work was started. Expenditure during 1918-19 Rs. 20,599.

*Roads.*

117. *Karandupone-Rambukkana Road*.—Certain minor improvements were made to this road at a cost of Rs. 4,496. The opening of this new outlet to the railway for Kegalla has been made considerable use of, and traffic on the road is already heavy.

118. *Ellearawa-Pinnauala Road*.—The improvements to the existing road, with the exception of the deviation, were completed during the year, the deviation being held over until the completion of the further section of road, which is a more urgent matter and is in hand.

119. *Pindeniya Road*.—The improvement of this road taken over from the District Road Committee, Kegalla, is in hand, consisting of widening, extending culverts, and re-metalling. Expenditure Rs. 4,947.

120. *Kahawatta-Rakwana Road*.—Widening of the road platform, extending culverts, and cutting back corners was carried out to the extent of the funds voted. Expenditure Rs. 9,494.

121. *Madampe-Hambantota Road*.—Track foundationing and metalling on the 94th and 95th miles were completed; and work of the same nature on other miles is in progress. There has been very considerable development of traffic on the upper miles of this road during the year, much timber being carted over it from lands being cleared and opened.

**Mandapam Camp.**

Officer in Charge, Mr. C. D. Beling.

122. The number of buildings in the camp is now 106, and there are close on 6 miles of roads.

123. Mr. Beling reports as follows :—

(1) *Water Supply and Sewage*.—Owing to the non-arrival of the electrically driven plant ordered for these works, the old temporary steam plant was in use throughout the year. Two boilers which had become unsafe were condemned, and the steam pumps driven by them were replaced with geared pumps driven by oil engines. The plant in use consists of two 4-inch centrifugal pumps for sewage, one 3-inch centrifugal pump and oil engine, and a steam pump and boiler for sea water for flushing latrines, and four pumps for pumping fresh water to the reservoir. Some inconvenience was caused by the blockage of the adit pipes laid in the water stratum, and it was found that the roots of the "babool" trees which were reserved in the water-collecting area to provide cover and prevent evaporation were responsible for it. The roots appear to have a remarkable tendency to find their way through the joints into the pipes, which they choked effectively. The trees are now being removed wholesale in the vicinity of the wells.

(2) The scheme for utilizing sea water for flushing latrines and sewers was completed early in the year, and served the coolie wards and part of the administration block and passengers' wards. A considerable quantity of fresh water was thereby saved, which would otherwise have been used up for this purpose.

(3) *Buildings*.—Additional labour accommodation for the Public Works Department staff was sanctioned, and the following buildings were started and are in progress :—

Two blocks of two units each for Public Works Department clerks.

Two blocks of five units each for Public Works Department fitters and artificers.

Two blocks of six units each for Public Works Department coolies and sweepers.

A hospital for cholera was completed during the year and has been handed over to the Superintendent. This was built entirely from sandstone quarried from the seabeach, and it was not possible to obtain bricks at the time.

(4) *Kitchens*.—The Hindu kitchen was extended to accommodate twelve Farmer's boilers fitted with copper pans for the preparation of curry and pepper water, as the cast iron steam cookers are not suitable owing to the action of the acids on the metal. It is intended later on to provide steam cookers with copper-tinned pans for this purpose, and an experimental one is now being made at the Government Factory.

(5) *Electrical Installation*.—Owing to the delay in the arrival of the electrical fittings much progress has not been possible with the scheme. The power station has been fitted with the engines and generators, and it is hoped to push on with the rest of the scheme early next year.

(6) *Sewage*.—The sewage-collecting pit at the south beach was provided with a reinforced concrete cover, and the discharge pipe from the pump was carried out to sea. These improvements have eliminated to a great extent the unpleasant odour from the pit experienced before. The sea water flushing scheme for latrines and sewers was completed. A circular brick reservoir is provided, which acts as a balance tank to the pumping main, and has a sufficient capacity to last throughout the night when the pump is stopped. It is now proposed to extend the sea water flushing system to the rest of the camp, and a scheme is now being prepared.

(7) *Water Supply*.—A scheme for extending the water-collecting area is in progress. Six new wells 10 feet diameter are being sunk, and these will be connected to the sealed pumping chambers by stoneware pipes laid in the fresh water stratum, the pipes having openings at intervals to collect water. The unusually heavy north-east monsoon this year has interfered with the progress of this work, which has been suspended till the dry weather sets in.

(8) *General*.—The chief event of importance during the period under review was the unprecedented rush of immigrants to Ceylon during the months April to July, obviously in order to escape from the famine conditions prevailing in South India. The number of coolies and passengers which passed through the camp during these months were as follows :—

|                                   | Total.  |                                  | Total.  |
|-----------------------------------|---------|----------------------------------|---------|
| April : coolies and passengers .. | 76,897  | June : coolies and passengers .. | 135,674 |
| May : do. ..                      | 139,923 | July : do. ..                    | 104,367 |

(9) The number of coolie wards provided was found to be insufficient, and temporary sheds had to be hastily erected to relieve the situation. Three temporary coolie wards and eight segregation sheds with latrines on the bucket system were run up rapidly. Extra accommodation was also required for the increased staff temporarily engaged, and eight temporary cadjan lines of six units each were put up for the Camp Superintendent's staff and Public Works Department labour.

(10) The Hindu kitchen had a very busy time, and upwards of 12,000 meals a day were served from it alone. The number of steam cookers provided were found sufficient, but the difficulty was experienced with the steam generating plant, as the small vertical boiler provided as a stand-by was not capable by itself of providing sufficient steam for the kitchen, with the result that the big locomotive boiler was in continual use, and could not therefore be washed out or attended to in any way. The small vertical boiler is now being replaced by another locomotive boiler, and it will be possible to work each of them alternately.

(11) The increase of camp population had its effects on the camp water supply, which was drawn upon rather heavily, with the result that a slight excess of salinity has been revealed by tests made by the Government Analyst. It is expected, however, that the quality will improve with the good rainfall in the north-east monsoon.

124. The expenditure during the year under all heads amounted to Rs. 108,490.

**Government Factory.**

Factory Engineer, Mr. G. H. M. Hyde.

125. Expenditure during the year amounted to Rs. 701,805, which is lower than it has been for some considerable time.

126. The Factory Engineer reports as follows :—

(1) During the financial year under review the shortage of materials owing to the war and the general policy of retrenchment by Government had the effect of keeping the workshops for the most part short of orders, and in consequence heavy reduction in the number of men employed had to be continued. In the *Bridge Shop* alone, which was most affected in this way, the number of men had to be reduced from 750 to 200, as at present. Only a few small bridges were constructed, as well as the usual run of small work for other Government Departments, mud barges, &c., and a number of tip wagons were also put in hand for the Karaiyur Reclamation Scheme, Jaffna. In regard to the work in this workshop, in order to cope with bridge work in future, two additional multi-spindle drilling machines are badly required.

(2) *The Machine Shop*, as usual, was kept fairly full with work during the whole year, thus keeping the machine tool plant fully employed. The complete rebuilding of thirty-two steam rollers, besides the usual minor repairs to many others during the year, provided work for a large number of machines and workmen. Over and above the maintenance of steam rollers, a great variety of other work was carried out, such as water tanks, cast iron piping, &c., sluices and other plant and repairs for the Lake Development Scheme; telephone and instrument works; cranes and machine tools for the Port Commission; dredging plant for Nuwara Eliya; boiler repairs and general repairs for other Government Departments.

The output of this important branch of the Factory is only limited by the number of machine tools and space available for laying out work. There is every sign of the tendency to "manufacture" rather than "import" machinery to increase the necessary plant of Government Establishment, and in this connection a much larger and a more fully equipped machine tool plant is necessary.

The number of high class machines have certainly been added to during the recent years, and others have been successfully constructed locally, but the time has certainly come to throw out the remainder of the old inefficient worn out machines of forty years and more and to instal in their place new high speed tools.

At least eight more medium size lathes are required, besides drilling, milling, grinding, planing, and other tools. If the Factory be provided with a complete modern plant, a large part of the machinery required by the Colony could be manufactured locally at much lower cost than by importing.

(3) *The Iron and the Brass Foundries* were kept fully employed during the financial year on general foundry work for all Government Departments, including a considerable amount of work for the Port Commission. It is interesting to note that the Factory rate for the supply of cast iron has remained at almost half the price of that supplied by the local merchant firms. Both foundries are well equipped and capable of handling all ordinary work required by Government.

(4) *The Blacksmiths' Shop*, on the whole, has been kept well supplied with work of the usual varied nature, and, for the sake of economy, the endeavour has been to use scrap materials as much as possible in making small forgings, and quite a large quantity of old materials has been turned to useful account in this way.

(5) The whole of the *Smiths' Shop* plant is completely worn out, and should be entirely scrapped. The smiths' hearths are of the crudest description, making it difficult and expensive to heat work properly. There are in this shop three steam hammers, all of which are worn out; in fact, two of them were actually thrown aside as scrap some years ago, but owing to pressure of work had to be patched up and put to use again. Three new steam hammers are required, a 10-cwt., 5-cwt., and a 2½-cwt. size, besides twenty-four properly constructed hearths of good British make. It is very important that an electric welding plant should be acquired for the repair of steam boilers and general construction work, for an enormous saving in time can be effected by the use of one of these plants.

(6) *The Carpenters' Shop and Saw Mill* have, on the whole, been somewhat slack during the year, owing to the cessation of the building of large outworks by the Factory Staff, which usually more or less kept this shop going. The commencement of the new scheme of supplying timber to outstations has, however, made the saw mill of this shop once more very busy, and it is desirable now to have proper arrangements for the storage and seasoning of the timber put on a proper basis as early as possible. Among the heavier works carried out during the year were hulls for Nuwara Eliya dredger and mud barges, together with a new flagstaff for Trincomalee.

(7) *Power Supply*.—The large wood waste gas plant was put successfully in operation towards the end of the year, and is now supplying gas for the Machine and Bridge Shop engines which lie some 75 yards apart. A great saving is being effected by the use of this plant, although it will probably not be shown as any distinct saving in the general fuel bill this year, owing to the fact that the steam-driven log saws are now continually hard at work, besides which two more steam cranes, which are used for handling timber, are now burning nearly one ton of firewood per day. Before long it will be very necessary to instal a 75 horse power engine to drive the Machine Shop, as the present one of 44 horse power is now at its full limit of power. The existing 44 horse power engine can then with advantage replace the fifty-year old steam engine, which at present drives the Carpenters' Shop machines. There is sufficient margin in the new gas plant to drive all engines at once, but not until this change has been made and all possible steam engines cut out can the full benefit of the new gas plant be felt.

(8) *Labour*.—Owing to extreme scarcity of work during the year due to the war, a great reduction in the number of workmen employed by the Government Factory had to be made, which, I fear, caused some considerable distress among them; however, efforts were made to alleviate some of their hard conditions of life by closing some of the workshops only for part of the time.

During the year Government conceded a temporary increase to the wages of all workmen owing to the high cost of living and other expenses contributed by the war. They are as follows :—

75 cents and under per diem : 45 per cent. increase.

80 cents to Re 1.15 per diem : 35 per cent. increase.

Re. 1.20 to Re. 1.90 per diem : 25 per cent. increase.

Re. 1.95 to Rs. 4 per diem : 20 per cent. increase.

In February of the year the workmen appealed for shorter number of working hours per week, which Government not only conceded, but with the addition that the new rate per hour was taken on the shorter number of hours per week, thus giving the workmen the benefit of a further 7.7 per cent. increase.

**Electrical.**

Electrical Engineer, Mr. F. B. Rylands.

127. The Electrical Engineer reports as follows :—

(1) From October, 1918, to September, 1919, the expenditure on new works and extensions to Government electrical installations has been Rs. 105,982.44 and for electrical energy Rs. 75,766.11, making a total of Rs. 181,748.55.

*Maintenance.*

|  | Rs.    | c. |
|--|--------|----|
| Electric lights, fans, motors, &c., and other apparatus                | 35,598 | 69 |
| Electric light and power station and distribution system, Nuwara Eliya | 8,632  | 80 |

*New Works and Additions.*

|  |        |    |
|--|--------|----|
| Electric lighting and apparatus, Colombo Customs, Medical Department, Mandapam Camp, Police Department, Education Department, Railway Department, Survey Department, Post and Telegraph Department, General Treasury, Revenue Department, Judicial Department, Peace Celebrations, and Miscellaneous | 38,979 | 77 |
|--|--------|----|

*Telegraph Instruments.*

|  |        |    |
|--|--------|----|
| Repairs, alterations, &c., have been executed to 3,558 relays (standard P. O., non-polarized, Vyle's polarized), sounders (local direct working non-polarized and portable), vibrators, keys, differential and single current rheostats, Wheatstone bridges, detectors (Q and I), test boards, commutators, zinc rods, &c. | 14,627 | 72 |
|--|--------|----|

*Telephone and Railway Electric Signalling Instruments.*

|  |        |    |
|--|--------|----|
| Repairs, alterations, &c., have been executed to 1,020 wall and desk sets, phonopore, long distance portable, tablet, cabin indicators, operators' sets, generators, extension bells, receivers, D.P. and W.P. switchboards, plugs, fuses, &c. | 8,143  | 46 |
| Electric current, Public Departments   | 75,766 | 11 |

Total .. 181,748 55

(2) During the past year six new Government electrical installations have been fitted with electric lights and fans, and a variety of other installations in Colombo and Kandy, a total of fifty ceiling fans and four desk fans having been installed.

(3) *Mandapam Camp Electric Lighting.*—This work is now in progress, the power station electrical equipment, including main switchboard, is in course of erection, and the various buildings are being wired for lighting.

(4) *Galle Electric Lighting Scheme.*—Proposals for the use of water power on the Gin-ganga are under consideration, but it is doubtful if sufficient power can be economically obtained.

(5) *Nuwara Eliya Hydro-electric Supply.*—The output of the power station is limited by the pipe line supplying water to the turbines amounting to 122 brake horse power = 82 kilowatts equivalent to (4,100) 20 watt lamps, and is now nearing its maximum, and it may not be possible to give a further supply for lighting to consumers at present; the necessary materials, including steel pipes, for constructing the new pipe line are now on hand, and it is proposed to proceed with the work at once.

(6) *Batticaloa Electric Lighting.*—Inquiry is being made by the Local Board, Batticaloa, for a small electric lighting scheme for the town of Batticaloa, and a preliminary report and estimate have been furnished.

(7) *Electric Travelling Cranes, Customs, Colombo.*—Two electric travelling cranes for Delft warehouse have arrived in Ceylon during the latter part of 1919 ready for erection.

(8) *Electricity Ordinance, No. 26 of 1906.*—Electrical Inspectors have been appointed in connection with the operation of this Ordinance.

(9) *Staff.*—Mr. P. C. Fernando has been appointed Assistant Electrical Engineer in February, 1919.

**HYDRO-ELECTRIC POWER.**

128. Investigations on a systematic basis were begun in October, 1918, and continued during the subsequent year for locating the sources of water power obtaining in the Colony and determining the extent to which they can be economically developed for generating electrical energy. A considerable amount of information and data has been collected and tabulated in respect of thirty-seven possible sites for power development, and, although this number is by no means considered to embrace all sources, it is believed to include almost every one worth considering from an industrial standpoint.

129. With respect to the heads of pressure they are projected to operate on, these thirty-seven schemes may be tabulated as follows:—

| Head of Pressure.      | Number of Schemes. | Output in Electric Horse Power. | Head of Pressure.  | Number of Schemes. | Output in Electric Horse Power. |
|------------------------|--------------------|---------------------------------|--------------------|--------------------|---------------------------------|
| 2,000 ft. to 1,000 ft. | 13                 | 307,000                         | 500 ft. to 100 ft. | 5                  | 258,900                         |
| 1,000 ft. to 500 ft.   | 18                 | 168,000                         | Under 100 ft.      | 1                  | 3,500                           |

130. The total output that can be economically developed for industrial purposes on any considerable scale thus aggregates 737,400 electric horse power.

