FOREWORD

=====

Prior to the second World War, relatively few Sri Lankans studied for post-graduate degrees. Those who did were mainly doctors, university teachers and a handful of scientists in Government Research Institutions who were required by the terms of their employment to secure post-graduate degrees for promotion. The vast majority of these students obtained their post-graduate qualifications from British Universities.

In the post-war period, the number of persons seeking post-graduate qualifications has increased considerably. With the rapid expansion of the University system and the increase in the pace of Government development activities, there has been a growing demand for highly qualified specialists in many fields, particularly in the fields of Agriculture, Engineering, Medicine and the Social Sciences. An ever-increasing number of bright young graduates has been seeking post-graduate qualifications. The majority of these students have been compelled to go abroad for their studies because of the limited facilities for post-graduate studies which have, until recently, been available locally.

It is clearly not possible for a small country like Sri Lanka to provide locally all the post-graduate educational facilities which its students require. Even if this were possible, it would not be desirable because the cross-fertilisation which results from close association with foreign universities and research organisations is very necessary for the successful development of our own academic institutions. It will not, however, be possible in the future to send abroad all the students who will be seeking post-graduate qualifications. The cost of university education in the developed countries of the

West is increasing rapidly, and any large increase in the number of students from Sri Lanka following foreign courses of study would involve a considerable strain on our limited foreign exchange and foreign aid resources. It is very necessary, therefore, that we should make every effort to develop and expand our own post-graduate facilities, so that eventually only students who wish to undertake research in highly specialised fields, or students who have shown truly outstanding academic promise, need go abroad for their post-graduate education.

Universities in Sri Lanka have, in recent years, taken some steps to expand their post-graduate educational facilities. In the past five years, for instance, more than 25 percent of post-graduate degrees awarded to Sri Lankans were awarded by local universities as against 15 percent in the preceding seven years. I am sure that this percentage will increase substantially in the near future.

It is in this context and against this background that Mr. Gamini Seneviratne, Director of the Materials and Manpower Resources Division of this Ministry, was requested by the Committee of Development Secretaries, to collect information on the post-graduate educational facilities available in Sri Lanka. The results of Mr. Seneviratne's studies are being published by the Ministry in two parts. The first part (Volume I) is a Directory of Post-Graduate Courses available in the country, while the second part (Volume II) contains information on the research dissertations presented by Sri Lankans for the post-graduate degrees in universities in Sri Lanka and abroad. This information is being published in the hope that it will be of value to universities and other academic and research institutions as well as to prospective students who are considering the possibility of undertaking post-graduate studies in Sri Lanka.

Mr. Seneviratne and his staff have put in considerable effort in the preparation of this publication. I wish to express my deep appreciation of the work which they have done in this connection.

POST GRADUATE EDUCATION IN SRI LANKA

The history of formal education in Sri Lanka goes back many centuries to the Pirivenas of which there were some 240 extant 10 years ago. They were supplemented by the Viharas or Village Temples and by the schools of men learned in particular disciplines. The curriculum available then covered Reading, Writing, Number, Logic, Proceody, Rhetoric, Pali, Sanskrit and perhaps Tamil Language and Grammar, the Tripitaka, Astrology, Political Science, Ithihasa, Medical Science and the Military Arts.(1) The form of education then prevailing while imparting certain skills focussed on social ethics and pointed people firmly in the direction of Nirvana. The development and diffusion of technology in the fields of mining, smelting, carpentry, structural & hudraulic engineering, land preparation and agronomy, fishing, metal work, painting, sculpture, and of spinning, cinnamon peeling and other forms of proceesing of agricultural produce, took place through practical experience and through what may be termed, in current parlance, on-the-job training.

2. The forms of institutionalised education which developed during the colonial period and especially the period of direct British domination were related to the production of the skills necessary for the support of the colonial administration and of colonial enterprise in commerce and the plantations, including economic infras-structure such as highways and bridges, railways and basic engineering products.

3. The skills necessary to provide the supporting services were imparted through the English language and though subsequent training 'on the job' at every level from the works foreman to the Civil Servant. The use of the English language to provide convenient access to other skills required for the colonial economy served also to create a class which tended to be alienated from the vast majority of the people and which looked upon the British as not merely the greatest innovators in all forms of technology including agriculture, but also the embodiment of human

culture at its most refined.

4. The problems of our system of education and the orientation of those who seek qualifications at post graduate level are the products of that history.