131. The power derivable from a source of water power is a function of the head of pressure available and the quantity and rate of flow of water obtainable. The head of pressure, i.e., the difference in level between the intake or forebay and the tail-race at the power house, has to be fixed to get the biggest drop possible with due regard to the cost involved, while the point of tapping the stream must be determined so as not to cut off the effective feeders in the form of ground flow or subsoil drainage during the dry weather period.

132. The characteristic flow of a stream is, as a general rule, considered to be the most economical basis on which the power output of a source of supply can be based when projected to operate under a given head of pressure. To secure this characteristic flow during dry seasons adequate storage has to be provided; and it is here that difficulty often arises, for it is not in all cases possible to obtain the requisite storage at reasonable cost. It thus comes about that the factor which determines the extent to which a given scheme can be developed is the magnitude of the storage that can be secured for it at an economical capital outlay, while the characteristic flow of the stream determines the maximum limit to which it is capable of development.

133. The advantages of the Laxapana-Aberdeen scheme in these respects over others initially examined and considered led to a detailed examination being undertaken of the Kehelgomu-oia and Maskeliya-oia and the formation of a definite project for their combined power development, and a staff of surveyors and levellers under the direction of Mr. D. J. Wimalasurendra, District Engineer, has been employed during the year in carrying on the necessary field work and preparing the preliminary plans.

134. The project is to dam the Kehelgomu-oya at Norton bridge and the Maskeliya-oya at Elfindale, just below Laxapanagala, and carry the water in conduits on either side of the dividing ridge to a point above Arselena estate. At this point the two conduits will be joined by a short tunnel through the hill, and the combined flow will thence be carried in a single conduit to a forebay or intake placed on the hill slope at Morahengama, the distance from the Elfindale dam being approximately  $4\frac{1}{2}$  miles. From this forebay a penstock race or parallel series of pipes will be laid down the steep hill slope—the vertical drop is 2,000 feet—to operate turbo-generators in a power house at the foot at Hangarapitiya on the banks of the Laxapana river.

135. The sites of intake and future storage reservoir have been selected, conduit lines set out on the ground up to the forebay, trial lines for the penstock race have been opened, longitudinal and cross levels taken and surveys of the lines and sites made, and plans for them prepared. All important levels and points have been permanently fixed and marked on the ground.

136. The predominant feature in the development of this source is that it admits, by judicious planning, of being economically developed by degrees and as occasion demands, within limits, up to 200,000 electric horse power and at a very moderate cost, which is calculated to allow of the sale of current, wholesale, in Colombo at 2 cents per unit, and possibly lower to big consumers as developments take place.

137. Electric current, three-phase at 6,600 volt, 50 frequency would be generated at the power house at Hangarapitiya, transformed to 100,000 volt and 80,000 volt and transmitted by overhead bare wire to Colombo and Kandy or *en route* for use.

138. The scheme possesses exceptionally good features for one of its magnitude both as regards reliability and low cost of installation, and bids fair to rival almost any scheme in existence in these respects. The central position of the station in respect to Colombo, Kandy, the railway, and planting districts generally is exceptional, and within easy transmission distance.

139. This scheme and certain others has been referred to an expert for opinion, and his report is awaited.

140. The next possible scheme of importance is that of the Mahaweli-ganga, and investigations are being made and data collected with a view to ascertaining the most economical method for harnessing this source, and also of determining the practicability or otherwise of combining the Haragama rapids and falls at Victoria estate in one large scheme. Possible storage areas, which will enable regular and economical outputs to be derived from such secondary sources as the Elgin Falls, St. Clair Falls, the Ulapane rapids, &c., and at the same time regulate the flow of the river for the main scheme, are also being examined.

141. The investigations made and still in progress should on completion furnish a complete survey of the extent and location of the different sources of water power in the Island which it would be generally practicable to develop on an economical basis. The data obtained will also give valuable information in regard to the periodical incidence of floods in the main rivers and their tributaries, and also the extent to which the large storage reservoirs required for major electric schemes will tend to diminish the intensity of floods.

142. The investigations in regard to the Laxapana-Aberdeen scheme involved field work executed under very trying conditions; the ground covered is of a very rough and difficult character, and subject to heavy rainfall and mist for some ten months of the year. Almost all the field staff were new to the work, and there was much trouble in maintaining a regular and skilled labour force. With the help of the present staff, who are now thoroughly trained and experienced, more expeditious work may be looked for in future.

#### GENERAL.

143. The Engineering and Architectural Staff at the Head Office got through a large quantity of work in the preparation of plans, quantities, and details for the execution of schemes and buildings during the year. The importance of this branch of the establishment is inclined to be overlooked somewhat as its work becomes merged in that carried out by the executive officers, who generally get the sole credit for projects successfully put through, the officers responsible for the design and its many details both as to calculation and planning being forgotten.

#### STAFF.

144. The following officers were on leave during portions of the year:—Messrs. A. Woodeson, A. H. F. Clarke, E. W. Cade, A. N. Robertson, A. P. Brohier, A. J. Scharenguivel, A. S. Barker, and W. A. Harrison.

145. Messrs. W. T. Cox and S. F. Hopley, who were also on leave, are not returning.

146. The following officers have returned after war service:—Messrs. H. B. Lees, J. Gray, A. Rothwell, H. L. Grocock, W. J. Thornhill, S. Davies, C. H. Linnell, C. H. Bradley, T. H. Leader, H. N. Worth, W. G. Scott, S. J. Kirby, L. W. Peach, and M. Jeffery.

147. The following officers are still on leave after war service:—Messrs. S. H. Bower, J. A. Moraes, W. A. Coradine, E. W. Bartholomew, F. G. Stevens, and E. B. Bowen.

Colombo, April 18, 1920.

T. H. CHAPMAN,  
Director of Public Works.

# IRRIGATION.

## REPORT OF THE DIRECTOR OF IRRIGATION FOR 1919.

*Note.*—This report is for the calendar year 1919 (the financial figures being those for the twelve months ended September 30, 1919), and is written by the Assistant Director, R. F. Morris, M.I.C.E., who was acting as Director during the absence of the Director on home leave from March 2, 1919, till the close of the year.

The total expenditure for the year was Rs. 658,514.21, and the services to which it was appropriated as compared with the three previous years were as follows:—

| Description of Vote.                         | 1915-16.                 | 1916-17.                 | 1917-18.                 | 1918-19.                 |
|--|--------------------------|--------------------------|--------------------------|--------------------------|
|  | (Oct.-Sept.)<br>Rs.   c. | (Oct.-Sept.)<br>Rs.   c. | (Oct.-Sept.)<br>Rs.   c. | (Oct.-Sept.)<br>Rs.   c. |
| Irrigation Department and "Other Charges" .. | 392,560 26               | 428,075 35               | 402,564 9                | 380,340 84               |
| Irrigation Annually Recurrent ..             | 166,174 85               | 160,363 90               | 176,728 60               | 152,974 40               |
| Irrigation Extraordinary ..                  | 196,845 69               | 240,033 94               | 210,931 56               | 125,198 97               |
| Total ..                                     | 745,580 80               | 828,473 19               | 790,224 25*              | 658,514 21               |

The expenditure on surveys, maintenance, and construction of irrigation works, exclusive of establishment charges, since 1909, has been as follows:—

|   | Rs.     |           | Rs.     |
|---|---------|-----------|---------|
| 1909 ..   | 541,724 | 1914-15.. | 450,002 |
| 1910-11 (18 months: Rs. 877,036), proportionate expenditure for 12 months.. | 584,690 | 1915-16.. | 411,571 |
| 1911-12..   | 530,093 | 1916-17.. | 487,063 |
| 1912-13..   | 531,914 | 1917-18.. | 465,130 |
| 1913-14 (15 months: Rs. 678,541), proportionate expenditure for 12 months.. | 542,833 | 1918-19.. | 348,377 |

The funds voted, and the expenditure incurred, under either head of "Total" or of "Surveys, Maintenance, and Construction" were smaller than in any year since 1900, the year the Department was formed.

2. The details of work carried out in connection with irrigation during the year will be found in the reports of the Divisional Irrigation Engineers. The following call for special mention:—

(a) *Karaichchi Scheme, Northern Province.*—The work of the year was chiefly concentrated on such construction as would facilitate the final closure of the dam, and by doing all possible preparation and work of organizing which might tend to relieve the strain when the river breach is actually being filled in. If labour and food supply difficulties do not prove insuperable, it is hoped to carry out the closure of the dam during 1920, and this would at once make about 8,000 acres of land irrigable. Government has authorized the importation of 200 coolies from South India, and it is hoped that they will prove of great use and assistance in the "closure" work; but the more attractive work to be carried out on the salt pans at Elephant Pass is likely to influence considerably the Jaffna labour supply to the detriment of the Karaichchi works.

(b) *Nachchaduwa Scheme, North-Central Province.*—The engineering surveys for this scheme were completed during the year; the work comprised the tracing and demarcating of all distribution channels necessary for supplying the irrigable land with water, and also of a line for an agricultural

\* This is the correct expenditure; the amount shown in last report was Rs. 808,527.65, being Rs. 18,303.40 too much under head Irrigation Department.

road to open up the lands and allow the produce to be taken out on to the Public Works Department Kurunegala road, near Anuradhapura. The construction of the distribution channels was also taken in hand, and the scheme is now in the position that the little additional work necessary before water could be supplied on the lands can be easily done before the lands will be ready to receive it. The colonization project was not proceeded with owing to various difficulties, which the Government Agent considered insuperable at the time.

(c) *Kirindi-oya Right Bank Scheme, Southern Province*.—The distribution channels and other small works necessary for the supply of water to the lands in zone No. 1 were completed, and consequently the works could have been used to irrigate lands if the lands had been ready. Unfortunately, however, the land sales held during the year were not very satisfactory, chiefly owing, it is stated, to the objection of purchasers to the conditions of variation of the irrigation rates; the question was discussed, and it was decided that the conditions should be laid down in less restricted form; the sales of the blocks for which bids had been received were annulled, and the lands have been advertised again. It is considered by the writer that these lands will be eagerly bid for if the unfounded suspicions of prospective purchasers can be allayed.

(d) *Walawe Left Bank Scheme, Southern Province*.—The designs for this scheme made as much progress as was possible with the available staff.

(e) *Tabbowa Scheme, North-Western Province*.—Orders were received to start work again on this scheme in the Puttalam District, which has been in abeyance since September, 1915, but owing to the insufficiency of staff it was not found possible to send an engineer till after the end of the year.

3. About 50,000 acres of undeveloped Crown land is irrigable at present under schemes which are either completed or can be completed before water is required on the lands; in addition, about 35,000 acres of Crown land could be made irrigable in the course of two or three years under schemes which are either being investigated or are partially carried out.

4. A large area of land under Kalawewa scheme, North-Central Province, including the Maha Iluppallama Experimental Station, was granted to Mr. C. F. Hutchinson on special pioneer terms; on part of this area the crops are to be irrigated from Maha Iluppallama tank.

5. Over the Island generally the rainfall was up to the average, and in some districts well above the average. No serious damage was caused by floods to irrigation works.

6. In conjunction with the Government Agents, a considerable amount of work has been done in connection with the drafting of new irrigation rules, ready for publication in accordance with the Irrigation Ordinance, No. 45 of 1917. No rules, however, were published during the year, as it has been considered necessary to appoint cultivation officers before the rules can be legally enforced, and the selection of suitable officers has proved somewhat difficult. Cultivation officers have recently been appointed for Giant's tank, for Province of Sabaragamuwa, and for the Kalmunai District, Eastern Province.

7. Irrigation rates were fixed by Government for new lands under the Vakaneri, Unnichchai, Tembittiya, and Kirindi-oya right bank schemes, and rates for the Nachchaduwa scheme were under discussion (and have been decided by Government since the end of the year).

8. Speaking generally, and taking the Island as a whole, increased areas have been cultivated in paddy, and the paddy returns have been good. The water in the Crown works proved sufficient for all crops which had been sown at proper dates; in fact, very little paddy was lost through water shortage, but other causes have operated to a certain extent in reducing cultivation and output, e.g., influenza in some districts preventing cultivation; and unseasonable heavy rains, when the pinmari crop was ready for harvesting, turned what would have been a very good crop under the Kantalai scheme into one rather below the average.

9. The high price of rice, kurakkan, and other foods has at last had some favourable effect on the lot of the man who actually works in the fields and produces the food, and who, up till quite recently, appears to have been the last person to benefit. The writer understands that in some districts the cultivator has actually been able to accumulate a little money or free himself from debt—a state of affairs almost unknown and undreamt of a couple of years ago. In a few cases this comparative affluence may have influenced the cultivator to trouble little about his next harvest, but, in the opinion of the writer, there can be no question that it has generally acted as an inducement to increased cultivation. Unfortunately there still appear to be large areas in some districts which are not cultivated as much, or as frequently, as they might be, for which, of course, pretexts of varying credibility and weight are forthcoming.

10. Towards the end of the year the pay of all Government labourers was raised considerably in order to relieve to some extent the hardships caused by the scarcity and high price of foodstuffs and cloth; this increase naturally raises the cost of all work, or entails a corresponding reduction in the amount of work which can be done.

11. The shortage of food and resulting high prices of same has intensified the food production movements in the Provinces, and this has naturally imposed on the officers of the Department a very great deal of work in investigating and reporting on suggested irrigation schemes. As was to be expected, in a large number of cases the schemes proved to be quite impracticable, or the cost of the necessary works out of all proportion to the area which would be benefited. Unfortunately the food production campaign coincided with a period during which the staff of the Department was at a lower strength than had been the case for years, consequently the stress was all the greater on the senior officers available, almost all of whom are doing double duty. The writer has to thank all officers for the ungrudging way in which they have responded to the increased calls on them.

12. *Headquarters, Fort Frederick, Trincomalee*.—The maximum temperature recorded was 99.3° F. on May 7, 1919, and the minimum temperature was 70° F. on January 12, 1919, the mean of maximum daily temperatures during the year being 90.2° F.

The rainfall for the year was 75.54 inches compared with 51.59 inches for 1918 and a yearly average for the last fifty years of 62.63 inches. With the increased rainfall during the drier months, March to August, the supply of water in the pump well was better than last year, and hand pumping from the rain-water tank was done only for a few days to supplement the supply from the well.

The water in rain-water storage tank No. 2 was pumped out by the diaphragm pump, and the seven tanks contained in it, viz., three settling tanks, three filter tanks, and one storage tank, were all thoroughly cleaned and some repairs effected. The other small collecting tank was also emptied and cleaned.

Two samples of rain water, one from each of the above storage tanks, were sent to the Government Analyst for analysis on August 21, 1919, and the conclusion arrived at by him was that the waters could not be passed for domestic purposes. It is difficult, however, to find another scheme which would supply water at reasonable cost.

The roads were kept in good order throughout the year, and the drains were frequently cleaned and minor improvements made to them.

The work of clearing jungle, weeding, and uprooting of old suriya trees and prickly pear was continued, and about 25 snakes were killed, most of these being tic polongas.

A large number of jelly fish appeared on the foreshore on July 4, and continued to collect at intervals until the latter part of September; they were collected and buried on the shore, as their decomposition was causing an intolerable nuisance.

Scavenging and conservancy was done properly, and the place was kept in a clean and sanitary condition.

Twelve trees were planted, the species being *Spathodea campanulata*.

The total expenditure on water supply, conservancy, and maintenance of headquarters (including buildings) was Rs. 7,812, the buildings being maintained in as satisfactory a condition as can be expected with the high price of labour and materials.

The bungalow which was situated between bungalows Nos. 1 and 2, and had been condemned, was pulled down.

To try to prevent the erosion on the foreshore, it was decided to construct a groyne. A pile driver was brought from Kalmunai and the work was carried out, first, under the supervision of the Office Assistant, Mr. J. S. Kennedy, and later, during his absence on leave, under the supervision of the Divisional Irrigation Engineer, Trincomalee Division.

No special work was carried on in the workshop during the year. A 12-inch sluice gate with lifting rod for a village tank was made; otherwise only minor repairs were done.

13. The disadvantages of the Head Office being so far removed from Colombo were experienced as usual. The writer was summoned by telegraph to appear at meetings of the Executive Council in Colombo on October 24 and November 27.

On December 15 the writer was wired for to attend a Conference of Heads of Departments presided over by the Hon. the Controller of Revenue at his office, to consider the terms upon which large areas of irrigable land might be offered for food production to planting associations or reputable syndicates.

It was also found necessary to visit Colombo at short notice on urgent affairs to consult the Hon. the Attorney-General, the Hon. the Controller of Revenue, and other Heads of Departments.

14. The chief items of work done in the Head Office in connection with designs, drawings, quantities, or estimates were in connection with the following:—

- (a) New designs for Tabbowa scheme; improvements to Kotahetana-ela; Kirindi-oya right bank scheme: alterations to channel designs; diagram of controlling levels of spill, regulator, &c., Madugaha-ela anicut; Waduwa-ela project; Yakdehi-ela improvements scheme: channel, syphon, regulator, &c.; Unantenna anicut across Ma-oya; overhead gear for valve tower of Karaichchi sluice; proposed extension of area under Soraborawewa; type sluice with locking arrangements for village tanks; Vadamaradchi lagoon regulators; Belpagama scheme; improvements to Walawe No. 1 channel; scheme for flood protection and draining lot 20 in Cinnamon Gardens, Colombo; bridge to tower of Karaichchi sluices; Unnichchai left bank channel cadastral limit plan; Maha Uswewa cadastral survey; blocking out land under Nachchaduwa scheme for cadastral survey; tracings of "middle block" of Nachchaduwa, and of channels for cadastral survey; Tembittiya blocking out plan (cadastral); capacity and area diagrams for Irakkamam, Amparai, and Sakamam tanks; acquisition tracings for Walawe No. 3 channel and Vakaneri channel reservations; Nachchaduwa agricultural road; Hambegamuwa right bank channel; Tabbowa scheme completion estimate; restoration of Dewakiwewa; renewing Nachchaduwa spill gates; restoration of Sigiriya tank; Verukal anicut (Allai).
- (b) Designs and estimates sent in by the Divisional Irrigation Engineers for the following works were checked:—Bungalow at Iranaimadu; Amanagama channel, Nachchaduwa; Tabbowa bund; Nachchaduwa distribution channels (high level and low level); Murunkan regulator, Giant's tank; regulator on 12th mile channel, Giant's tank scheme; Chadayantalawa spill raising; Guardian's bungalow, Ipolagama; Alankulam channel, Nachchaduwa; drainage channel (Yodawewa low-level channel), Kirindi-oya left bank scheme.
- (c) The positions of the major irrigation works in the Southern Division were entered in all the Head Office copies of the 16-chain sheets. Information from control and issue of water plans, such as constructed channels, position of sluices, anicuts, &c., was entered on the topographical sheets. By means of distinctive colouring the village tanks restored and under restoration in the Central, Uva, and Northern Provinces were shown on the topographical sheets.
- (d) Monthly returns were received and river discharge calculations made for the Deduru-oya, Nalanda-oya, and Kanakarayan-ar; and calculations were made and curves plotted for the following:—The measuring weir below the spill of Nachchaduwa; the velocity of water in open channels (according to Kutter's formula); the height of water over the *tekkam* (Giant's tank) from the year 1903.
- (e) Specification plans were prepared or revised for Vavuniya tank, Periya Olukkulam, Hambegamuwa tank, Mamadu tank, Batugedara channel, Malwatta channel, Bassawakulam, Iratperiyaikulam, Maharampaikulam, Madukanda tank, Sangilikandarawa, Soraborawewa, Kudawewa, Kirindi-oya right bank scheme, and Rukam scheme.
- (f) Five specification lists of lands were revised and published, and also 26 supplements or amendments; 29 exemption applications and 184 land sale applications were reported on.

15. *Staff.*—The year under review has been a difficult one as regards the field staff, especially in view of the increased work due to food production efforts. The losses to the Department were 3 Engineers, 1 Assistant Irrigation Engineer, 3 Inspectors, and 5 Sub-Inspectors; of these, the retirement of two or three officers only could have been anticipated. To fill the vacancies, it was found possible to recruit only four suitable men as Sub-Inspectors. The number of officers in the Engineer and subordinate grades at the end of the year was less than at any time since 1900, when the Department was formed. The following staff changes took place :—

The Director of Irrigation, Mr. C. F. S. Baker, M.I.C.E., proceeded on ten months' leave on March 2, the Assistant Director, Mr. R. F. Morris, M.I.C.E., acting as Director, and Mr. W. Brown, M.I.C.E., as Assistant Director, until the end of the year.

Mr. J. H. Fraser, Divisional Irrigation Engineer, proceeded on home leave on February 24.

Mr. B. G. Meaden, A.M.I.C.E., who proceeded on long leave on May 27, 1918, resumed duties on January 24, 1919.

Mr. C. A. Coombs, who proceeded on long leave on May 4, 1914, and subsequently joined the Army, retired from the service on April 5, 1919, on grounds of illness caused by wounds.

Messrs. W. H. Biddle and W. J. Brindley, Irrigation Engineers, having passed the examination in riding, were confirmed in their appointments in January.

Messrs. J. A. Wilson and T. G. F. Hemsworth, Irrigation Engineers, were on Military service.

Mr. J. S. Kennedy, Irrigation Engineer, who left Ceylon on March 4, 1917, to take up Military service, was demobilized, and he returned to Ceylon on April 1, 1919. Mr. Kennedy again left the Island on twelve weeks' leave on November 26 on account of urgent private affairs. Mr. Hemsworth has not yet returned.

Mr. L. G. de Lima, Temporary Irrigation Engineer, left on three months' leave on July 1, preparatory to the termination of his service on October 1.

The designation of Chief Irrigation Inspectors was changed to Assistant Irrigation Engineers, thus bringing them into line with somewhat similar officers in the Public Works Department.

Mr. J. L. Caspersz, Irrigation Inspector, First Class, and Mr. C. M. Jennings, Irrigation Inspector, Second Class, were promoted to the grades of Assistant Irrigation Engineer and Irrigation Inspector, First Class, respectively, with effect from January 1, 1919.

Messrs. V. E. B. Bastiampillai, K. Kandiah, M. M. Ebrahim, and W. F. Marshall were appointed Irrigation Sub-Inspectors, Second Class, during the year.

Mr. G. B. de Zilva, Assistant Irrigation Engineer; Mr. W. Keil, Irrigation Inspector; and Mr. S. Sinnayah, Guardian, retired during the year on account of age limit; and Mr. V. Naganthirappillai, Guardian, on medical grounds. Mr. G. A. Goonewardene, Irrigation Sub-Inspector, resigned on September 5 on account of ill-health, and the services of Mr. R. H. Elalasinghem, Irrigation Sub-Inspector, were discontinued on September 1.

The writer regrets to record the deaths which occurred during the year of Mr. H. A. E. de Vos (who died while on military duty in Mesopotamia) and Mr. V. Nellalingam, Irrigation Inspectors, and Messrs. W. J. Perkins, J. J. Barthelot, and E. P. Perera, Irrigation Sub-Inspectors.

The examination for the Irrigation Inspectors' Grade was held in December, 1919, the examiner being Mr. O. W. Henman, A.M.I.C.E. Eleven candidates sat for the examination, out of whom four candidates were successful in passing Parts I. and II., and one candidate in Passing Part I.

16. The following are condensed reports on divisions received from the Divisional Engineers :—

#### I.—NORTHERN DIVISION.

Mr. L. P. Emerson, A.M.I.C.E.

##### SURVEYS AND INVESTIGATIONS.

1. *Anuradhapura Subdivision.*—Surveys were again this year an important part of the work of the subdivision.

(i.) They include under Nachchaduwa—

- (a) The trace for extending the low-level channel 5½ miles.
- (b) Tracing all the distributary channels necessary to supply the irrigable lands.
- (c) Making a contour survey to show which lands were irrigable.
- (d) Re-tracing part of an agricultural road through the irrigable lands to join the main Kurunegala-Anuradhapura road at the 4th mile.

• The plans of the above, the channel designs, and estimates were practically completed.

(ii.) *Nuwarawewa.*—The survey for the extension of the high-level channel under this tank and the survey of the irrigable land was put in hand; this is still in progress.

2. *Kanukkeni Tank, Northern Province.*—A sum of Rs. 327·35 was spent in making a few preliminary surveys with a view to the ultimate restoration of this tank.

3. A very large number of land and exemption applications were dealt with during the year.

##### CONSTRUCTION.

4. *Karaichchi Works, Northern Province.*—(a) Good progress was made in the programme of work laid down for the financial year ended September 30, 1919; the full apportionment was Rs. 92,093, and the full expenditure (including transport charges, &c.) was Rs. 94,531·27. The total amended estimate sanctioned is Rs. 1,712,330, and the unexpended balance on September 30, 1919, was Rs. 269,966.

(b) The expenditure during the year was almost entirely for labour; little was spent on materials, as the work was chiefly earthwork; no cement was purchased throughout the year.

(c) The following are the chief items and quantities of work done during the period under review :—

| <i>Earthwork.</i>                       |       | <i>Cubcs.</i> |
|---|-------|---------------|
| (i.) Excavation in spill channel ..     | 9,446 |               |
| (ii.) Excavation in inlet channel ..    | 4,054 |               |
| (iii.) Excavation in main channel ..    | 1,877 |               |
| (iv.) Excavation in spill fall No. 3 .. | 443   |               |
| Total ..                                |       | 15,820        |

(v.) The whole of the spill channel above and below the spill crest line has now been excavated to proper level, with the exception of the 20,000 cubcs section reserved for the river "closure" in 1920. The 9,446 cubcs excavated were trucked and deposited in the main bund and berm.

vi.) The completion of the inlet channel and removal of 4,054 cubcs of hard cabook and kaolin proved a tedious job, and was quite the most difficult piece of work to get done during the year. This channel has now been properly completed to section and bed level. The above spoil was trucked and deposited in the 10 to 1 slope along the bund. The urgent necessity for finishing this channel to bed level before any actual "closure" operations could be started made it necessary to employ all available labour on this work much to the dissatisfaction of the labour force. More showy and much easier work had in consequence to be postponed, and the navy was stopped altogether for long periods. The excavation in the lower levels was so hard that it was found advisable to blast a lot of it, and progress was in consequence slow. Difficulty is still anticipated in keeping this channel to its true bed level, as in certain places slips continue to occur.

(vii.) 1,877 cubcs of similar excavation was taken out of the bed of the first half mile of the main or outlet channel and thrown to spoil on the left bank.

(viii.) The spoil from No. 3 fall was deposited in the flood bund near the spill.

(ix.) *Puddle.*—250 cubcs of puddle were laid in the bund at the river section, and 600 cubcs of clay were piled on the bund site for the "closure" puddle core. Another 600 cubcs will be piled here as soon as the river permits.

(x.) *Bund.*—During the year both banks have been advanced towards the river proper, and as much work done as possible to the flank bunds so as to lessen the amount of work actually necessary to ensure the safety of the "closure" work in 1920. The river bed has been restricted to a width of 100 feet only, and the flank bunds carried up therefrom at a slope of 3 to 1. The berm has been extended accordingly on the tank side. Most of the 9,446 cubcs obtained from the spill excavation was used for this purpose. The toe of the new earthwork slope was protected with timber piling and empty cement barrels filled with sand or earth. The latter proved very efficient protection.

(xi.) *Masonry Work.*—53½ cubcs of masonry pitching were laid in the apron of spill fall No. 1, which is now completed. 18 cubcs of concrete were laid in the apron of spill fall No. 3. Owing to the necessity for completing the inlet channel, labour could not be spared for excavating the apron trench, and further masonry work was accordingly prevented.

(d) *Labour.*—Labour was at a premium throughout the year. The Odda coolies, who have formed the nucleus of the labour force here for years, gave a lot of trouble, particularly over the inlet channel work, which they disliked. Many of them had died during the influenza epidemic of 1918, and a good many were frightened and left the place.

Excellent gangs of Jaffna labour came and worked for short intervals and earned good money, but the appalling number of temple festivals, which every Jaffna man must attend apparently whether he can afford it or not, absolutely precludes any idea of steady continuous work.

Again Iranaimadu has a bad name for fever, and labour will not come here if they can get work elsewhere. According to the old workers here, there has been more fever during 1919 on the works among all classes than before.

(e) *Climatic Conditions.*—There was rain every month during the year, and there was no prolonged drought as in 1918. The January rains were a failure, and local cultivation suffered in consequence, but the present north-east monsoon rains set in in the middle of October, and the rains have been heavy practically ever since. The total rainfall for the year at Iranaimadu was 71 inches, of which 60 inches has fallen in the last three months; the average annual rainfall must be about 50·55 inches.

On December 31 a heavy fall of 8½ inches fell at Iranaimadu after a week's heavy rain, which resulted in the highest fresh-water flood on record for the past twenty years at Elephant Pass, the lagoon rising to a height of 12 inches over the resthouse floor on January 1, 1920.

On the works, the bridge across the Kanakarayan-aru was submerged 6 feet, the maximum flood level recorded being 68·00, as compared with the maximum flood on record at the same spot of 74·00 in 1911.

The exceptional flood at Elephant Pass this year, though 6 feet lower at Iranaimadu than the record, would appear to be due to the fact that the bar at Chundikulam had again been closed by storms after December 5, on which day it was cut.

Considering the flood, little actual damage was done on the works; fourteen trucks were washed down the river, but recovered, and are now on the track again. Some 200 cubcs of earthwork were washed down the river.

At Kilinochchi the tank water rose to 16 feet 8 inches on the gauge, or 5 feet 8 inches over spill, and to within 15 inches of the bund top, which held however.

5. *Nachchaduwa, North-Central Province.*—(a) A sum of Rs. 6,030·59 was spent on the construction of distribution channels during the year. Work proceeded very slowly owing to lack of labour and efficient staff. The Irrigation Engineer of the Anuradhapura Subdivision has considerable outside circuit work to do, and it is not easy for him efficiently to supervise construction work. Owing to shortage of staff, untrained Irrigation Sub-Inspectors had to be put in charge of the channel work. The result has been expensive, and not wholly satisfactory work, but the Irrigation Sub-Inspectors have received some useful training.

(b) A sum of Rs. 631·58 was spent on clearing part of the proposed agricultural road.

6. *Vadamaradchi Lagoon, Northern Province.*—A sum of Rs. 4,334·11 was spent on the construction of planked regulators fitted in certain bridges to prevent the outflow of the fresh water from Vadamaradchi lagoon to the sea. This was completed before the rains, and is now doing its work efficiently.

## MAINTENANCE.

7. *Karaiichchi Works Subdivision.*—The Dry-aru tank was properly maintained at a cost of Rs. 2,724·84. The bund, which in the past has given much anxiety, is now in such good condition, thanks chiefly to improved drainage, that it withstood the flood which rose to within 15 inches of the top, and is mentioned *ante*.

8. *Anuradhapura Subdivision: Special.*—(a) A sum of Rs. 647·03 was spent on the protection of Talawa tank bund.

(b) A sum of Rs. 659·79 was spent on the completion of a sluice on the 1st mile of the Yoda-ela.

(c) A sum of Rs. 67·97 was spent on minor improvements to Balaluwewa channel.

9. The ordinary maintenance on all the major works in the North-Central Province was carried out as well as possible with the available money.

10. *Giant's Tank Subdivision.*—(a) The standard of maintenance dropped to a certain extent this year owing to the lack of efficient staff. Towards the end of the year the writer was obliged to take it over himself, relieving the inexperienced Irrigation Sub-Inspector. An endeavour will be made to raise the standard in 1920.

(b) A cut-off wall was put round Adakalamoddai sluice to prevent leakage. Similar walls are very necessary at the other sluices that are not provided with cut-off walls.

(c) *Adakalamoddai Sluice.*—A serious blow-out occurred in the foundation of this sluice early in the year. This might have been successfully repaired by stopping the flow through the sluice, but this would have entailed the loss of some 1,000 acres of paddy crop, which was a very serious consideration in this famine year; it was therefore decided to risk the sluice falling and save the crop. In July the sluice fell forward, being undermined, and the water getting behind it threatened the dam of the tank.