The English Schools System

5. The schools system as much as the manner in which access to English Universities was provided acted together to disorient those who received that education and to isolate them from the problems of our society. Consequently while they acquired great skill in analysing the literature of ancient Rome and the currents of European History they remained innocent of any knowledge of the technologies developed in and used by our people in the fields of agriculture, medicine and engineering or of their systems of communal organization. As Rev. Fraser of Trinity College expressed it some 70 years ago, 'Many have been trained in Ceylon to pass the Senior Cambridge Local, who could not read or write a letter in their fathers tongue ... The exclusion of the vernaculars favours the tendency to think all local knowledge and local problems as unworthy of respect. I doubt very much if the serious mind of the educated man can be expected from a system of instruction which keeps the mind generally on the unfamiliar. Language, History, Literature, "Reading Books" - all deal with foreign conditions. But real thought is created best in boys by the application of ideas to their known environment and conditions. Without this, thinking becomes unstable and a mere caricature of the real thing.'(2)

6. The problem was compounded here by the fact that, unlike in India, "European Schools" were not set up for persons of European descent because the European community and the Colonial Government were reluctant to incur the necessary expenditure. The children of European descent were sent to the same schools in which our students received an English education. Consequently the curricula of work in such schools was designed to meet, on a priority basis, the needs of children of European descent. Education in

their mother tongue was specifically discouraged in the case of the Sinhalese since it was excluded from the London Matric (while Tamil was not, thanks to the accommodation made for that language in respect of the Tamil speaking people of the Madras Presidency).

7. The aspirations which exposure to this system of education gave rise to are vividly demonstrated in the results of a survey carried out in August, 1911 when a questionnaire was sent out to 4,900 parents inquiring of them 'what occupation they propose that their son should take up'. Of the more than 50% who responded, 2% wanted their son to enter the Civil Service, another 30% Government Service (two thirds of them specified the Clerical Service), 20% Medicine, 14% Law, 6% Engineering, 4% Surveying, 7% Teaching or Preaching, 3% Planting, 4% Trade while 8% were undecided. 1% mentioned Agriculture while the odd eccentric specified Carpentry, Jewellery, Newspaper Reporting and 'Artist' - (Vide Annexe I).

The Creation of a University

8. With the expansion of "English Education" at secondary school level through the agency of Christian Missions, and the demonstration of the possibility of access to the higher echelons of Government through the acquisition of a University Degree, the pressure for the establishment of a University in Ceylon gathered momentum particularly after the Ceylon University Association of which Sir Ponnambalam Arunachalam was a leading light was funded in 1906.

9. When the proposal for the establishment of a University was mooted one of the arguments presented in support of the proposal was that "those who are unable to send their sons to Europe have now no means of giving them anything more than a school education". The argument continued that "in view of the large development of a fairly affluent class" there were now a sufficiently large number of people who were willing and able to fund the

education of their sons through University although they could not afford to send their sons to England. The present argument for the prevision of post-graduate training facilities in this Island includes this element of the excessive cost today of sending our students out to European Universities for their post-graduate degrees. The cost of education in the U.K. for foreign students has spiralled sharply over the last few years. The fees levied discriminate against foreign students on a graduated scale - some categories being required to pay thrice and some four times as much as **nationals**

10. The establishment of the University naturally took time, given the fact that the British administration made concessions to colonial peoples, by and large, in direct relation to its own vulnerability to the degree of pressure exerted upon it.

The first step was the establishment, in 1921, of a University College which was affiliated to and prepared students for the external examinations of the University of London. After much debate in the Legislative Council, in which the colonial administration activated and played upon divisions of opinion as to the nature and location of a University of Ceylon, (a debate in which Sir Ponambalam Ramanathan, for instance, vigorously opposed the demand for a unitary and residential University for this country). (3), it was finally established on 1st July, 1942. The nucleus of this Institution was the University College (by then 21 years old) and included the Medical College. By the time the Residential University proposed by the Legislative Council in 1929 finally came to be established at Peradeniya in 1952, the University had over 2,000 students on roll.

11. In setting up the University of Ceylon in 1942 the objectives stated included the following: "The University College has continued to teach for London degrees on syllabuses which are irrelevant and inapplicable to Ceylon conditions. Higher education has suffered in consequence as well as secondary education in as much as an alien

Digitized by eGangotri Foundation
hoolaham.org | aavanaham.org

orientation has been given to school curricula". As the Commission on Higher Education in the National Languages observed in 1956, the "London Examinations have been replaced by Ceylon Examinations but the alien orientation still remains."

12. The preference for certificates from English Universities is visible in the sudden and sharp increase in the number who appeared for the Examinations of the University of London in the years immediately following Independence in 1948. There was a further wave of anxiety to obtain the London G.C.E. (Advance Level) Certificate in the last 1950's, the number almost doubling from 3,300 in 1957 to 6,585 in 1958.(4)

Diversification and Change

13. With the expansion of primary and secondary education under the free education scheme pressure developed once more for a further development, - this time, for the provision of courses at University level in the Sinhala and Tamil media. After what may be termed the cultural revolution of 1956, the Government responded to that pressure by absorbing the two major pirivenas of Vidyalankara and Vidyodaya into the University system. In 1960 the University of Ceylon also admitted students in the Sinhala and Tamil media and the student population in the Universities increased dramatically by 58% in one year.

Structure

14. The structure of the Universities and their policy on admissions have been changed from time to time in response to various pressures. In 1967 the Colombo Campus of the University of Ceylon was converted into a separate University and in the same year the two Pirivena Universities admitted female students. The University of Ceylon Act No. 1 of 1972 reduced the status of the existing Universities into one of Campuses of a single

University. The six Campuses were Peradeniya, Colombo, Vidyodaya, Vidyalankara, Jaffna & Katubedda. This exercise was carried out in the name of rationalising the use of the facilities available in the various Universities. These six Campuses were converted once again into separate Universities by the University Act No. 16 of 1978 and, in addition to them, a University College in Ruhuna and a Campus affiliated to the University of Peradeniya at Dumbara were also opened.