A coffer dam composed entirely of rubble was thrown across the inlet channel, earth was then deposited upstream of the coffer dam at each side, leaving a pure rock dam about 10 feet wide in the centre; through this dam water was issued for the rest of the season. No difficulty was found in regulating the supply. After the crop was harvested, the repairs of the sluice were undertaken at a total cost of Rs. 3,150, and completed before the next sowing began.

(d) *Murunkan Regulator.*—A regulator was built across the Alavakkai, just below Murunkan sluice, at a cost of Rs. 1,080. This was a much-needed improvement; it diverts water through Murunkan sluice into a chain of six tanks.

(e) *12th Mile Channel.*—A regulator was built across this channel at a cost of Rs. 318·74. This was needed to divert water properly on to the lands.

(f) *300-acre Block Channel.*—A channel 1½ miles long was partially cut (floods stopped the completion) from the 11th mile sluice. This channel will supply water to a new block of 300 acres which is being put on the market.

11. *Major Works, Northern Province.*—The major works in the Vavuniya district were taken over from the Government Agent by this Department, and an Irrigation Sub-Inspector was put in charge as Subdivisional Officer.

## CULTIVATION.

12. In general cultivation has been successful this year. An endeavour was made to give every possible assistance to increase cultivation owing to the shortage of foodstuffs.

13. There being surplus water in Nachchaduwa, it was decided to send of this water about 16,000 acre feet to Giant's tank to enable a large sirupokam (dry-weather crop) to be grown.

Giant's tank had about 14,000 acre feet, and the total of 30,000 acre feet just sufficed to cultivate 2,000 acres of paddy. This duty is about normal. The actual water put on to a field is about 4 feet, but evaporation accounts for nearly all the rest, it being borne in mind that in the case of Giant's tank the water is spread over an enormous area, so that an unusual amount of evaporation may be expected.

## HEALTH OF THE STAFF.

14. Most of the staff and labour force suffered from fever, which was specially bad at Nachchaduwa and Iranaimadu.

## II.—BATTICALOA DIVISION.

Mr. B. G. Meaden, A.M.I.C.E.

## SURVEYS AND INVESTIGATIONS.

1. Pattipola-aru specification survey and the contour surveys of Irakkamam and Amparai were completed during the year. The survey of Sakamam land east of Akkaraipattu-Sakamam road and the contour surveys of Vammiyadi, Sakamam, and Lahugala tanks were carried out.

2. The following minor surveys were carried out during the year:—

Survey of the channels under Rotawewa and Lahugala tanks.

Survey for proposed Periyavisarai vaikal from Virayadi anicut to Periyavisarai kandum under upper and lower anicuts.

Contour levels at Kiliveddi kandum under Amparai tank.

Survey of the channels from Irakkamam tank to Akkaraipattu.

Survey for connecting Sakamam scheme levels with Pattipola-aru scheme datum.

Survey for demarcating boundaries of cultivating kandams, Unnichchai scheme.

Survey of the sites of spills for the left bank channel, Unnichchai scheme.

## CONSTRUCTION.

3. *Unnichchai Scheme.*—(a) The right bank spill protection works were completed, the quantities of work done during the year being—

|                             | Cubes. |                             | Cubes. |
|-----------------------------|--------|-----------------------------|--------|
| Excavation ..               | 278·43 | Special flooring masonry .. | 47·66  |
| Masonry in Winget blocks .. | 35·21  | Removing temporary dam up-  |        |
| Cement concrete ..          | 189·92 | stream of spill ..          | 670·00 |

(b) Three spillways were also constructed on the left bank channel, the quantities being—

|                      |        |                        |        |
|----------------------|--------|------------------------|--------|
|                      | Cubes. |                        | Cubes. |
| Earth excavation ..  | 491·76 | Drymasonry pitching .. | 6·00   |
| Masonry in cement .. | 3·00   |                        |        |

4. *Tumpankeni Tank*.—The raising of the tank spill was completed during the year, the quantities of work being—

|                    |        |                              |        |
|--------------------|--------|------------------------------|--------|
|                    | Cubes. |                              | Cubes. |
| Cement concrete .. | 12·00  | Dressing rock foundations .. | 6·00   |

The expenditure was met from Fine Funds.

5. *Pattipola-aru Scheme*.—Blasting rock in channel to Kiliveddi kadam was completed, the expenditure being met from Fine Funds.

#### SPECIAL MAINTENANCE.

6. *Rukam Scheme*.—The wooden beams and struts of the Kidavadipallam anicut were replaced by reinforced concrete at a cost of Rs. 362·44. About  $\frac{1}{2}$  mile of the upstream side of the Rukam tank bund has been damaged by wave action. Earthwork and rubble repairs are necessary. The work is now proceeding. During November 177 cubes of earthwork were done. The work was stopped in December owing to heavy rains.

7. *Panama Tank*.—Minor improvements to the sluice and inlet channel were carried out to the following extent :—

|                                 |              |                     |              |
|---------------------------------|--------------|---------------------|--------------|
| Earth excavation and filling .. | Cubes 155·00 | Pointing masonry .. | Squares 6·00 |
| Clay puddle ..                  | 16·00        | Removal of silt ..  | Cubes 4·00   |

8. *Kadukkamunai Tank*.—The construction of a drop wall to the tank spill was commenced in September, and the work was completed in November, 1919. During the financial year ended September 30, 1919, materials were collected and the excavation of earth and boulders was begun. Only Rs. 389·09 was spent during the financial year. Distribution sluice No. 6 on the channel below this tank was rebuilt during the year. The expenditure was Rs. 313·43.

9. *Divulana Tank*.—Repairs to the bund were effected.

10. *Unnichchai Left Bank Channel*.—Three breaches in the channel bund were repaired.

11. *Tembittiya Tank*.—Two leaks in the spill masonry were repaired.

12. *Pullumalai Tank*.—Repairs were made to a defect in the foundation of the spill wall.

#### GENERAL MAINTENANCE.

13. The usual maintenance of irrigation works and roads was carried out, but efforts were made to effect an improvement in the general state of the works. Improvements in the way of clearing jungle from reservations were made in the Urakai channel at Sakamam, Vilattipiddi inlet channel, and Irakkamam inlet channel. The sluices at Kaliodai anicut were overhauled. The Panama-Nawulla trace was re-cleared and improved. The roads on Vilattipiddi and Rotawewa tank bunds were made fit for cart or motor traffic. The service road to Rotawewa was widened and gravelled. An increase in the maintenance allotment for the works in this division is necessary in order to bring the works into a really well-kept condition. The routine of absolute minimum maintenance work, together with supervision and non-effective charges at present, absorbs practically the whole of the maintenance allotment.

#### CULTIVATION.

14. The total area of land sown and reaped under the major irrigation works was 49,088 acres, as against 45,277 acres sown and 43,610 acres reaped in 1918. The cultivating season was a dry one, but the crops, on the whole, have been good. Certain high lands under Sakamam suffered slightly from shortage of water towards the end of the cultivation. The figures obtainable for yield are, in the opinion of the writer, unreliable; they vary from eight-fold to twenty-fold.

15. The preparation of very valuable reports on the "control and issue of water" by the writer's predecessor, Mr. C. C. Harward, was completed during the year for the following schemes: Pattipola-aru (seven parts), Divulana, Tumpankeni, Chadayantalawa, Vakaneri, Rukam, Manalpiddi-aru, Sakamam.

### III.—TRINCOMALEE DIVISION.

Mr. T. Harner (Acting).

#### SURVEYS AND INVESTIGATIONS.

1. *Kantalai Scheme Development*.—A survey of all the natural features with levels was made in connection with this and a left bank channel traced. The amount spent was Rs. 1,846·77, and the principal items of work done were :—4,500 acres contoured, within which all natural features were surveyed and levelled; 130 miles of lines cut, levelled, and surveyed;  $4\frac{1}{2}$  miles of channel traced.

2. *Paravipanchan Tank*.—A preliminary investigation survey and report on this tank was made with a view to its restoration in connection with Kantalai extension scheme.

3. *Kantalai Spill*.—A survey was made of Kantalai spill and channel, and plans and proposals got out for—

- Raising Kantalai spill by 2 feet for extra capacity.
- Experimental gauging weir for Kantalai spill channel.

4. *Pankulam*.—A survey of this old tank was made, the tank bed contoured, and plans and report got out with a view to its restoration.

5. *Verukal-aru*.—Gaugings of Verukal and Mavil aru were again taken to ascertain the dry-weather flow; and the annual "erosion" survey of the Verukal loop made.

## CONSTRUCTION.

6. *Periyakulam Road*.—The work of forming this new road to the Periyakulam tank was continued, two more culverts built, and  $\frac{3}{4}$  mile of road drained and formed. The cost of the work (Rs. 479.60) was defrayed from the Major Works Fine Fund.

## MAINTENANCE.

7. The major works were maintained in as good order as the funds would permit of at a cost of Rs. 5,189.86.

8. The following special repairs were done :—

*Allai* : Sluices Nos. 1, 2, and 3 were re-pointed.

*Peruveli* : The leaks at sluices Nos. 4 and 5 were cut out, puddled, and the masonry re-pointed.

*Periyakulam* : The leak at the right bank sluice was cut out, puddled, and the masonry re-pointed.

9. The Tanglebam agricultural road was maintained in fair order, but an increased amount is required to keep the first 2 miles of this road in good order, as considerable traffic passes over it to and from Tanglebam.

## VILLAGE TANKS.

10. *Kaddukulam East and West*.—There are twenty-eight village tanks in these pattus. 1,981 $\frac{1}{2}$  cubes of earthwork were called for, and 699 $\frac{1}{2}$  cubes done. This represents a decrease of 739 $\frac{1}{2}$  cubes over last year.

11. *Gomarankadawala* again leaked badly at the bisokotuwa sluice towards the end of the year, and temporary repairs were made until the tank can be emptied next dry season for proper repairs to be undertaken.

12. *Kivulakadawa*.—It was intended to continue the pitching of the slope of this bund, but, owing to the tank being full throughout the year, it was not possible to undertake the work.

13. *Koddiyar Pattu*.—There are seventeen village tanks in this pattu. 1,206 cubes of earthwork were called for, and 1,104 cubes done. This shows an increase of 30 cubes over last year.

14. Repairs were done at the following tanks :—Kokkadikulam, Pokkiyakulam, Puliyanikulam, Velankulam, Siruveliyamankulam, Anaikukulam, Maraveddikulam, Mailaimalakulam.

## CULTIVATION.

15. The total area cultivated under the major works in this division during the year was 6,746 acres, and the total area reaped 6,706 acres. Particulars are given below :—

(a) *Allai Scheme, including Peruvelikulam*.—1,256 acres were cultivated and reaped for munmari. 913 acres were cultivated and reaped for pinmari. The estimated yield was 25 $\frac{1}{2}$  bushels of paddy per acre, as against 21 bushels per acre of last year.

(b) *Ilakantai*.—170 acres were cultivated and reaped for munmari. 87 acres were cultivated for pinmari, and 40 acres of this crop were lost owing to shortage of water due to late sowing of crop. The estimated yield was 26 $\frac{1}{2}$  bushels of paddy per acre, as against 25 bushels per acre of last year.

(c) *Kantalai Scheme*.—72 acres were cultivated and reaped for munmari. 3,842 acres were cultivated and reaped for pinmari. The estimated yield was 40 bushels of paddy per acre, as against 50 bushels per acre of last year.

(d) *Andankulam*.—186 acres were cultivated and reaped for munmari. 78 acres were cultivated and reaped for pinmari. The estimated yield was 40 bushels of paddy per acre, as against 50 bushels per acre of last year.

(e) *Periyakulam*.—72 acres were cultivated and reaped for munmari. 70 acres were cultivated and reaped for pinmari. The estimated yield was 40 bushels of paddy per acre, as against 20 bushels per acre of last year.

16. The total area cultivated under the village tanks in Kaddukulam east and west was 692 acres, the estimated yield being 13 $\frac{1}{2}$  bushels of paddy per acre.

17. The total area cultivated under the village tanks in the Koddiyar pattu was 466 acres, the estimated yield being 12 bushels of paddy per acre.

18. *Methods of Cultivation Adopted*.—(a) The general method of cultivation adopted under the Kantalai and Allai schemes is by “mudding” with buffaloes; whether the “mudding” is properly done or not depends entirely upon how plentiful (or otherwise) buffaloes are. Speaking generally, “mudding” is invariably only half done, and the fields then levelled off with a plank, or by the cultivators smoothing it off with their feet. Beyond sowing, with the exception of “watching,” no attempt is made to improve cultivation by means of efficient ploughing, manuring, transplanting, or weeding.

(b) Under the Allai scheme small areas of land are cultivated for “idaipokam,” or an early munmari, between September and early March. In these cases ploughing is done with a native plough, unless there is sufficient rain to permit of “mudding.”

(c) Buffaloes in the Koddiyar pattu would suffice for the requirements under Allai scheme if the owners would keep them for that scheme, but they prefer, on account of the money to be obtained, to hire them out to the cultivators under Kantalai scheme for pinmari, trusting to get them back in time for Allai pinmari cultivation, or to manage with the few retained, resulting in the cultivation under both schemes suffering for want of sufficient buffaloes.

(d) In the opinion of the writer, no improvement has taken place in the method of cultivation in recent years; in fact, as more land has been opened up, and labour and buffaloes have not increased in proportion, the method of cultivation has become more neglectful.

(e) The lands under both Allai and Kantalai schemes are low-lying lands situated near the coast, and in abnormal years subject to heavy floods, and owing to their situation difficult to drain quickly. This has resulted in the cultivators of this district almost entirely abandoning munmari cultivation, and desiring to cultivate all the lands for a pinmari crop, and a late one at that.

(f) In the case of the Kantalai scheme, the available supply of water is still more than sufficient to allow of all the existing lands under Kantalai being cultivated for pinmari, but, in the case of Allai scheme, the water supply is far from sufficient to allow all lands to be cultivated for pinmari; added to this is the late date for pinmari cultivation that the people will insist on, their reasons being “floods” and “paddy pests.”

(g) The main north-east rainfall in this division is over by early January, and, except in very abnormal years, the land would not suffer from floods after that time; but when this is pointed out to the people and they are urged to commence cultivation early in January, they then bring up the “paddy pest” objection.

(h) A meeting was held by the writer at Mutur on September 2, 1919, and an endeavour was made to persuade the landowners to cultivate their entire lands under Allai scheme at once for early munmari, with a view to conserving the tank water and to enable early pinmari to be sown, which would enable a larger area to be cultivated and so increase the food production of the district, but it was all to no purpose. There was good rain, both during the latter half of September and in October, and water was standing on the fields, no effort being made to mud or plough the lands. The writer interviewed the Koddiyar Vanniah as to why the people were not commencing cultivation and making use of the rain water, and the reasons given in his report are "carelessness" and "neglect."

(i) Under Kantalai scheme a meeting was called in August, at which the people were persuaded to cultivate early munmari to increase the food supply, and they agreed to do so (though munmari cultivation has not been carried out for some years), and the last date fixed for sowing was October 31. There was no reason whatever to prevent these people having carried out this cultivation, yet, during the first week in November, they petitioned for the sowing dates to be extended, and, therefore, a second meeting was held at Tanglegam in November, in which the people stated "they could not now cultivate a munmari owing to heavy rains."

(j) The majority of the cultivators under the two schemes, Allai and Kantalai, are, in the opinion of the writer, both indolent and obstinate as regards endeavouring to increase the output from their lands and making the most of the water supply.

(k) In addition to having been given every encouragement and assistance by this Department, these two schemes have had the help and advice of a trained Agricultural Instructor on the ground since about last May, but with no appreciable result as regards improved method of cultivation as far as the writer could see.

#### IV.—SOUTHERN DIVISION.

Mr. C. Zanetti (Acting).

##### SURVEYS AND INVESTIGATIONS.

###### *Matara Subdivision.*

1. There were no surveys of importance undertaken in this subdivision. The observations on the Weligama flood outlet scheme were continued throughout the year at a cost of Rs. 735.65. There were two floods on the Polwatta-ganga during the year, and observations of the velocities and heights of water were taken. The first flood, which started on July 19, was a small one, and lasted until July 24, when the water in the river went down to its normal level. Velocities at the four stations and heights at five gauge stations were observed twice daily during the floods within a particular half hour's time previously arranged upon. The second flood began on September 20, and rose steadily until the evening of September 23, the highest reading recorded at the gauge at Elluwawala (the headquarters for the different stations) being 6 feet 9½ inches at 4.30 P.M., and this level was maintained until early next morning (24th), when the flood was observed to be subsiding, the same gauge reading 6 feet 6 inches at 10 o'clock on September 24. The water subsided very slowly owing to continued rain, until it eventually went down to its normal level on October 1. The flood was of long duration, and was considered by the people to be a fairly high one (many houses, including the house in which the gauge officers were staying, went under water), and it caused much damage to buildings and vegetable gardens within the submerged area.

The gauge and velocity stations were fairly well maintained during the year. A temporary gauging overseer and gauge station watcher are engaged in taking daily records of heights of water throughout the year at stations along the river from the mouth up to Kananke bridge.

###### *Tangalla Subdivision.*

2. *Kirama Contour Surveys.*—Fair progress was made on this survey. The total work done during the year was as follows :—

|                       |    |    |    |       |     |
|-----------------------|----|----|----|-------|-----|
| Jungle clearing       | .. | .. | .. | Miles | 40  |
| Chaining              | .. | .. | .. | Miles | 80  |
| Levelling             | .. | .. | .. | Miles | 118 |
| Taking angles         | .. | .. | .. | Miles | 81  |
| One-mile blocks laid  | .. | .. | .. | No.   | 17  |
| Half-mile blocks laid | .. | .. | .. | No.   | 23  |

The work is expected to be finished by the end of June, 1920, or so. The total expenditure on this survey this year was Rs. 2,078.16.

###### *Hambantota Subdivision.*

3. *Walawe Right Bank Scheme.*—Surveys were made and levels taken in connection with improvements to Government channels in order to bring under irrigation more land forming part of the Walawe estate. Channels were traced in the estate itself for the same purpose. The survey was completed, and the improvements are to be carried out early in 1920.

4. *Walawe Left Bank Scheme.*—A survey was started over some swampy tracts at Beragama, and levels were taken to determine the drainage line in these tracts. The work could not be completed owing to great pressure of other work.

###### *Rakwana Subdivision.*

5. No surveys of importance were carried out during the year.

6. Levels were taken on the Hingurawewa works to arrive at the best and cheapest means to increase the capacity of the intake channel to the tank, and thus secure a better supply of water for the development of the scheme. Much pressure of other work prevented these investigations being completed. A distribution channel, 2,500 feet long, was traced from No. 4 distribution sluice in the left branch to irrigate 56 acres of land newly asweddumized under this scheme.

## CONSTRUCTION.

*Hambantota Subdivision.*

7. *Kirindi-oya Right Bank Scheme.*—All the works required to issue water to the first zone of the scheme were practically finished in 1918. The following of the few small items of work still required for this zone were carried out during the year under review :—

- (a) Distribution Channel No. 1 : The two openings for the drainage had their sets of pipes inserted, and the gaps were filled with 125 cubes of earth.
- (b) Distribution Channel No. 3 : Three cubes of rock was blasted to complete this channel.
- (c) Distribution Channel No. 3, Subsidiary : This was completed with 57 cubes of earthwork.
- (d) Distribution Channel No. 4 : This was completed with 172 cubes of earthwork.
- (e) Distribution Channel No. 5 and Subsidiary : The channels were completed this year with 769 cubes of earthwork and 105 cubes excavation in soft rock.

## MAINTENANCE.

*Matara Subdivision.*

8. The total expenditure on the maintenance of the works in the subdivision was Rs. 7,770. All the works were kept in fair order, with the exception of the combined bridge and regulator at the Dedduwa works, which, owing to foundation trouble, is beyond repair.

*Tangalla Subdivision.*

9. The total expenditure on maintenance for the works in the subdivision was Rs. 5,783·08, inclusive of a sum of Rs. 238·69 spent in replacing the floor below the four-door anicut, Udukiriwila works. The works in general were fairly well maintained considering the money available. A decided improvement was effected on the Arachchi amuna channels, and several minor improvements were also effected on the Mandaduwa channel system.

10. *Netolpitiya Channel.*—A drop wall was rebuilt and curves were rectified in the channel, the expenditure being met from Fine Fund.

*Hambantota Subdivision.*

11. *Walawe Right Bank Scheme.*—The total expenditure for the year on the maintenance of the scheme was Rs. 7,151·19. The works were maintained in efficient order. The quantity of silt removed from the main channel and channel No. 3 was 1,510 cubes, the cost being Rs. 1,923·88.

12. *Kirindi-oya Left Bank Scheme.*—The total expenditure for the year on the maintenance of the scheme was Rs. 7,956·71. The whole of the scheme was maintained in good order during the year, and several minor repairs were done to distribution sluices on Akurugoda high-level channel, Akurugoda low-level channel, Kachcherigama channel, Yodawewa low-level channel, Mutiyama low-level channel, and Yatala channel.

The banks in most of the channels of the scheme have gradually become narrowed, and constant repairs to leaks have to be done—a difficult task when cultivation is in progress—as no earth can be got to repair them. The gradual widening and raising of these banks, as well as the acquiring of reservations where none exist, is very desirable.

The only special item of work done on this scheme was the construction of a regulator and distribution sluice on western branch, Akurugoda low-level channel, in place of the combined one known as distribution sluice No. 2, which had collapsed.

*Silt removal.*—Approximately 5,000 cubes of silt were scoured through Tammannaru and Ellagala anicut silt gates, and further 1,535 cubes of silt were removed from the various channels during August, September, and October at an approximate expenditure of Rs. 2,000.

13. *Kirindi-oya Right Bank Scheme.*—All the completed works were maintained in efficient order at an expenditure of Rs. 5,414·39. The demarcated traces of the channels for the second and third zones were kept clear. The silt removal was done, as usual, at the Pannagamuwa inlet channel. The section from the “take off” in the river to the head sluice is subject to very heavy silting, which has to be removed yearly. In order to save this expenditure, while there is no necessity to take water in, a dam has been constructed across the inlet channel as near as possible to the “take off.” The quantity of silt removed from this section and from the channel from the head sluice was 1,931 cubes, the approximate cost being Rs. 2,250.

The Yodakandiya tank was filled to spill level in December, 1918, and a head of about 6 feet of water was maintained this year in it. All the restored breaches are in good condition and water tight.

14. An under-culvert on the western branch, Akurugoda low-level channel, was constructed, the expenditure being met from the Fine Fund.

A regulator and a distribution sluice were constructed on the Malawewa drainage channel, the expenditure being met from the Fine Fund.

*Rakwana Subdivision.*

15. The total expenditure in maintaining the works during the year was Rs. 9,119·09. All the works have gradually been brought into a fair state of efficiency, and after another year or so the work of maintenance should diminish.

16. The Batugedara, Malwatta, and the Wellawa channels, and the Hinguruarawewa scheme received special attention this year, and the writer is pleased to report on the further improvements effected thereto. The Government Agent, Province of Sabaragamuwa, and the Ratamahatmaya of the district took great interest this year in the Batugedara channel, which requires prompt attention at every downpour of rain (on account of the silt washed into it from the various adjoining estates), and there were no complaints this year from any of the cultivators. The clearing of the silt, if not done immediately by the estate labour, was done by the Guardian, and the Government Agent saw to the cost being promptly recovered from the estate proprietors.

17. The completion of the repairs to the Uggalkaltota trough was successfully carried out this year in time to allow the usual cultivation under it. The expenditure on this work during the year was Rs. 1,398·61.

18. A paved cattle crossing was built on the Batugedara channel, the expenditure being met from the Fine Fund.

19. *Labour.*—As no large works of construction were carried out during the year in the Southern Division, the supply of labour for ordinary works of maintenance and silt removal proved sufficient.

## INVESTIGATIONS AND LAND DEVELOPMENT.

*Matara Subdivision.*

20. Various proposals were brought forward by the Government Agent, Southern Province, and the Assistant Government Agent, Matara, principally for the draining of swampy lands to render them cultivable, and for protective works to lands subject to the ill-effects of salt water from the sea and flood water from the river. After investigation all the proposals were found either impracticable or prohibitive on account of the cost, with the exception of the Karijapitiya scheme, which appears feasible, and which will be further

investigated as soon as the condition of the ground will permit it. The proposals in this case consist of improvements to the drainage and irrigation of about 350 acres of very good land (now subject to floods) by the construction of regulators and earthen bunds. In this subdivision only three applications for Crown land (in all 2½ acres in extent under the Dedduwa scheme) were reported upon and recommended.

*Tangalla Subdivision.*

21. Proposals to restore Mahawewa, Degampota, and fill it from the Urubokka river were investigated and reported against, as no water from Urubokka can be spared, and as the scheme would entail a long channel. No other proposals for development were received. Only seven applications for land were received for report, on which 46 acres were recommended as irrigable under the Urubokka scheme.

*Hambantota Subdivision.*

22. *Walawe Right Bank Scheme.*—The demand for the little irrigable land still available under the existing conditions and for land which could be irrigated by extensions and improvements in channels has been exceedingly keen, especially since the advantageous conditions offered by Government Circular No. 54 of August 4, 1919, became known to the farmers. In the writer's opinion the present market value of paddy leaves such large margin of profit to the growers that, if they could secure the labour and cattle which would be necessary to extend their cultivation, every acre of irrigable land available under this scheme would be taken up at high valuations and water-rate. The favourable condition offered in this Circular might have been confined only to lands outside major works, or allowed only under those major works where the development seems entirely lacking. The competition and demand for land, in the writer's opinion, is not entirely explained by the easy terms offered in that Circular, but is due to the gloomy prospects of the importation of rice and the consequent certainty to the grower that the price of paddy will not for years to come be much below what it is to-day. To justify these views and reasons for the competition of land under this scheme, the following instance will be of interest:—

Under the Walawe scheme a block of about 40 acres in extent of irrigable land was applied for by different persons under Government Circular No. 54 of August 4, 1919. The Assistant Government Agent intended first to divide the block amongst the applicants, but as, in the opinion of the writer, this would have rendered irrigation somewhat more difficult and cause besides other complications in giving immediate possession without a proper survey, he decided to lease the land on terms of that Circular to the one amongst the applicants who would offer the highest figure as the value to be fixed for the land in calculating the 6 per cent. rent. At the sale of the lease this value reached the figure of Rs. 380 per acre. No one of the competitors at the sale holds land in that tract (as an explanation of such figure being bid), nor does the land possess any special value when compared with other land under the scheme.

The above instance undoubtedly seems to prove the demand for land under the Hambantota District major works, and, though the writer is now dealing with the Walawe scheme, he is of opinion that it is applicable to other works, and that the lands in the first zone of the Kirindi-oya right bank scheme would have attracted the same or keener competition if they had been offered for sale under acceptable terms.

Under the Walawe scheme there have been 110 land applications, over 100 of which, under the terms of the Government Circular No. 54 of August 4, 1919, have been reported upon during the last three months of the year. Most of these applications entailed a great deal of investigation in the field, and the prompt manner in which they have been dealt with by the Irrigation Sub-Inspector in charge deserves to be recorded. Of about 900 acres applied for in these applications, about 430 acres have been recommended for alienation to the applicants.

23. *Kirindi-oya Left Bank Scheme.*—There has not been much sign of development or keen demand for new land under the scheme, and this is principally due to the fact that there is little or no land left under the existing conditions which can be irrigated without the construction of lengthy field and drainage channels. Another strong reason for the lack of demand is that the paddy growers in that district who can afford to buy land are holding back to invest their means in better land under the right bank scheme.

The applications for land under Tissa and Yodawewa were 17 in number, aggregating to 343 acres, 200 of which were in an area appearing as reserved Crown forest. The balance of 143 acres was recommended for alienation.

*Rakwana Subdivision.*

24. During the latter part of the year the Government Agent of the Province (Sabaragamuwa) brought forward a large number of proposals for new works and for restoration of old anicuts and channels. Each one of these, more or less, requires arduous walking for inspections and engineering investigation before it can be finally brought before Government. The writer and the subdivisional officer devoted to this special work all the time that could be spared from more urgent work and the immediate requirements in the subdivision. About thirty of these small and large schemes have been reported by the writer to the Government Agent after *prima facie* investigations this year. Most of these proposals are for permanent anicuts where temporary ones existed, or still exist, across dolas and rivers, and for channels therefrom intended to irrigate small extents of fields abandoned, or irregularly cultivated, or new lands. Of those inspected and reported upon, few are practicable owing to prohibitive cost, or if not so, owing to the unwillingness of the proprietors to contribute reasonably towards it, or to pay an adequate water-rate. Much valuable time and energy are thus involved. A junior Irrigation Sub-Inspector was appointed on November 1, 1919, to assist the subdivisional officer in the investigations of these proposals which on first inspection and on conditions offered by the proprietors appeared worth the trouble and the cost of investigations, but unfortunately, within a week or so of his arrival, he contracted enteric fever, and was unable to assist the subdivisional officer.

**CULTIVATION.**

25. Reporting generally on the division, the most important step towards improved cultivation which came to the notice of the writer has been in the Matara District, where transplanting has been introduced this year for the first time, and to a very encouraging extent. One of the factors in this advance is, no doubt, the enormous saving by this process of seed paddy, which in itself, at the present market value of the produce, covers a fair proportion of the extra costs in the operation, and there is no doubt that, with the advantage of greater yield to follow, this method will gradually become popular. The writer also noticed, under the Walawe scheme, that certain lands which were allowed to be fallow, because unfertile, were worked up this year and cultivated with a certain success. The top soil was turned over deeply by mamoties, and all the other work generally done by cattle was done on this land by men.

In general, though the signs of advance are few, cultivation this year has certainly been carried out with greater pains and labour than in the past, encouraged, no doubt, by the high prices of the product.

Under all the major works in the Southern Province proprietors, *goiyas*, and leasees set all their energies into operation, and, judging from what the writer has noticed, every acre of field appears to have been cultivated this year.

*Matara Subdivision.*

26. Both the crops, yala and maha, suffered this year for want of water during two periods of abnormally prolonged drought, and about 190 acres failed entirely through it. The present maha, now almost ready for reaping, is a very promising one.

27. Private lands to the extent of about 15 acres were newly brought under cultivation.

28. The total acreage cultivated and reaped during the year, according to the figures supplied by the headmen, was 11,373 acres, as compared with 12,277 acres in 1918. The average yield is reported to have been about seven-fold. On these figures the writer estimates that 227,500 bushels of paddy were produced under the schemes, the market rate per bushel having been Rs. 5.

*Tangalla Subdivision.*

29. The seasons passed favourably, and the water supply was ample under all the works for both crops, excepting under Pattiyapola tank, but here, too, with some difficulty the crop was brought to maturity, without loss.

30. The total reaped at all cultivations was 4,501 acres, as against 4,481 acres in the previous year. The reports on the yield vary, but it may be put down at about fourteen-fold. The estimated production under all the schemes for the year can be put down at 90,000 bushels of paddy sold at an average of Rs. 4.25 per bushel.

*Hambantota Subdivision.*

31. There was ample water for all the cultivation under the Walawe and Kirindi-oya schemes, and no losses to crops or difficulties in water supply arose during this year.

32. Under the Walawe right bank scheme 344 acres of new lands have been cultivated for the maha now under growth, of which 20 acres were alienated to applicants in October last. The extent reaped under the Walawe scheme for maha and yala was 8,150 acres, which shows an increase of 632 acres on the previous year's cultivation. The average yield can be put down at thirteen-fold at least, and the total production at 180,000 bushels of paddy, which was sold at an average price of Rs. 3.75 per bushel.

33. Under the Kirindi-oya left bank scheme the extent of private land opened out this year was 30 acres. The extent reaped for maha and yala was 9,074 acres, as against 8,987 acres in 1918. The yield is reported as eleven-fold. The production of the scheme can be put down at not less than 231,000 bushels of paddy sold at Rs. 3.60 per bushel.