Curriculum

15. During the period 1965 to 1980 there have been significant changes in the curriculum of the Universities. New subjects such as Management, Business Administration and Development Administration have been introduced. An attempt has been made to increase the intake in areas which were in great demand such as Engineering and Medicine, and significant numbers of students who would otherwise have followed a course in the Humanities have been syphoned off into courses in Commerce, Business Administration, Management and Education.

Character

16. There have also been enormous changes in the character of the University, the degree of administrative autonomy available to the University system, the population of students both in absolute terms and in their distribution among different Faculties, in the academic and social background of those who seek admission to the University and also in their career perspectives.

17. These changes were a product of the ideology of egalitarianism which has come to determine public policy over the last quarter century, and have been related to the medium of instruction and, more revealingly perhaps, it being a tendency anterior to these developments, to the deep rooted desire to obtain paid employment particularly in the Public Sector, - an objective which was enthroned in the minds of the educated elite during the British

colonial period as the consummation most devoutly to be wished.

18. The following statistics would suffice to illustrate these changes:

- (i) The number seeking University education increased (in round figures) from 350 in 1943 to 2,000 by 1955, 5,000 by 1960, 31,000 by 1970, 62,000 by 1976 and over 100,000 by 1979.
- (ii) The number who gained admission in the corresponding years were 200; 650; 1,800 and 5,000.
- (iii) The percentage of applicants admitted to the Universities decreased sharply from 56% in the first year to 32% in the rest of the 'forties, 29% in the 'fifties, 18% in the early 'sixties, 10% in the early 'seventies and 6% in the late 'seventies.
- (iv) The number of schools which present candidates for the University increased from 30 in 1942 to around 300 by 1960 and to 1,500 today.
- (v) In the absence of facilities for teaching science subjects an increasing number sought and obtained admission to follow arts courses at the Universities, the percentage of students following arts based courses moving up from around 40% to 75% until the policy of increasing admissions to science based courses at the expense of arts based courses, adopted in the early 'seventies, reduced it to about 60% of the total.

The heavy bias towards the Humanities in our Universities was historical, as can be seen in the fact that the first student who completed the Intermediate Examination in Science of the University of London did so in 1911 fully 20 years after our first Graduate from London in Arts.

19. Another related feature of the expansion of demand for University education has been that an increasingly large proportion of students who become eligible for admission are unable to find places in the Universities. The attempt to increase the proportion of students selected for science courses, in particular, from centres outside the metropolis, has tended to lower the quality of those who obtain admission to the Universities, to lengthen the average stay at University and to impose a further burden on available staff and facilities, in other words, the district quota system has tended to transfer to the Universities the task of providing a part of the secondary education required for admission.

Orientation

20. The expansion of the schools system introduced by the British, commencing with the Colombo Academy which developed into the Royal College a hundred years ago, the establishment of scholarships at the end of secondary school to enable scholars (always those whose families enjoyed an unimpeachable social background) to proceed to the centre of the universe which was London, the development of the University College and eventually of the University of Ceylon in response to pressures which were articulated by the very products of that system of scholarships, have all been well documented elsewhere. What has tended to become obscured, however, is that the fact that the development of a University in Sri Lanka was conceived and implemented by people who were oriented towards the metropolis of Britain, determined its character as an extension of the radial system of British education and was designed to meet the demands of a Sri Lanka economy dominated by the form it had taken under the colonial administration.

21. Over the years, this predisposition towards British systems has come to be qualified in response to the prestige acquired by Shanthi Niketan in the field of the arts, to political developments which made access to

Universities in the Soviet Union available, to the magnet of money and technology supplied by the new great power of the United States and to a growing awareness of the distinction achieved by centres of learning in continental Europe in the humanities, and in the social, natural and applied sciences. In more recent years the quality of technical training in India too has come to be appreciated. This diversification however has been limited by the factor of language and our scholars have, by and large, tended to seek opportunities for post graduate studies in the developed countries of the English speaking world; this is not to be wondered at, since they do so in the foreknowledge that the language would give them a passport to employment in English speaking countries and in international organisations. The contents of Annex (xi) will confirm this.