*Rakwana Subdivision.*

34. The water supply was sufficient for the cultivation under all the schemes.

35. Under the Uggalkaltota channel the Government Agent granted permits on the writer's reports to five different applicants to asweddumize and cultivate small lots of land aggregating 31 acres. 56 acres were also granted under Hinguruarawewa to eleven different applicants, and under the same tank 500 acres were leased to a leading Kandyan chief. The 56 acres given on permits have been asweddumized, and most of that extent is under crop now, but little has been done so far in opening out the 500 acres.

36. The figures obtained from the chiefs and headmen of the extent cultivated do not show an appreciable increase on the previous year, and the writer is inclined to believe that they are not accurate. In any case this year's energies of the growers in the asweddumizing and the preparation of new fields, together with the slight improvement in cultivation and the greater pains which are being taken in following even the primitive methods, are bound to increase considerably the production in 1920, and still further thereafter if the market value of paddy does not fall below Rs. 3 per bushel, which, in the opinion of the writer, is not likely to be for some years.

37. In the Province of Sabaragamuwa cultivation was energetically pushed on by the Government Agent and some of his chiefs, but where it concerns the major irrigation works in that Province, the results of the efforts were not very encouraging when figures are compared, the increase this year having been only 37 acres. This is due to the fact that under the Uggalkaltota channel, for want of labour and cattle and the prevalence of much sickness, only 147 acres were cultivated this year, as against 332 in 1918.

38. The total extent reaped in this subdivision was 1,480 acres, as compared with 1,443 acres in the previous year. From the writer's personal observations and investigations the average yield can be estimated at sixteen-fold, and the production in the subdivision at 35,000 bushels of paddy.

39. The total production of paddy from the major works in the whole Southern Division, therefore, works out at 763,500 bushels, but, considering that the headmen's reports as to yield and the figures of the extent reaped this year are believed by the writer to be below what they actually should be, the total output of paddy may be fairly safely said to have amounted to one million bushels.

**HEALTH.**

40. A great deal of fever and "flu" prevailed amongst the staff and the labour. There were two outbreaks of cholera in the Hambantota District. The first affected more or less the whole of the area, but very seriously Hambantota. The second outbreak was much milder, and confined to Tissa, Magama, and Ranakeliya. The district is at present clear of the epidemic.

**V.—WESTERN DIVISION.**

Mr. C. C. Harward, A.M.I.C.E.

**SURVEYS AND INVESTIGATIONS.**

1. (a) *Muturajawela Scheme.*—A survey was taken in hand to investigate the possibility of the drainage and protection from floods of the large area of swamp lying between the Colombo-Negombo road and the sea, and extending from the Negombo lake to the Hendala-Mabola road, and to form an estimate of the probable cost of the works required. Owing to delays caused by rain and floods it was not completed during the year. The field work will be completed early in 1920. Owing to shortage of permanent staff it was necessary to employ a special temporary surveyor for this work.

(b) *Diyaturai Anicut Scheme.*—A small survey was carried out to complete the data necessary for designing the Diyaturai anicut restoration.

(c) *Minor Surveys* were carried out for a gauging station on the Deduru-oya intake channel and for Kospotu-oya anicut flood bund extension.

## CONSTRUCTION.

2. (a) *Deduru-oya Scheme*.—A rock slip in the 5th mile of the main channel was repaired.
- (b) *Magallawewa Tank*.—The rubble pitching to protect the inner slope of the bund was extended. The northern bund of this tank is now almost fully protected.
- (c) *Village Tanks*.—Rs. 1,604.66 was expended in constructing pipes for village tank sluices in the division.

## MAINTENANCE.

3. (a) The major works in the division have been maintained in fair order, and a good number of improvements to minor details have been effected during the year.
- (b) *Village Tanks*.—Repairs to sluices and spills of the following tanks were carried out:—Ambagaswewa, Balalla, Mahawewa, Kudawewa, Ambanpola, Uppalawatta, Tinipitiwewa, and Kirindigala.

## CULTIVATION.

4. (a) *Deduru-oya Scheme*.—An increased area was cultivated as compared with last year's total of 4,729 acres. The total area reaped this year was 5,420 acres, comprising 2,936 acres of maha and 2,484 acres of yala. Reliable figures regarding the yield are not available.
- (b) *Magallawewa Scheme*.—A total of 762 acres was reaped under this scheme, as against 731 acres last year. This total was made up of 116 acres of maha and 646 acres of yala. An additional area of 135 acres was ploughed for maha and abandoned on account of lateness. The area cultivated under this scheme could be considerably increased if the cultivators could be induced to start maha at a proper time.
- (c) *Maha Uswewa Scheme*.—A total of 350 acres was reaped under this scheme, as against 375 acres last year. The total was made up of 50 acres for maha and 300 acres for yala. The chief cause of the small maha crop was an influenza outbreak at the season of preparation.
- (d) *Mediyawa Scheme*.—A total of 392 acres was reaped, as against 320 acres last year. This total was made up of 176 acres of maha and 216 acres of yala. An additional 110 acres sown for yala was abandoned owing to water shortage due to late sowing.
- (e) *Galgamuwa Scheme*.—A total of 290 acres was reaped under this scheme, the whole area being yala. Maha was not sown owing to the tank not having filled.
- (f) Under the small major works in the Western Province a total area of 663 acres was cultivated, comprising 315 acres of maha and 348 acres of yala.

## DEVELOPMENT PROSPECTS.

5. (a) *North-Western Province*.—There is very little scope for further development in this Province by the sale of new land under existing schemes; any development on a large scale of *new lands* will require to be supported by new works or by expensive additions to existing works. There is, however, room for considerable increase in the paddy production, both under existing major works and under village works, by alterations in the sowing dates so as to make more use of rain water and by improved methods of cultivation, and also by cultivation of lands which are at present frequently allowed to lie idle.

- (b) *Western Province*.—There is no scope for further development by opening up new lands under the existing major works. There is also no scope for getting a considerably increased yield of paddy from the major works, excepting the Peliyagoda scheme, under which there is considerable room for improvement, and the matter is at present under investigation.

There is very considerable room for improvement in the output of paddy from village lands in this Province, especially in the large area of lands near the coast which are within a foot or two of sea level, and cultivation on which should be done at special times on account of the difficulty of draining them. These lands should be organized as a whole, and special irrigation headmen should be appointed to administer them.

The subject is a very important one at the present time, and all the time that can possibly be spared from other works is being devoted to the study of it. A very large area is involved (probably over 100,000 acres), much of which has been allowed to go out of cultivation during past years, but a good deal of which is being cultivated again this year on account of the high price of rice. This area has never been studied, and it requires preliminary study as one unit first. Staff and money will be required later on to make a more detailed investigation of it. There can be no doubt that under the present conditions this investigation is one of the most important works in the division, because the population is on the spot.

Questions regarding parts of these lands are under consideration at present, but it is impossible to deal satisfactorily with isolated parts of it, because nearly all the low-lying lands are connected by navigation canals with the Kelani-ganga and the Kalu-ganga, and they require investigation as a whole.

## VI.—CENTRAL DIVISION.

Mr. C. C. Harward, A.M.I.C.E.

## SURVEYS AND INVESTIGATIONS.

1. *Central Province*: (a) *Nalanda-oya Scheme*.—The survey of alternative traces for approach road to the dam site, which was commenced in 1918, was completed. Further investigations of the foundations for the right bank abutment of the dam were completed. Records of the flow of the Nalanda-oya were registered throughout the year.

- (b) *Nikawella Anicut*.—A survey was made of the site of a proposed anicut at Nikawella in the Matale District and a channel traced to the fields to be irrigated.

- (c) A survey to investigate the proposed restoration of the Bodi-ela was commenced.

- (d) Minor surveys were carried out as below:—

- (i.) To investigate the question of the restoration of Unantenna amuna and channel.
- (ii.) To investigate a proposed diversion of the Ma-ela.
- (iii.) Preliminary investigations at Nikawella anicut.
- (iv.) To investigate an extension of irrigation under Pelwehera tank.

2. *Province of Uva.*—(a) A survey for the extension of Hambegamuwa right bank channel was taken in hand during the year.

(b) Minor surveys were carried out as below :—

- (i.) Investigation at Kotawera tank for building a regulator and “by-pass” for silt.
- (ii.) Obtaining hydrographic data at Sudapanawila, Buttala, and Kumbukkan schemes.
- (iii.) Preliminary investigations of Hambegamuwa right bank channel extensions.
- (iv.) Investigation of proposal for restoration of Raduna amuna.
- (v.) Investigation for proposed restoration of Yakdehi-ela.

#### CONSTRUCTION.

3. *Central Province.*—(a) Repairs to the masonry works of the Ma-ela were carried out.

(b) Rs. 107 was spent in improvements to village irrigation works in the Matale District.

(c) Rs. 534·86 was expended in making cement pipes for village tank sluices in Matale District.

#### MAINTENANCE.

4. The major works throughout the division were maintained in fair order considering the limited amount of money available for the purpose. No work calling for special mention was carried out during the year.

#### CULTIVATION.

5. *Central Province :* (a) *Ma-ela Scheme.*—A total area of 2,260 acres was reaped under this scheme consisting of 1,321 acres for maha and 939 acres for yala.

(b) *Lamasuriyagama-ela Scheme.*—A total area of 312 acres was reaped consisting of 156 acres for maha and 156 acres for yala.

(c) *Mulhal-ela Scheme.*—A total area of 617 acres was reaped consisting of 467 acres for maha and 150 acres for yala.

(d) On the remaining small schemes of the Province about 358 acres were reaped.

6. *Province of Uva :* (a) *Kumbukkan Scheme.*—A total of 710 acres was reaped, being all maha.

(b) *Gal-oya Scheme.*—A total area of 305 acres was reaped, being all maha.

(c) *Buttala Scheme.*—A total of 575 acres was reaped under this scheme, being all maha.

(d) *Uma-ela Scheme.*—831 acres were reaped consisting of 463 acres maha and 368 acres yala.

(e) *Badulupitiya-ela.*—A total area of 430 acres was reaped consisting of 215 acres maha and 215 acres yala.

(f) On the remaining small schemes of the division about 1,560 acres were reaped. The usual yala crop was not sown at Sudapanawila-ela owing to “hoof-and-mouth” disease.

7. *General.*—There were practically no losses of crops under any of the above schemes, and the returns admitted to are fairly good.

#### DEVELOPMENT PROSPECTS.

8. (a) *Central Province.*—There is no prospect of any extensive development under existing major works in this Province by sale of new lands under the existing schemes. Any increase in the output of paddy must depend on improved methods of cultivation, or on the construction of new works. It is probable that more regular cultivation will be done on all the works, including the village works, in the coming season owing to the increased price of rice.

(b) *Province of Uva.*—The schemes in this Province, under which there is a prospect of the development of areas worth mentioning, are the Gal-oya scheme and the Kumbukkan scheme, the total undeveloped acreage under the two schemes being about 1,400 acres. The total undeveloped acreage under all the rest of the major works in Uva is about 600 acres.

(c) *Village Works in Uva.*—It would appear that there must be considerable room for an increased output from these works. There are over 2,000 village “elas” and over 100 village tanks in Uva; the average area cultivated under these numerous works probably does not exceed 10 acres per work. This estimate is based on a somewhat hurried glance through the list of village works in charge of the Irrigation Sub-Inspector, Badulla, but it indicates that there is probably considerable room for development, as an increase in the average of even a small amount would represent a considerable increase in the production of paddy. At present it is only possible to detail one Irrigation Sub-Inspector to be in charge of all these works, and it is hardly necessary to say that he cannot possibly do justice to them.

9. Both in the Central Province and in the Province of Uva the main hope of immediate development lies in the improvement of the administration of village works. Much too little is known about these works, and a thorough study of them is necessary, but it is very difficult to do much in this direction without a substantial increase of staff. It would probably be a sound policy to have a temporary special officer in each Province to make a complete list of all the works, with a brief description of each of them, and a statement of what is required to improve them, and one-inch-to-the-mile maps showing all the works. As soon as a better knowledge of them had been acquired, it would be possible to go into the question of appointing the necessary staff to enforce regular cultivation under them.

R. F. MORRIS, M.I.C.E.,  
Assistant Director of Irrigation.

A limited number of copies of this report will be bound together with the following statements; those marked B are included in the Ceylon Blue Book :—

B Expenditure on Surveys.  
B Expenditure on Construction.  
B Expenditure on Maintenance.  
B Expenditure on Village Works.  
B Expenditure, Miscellaneous.

B Summary of Year's Expenditure.  
Areas of Paddy cultivated.  
Labour and Fine Money, Village Works.  
Restored Village Tanks.

Trincomalee, February 25, 1920.

C. F. S. BAKER, M.I.C.E.,  
Director of Irrigation.

## APPENDIX.

A.—Statement showing Areas of Rice Cultivation under various Irrigation Schemes during 1918-19.

| Name of Work.                                | Area paying Rate. | North-east Monsoon Cultivation. |         |        |         | South-west Monsoon Cultivation. |         | Total Area cultivated. |         |

# MINES.

## REPORT OF THE INSPECTOR OF MINES FOR 1919.

*Staff.*—The Inspector of Mines was away on leave from March 12 to November 7, 1919, during which period the Assistant Inspector acted.

*Inspection.*—The mines that were working were inspected at regular intervals, and all accidents were inquired into.

*General.*—There were 312 declarations sent in to open and work new mines during the year. The number of mines reported to be working at the end of the year was 73, employing about 6,000 men. Included in these are some 25 small mines said to be working in the Galle, Matara, and Kandy Districts, and employing altogether about 200 men. In the Kandy District probably there are no plumbago mines at work, but only small mica mines. Of the 16 mines said to be working in the Southern Province, not more than about 3 are really working, as it has been found that these small owners continue to send in working reports even after their mines have stopped work.

Mining was practically at a standstill for most part of the year, and specially so at the end of the year. The mines that continued to work were the large mines in the Kurunegala District at Maduragoda and Ragedara, those at Dumbara and Karandana in the Ratnapura District, two mines at Botale in the Colombo District, and four in Pasdun korale of Kalutara District.

The total quantity of plumbago exported during 1919 was 6,672 tons, valued at Rs. 1,732,079. The only explanation of this large falling off of exports, from over 30,000 tons during 1916 to 6,672 tons during 1919, is that there is less demand for plumbago. The Island is still in a position to produce 30,000 tons a year, but it is not likely to do so unless a market can be found for the mineral. In former years Ceylon enjoyed a practical monopoly of the world's supply of plumbago, but during the last nine or ten years it has lost this advantage, owing to plumbago having been discovered in large quantities in other countries, specially Madagascar, where the export has now reached something like 40,000 tons a year, and it is now a question whether Ceylon will be able to compete in the world's markets with these other countries.

Ceylon plumbago appears to possess superior qualities over that of other countries, but not sufficiently so to enable it to obtain very much higher prices, as the plumbago from other countries can be utilized for all practical purposes, so that to obtain a market the local article will have to be placed at practically the same price as the foreign article. In order to do this, it is feared that the Ceylon mine owners will have to be content with considerably less profits than they have enjoyed in the past, as the cost of production is always likely to be higher here than at Madagascar, owing to the fact that mines in Ceylon are deep, whereas those at Madagascar are mostly more or less surface ones.

The Plumbago Merchants' Union have, it is understood, gone into the matter with a view to finding out the total cost of production, including delivery in Colombo, curing, freight, &c., with the object of evolving a scheme by which Ceylon plumbago could be offered to the market for some fixed period at fixed maximum prices, giving as it were a guarantee that, should buyers be induced to revert back to Ceylon for plumbago, they will not be subjected to an enormous rise in prices as soon as the demand increases. It is not known how far the scheme has developed, or whether any action has been taken at all.

The plumbago exported this year worked out at an average of about Rs. 259 per ton as it was declared at the Customs. At an all-round rate of Rs. 250 a ton there are many mines in Ceylon that, given a regular market, could be worked profitably.

Several large mines closed down temporarily, including Wataraka and Laxapana, but are sure to re-open should the market revive.

The high-rate of exchange is also a serious drawback against the revival of the plumbago industry.