Post-Graduate Research and Training

22. For more than half a century the research studies of Institutes and Academies in this country in the natural sciences were oriented by the Imperial Institute which was established in London in 1887 "to promote the commercial, industrial and educational interests of the British Empire." (5) The affairs of this Institute were governed not so much by the needs of Science but directed rather by the British Government towards the exploitation of the raw material resources of its colonies. The following paragraphs from the report of the Imperial Committee on Economic Consultation and Co-operation (1933) reveal the 'relevance' or problem-oriented character of its work: "The technical work of the Institute, which deals with the determination of the quality and the uses of Empire raw materials, with their preliminary testing, and with advising upon the production of those for which a market is available, is carried out by two main Departments of the Institute, viz., the Plant and Animal Products Department and the Mineral Resources Department. Each of them is divided into an Intelligence Section and an Investigation Section. The Intelligence Sections are responsible for the collection and dissemination of

information of a technical and commercial character regarding raw material of the Empire. The investigation work of the Institute includes all testing up to, but not including, fundamental research".(6)

23. This work was undertaken at time when it was assumed that the sun would never set on the British Empire. However that may be, it served to develop the skills of our scientists and also produced a large volume of investigative material on the natural products of the Island and on their markets abroad. There included fruit canning, vegetable oils, papain, coir fibre, wood protection, sericulture, the manufacture of power alcohol, purification of coconut palm spirit for the manufacture of perfumes, the technology of soap manufacture, the industrial uses of activated charcoal, the development of industrial zircon, mica and ilmenite, the upgrading of graphite and the manufacture of cement - quite a good record.

24. The work done by the Imperial Institute was supported by the activities of the Botanical Gardens at Kew through which a number of plants of economic and strategic importance were channelled to British colonial possessions in Asia and Affrica from other parts of the world.(7) Among them were tea, rubber and cinchona which were established on a plantation scale in this country. Indeed one of them - the tea plant - supplied the unique example of a foreign plant introduced by foreigners, cultivated by indentured foreign labour in plantations owned and managed by foreigners, dominating the economy of the host country not only in the incomes it generated but in its longterm adverse effects on traditional agricultural systems. The principal objective (as well as the result) of the technology developed at Kew gardens was to accelerate the process of exploiting the land and labour resources of the colonies. The scientists trained and drawn from among the colonized peoples played their part in maximising the economic returns from these plants; the returns, needless to add, were for appropriation by the West

25. The training of scientists, economists and other key people of the colonial establishments produced direct returns to the British economy. "The importance of funding students from overseas" has been well stated in the following letter to the editor which appeared in the Financial Times, London, in June, 1982. It is reproduced without further comment.

"The importance of funding students from overseas"

From the Partnership Co-ordinator
Ove Arup and Partners.

Sir - I am sure I shall not be alone in being infuriated by the quasiacademic approach of Michael Dixon's article "Who should fund foreign students?" (June 7). Those of us who have direct dealing with foreign governments, and who have to negotiate overseas, know that no other single action on the part of the British Government in recent years has caused more offence and potentially done more damage to political and trade relations than the measures taken by the present Government on foreign students' fees.

In all societies, certainly not least in the developing world, there is a need to realise the full potential of individual's capabilities. While one may agree that there has been an overemphasis - throughout world - on pushing the largest number of people possible through an educational system aimed at intellectual excellence, there can be no question of the need for fostering those who have a genuine capability for outstanding intellectual achievement. The developing world needs its intellectual leaders as much as the developed world. The UK needs policy makers throughout the world to have at least an empathy with this country. There is no better way to induce this than by helping to educate them.

The developing world desperately needs many more professional people than are presently available. My firm, in company with many others devote a great deal

of time and effort to helping to develop such people. If however, such people do not have basic qualifications which are orientated to British practice, they will not come to us. Furthermore, their attitudes and ways of thought will not be positively attuned to ours, even if they are not negatively so.

Professional people trained to apply our standards and procedures are a very positive influence in the development of British consulting and project business in the developing world.

It seems to me that we need a policy which encourages and helps the genuinely bright foreign students to come to the U.K. especially those who are aiming at the professions. This should not be considered as excluding an equally desirable policy of fostering short visits to the U.K. of those concerned with particular situations and types of activity. The two policies should be considered supportive not alternatives.

May I say it behoves us ill to strike a stance of intellectual (or any other form of) arrogance in and to the developing world.

26. The report of the committee on Research Facilities (S.P. xiii of 1935) touched on the nature of the post-graduate training which merits encouragement by Government: "The main source of supply of research workers is the country's Universities. It is vital to Ceylon's progress that its only Institution of University rank should be given every facility possible so as to bring more graduates in the pure sciences to the stage of competence in scientific research. To this end it is essential that there should be some stimulus in the shape of scholarships or research studentships which will attract a sufficient number of graduates in Physics, Chemistry, Botany and Zoology to post-graduate work". The Committee recommended the establishment of a Central Research Council and assumed that the Council "will select men in some cases for training or for work in local institutions and for special

training in institutes abroad". While expressing the view that such scholarships should not be granted annually "without reference to the needs of the situation" as it might lead to unemployment among such highly trained scientists, the Committee left the door open to the proposed Council to make "occasional scholarship grants to first class science graduates for research study in the Pure or Applied Sciences without regard to or promise of ultimate employment" since "such scholarships would be part of the general plan for the increased application of science to industrial & social needs."

27. It is apparent therefore that the basic issues which concern the formulation of a policy and programme for post-graduate training and research work were articulated and canvassed in this country more than **four** decades ago. We have made some progress since in the co-ordination of research activity in the country and the promotion of post-graduate research by individuals outside the research institutes, through the (since re-designated) National Science Council which, along with the new Institute of Fundamental Research now function, appropriately, under the President himself.