As a means of assisting Ceylon plumbago as regards import into the United Kingdom, the question of fixing a preferential tariff against the plumbago from foreign countries was raised, but was dropped as being impracticable.

In a crisis of this kind, statements are frequently made that Government should assist those affected. It has been suggested that Government should give every facility with regard to the importation of explosives and other materials, and easy means of obtaining timber, but, so far as can be judged, the matter rests not with Government, but with those in the business. If they are able to supply Ceylon plumbago, which is admittedly of higher quality, at a price comparing favourably with the mineral obtained from other countries, it is possible to regain the market lost by the prices in the past being enormously higher than those of the other countries.

The cost of production, &c., is known only to those in the trade. It is to be hoped that every effort will be made to revive such an important industry, and to save it from expiring altogether.

At the beginning of 1914, when the first signs of competition with Madagascar plumbago began to be felt, the Low-country Products Association and the Plumbago Merchants' Union decided to send a representative from each to investigate. The mission was put off by the outbreak of war, and was subsequently abandoned, as the competition was too apparent to need investigation. The present crisis appears to demand equally combined action on the part of producers.

The question that occurs to one outside the trade is, whether or not it would be desirable for the producers and dealers to combine and appoint a suitable person as their representative or agent to be sent to the principal plumbago-using countries provided with samples and figures to book orders. One enterprising owner has gone over with the intention of obtaining a market for his plumbago in Europe and in America, and it is hoped his efforts will meet with success.

In previous years there have been slumps in the industry, due to temporary lack of demand for plumbago, but the present slump is an entirely different matter, as the demand for plumbago is as great or greater than it ever was, only, unfortunately for Ceylon, the supplies are being obtained from elsewhere. The position could not very well be worse than at present. The few mines working are producing more than the requirements, thereby adding to the existing large stocks. These remarks apply to most part of the year under review and describe conditions at the end of it, there being no signs of improved prospects for the future.

*Mica.*—There were a few small mines worked for mica during the year, but only two or three were at work in the Central Province towards the end of the year. The general result of all the prospecting seems to have proved the existence of innumerable small deposits spread throughout a good part of the Island, but nothing of very much value in the way of good veins. The Principal Mineral Surveyor is of opinion that the mica industry in Ceylon is not likely to be of any value. There are abundant supplies in other countries which can be put on the market much more economically than can the Ceylon mica. 167 gwt. were exported at a declared value of Rs. 23,036.

There were 13 mines working with machinery. Thirty-three accidents occurred during the year, resulting in the death of 18 persons and injury to 17. A description of each accident that occurred is given under the respective Provinces.

#### PROVINCES.

##### (1) Western Province.

There were 22 mines registered as working at the end of the year employing about 2,000 men. The number of new mines registered was 52. Machinery was in use at 7 mines. Fourteen accidents occurred, resulting in the death of 4 persons and injury to 11.

*Wataraka mine*, situated near Padukka, closed down towards the end of the year owing to depression in the market, but will re-open immediately there is any chance of a demand for plumbago. Work in this mine was carried on at the 450 feet level with drives on the vein to north and south, which proved the length of the vein to be 550 feet. Below this level three winzes were sunk, the deepest to a depth of 50 feet, all showing the vein still good. Above this level some stoping was done. A report by a Mining Engineer who was employed at the mine estimates that the developments at present above the 450 feet level should yield 1,650 tons. Assuming the vein continues, as proved, from the 500 feet level down to the 550 feet level, it is estimated that this block will yield another 3,000 tons. Thus far the statements are made on fairly sure grounds, but any estimate of the quantity to be obtained from other parts of the mine worked on the upper levels by previous owners, and now fallen in, depends on information that can be gathered. It is stated that from the whole mine above the 550 feet level a total of 10,000 tons may reasonably be expected. The mine is fitted with machinery, and is capable of turning out 100 tons a month at least.

The Botale mines, near Ambepussa station, are now only working at and above the 114 feet level, and are apparently nearing completion after having worked many years and yielded a large quantity of plumbago.

Two mines at Amudachehihena, near Veyangoda, worked continuously during the year, but the large mines at Debahera closed down. A new mine at Godagama, in this district, was started, but had not reached the vein by the end of the year.

*Boraluketiya mine*, at Migahatenna, in the Kalutara District, was worked continuously, and from 400 to 500 tons of plumbago were obtained. There was practically no development work done, but this mine should still be able to turn out a large amount of plumbago of excellent quality. There is a large quantity of water in the mine, and the cost of pumping is high.

The only other important mine worked in this district is Mananagodella, at Mahagama. This is a group of three shafts connected and working at the 180 feet level. The output from these was about 25 tons a month.

The following is a description of the accidents :—

Four accidents occurred in Wataraka mine : (1) A man was slightly injured by some earth falling on him ; (2) a man was injured by a beam falling on his leg ; (3) a man was killed by falling into the pit whilst stepping into the kibble at the surface ; (4) a man was injured by a stone falling on his leg whilst going over a heap of debris. Three accidents occurred in Boraluketiya mine, Migahatenna : (1) A man was killed by falling into the pit ; (2) a man was injured by a stone from the roof of a stope falling on him ; (3) a man was injured by falling when resting on the timber in a stope.

At Godakumbura, Mahagama, a man was slightly injured whilst removing the loose stone at the bottom of the pit. At Amudachehihena, Karasagala, a man was injured by a piece of timber falling on him. At Elawalhena, Migoda, a man was killed by the explosion of a dynamite. At Mananagodella, Mahagama, two men were injured by one of the men who was being raised to the surface falling on another man.

##### (2) Central Province.

There were 10 mines registered as working at the end of the year employing about 111 men. The number of new mines registered was 29. No accidents occurred. Laxapana mine was the only one in which machinery was used, and it closed down early. This mine is drained by an adit, and by having 4 or 5 men repairing the timber can be kept in a position to re-start work at any time. The other mines are small, and are mostly temporary mica mines.

##### (3) Southern Province.

There were 33 mines registered as working at the end of the year employing 231 men. The number of new mines registered was 159. One mine was using machinery. The majority of these owners are ignorant villagers, who forward working reports long after the mines close down. This was verified by a visit to several districts. Not more than 4 mines were actually working employing about

40 men. Two accidents occurred resulting in the death of one man and injury to another. The following is a description of the accidents :—At Gulankanda, Ampegama, a man was killed by falling on some tools whilst going down the shaft along the rope. At Punchinaiduwa, Ratgama, a man was injured by the bucket striking his head.

(4) *North-Western Province.*

There were 12 mines registered as working at the end of the year employing about 1,670 men. Four new mines were registered during the year. Machinery was used at 3 mines. Ten accidents occurred, resulting in the death of 10 men and injury to 3.

Damballagola mine, at Ragedara, has been developed to the north at about the 570 feet level. A cross cut was driven and five veins were cut. Drives were made east and west and winzes sunk. They do not appear to extend downwards, but all are apparently good veins above this level, one showing 18 inches of plumbago at the top of the drive. The present output is very small, but by working on all the faces, and having machinery to deal with the raising of material, this mine should be capable of turning out a large output at a fairly low cost.

Millagaha mine, at the same place, is also working at about the 570 feet level, on one vein, and with mechanical raising, and the multiplying of faces, should increase the output considerably. Some similar system as is in use at Kahatagaha mine, at Maduragoda, would probably be applicable to both these mines, or the driving in of an adit from the bottom of the hill to connect up to both these mines at depth; this would also ensure ventilation.

Kolongaha mine, at Maduragoda, is working on one vein at about the 560 feet level, and here, too, only one face is being worked, the best part of the vein being stoped down in one stage. This method of going down on the vein at the best parts by hand work and leaving the poor parts to be worked upwards in the last stage of the life of the mine results in the mine going down in a zig-zag direction, and to adopt mechanical haulage it would be necessary to cut through the pillars to get a straight lead, and undoubtedly improvements of this nature are becoming necessary to enable miners to produce at a cost to compete with other countries.

Kahatagaha mine, at Maduragoda, is an example of what can be done by adopting improved methods. It produced 1,124 tons at a low cost. They are going down on the vein at the 516 feet level, and have some 18 faces working. The plumbago and debris is raised from the bottom 25 feet to the 490 feet level by hand, then by a compressed air winch to the 369 feet level and tipped into trolleys, it is then conveyed along the drive to the next lift and raised also by a winch driven by compressed air to the 100 feet level, from this it is trolleyed to the bottom of the main shaft and raised to the surface by a steam winch. The use of compressed air underground makes the mine cool and comfortable. Two boilers generate the power for the steam winch, pump, air compressor, and dynamo. Connections are being made to Bemmulla and to No. 3 Kahatagaha mine to enable them to be worked in conjunction with this mine. The other mines in this village are only working a little at the upper levels.

Dehigaha mine, which went down to about 700 feet, has abandoned the bottom owing to want of proper ventilation and to the high cost of raising the stuff, and is now working up the pillars.

Elibichehiya mine has not yet sunk the shaft down to the level below which plumbago is said to exist in large quantities. There is a good lot of water, and pumping is expensive. The following is a description of the accidents that occurred :—Three accidents occurred in Millagaha pit, Ragedara : (1) A man was killed by falling from the ladder whilst ascending; (2) and (3) two men were injured by falling from the ladder whilst descending. Two accidents occurred in Dehigaha pit, Meepitiya : (1) A man was killed by falling from the ladder whilst descending; (2) a man was killed by falling from the ladder whilst ascending. Two accidents occurred in Walakatahena pit, Maduragoda : Two men were injured by stones falling on their legs whilst going over a heap of debris. At Kahatagaha pit, Maduragoda, a man was injured at the surface by falling from a coconut tree. At Kanugollayaya, Mipitiya, a man was injured by falling from the ladder whilst descending. At Haulpatale, Ragedara, a man was injured by falling from the ladder whilst ascending.

(5) *Province of Sabaragamuwa.*

There were 25 mines registered as working at the end of the year employing 1,983 men. The number of new mines registered was 62. Machinery was in use at 3 mines. Seven accidents occurred, resulting in the death of 6 persons and injury to 2.

The group of mines at Pahalapola, near Nambapana, continue to work, and is producing a fair amount of plumbago. The cost of production at these places is fairly low, owing to the fact that the mines are connected to the Medapola adit, and the cost of pumping is thus saved.

The Karandana mines also continued to work, but not in a large way. They, too, have the advantage of the water being drained by an adit.

Wallagala mine, at Bopitiya, worked throughout, employing a few men.

Mahabogala mine, at Arukgammana, which has worked continuously for many years, temporarily closed down during the year.

Punchibogala mine also closed down temporarily. On the other hand, Karandawatta mine, at the same place, after being closed for some years, was re-opened by a new owner to the 150 feet level. They are taking out a little plumbago, and sinking to try to get on to a vein at depth that was worked in the adjoining mine.

The following is a description of the accidents that occurred :—Two accidents occurred in Karandawatta, Arukgammana : (1) A man was burnt by the ignition of a small accumulation of gas and died a few days later; (2) a man was injured by his hand striking against the side of the shaft whilst being raised to the surface. Two accidents occurred in Wallagala pit, Bopitiya : In one a man was killed, and in the other a man was injured by falling from the ladder whilst descending. At Mahabogala two men were injured by the explosion of a missed fire dynamite. At Gedumbagaha pit a man was killed by falling from the ladder whilst ascending. At Rambutangaha pit, Dumbara, a man was killed by falling when attempting to step from the bucket to the platform.

(6) *Province of Uva.*

Six new mines were registered, but no working reports were received.

Colombo, April 8, 1920.

T. G. HUNTER,  
Inspector of Mines.

# FACTORIES.

## REPORT OF THE INSPECTOR OF FACTORIES FOR 1919.

**Staff.**—There has been no alteration since the last Administration Report. The Inspector has been on duty throughout the year, except for fourteen days' leave in February. During that period the office work was attended to by him.

**Inspections.**—Inspections were carried out in the Central, Western, Sabaragamuwa, and Uva Provinces; the total number of visits was 582. In the majority of cases the result of the inspection was satisfactory. The instances of non-observance of the rules were omission to secure annually the boiler certificates, to report the cessation of work, and to maintain the existent fencing in good repair. Details of these contraventions are given under the respective Provinces. There has been a decrease of nine in the total number of factories compared to that of 1918, or just under a three-quarter per centum. This hardly indicates an actual reduction, however, for the reason that it is mainly due to the unification of two or more factories to combine the curing of tea, rubber, and cacao under one roof. The number of employees or the horse power used is not necessarily lessened thereby. Further details are given in this respect. The mileage travelled was 3,615, exclusive of railway journeys.

| REGISTRATION. |  |  |                         |

| Sabaragamuwa  | 176                     | —                                   | —                           | —                       | —         | —                                | 176    | 42           | 7                       |
| North-Western | 21                      | 33                                  | —                           | —                       | —         | —                                | 54     | 13           | 2                       |
| Total         | 1,037                   | 115                                 | 45                          | 22                      | 11        | 36                               | 1,266  | 313          | 109                     |

The number of cases in which steam power was used has diminished by just 8 per cent., nearly twice the average rate of decrease for some years past. Electric lighting installations, on the other hand, have increased by 11 per cent. since the previous report.

**ACCIDENTS.**

The fatal accidents number five for the year, the same number that occurred in 1916; two of these, however, were not connected with mill gearings; one being caused by burns, and one from a fall out of a window. The rates of serious and fatal mishaps according to classes of factories was as under :—

| Class of Factory.         | Rate per Hundred Factories.  |
|---------------------------|------------------------------|
| Tea                       | Approximately $\frac{1}{2}$  |
| Rubber                    | Approximately 2              |
| Coconut                   | Approximately 7              |
| Engineering and saw mills | Approximately 4              |
| All others                | Approximately $5\frac{1}{2}$ |

Of the twenty-one accidents, comprising those fatal and serious, eight were incurred during the course of supplying material to machines, such as rubber rollers, fibre drums, and circular saw benches. Those connected with oiling, cleaning, and repairing, and the adjustment of belts were ten. There was

one due to a fall, one to a belt breaking, and one to burns. Twenty-eight accidents took place, resulting in the death of five persons and injuries to twenty-three. Seven of the latter, however, were of a trivial or non-serious nature.

| Province.     | Number of Accidents. | Number of Persons injured. | Number killed. | Total affected. |
|---------------|----------------------|----------------------------|----------------|-----------------|
| Central       | 4                    | 4                          | 2              | 4               |
| Western       | 20                   | 20                         | —              | 20              |
| Sabaragamuwa  | 3                    | 3                          | 2              | 3               |
| North-Western | 1                    | 1                          | 1              | 1               |
| Total         | 28                   | 28                         | 5              | 28              |

| Class of Factory.         | Non-serious. | Serious. | Fatal. | Total. |
|---------------------------|--------------|----------|--------|--------|
| Tea                       | 2            | 2        | 3      | 7      |
| Rubber                    | —            | 2        | —      | 2      |
| Coconut                   | 1            | 7        | 1      | 9      |
| Engineering and saw mills | 1            | 1        | 1      | 3      |
| All others                | 3            | 4        | —      | 7      |
| Total                     | 7            | 16       | 5      | 28     |

A description of each serious or fatal accident is given under the Province in which it occurred.

(1) *Central Province.*

There were 606 factories registered as working, employing from 11,000 to 12,000 persons on working days. 178 factories were visited, and precautionary measures were recommended in thirty instances. Cases of non-observance were not encountered. There were two new factories registered, and inspected during the year. There were no prosecutions instituted. Four accidents took place, through which two fatalities and two cases of serious injury resulted, as described below:—

(a) *Fatalities.*—At Hardonhuish tea factory, in the Dikoya district, a mechanic whilst tightening the keys of a water-wheel pinion had his hand and arm drawn in between the teeth of this mechanism and those of the main spur wheel. The machinery was not working at the time, but the coolies helping in the work, by some misunderstanding, turned the gearing round. He subsequently succumbed to his injuries. It was quite accidental. A special visit was paid by the Inspector.

At Galaha tea factory, in the Hantane district, a cooly fell from the third storey out of a window. He was engaged in tightening up the tats in the withering loft. It was a pure accident, and, in fact, cannot be considered as that of one caused by machinery.

(b) *Accidents of a serious nature.*—At Laxapana tea factory, in the Maskeliya district, a man whilst scraping off the excess lubricant from the bevel wheels of a tea roller, allowed his hand to be drawn into this gearing. Eventually his right forearm was amputated. Fencing measures had not been neglected, and the accident was due to the man's heedlessness, and in doing what he was not called upon while the machinery was in motion.

At Amblamana tea factory, in the Hantane district, a Sinhalese man inadvertently put his hand in the tramway cable and had it drawn in between the cable and the wheel of a runner. A finger was severed. It was due to his own action.

(2) *Province of Uva.*

One hundred and twenty-one factories appear in the register at the end of 1919, employing from 2,000 to 2,500 persons on working days. Inspections were made throughout the Province, and precautionary measures were recommended in twenty-two cases. One case of non-observance was encountered; this was an omission to renew the boiler certificate. It was subsequently secured. The reason given for the delay—a period of about two months—was the difficulty at the time of getting the services of an engineer. There were no accidents. There were no prosecutions.

(3) *Southern Province.*

In this Province the numbers of factories and of persons employed are respectively 39 and 750 to 800. There were no prosecutions. There were no accidents.

(4) *Western Province.*

There were 270 factories registered, employing 16,000 to 17,000 persons on working days. Eighteen new factories were registered and inspected, classified as follows:—Five tea and rubber, six saw mills and engineering, six fibre and desiccating, and one manure. Three factories were added to the total of 1918. The visits carried out numbered 280. Additional precautionary measures were recommended in forty cases. Two instances of non-compliance occurred: one was failure to maintain the fencing in good repair, and one of omission to report the closing of a factory. It was subsequently explained that through changes in the management these irregularities had supervened. There were no prosecutions. There were twenty accidents, in which two men were killed and eighteen injured; five of the latter were of a non-serious nature.

(a) *Fatalities.*—At the Lanka Engineering Works (Messrs. Brown & Co.), Maradana Ward, a man died through injuries sustained from burning. It was not strictly a machinery accident.

At the Orient Mills, Veyangoda, for coconut desiccating and fibre, an employee had his arm drawn into a husk crusher whilst engaged in feeding same with material. He received medical treatment almost at once, but succumbed later at the hospital. It was entirely accidental. A special visit was paid by the Inspector.

(b) *Accidents of a serious nature.*—At the Hunupitiya coconut oil and desiccating mills, in the Alutkuru korale north, an employee whilst pushing a piece of wood towards a circular saw, at which he had no business to be, owing to mishandling, the wood was thrown back and struck his forehead. He was some days in the hospital. It was due to his interference and ignorance.

At Warwick Major's saw mills, in the Kalutara District, situated near Moratuwa, a workman had his hand crushed between the rollers of a planing machine. Later his hand had to be amputated. The man was not employed at this machine, but he was carrying planks at the time, and in a moment of carelessness put his hand on these rollers. It can be considered as an accident due to his lack of attention. A special visit was made by the Inspector.

At the Ceylon Spinning and Weaving Mills, Wellawatta, a boy had the middle finger of his right hand crushed. The account given was that he deliberately put his hand into a thread-extracting machine, near to which he had no reason to go. It seemed to have been due to his own fault. At these same mills and during the same month (February) another employee was injured by the breaking of a belt, one of the ends striking his face. The belt was above the height (3 feet 6 inches) required by the regulations, up to which fencing is carried. It was a pure accident. A special visit of inspection was made.

At the Mount Lavinia Hotel the engine driver sustained compound fracture of four fingers of his right hand. The injuries were caused through getting caught in the cogwheel of a pump. The machinery was not working at the time. He was cleaning the gearings, and the mechanism was being turned by hand. It was a simple accident.

At the Britannia oil and desiccating mills, in the Alutkuru korale north, a man received multiple injuries to his right forearm, necessitating amputation. His arm was drawn into an oil expeller whilst feeding same. The accident was due to temporary lack of attention on the workman's part.

Another accident occurred here in August. A woman had the small finger of her right hand severed through getting caught in the fly-wheel of a sifter. It was stated that her work was confined to placing desiccated coconut in the sifting room, and there was no occasion for her to go near the machine in question. It seemed to have been her own fault.

At Elston rubber factory, in the Kelani Valley district, a boy of fifteen years (the rubber-maker's cook) came to the factory for no apparent reason and put his hand under the water flow of a washing machine. It was drawn in between the rollers and badly crushed. The fault must have been his own; he had not any right to be there.

At Kirantidiya rubber factory, in the Kalutara District, the engine driver while cleaning the oil engine had his hand caught and somewhat crushed. He was unable to use his hand for a few days. It was a pure accident.

At the Colombo Commercial Company's Lead Mills, in Union Place, Slave Island Ward, a man had his right arm severely crushed in an underground shafting, which was being repaired at the time. The Manager stated that the workman was warned against interfering with the mill gearing, but disregarded this admonition, and endeavoured to scrape grease off the bearings. It was due to the workman's own fault.

At the Mahamedil Oil Mills, in the New Bazaar Ward, Colombo, a fitter of twelve years' experience, whilst examining an oil expeller, accidentally let his arm be caught and drawn into the gearing. The arm was somewhat crushed and lacerated. The gearings were adequately fenced. It was purely accidental.

At the Bulk Petroleum Installation (Messrs. Delmege, Forsyth & Co.), in the Kotahena Ward, Colombo, a workman lost a portion of his right thumb at a tin-cutting machine. This accident was due to temporary lack of attention on the workman's part. The machine was adequately fenced.

At the British Ceylon Corporation Mills, Hulftsdorp, in the New Bazaar Ward, a workman had his fingers of his right hand lacerated through their coming in contact with the cogwheels of an oil expeller. He had no ostensible reason to go into the proximity of this machine, the Manager stated, and which had its gearings cased over. It was due to his own carelessness.

#### (5) *Province of Sabaragamuwa.*

There were 176 factories registered as working, employing from 2,500 to 3,500 persons on working days. Three inspections were made in this Province. There were no prosecutions. Of accidents, one fatality and two of a non-serious nature happened.

*Fatalities.*—At Kandaloya tea and rubber factory, in the Yakdessa district, a boy who was not employed inside the factory interfered with the belt of a cardamom clipper. The Inquirer into Sudden Deaths reported: "How the boy got caught in the belt is a mystery, unless it was the open end of a bangle (bracelet) that got caught." Death was due to shock from multiple injuries.

#### (6) *North-Western Province.*

Fifty-four factories, employing from 1,500 to 2,000 persons, are registered. There were no prosecutions. There was one accident of a serious nature, as described below:—

At Keenakellie coconut fibre mills, near Marawila, in the Chilaw District, the foreman had his left forearm crushed whilst oiling the cogwheels of a husk crusher, the machinery being in motion at the time. The Mudaliyar reported "that the accident occurred owing to the injured man's carelessness, and that nobody was to blame."

NOEL WOODHOUSE,  
Inspector of Factories.

February 20, 1920.

# COLOMBO DRAINAGE WORKS.

## REPORT OF THE RESIDENT ENGINEER FOR 1919.

### GENERAL.

THE work during this year was pushed forward more rapidly, as the price of cement, which had such a retarding effect during 1918, was very considerably reduced. The delay in the arrival of the pumping plant was, perhaps, not quite so noticeable, but out of four pumping stations which were otherwise ready, it was only possible to complete one, namely, the "Western." I am of opinion that the modified programme of these works cannot now be completed until the end of 1920 or early 1921.

2. An appreciable portion of the sanctioned funds still remain unexpended, as no additional works were undertaken during the year, and there have been no street widening and other improvements, which prevent certain sewers and rain-water drains being laid.

### ESTIMATES.

3. The Consulting Engineers' estimate for the complete scheme stands at Rs. 23,572,000, as before, but the estimate for the Suduwella channel improvement, Rs. 136,000, will have to be added to this figure, in order to arrive at a total representing the ultimate cost of the works. The works sanctioned during the year were as follows:—

|  |               |
|--|---------------|
| Madampitiya treatment works (extension): Alterations to Nos. 3 and 4 septic tanks, and the construction of Nos. 3, 4, and 5 circular sedimentation tanks | Rs.<br>80,000 |
| W 1, minor sewer   | 2,500         |
| Additional amount sanctioned for Wellawatta treatment works  | 125,375       |

The total sanctioned estimate has thus been increased to Rs. 16,900,379, as shown in detail in Appendix I. to this report.

### EXPENDITURE.

4. The total expenditure to the end of December, 1919, amounted to Rs. 13,883,398.74, of which Rs. 881,283.41 was expended during the year, as against Rs. 630,822.57 expended during 1918. The expenditure in the several drainage districts is given in tabular form in Appendix II. A sum of Rs. 89,117.54, which has been included in the total expenditure, is recoverable from other departments.

### LABOUR.

5. The strength of the labour force averaged 1,101, as compared with an average of 1,355 in 1918. The maximum number on the roll was 1,208 in April, and the minimum number 1,007 in December. The pay roll averaged Rs. 39,234 a month, as against Rs. 23,747 in 1918.

### STAFF.

6. The European staff is at present constituted as follows:—

|                          |  |
|--------------------------|--|
| Resident Engineer        | Mr. M. R. Atkins.                                      |
| Acting Resident Engineer | Mr. R. G. Waterhouse from September 12, 1919.          |
| Assistant Engineer       | L. G. Pilkington (agreement terminated in July, 1919). |
| Do.                      | Mr. M. Jeffery.  |
| Foreman Timberman        | Mr. J. E. White.                                       |
| Do.                      | Mr. R. Dingle.   |

The following members of the locally-recruited staff left the Department during the year:—

|   | Period of Service.<br>Years. |   | Period of Service.<br>Years. |
|---|------------------------------|---|------------------------------|
| Mr. V. P. Senegiratte, Head Draughtsman | 16                           | Mr. N. D. Cooray, Draughtsman           | 7                            |
| Mr. P. P. Perera, Chief Pay Clerk       | 15                           | Mr. E. A. Fernando, Clerk               | 6                            |
| Mr. C. D. Fernando, Draughtsman         | 10                           | Mr. A. Mathaparanam, Clerk              | 6                            |
| Mr. B. N. Fernando, Foreman             | 10                           | Mr. K. D. A. Perera, Record Draughtsman | 5                            |
| Mr. J. Steyn, Assistant Foreman         | 10                           | Mr. A. D. Edwin, Clerk                  | 4                            |
| Mr. S. Kandiah, Clerk                   | 9                            |   |                              |

\* Temporarily transferred from Public Works Department to act as Chief Assistant Engineer during the absence of Mr. M. R. Atkins, who went on home leave in September.

## CONNECTIONS.

7. No new sewers have been made available for connections during the year. The City Sanitation Engineer's reports give the following figures regarding the work done in 1918 and 1919 :—

|  | Total to<br>December, 1919. | Progress<br>in 1919. | Progress<br>in 1918. |
|--|-----------------------------|----------------------|----------------------|
| Number of premises drained                               | 1,155                       | 36                   | 46                   |
| Number of water-closets installed                        | 3,815                       | 200                  | 119                  |
| Number of earth-closets removed since<br>January 1, 1913 | 1,526                       |                      | 66                   |
| Number of water-carriage public latrines<br>in use       | 30                          | 2                    | 1                    |

Tipping depôts for night soil are in use at the following centres :—Price park, Symonds road, Quarry road, Urugodawatta road, Pickering's road, and Alutnawata road.

## SEWERS AND RAIN-WATER DRAINS.

8. The reconstruction of the Suduwella channel was continued during the year, and the 6 feet portion completed. The 9 feet channel was nearing completion.

Sewer K 1 was completed for a length of 1,308 feet, up to the Kirillapone canal (the sanctioned length).

In Wellawatta (V and W districts) sewers were completed in 10th lane and the Galle road, also the extension of the rain-water drain V 17A to Laurie's road.

In Kollupitiya (T district) the construction of the rain-water drains was commenced along the Kollupitiya duplication and in the neighbourhood of Cambridge place.

It was found necessary to divert a portion of sewer H 1, from Blomendahl road towards the west, where the levels of the Invert had been seriously affected by the weight of embankment on the new harbour railway lines.

The work of relaying portions of sewers A 78 and A 80 (Norris road) by Parsons road overhead bridge was also undertaken by this Department at the request of the Chairman, Municipal Council. These two 9-inch sewers had sunk to a considerable extent and cracked. The damage was due presumably to the weight of the new embankment, and these sewers are now being relaid on sheet piling, and the concrete bed is being reinforced.

## PUMPING STATIONS.

9. The Western pumping station, where the plant has been installed, is now complete; it cannot, however, be brought into regular use until Wellawatta treatment works are finished, which will be about December, 1920. A portion of the Maligawatta pumping station plant was installed and the venturi meter tube fixed in position. Vuystwyke and Wellawatta pumping stations were completed during the year, except for their pumping machinery, which it is hoped will arrive from England shortly.

## AMPTIYA TREATMENT WORKS.

10. The three new wet-weather sedimentation tanks, with their detritus tanks, together with the 30-inch rising main and other subsidiary works, which were commenced in 1917, are now approaching completion. The other works taken in hand were the construction of the new circular sedimentation tanks Nos. 3, 4, and 5, which had been recently sanctioned. Apart from these, the only other work was the alteration to Nos. 3 and 4 septic tanks. These tanks which are part of a set of four in number were originally constructed as ordinary settling tanks, and are now being converted into two-storey sedimentation tanks.

## WELLAWATTA TREATMENT WORKS.

11. Considerable progress was made throughout the year on this portion of the works. The main effluent channel, overflow culvert, and sludge channel were completed. The sewage sedimentation tanks (two with four detritus tanks) were completed to the underneath side of the coping, with the exception of the internal frame work and slabs. The construction of the coffer dam was completed and 190 feet of the 24-inch cast iron outfall pipes laid.

## QUANTITIES.

2. The principal quantities of work completed to date were as follows :—

|                                    | Total to<br>December, 1919. | Progress<br>during 1919. | Progress<br>during 1918. |
|------------------------------------|-----------------------------|--------------------------|--------------------------|
| Excavation, cubes (100 cubic feet) | 229,048                     | 2,888                    | 4,304                    |
| Tunnels, lineal yards              | 43,742                      | 86                       | 524                      |
| Concrete and masonry cubes         | 40,917                      | 1,808                    | 1,492                    |
| Sewers, &c., completed lineal yard | 223,497                     | 2,121                    | 4,011                    |

Colombo, March 4, 1920.

R. G. WATERHOUSE,  
Acting Resident Engineer, Colombo Drainage Works.

## APPENDIX I.

## Estimate according to Drainage Districts.

| Apportionment of Estimate.   | Area<br>provided for. | Estimated<br>Population<br>in 1951. | Total<br>Estimate. | Estimate<br>sanctioned<br>to Date. |
|--|-----------------------|-------------------------------------|--------------------|------------------------------------|
| <i>Harbour Scheme.</i>   | <i>Acres.</i>         |                                     | <i>Rs.</i>         | <i>Rs.</i>                         |
| Works  | 613                   | 79,370                              | 4,708,000          | 4,625,000                          |
| Land and Compensation  | —                     | —                                   | 250,000            | 250,000                            |
|  | 613                   | 79,370                              | 4,958,000          | 4,875,000                          |
| <i>Extensions.</i>   |                       |                                     |                    |                                    |
| Main Sewer (extension)   | —                     | —                                   | 889,000            | 889,000                            |
| Northern Pumping Station (extension)                                     | —                     | —                                   | 255,000            | 125,000                            |
| Kadampitiya Treatment Works (extension)                                  | —                     | —                                   | 2,735,000          | 703,000                            |
| Wellawatta Pumping Station (including portion of<br>Mount Lavinia sewer) | —                     | —                                   | 300,000            | 284,000                            |
| Wellawatta Treatment Works   | —                     | —                                   | 650,000            | 375,375                            |
| District D (extension)   | 37                    | 2,590                               | 177,000            | —                                  |
| Do. F  | 206                   | 4,120                               | 422,000            | —                                  |