28. Three Post-Graduate Institutes have been established during the last 5 years: the Post-Graduate Institute of Buddhist Studies at Vidyalankara and the Post-Graduate Institute of Agriculture at Peradeniya, both in 1977, and the Post-Graduate Institute of Medicine under the University of Colombo in 1979. At the same time courses at post-graduate level in other areas, in the Humanities, Social Sciences and Natural Sciences have continued to be conducted at Colombo, Peradeniya, Vidyalankara, Vidyodaya and Katubedda under the administration of the existing Faculties.

29. Outside the Universities, but often in association with them, a considerable amount of research work is being carried out by the National Engineering Research and Development Centre, the Ceylon Institute of Scientific and Industrial Research, the Central Agricultural Research

Institute, the Veterinary Research Institute, the Tea Research Institute, the Rubber Research Institute, the Coconut Research Institute, the Agrarian Research & Training Institute and the Building Research Institute. The Institute of Fundamental Research has an enormous potential for providing an opportunity for Sri Lankan Scientists to address themselves to issues which are central to the practice of their discipline under the guidance of highly trained Scientists who have demonstrated their eminence in their particular fields.

Conclusion

30. The present report was born out of a brochure on the facilities available within the country for study at post-graduate level which the Materials & Manpower Resources Division of the Ministry of Finance & Planning was directed to prepare by the Development Secretaries' Committee.

31. The brochure which is now presented has been supplemented by a list of the titles of dissertations submitted by Sri Lanka Academics by members of the staff of Research Institutes, and by others for their post-graduate degrees.

32. Since formal education tends to be structured in the form of a pyramid and since the character of the apex is determined by the structure of the base, statistical data on secondary education and on under-graduate education have also been included as an appendix to this report.

33. It is hoped that the information contained in this document will prove useful and will be used in re-orienting education policy even more radically. It is clear that the historical development of formal education in Sri Lanka over the last century and a half and its isolation from the needs of the people, an isolation which, from one point of view, has become more pronounced over the years, particularly with the switch-over to the national languages as the sole media of instruction, have led to an imbalance between the facilities provided and the demand for them, a demand which is gradually re-orienting itself to the employment opportunities now available.

34. A concerted effort is required to expand the pool of trained tutorial staff at secondary and tertiary level in the key areas and to retain their services. The administrative staff in the Universities too needs to be upgraded since much too much of the time of senior academics is now mis-spent in attending to matters which should properly be done by a competent Registrar. This aspect is particularly important in view of the growth of the demand for external Degrees and the establishment of an Open University. The future of University education clearly lies in this direction for the vast majority and no effort should be spared in providing^{those who}/do not enter University with adequate opportunities for acquiring an academic training at a later stage in their life.

35. The technique of British administration created a bias against long term planning in all sectors of the economy, including that of education, and this history had tended to reinforce the native inclination not to worry about hurdles until they come to them. Sri Lankans are accustomed to thinking in terms of centuries only in relation to a glorious past. In relation to the future, however, planning proceeds, - at best and that very rarely - no further than the remainder of one's active years. Not surprisingly, therefore, adopted policies on education and employment have only recently, proceeded even to define targets for developing character and imparting the skills necessary for living. The down-grading of the role of teachers and the neglect of school and university administration must be regarded as consequences of this approach and evidence of its failure.

36. Unlike in the traditional culture of this country, the teacher's role as instructor and guide has been lost sight of over the last few decades. It has been replaced by a perception of the teacher as a person who can influence political thinking. The response to this new perception has too often been not only one of transferring teachers out of electorates thereby dislocating the work in the schools but also one of down-grading the social

status and leadership role of the teacher. This is reflected in their salaries which continue to remain low in relation to that of other public servants and in the low priority given over the last two decades to the training of teachers, - a trend which is only now being reversed.

37. The Universities too exist in society and are affected by the ruling philosophies of the day. Universities are manned, obviously and by definition, not by disembodied intellects but by people. They and their families are not less sensitive to the cost of living than the next man: that is only to be expected and can be dealt with. However when University teachers permit their attitudes to their academic responsibilities to be corroded by the cynicism which governs society from time to time not only do they betray their position within the University but also effectively negate their role within the larger community.

38. At the under-graduate level too this malady manifests itself in the inadequacy of the tutorial staff to cope with the increasing intake of students, the withdrawal of the facilities which made Peradeniya a truly residential University, the inadequate attention paid to providing either a sufficient number of books in Sinhala & Tamil or of furnishing University students with a knowledge of the English language - all of which contribute to the output of graduates of poor quality. It would be well to remember that it is for these graduates that facilities for post-graduate training are now sought to be provided.

D.G.P. Seneviratne

Director

Materials & Manpower Resources

May, 1982.

Acknowledgments

Mrs. K. Samaraweera (SLAS) Assistant Director, was principally responsible for gathering and processing this data. Latterly she was assisted in this work by Mr. P. Sumanapala, Planning Officer.

In the preparation of this document we received the cooperation of the Deans, Heads of Department and Registrars of the Universities. We also had several useful discussions with them. We hope that by publishing this information we would have repaid them in some measure for the time they gave us.

The tremendous amount of typing which the two volumes of this work entailed was done by Miss C.M.H.I. Perera and Miss Nanda Kariyawasam, of this Division.

AGRICULTURE

A separate Post-Graduate Institute for Agriculture has been established at Peradeniya.

It works in close consultation with the Faculty of Agriculture of the University of Peradeniya and also draws on the staff and facilities of the Faculty of Science of that University. It prepares students for an M.Sc. Degree awarded on one year's full-time course work; an M.Phil. Degree based on course work plus thesis of either two years' duration (full-time) or of three years' duration (part-time); a Ph.D. once again based on course work plus a thesis of three years' duration (full-time) and four years' duration (part-time).

Courses are available in the following subject areas :
Crop Science, Agricultural Biology, Agricultural Chemistry, Agricultural Economics and Extension, Animal Husbandry and Agricultural Engineering.

In addition to teaching staff drawn from the University it utilizes the services of Visiting Faculty drawn from a Consortium of Universities funded by the US AID and also uses the library and laboratory facilities of the University of Peradeniya and of related Government Departments.

ARCHITECTURE AND TOWN & COUNTRY PLANNING

The course in Architecture provided by the Ceylon Technical College was transferred to the Faculty of Natural Sciences in the University of Colombo in 1968 and subsequently to the Katubedde Campus.

The original B.Sc. course in Built Environment has now been supplemented at the University of Moratuwa by a post-graduate course leading to an M.Sc. in Architecture and to Part II of the R.I.B.A. Examination. Part III of this professional examination is also conducted by the Sri Lanka Institute of Architects and is recognised by the Royal Institute of British Architects. It is no longer necessary therefore for our students to go abroad to obtain full professional qualifications in Architecture.

The University of Moratuwa also offers courses leading to a Diploma in Rural and Regional Planning, in Urban Designing and Urban Development and an M.Sc. in Town and Country Planning,

ENGINEERING

Institutionalised training in this field commenced in 1935 with the establishment of the Ceylon Technical College which prepared students for the B.Sc. (Engineering) Degree of the University of London.

In 1953 the Faculty of Engineering was opened in the University of Ceylon, Colombo, and simultaneously the course of training for the London degree examination at the Technical College was abandoned. This Faculty was subsequently transferred to the University of Ceylon, Peradeniya.

Training Programmes for middle level Technicians were transferred from the Technical College to the new Institute of Technology at Katubedde in 1960. This Institute developed by 1966 into a College of Technology which conducted courses for and awarded a Diploma in Technology which corresponded to the B.Sc. (Engineering) Degree. This was a 5 year course which included one year's full time training in industry while the degree course at Peradeniya was of 4 years' duration.

In 1972 the Katubedde Institute was elevated to the status of a Campus of the University of Sri Lanka and has now become the full fledged University of Moratuwa.

The First Degree course at the University of Moratuwa has been expanded to cover a wider field than is customary and includes Water and Environmental Engineering, Coastal Preservation, Transportation and Geo-technical Engineering. The University expects their graduates to return to the University for further specialisation and provides in particular a part-time one year diploma course and a Master's course which includes a dissertation. The University of Moratuwa has easier access to industrial training facilities than the University of Peradeniya, has direct links with Universities in the U.K. and France and the advantage of the siting of the Arthur Clark Communications Centre in its premises. The University of Moratuwa hopes to establish a University-Industry Co-operation Centre with the assistance of UNESCC & UNIDO in order to enlarge its contacts with and service to the manufacturing and construction industries.

The University of Peradeniya provides a one year full-time course leading to an M.Sc., a 2 year M.Phil. course and a 3 year Ph.D. course in Civil Engineering, in Electrical and Electronic Engineering, in Production Engineering and in Mechanical Engineering.

The University of Moratuwa provides post-graduate courses in Building Science Technology, Chemical Engineering, Electronic & Tele-Communication Engineering, Hydrology & Water Resources Engineering, Irrigation & Water Power Engineering, Mechanical Engineering and Mining and Mineral Engineering.

Institution : University of Peradeniya
 Field of Study & Degree : M.Sc. in Civil Engineering
 Duration : 1 year full time
 Nature of Training : By Course Work & Research
 Admission Requirements : B.Sc. of Engineering from University of Peradeniya

OR

an equivalent qualification from another University

Mode of Selection : An applicant may be required to pass a qualifying examination.
 Course Fee : *
 Registration : Rs. 50/-
 Examination : Rs. 200/-
 Tuition : Rs. 250/-
 Medium of Study : English

Institution : University of Moratuwa
Field of Study & Degree : M.Sc. in Chemical Engineering
Duration : 2 years full time
3 years part time
Nature of Training : By Research or By Course Work
Admission Requirements : Must have a Degree in Chemical Engineering
(those who have a Degree in Chemistry or
Mechanical Engineering could be selected)
Mode of Selection : Assessment of First Degree results and
interview
Course Fee :* Rs.300/- per term
Medium of Study : English
Supervisory Staff :

Tennekoon, C.L.K.	(Snr. Lecturer)	-	B.Sc.(Ceyl.), Ph.D.(S'mpton)
Silva, H.D.J.	(Lecturer)	-	B.Sc.(Ceyl.), M.Sc.(Leeds)

THE HUMANITIES

Post-graduate degrees in this area have been awarded by the University of Ceylon as far back as 1946. Post-graduate courses are now provided in Sinhala at Peradeniya, Colombo, Sri Jayawardenepura & Kelaniya, in Tamil at Peradeniya & Jaffna, in Pali at Peradeniya, Kelaniya and Sri Jayawardenepura, in Sanskrit at Peradeniya, Sri Jayawardenepura & Jaffna, in English at Peradeniya & Kelaniya, in Western Classics at Peradeniya, in Philosophy at Peradeniya, Kelaniya & Jaffna, in Buddhism at Peradeniya, Sri Jayawardenepura & Kelaniya and in Hindu Civilisation at Jaffna.

A Post-Graduate Institute of Buddhist Studies was established in 1976 with the objects of "contributing to the unravelling of the cultural heritage of the Asian countries and particularly of the Buddhist Community of Sri Lanka in the context of the total cultural heritage of mankind" and of "exploring the relevance and adaptability of this heritage to the contemporary and future situations of these countries". This Institute is administered by the University of Kelaniya and consists of three Departments; Buddhist Sources, Buddhist Culture and Buddhist Thought.

In all these Universities the Departments of Sinhala, Tamil, English and Buddhist Studies were well staffed in relation to cadre and the others appeared to be adequately staffed. It was only in the Department of Philosophy at Peradeniya that more than half the posts of Senior Lecturer were vacant.

MEDICINE

Post-Graduate Courses in Medicine and related fields are available in the Universities of Colombo, Peradeniya and at the Post-Graduate Institute of Medicine (P.G.I.M.).

The University of Colombo offers courses in Anatomy, Anaesthesiology, Bio-Chemistry, Forensic Medicine, Micro-Biology, Nutrition, Parasitology, Pharmacology and Physiology.

The University of Peradeniya offers courses in Dental Surgery, Medicine and Veterinary Science.

Courses offered by both Universities lead to either a Master's or a Ph.D. Degree.

The new Post-Graduate Institute of Medicine which is affiliated to the University of Colombo has offered courses in Anaesthesiology, Community Medicine, Family Medicine, Medicine, Obstetrics & Gynaecology, Ophthalmology, Paediatrics, Psychiatry and Surgery. All these courses lead to either an M.D. or an M.S.

NATURAL SCIENCES

These traditionally cover Physics, Chemistry, Chemistry, Botany, Zoology and Mathematics. Other related areas such as Geology and the application of the basic disciplines mentioned above to materials and to industrial processes have also tended to be brought within the broad ambit of the Natural Sciences.

The demand for under-graduate courses in Science has increased rapidly but the intake capacity of the Universities has not kept pace with the increase in demand for admission to these courses. The percentage of students taking Science courses has dropped from 24% of the total University population in the early years to around 15% now. In the secondary schools the number of students taking the Science courses at Grade VII has remained more or less static at around 37% of the total. Nevertheless the number of graduate teachers in these subjects is only 6% of the total and the number of trained teachers only 10%. It is therefore not to be wondered at that the quality of instruction available to the students in the secondary schools is inadequate and that they are compelled to have recourse to private tuition.

The tutorial staff at the Universities has also tended to become depleted in recent years and although courses at post-graduate level are offered in the Natural Sciences at Peradeniya, Colombo, Sri Jayawardenepura & Kelaniya Universities the staff available is barely able to cope with their teaching duties for the under-graduate courses.

At the Universities of Peradeniya, Colombo, Kelaniya & Jaffna, taken in aggregate, the Departments of Physics, Mathematics, and Zoology were the most badly under-staffed.

The Department of Physics at Peradeniya is perhaps the worst, having only 3 out of 5 Asst. Lecturers, 4 out of 10 Lecturers and no Senior Lecturer while only 1 of 2 posts of Professor was filled. Overall, in Physics, only 55% of the permanent cadre had been filled. Two thirds of the posts of Senior Lecturer, more than half the posts of Lecturer and over one third of the posts of Asst. Lecturer were vacant.

In Mathematics once again only 55% of the permanent posts were filled. Two thirds of the posts of Senior Lecturer, over 60% of the posts of Lecturer and nearly one third of the posts of Asst. Lecturer were vacant. Here again Peradeniya had only 9 Lecturers in a cadre of 26.

In Zoology too less than 55% of the cadre was filled. 60% of the posts of Lecturer and 50% of the posts of Asst. Lecturer were vacant. The position in Botany was much better with 73% of the cadre filled but one third of the posts of Lecturer were vacant.

The Departments of Chemistry were relatively well staffed and carried only 10% vacancies.

It is not possible to generalise in respect of all Departments or of all Universities since the difficulties in filling vacancies involve elements which are specific to the external demand for particular specialisations within the Natural Sciences, to the congeniality or otherwise of each University both with regard to their location, the facilities available at University and the personal and professional qualities of senior staff.

Nevertheless the paucity of suitable applicants for the existing vacancies would be related to both the quality of the students entering the University and the quality of the teaching staff through whose hands they have passed. When experienced and competent teachers leave the University for employment elsewhere and are replaced by inexperienced staff it is only to be expected that the quality of the students who graduate with their instruction and join the staff of the University can only have the effect of progressively lowering quality still further.

In addition to post-graduate courses in Chemistry, Physics, Botany, Zoology, Mathematics and Biology provided by these Universities, the University of Colombo offers courses in Analytical Chemistry, Mathematical Physics/Applied Statistics and in Environmental Science while the University of Sri Jayawardenepura offers course in Polymer Science and Food Science. In addition the Ceylon Institute of Scientific and Industrial Research provides supervisory services and facilities for research for post-graduate students in Applied Physics, Natural Products and Industrial Micro-Biology.

THE SOCIAL SCIENCES

The allocation of subjects which are broadly classified among the Arts as distinct from Science, between the Social Sciences and the Humanities has long been a matter of controversy. In the present document we have included among the Social Sciences, Geography, which **has also the character** of a Natural Science, History, Linguistics and Archaeology which were traditionally classified among the Humanities, as well as those areas of study which indubitably belong among the Social Sciences, viz., Sociology, Education, Economics, Political Science, Public Administration, Business Administration and Law.

Over the years the numbers taking particular courses among the Social Sciences have changed in response to the employment value of each degree. The number of students taking a course in History for example has decreased both in absolute terms and as a percentage of students enrolled in Arts courses. At the same time the Departments of Economics, Business Administration and Commerce have tended to attract more students. The numbers enrolled for the Bachelor's Degree in Education have also fallen sharply perhaps in response to the depreciation which has occurred in terms of salaries as well as social status in the teaching profession.

This trend is reflected in enrolment at secondary and tertiary level as well. The percentage of students taking Arts courses dropped from 45% in 1977 to 29% in 1980 while Commerce students increased from 18% to 34% over the same period. This undoubtedly reflects the increasing opportunities for employment in business activities which have been created over the last few years.

The number of graduate teachers in Commerce and Business Administration too has increased from 144 in 1977 to 483 in 1980 while the number of trained teachers in Commerce increased only marginally from 1,322 to 1,577 over the same period. Despite the rapid increase in the demand for courses in Commerce and Business Administration even at secondary school level the number of teachers competent to teach these subjects constitute only a little over 2% of the teaching staff.

By and large the classical Social Sciences such as Economics have adequate teaching staff. The relatively new areas of Sociology, Modern History, Business Administration and Public Administration however are not adequately staffed.

The Department of Sociology at Peradeniya for instance had no Professor, no Senior Lecturers and only 6 out of 10 Asst. Lecturers. The Department of Archaeology had no Senior Lecturer and only one Lecturer in a cadre of 3. The Department of Modern History in Colombo had 7 Lecturers in a cadre of 17 while the University of Sri Jayawardenepura had no Professors either in Business Administration or Commerce and was short of staff at all levels in these two Departments as well as in Public Administration.

Among the traditional subjects the University of Colombo is under staffed in the Department of Law and in the Department of Geography.

Three Universities (Peradeniya, Colombo and Sri Jayawardenepura) conduct post-graduate courses in Sociology, three (Peradeniya, Colombo and Jaffna) in Education, four (Peradeniya, Colombo, Sri Jayawardenepura & Jaffna) in Economics, two (Peradeniya & Colombo) in Political Science, one (Colombo) in Population Studies, one (Sri Jayawardenepura) in Public Administration, one (Colombo) in Rural Area Development, two (Colombo & Sri Jayawardenepura) in Commerce, Management Studies and Business Administration, five (Peradeniya, Colombo, Sri Jayawardenepura, Kelaniya & Jaffna) in Geography and History, one (Peradeniya) in Archaeology one (Kelaniya) in Linguistics and one (Colombo) in Law.

 Class,
 OR
 (2) M.A.Q. Examination
Mode of Selection : By Advertisements
Course Fee : Rs.360/-
Medium of Study : Sinhala/English

*** *** *** *** ***

Institution : University of Sri Jayawardenepura
Field of Study & Degree : Ph.D. in Sociology
Duration : 2 years part time
Nature of Training : By Research
Admission Requirements : (1) Special Degree with First or Second
 Class or Masters Degree
Mode of Selection : By Advertisements
Course Fee : Rs.500/-
Medium of Study : Sinhala/English
Supervisory Staff :

Ratnapala, Nandasena	(Professor)	-	M.A., Ph.D.(Lond.)
Hettige, S.	(Lecturer)	=	Ph.D.(Monash)

*** *** *** *** ***

Institution : University of Sri Jayawardenepura
Field of Study & Degree : Diploma in Statistics
Duration : One year full time
Nature of Training : By Course Work
Admission Requirements : Should be a Science Graduate
Mode of Selection : By Advertisement
Course Fee : Rs.300/-
Medium of Study : English
Supervisory Staff :

Dayananda, R.A.	(Professor)	-	B.Sc.(Ceyl.), Ph.D.
de Alwis, S.P.	(Professor)	-	B.Sc.(Hon.), Dip. in Stat., Ph.D.
